Minor's Feminized Munson The Human Foot In Leather. For Footwear. P. W. Minor & Son, Inc. 14,153; Apr. 25.
Related Lasts. For Footwear. P. W. Minor & Son, Inc. 14,154; Apr. 25.
Saves Time Builds Appetite Wonder Shredder. For Food Shredders. Dixon-Prosser Inc. 14,145; Apr. 25.
Unified Measurements. For Footwear. P. W. Minor & Son, Inc. 14,155; Apr. 25.
Where's The Fire? For Coffee. Hills Bros. 14,149; Apr. 25.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 25TH DAY OF APRIL, 1933

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

A. B. See Elevator Company. (See Olofson, C. F. E., and Lindstrom, assignors.)
A C Spark Plug Company. (See Howse, Curtis L., assignor.)
A C Spark Plug Company. (See Webb, Hartwell W., assignor.)
Abbott, Edward J., assignor to Abbott Machine Company, Wilton, N. H. Slab detector, catcher, or breaker. 1,905,259; Apr. 25.
Abbott Machine Company. (See Abbott, Edward J., assignor.)
Abington Textile Machinery Works. (See Clark, Ernest, assignor.)
Ackerman, Adolph J., Mankato, Minn. Lifting device. 1,905,427; Apr. 25.
Ackerman-Blaesser-Fenney, Incorporated. (See Ackerman, Edward L., assignor.)
Ackerman, Edward L., assignor to Ackerman-Blaesser-Fenney, Incorporated, Detroit, Mich. Automatic window regulator. 1,905,876; Apr. 25.
Acme Steel Company. (See Wilson, Allen B., assignor.)
Adam, Frederick B., St. Louis, Mo. Panel-board section. 1,905,121; Apr. 25.
Adams, J. D., Manufacturing Company. (See Notvest, Robert, assignor.)
Adams, Oscar C., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe and the manufacture thereof. 1,905,205; Apr. 25.
Adams, Roy S., assignor of one-half to J. Pinto, Saginaw, Mich. Automatic furnace regulator. 1,905,977; Apr. 25.
Ad-Bag Sales Corporation, The. (See Christianson, David A., assignor.)
Addressograph Company. (See Duncan, Joseph S., assignor.)
Addressograph Company. (See Ziege, Karl, assignor.)
Aderer, Julius, New York, N. Y. Orthodontic appliance. 1,906,877; Apr. 25.
Adlake Company, The. (See Forbregd, G. T., and Cornish, assignors.)
Adlake Company. (See Sevison, Harry D., assignor.)
Aeschlimann, John A., Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Disubstituted carbamic acid esters of phenols containing a basic constituent. 1,906,960; Apr. 25.
Affel, Herman A., Ridgewood, N. J., assignor to American Telephone and Telegraph Company. Channel selection. 1,906,859; Apr. 25.
Ahlmann, Nikolai, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Apparatus for grinding materials which contain particles of iron. 1,906,780; Apr. 25.
Air Systems Incorporated. (See Burner, James A., assignor.)
Air Way Electric Appliance Corporation. (See Riebel, F., jr., and Dow, assignors.)
Aitkenhead, William, Failsworth, England. Flexible harrow or cultivator. 1,906,671; Apr. 25.
Aktiebolaget Formator. (See Granstedt, Erik, assignor.)
Aktiebolaget Formator. (See Granstedt, Karl E., assignor.)
Aktiengesellschaft Brown, Boveri & Cie. (See Couwenhoven, Abraham, assignor.)
Aktiengesellschaft Brown, Boveri and Cie. (See Stoecklin, Josef, assignor.)
Albertine, Herman, East Rutherford, N. J., assignor to Rogers Products Company, Inc. Lubricating apparatus. 1,905,878; Apr. 25.
Albertson & Company. (See Albertson, Frans O., assignor.)
Albertson, Frans O., assignor to Albertson & Company, Inc., Sioux City, Iowa. Valve seat ring driver. 1,905,879; Apr. 25.
Alden, John L., Wyncote, Pa., and C. J. McCarthy, East Orange, N. J., assignors, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y. Comparing time mechanisms. 1,906,778; Apr. 25
Alemite Corporation. (See Fesler, Douglas F., assignor.)
Alemite Corporation. (See Locke, S. D., Doech, and Stegeman, assignors.)
Alemite Corporation. (See Thomas, G. F., and Herb, assignors.)
Alexander, Clinton B., Washington, D. C. Connecter for repairing metallic measuring tapes. 1,906,128; Apr. 25.
Alexander, Gustaf, Chicago, Ill. Building structure. 1,906,040; Apr. 25.
Alexander, William, Glasgow, Scotland. Centrifugal separator. 1,905,779; Apr. 25.
Allegheny Steel Company. (See Ponce, Lucien G., assignor.)
Allen, Alexander, Providence, R. I. Towel cabinet and towel pack therefor. 1,905,206; Apr. 25.
Allen, Lavont C., assignor to The Lamson Company, Syracuse, N. Y. Conveyer system. 1,905,025; Apr. 25.
Allen-Sherman-Hoff Company, The. (See Rome, Jacob, assignor.)
Allendorf, Fritz, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Dynamo-electric ignition apparatus. 1,905,580; Apr. 25.
Allington, William E., Saginaw, Mich. Wood-waste feeding system. 1,906,781; Apr. 25.
Allis-Chalmers Manufacturing Company. (See Fiucior, Alfred K., assignor.)
Almy, Richard, Little Compton, R. I., assignor to Dewey and Almy Chemical Company, North Cambridge, Mass. Dispersion of rubber in nonaqueous liquids. 1,905,026; Apr. 25.
Aloserij, Nicolaas J. G. (See Carswell, T. S., Stehlby, and Aloserij.)
Alsaker, Alfred, and E. S. Cornelissen, assignor to The Delta Star Electric Company, Chicago, Ill. Adjustable lever. 1,905,784; Apr. 25.
Altwicker, Hubert. (See de Ridder, E., and Altwicker.)
Aluminum Screw Machine Products Company. (See Chestnut, Robert, assignor.)
Amann, Rudolf. (See Hissnay, L., and Amann.)
Amatel, Harold, East Orange, N. J., assignor to Westinghouse Lamp Company. Six-lamp wrapper. 1,905,027; Apr. 25.
Amdursky, Samuel S., assignor to Taylor Instrument Companies, Rochester, N. Y. Manometer. 1,905,782; Apr. 25.
American Ball Mill Company. (See Jugel, Rudolf P., assignor.)
American Brake Shoe and Foundry Company, The. (See Sutherland, Wallace B., assignor.)
American Circular Loom Company. (See Lutz, George A., assignor.)
American Circular Loom Company. (See Lutz, G. A., and Kramer, assignors.)
American Dyewood Company. (See Cole, Robert M., assignor.)
American Fabrics Company, The. (See Juestrich, Max U., assignor.)
American Glanzstoff Corporation. (See Stoeckly, J. J., and Bartunek, assignors.)
American Liquid Meter Company. (See Bassler, Carlos J., assignor.)
American Metal Company, The. (See Weinig, A. J., and Cuthbertson, assignors.)
American Optical Company. (See Baker, Nelson M., assignor.)
American Optical Company. (See Laabs, Max A., assignor.)
American Sales Book Company, Limited. (See Bottle, Edward K., assignor.)
American Seating Company. (See Hamilton, George H., assignor.)
American Seating Company. (See Hanson, Walter M., assignor.)
American Steel Foundries. (See Kayler, Frank H., assignor.)
American Tar Products Company. (See Rhodes, R. O., and Hager, assignors.)
American Telephone and Telegraph Company. (See Affel, Herman A., assignor.)
American Telephone and Telegraph Company. (See Potter, Ralph K., assignor.)
American Tobacco Company, The. (See Mallgraf, Ferdinand, assignor.)
American Zeolite Corporation. (See Riley, Ray, assignor.)
Anchor Packing Company, The. (See Walton, Julian N., assignor.)
Andersen, Johan M., Brookline, assignor to Albert & J. M. Anderson Manufacturing Company, Boston, Mass. Rewinding mechanism for clock springs. 1,905,783; Apr. 25.
Anderson, Albert & J. M., Manufacturing Company. (See Andersen, Johan M., assignor.)
Anderson, August E., Montclair, N. J. Spark plug. 1,905,957; Apr. 25.
Anderson Banking Company, executor. (See Norviel, Harry E.)
Anderson, Norman T. (See Sweeley, E. A., and Anderson.)
Andres, William J., assignor to Bendix Brake Company, South Bend, Ind. Controlling means. 1,906,826; Apr. 25.

Andrews, Charles W., and A. J. Boynton, assignors to H. A. Brassert & Company, Chicago, Ill. Treatment of oil gas. 1,905,028; Apr. 25.
Andrews, Isaac, Spartanburg, S. C. Antirattle device. Re18,800; Apr. 25.
Anselmo, Peter J. (See Leschke, H. M., and Anselmo.)
Antrim, William D., Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa. Gas range grid. Des. 89,673; Apr. 25.
Antrim, William D., Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa. Gas range. 1,905,672; Apr. 25.
Apco Mossberg Corporation. (See Jackson, Alfred F., assignor.)
Archea, Walter D., assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Milling machine. 1,905,678; Apr. 25.
Arco Vacuum Corporation. (See Carter, A. P., Hynes, and Cronin, assignors.)
Arford, Merton K. (See Dickinson, Lloyd W., assignor.)
Armitage, Ned. (See Kellett, I., Armitage, and Wood.)
Arnold, Clarence F., Drexel Hill, Pa. Tasseling machine. 1,905,978; Apr. 25.
Aro Equipment Corporation, The. (See Carter, John F., assignor.)
Aronson, Louis V., Newark, N. J., assignor to Art Metal Works, Inc. Combined safety razor and sharpening device. 1,905,329; Apr. 25.
Aronson, Louis V., Newark, N. J., assignor to Art Metal Works, Inc. Combined safety razor and sharpening device. 1,905,330; Apr. 25.
Aronson, Louis V., Newark, N. J., assignor to Art Metal Works, Inc. Combined safety razor and sharpening device. 1,905,331; Apr. 25.
Arpin, Louis J., New York, N. Y. Method and means of identification. 1,906,129; Apr. 25.
Art Concrete Works, Inc. (See Haase, L. G., and Brooks, assignors.)
Art Metal Works, Inc. (See Aronson, Louis V., assignor.)
Arthur, James L. (See Prescott, F. H., and Arthur.)
Aseltine, Fred E., assignor to Delco Products Corporation, Dayton, Ohio. Duplex charge forming device. 1,905,029; Apr. 25.
Aseltine, Fred E., assignor to Delco Products Corporation, Dayton, Ohio. Charge forming device. 1,905,030; Apr. 25.
Ashworth, Fred, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe sewing machine. 1,905,031; Apr. 25.
Ashworth, Fred, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sewing machine shuttle. 1,905,032; Apr. 25.
Askania-Werke Aktiengesellschaft. (See Möller, Waldemar, assignor.)
Associated Electric Laboratories, Inc. (See Doyle, Frederick W., assignor.)
Associated Electric Laboratories, Inc. (See Tharp, Victor S., assignor.)
Associated Electric Laboratories, Inc. (See Weinreich, George F., assignor.)
Austin, John T., assignor to The Austin Organ Company, Hartford, Conn. Combination organ stop action. 1,905,880; Apr. 25.
Austin Manufacturing Co. (See Morse, W. G., Wilson, and Wuestenberg, assignors.)
Austin Organ Company, The. (See Austin, John T., assignor.)
Auto Research Corporation. (See Bijur, Joseph, assignor.)
Avey Drilling Machine Company, The. (See Friedl, Joseph, assignor.)
Avila, Joseph T., Providence, R. I. Automobile commode. 1,905,881; Apr. 25.
Baash, Lawrence F., and E. Burns, Los Angeles, and G. B. Garrard, Long Beach, Calif. Packing assembly. 1,905,122; Apr. 25.
Babbs, Alfred J., Longsight, Manchester, England. Splash guard for motor vehicles. 1,905,674; Apr. 25.
Babcock & Wilcox Company, The. (See Harter, Isaac, assignor.)
Babcock & Wilcox Company, The. (See Jacobus, David S., assignor.)
Babcock & Wilcox Company, The. (See Jacobus, D. S., and Black, assignors.)
Babcock & Wilcox Company, The. (See Kerr, H. J., and Jones, assignors.)
Babitch, Abraham M., and M. G. Hanson, Flint, Mich. Fuel pump operating means. 1,905,207; Apr. 25.
Bacon, Robert H., Oakland, Calif. Check valve for rubber Balls. 1,905,361; Apr. 25.
Bacqueyrisse, Louis, Paris, France. Electric traction system employing compound motors. 1,905,428; Apr. 25.
Badgett, James L., Boling, assignor of one-fourth to W. C. McMasters and one-fourth to J. E. Pomeroy, Pasadena, Tex. Sand tester. 1,905,208; Apr. 25.
Baetz, Walter, New York, N. Y., assignor to Man-O-Lamp Corporation. Picture frame. Des. 89,674; Apr. 25.
Baetz, Walter, New York, N. Y., assignor to Man-O-Lamp Corporation. Picture frame. Des. 89,675; Apr. 25.
Baetz, Walter, New York, N. Y., assignor to Man-O-Lamp Corporation. Picture frame. Des. 89,676; Apr. 25.
Bailey, R. W., et al. (See Schurts, Ralph E., assignor.)
Bailey, Sidney, jr., Ablington, Pa. Drum for dyeing, etc. 1,906,180; Apr. 25.
Bailey, Walter T. (See Federwitz, T. A., and Bailey.)
Baker, John C. (See Dunbar, H. W., and Baker.)
Baker, John H. B., Aldwych, London, England, assignor to International Standard Electric Corporation, New York, N. Y. Automatic telephone system using single motion switch by-path circuits. 1,905,785; Apr. 25.
Baker, Nelson M., assignor to American Optical Company, Southbridge, Mass. Ophthalmic mountings. 1,905,675; Apr. 25.
Baldwin, John W., jr. (See Weatherhead, A. J., jr., and Baldwin, jr.)
Balke, Clarence W., Highland Park, assignor to Fansteel Products Company, Inc., North Chicago, Ill. Metallic columbium and making the same. 1,905,882; Apr. 25.
Ball, Albert P., assignor to Briggs Manufacturing Company, Detroit, Mich. Door and window construction. 1,905,429; Apr. 25.
Ball, Edward M., Bloomingdale, N. J., assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company. Manufacture of laminated glass. 1,905,430; Apr. 25.
Banbury, Fernley H. (See Schnuck, C. F., and Banbury.)
Bancroft, Albert F., West Newton, assignor to Bancroft-Walker Company, Boston, Mass. Making footwear. 1,905,786; Apr. 25.
Bancroft-Walker Company. (See Bancroft, Albert F., assignor.)
Banner, Otto A., Highland Park, assignor to John Waldron Corporation, New Brunswick, N. J. Shaft coupling. 1,905,431; Apr. 25.
Barbé, Edgar H., assignor to Rollodor Manufacturing Company, Los Angeles, Calif. Mobile ash tray. 1,905,123; Apr. 25.
Barber Asphalt Company, The. (See Douthett, Orin R., assignor.)
Barber-Colman Company. (See Edgar, John, assignor.)
Barber-Colman Company. (See Sinderson, John B., assignor.)
Barber, George H., New Rochelle, N. Y., assignor to Bond Electric Corporation, Jersey City, N. J. Flash light bottom cap with spare bulb carrier. 1,905,787; Apr. 25.
Barbulesco, Constantin D. (See Edwards, P. S., and Barbulesco.)
Barbulesco, Constantin D., assignor to P. S. Edwards, Dayton, Ohio. Capacity controlled relay. 1,905,332; Apr. 25.
Barclay, Sidney F., Manchester, England, assignor to General Fire Extinguisher Company, Providence, R. I. Automatic sprinkler or fire extinguisher and other fire device. 1,905,676; Apr. 25.
Baron, Charles S., Tiffin, Ohio. Container and in sealing closure therefor. 1,905,628; Apr. 25.
Barrett, Harold G., Wilmette, assignor to Pyratone Products Corporation, Chicago, Ill. Golf club. 1,905,406; Apr. 25.
Barrett, Ray W., Torrance, Calif. Antifriction equalising bearing. 1,905,333; Apr. 25.
Barstow, Edwin O., and S. B. Heath, Midland, assignors to The Dow Chemical Company, Midland, Mich. Apparatus for contacting solid and gaseous materials. 1,905,883; Apr. 25.
Barthelemy, Henri L., Milan, Italy, assignor to Ruthaldo Company Inc., New York, N. Y. Formation of filaments and the like of a cellulose ester. 1,906,041; Apr. 25.
Barthelemy, Henri L., Rome, Ga. Spinning cell for the manufacture of artificial filaments with auto-recovery of the volatile solvents. 1,906,042; Apr. 25.
Barton, James P., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company. Radio receiving system. 1,905,260; Apr. 25.
Bartunek, Richard. (See Stoeckly, J. J., and Bartunek.)
Bassler, Carlos J., assignor to American Liquid Meter Company, Alhambra, Calif. Meter. 1,905,549; Apr. 25.
Bast, Frank J., Queens Village, assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y. Temperature and pressure controller. 1,905,788; Apr. 25.
Bates Manufacturing Company, The. (See Svensson, Victor A., assignor.)
Bauer, Walter, assignor to Roh. & Haas Aktiengesellschaft. Darmstadt, Germany. Manufacture of hydrogen chloride or hydrogen bromide or their corresponding acid solutions. 1,905,432; Apr. 25.
Baum, Isaac A., Chicago, Ill. Footplate for door frames. 1,905,124; Apr. 25.
Baum, Isaac A., Chicago, Ill. Metal jamb construction. 1,905,125; Apr. 25.
Baylis, George A., Huntington, N. Y. Battery light for refrigerators, ice boxes, closets, and the like. 1,906,131; Apr. 25.
Beam, Vilynn O., assignor to Surface Combustion Corporation, Toledo, Ohio. Motor operated valve. 1,905,884; Apr. 25.
Becker, Logan A. (See Egger, W. F., and Becker.)
Beckley, Will. (See Gross, William M., assignor.)
Beddoe, Ira H., Venice, Calif. Expansion compensator. 1,905,991; Apr. 25.
Beeman, Edwin R., Minneapolis, Minn. Electrical door operating device. 1,905,126; Apr. 25.
Behrsing, David. (See Godshalk, C. A., Henke, and Behrsing.)
Belden, Albert G., and H. A. Silven, assignors to Norton Company, Worcester, Mass. Hydraulically operated grinding machine. 1,905,127; Apr. 25.
Belgard, Austin B., Chicago, Ill., assignor to Belgard-Spero, Inc. Temple for spectacles. Des. 89,677; Apr. 25.
Belgard-Spero, Inc. (See Belgard, Austin B., assignor.)

Bell Telephone Laboratories, Incorporated. (See Bruce, Edmond, assignor.)
Bell Telephone Laboratories, Incorporated. (See Harrison, Henry C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hinrichsen, Edward E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Horton, Joseph W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Ives, Herbert E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Landsman, Wesley E., assignor.)
Bell Telephone Laboratories, Incorporated. (See St. John, E., and Miller, assignors.)
Bell Telephone Laboratories, Incorporated. (See Ulrich, Horace W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Yenser, George R., assignor.)
Bemis Industries, Incorporated. (See Brown, Horatio W., assignor.)
Bemis Industries, Incorporated. (See Litchfield, Isaac W., assignor.)
Bendix Aviation Corporation. (See Lansing, Raymond P., assignor.)
Bendix Aviation Corporation. (See Lorensen, Christian, assignor.)
Bendix Brake Company. (See Andres, William J., assignor.)
Bendix Brake Company. (See Parker, Humphrey F., assignor.)
Benner, Anthony A., and R. A. Schatzel, Rome, assignors to General Cable Corporation, New York, N. Y. Insulated electrical conductor. 1,905,789; Apr. 25.
Bennett, Edwin O., assignor to Continental Oil Company, Ponca City, Okla. Dry ice conversion unit. 1,905,885; Apr. 25.
Bennett, Owen G., Baltimore, Md., and C. B. Jackson, Meridian, Miss., assignors to Catalyst Research Corporation, Baltimore, Md. Hydrogenation catalyst. 1,905,433; Apr. 25.
Benson, Pamella F., Long Beach, Calif. Baby's folding crib. 1,905,128; Apr. 25.
Bergen, George M., et al. (See Hatfield, Floyd H., assignor.)
Bergen, Gustav, F. Engelhardt, and R. Steckhan, assignors to "Miag" Muhlenbau und Industrie Aktiengesellschaft, Brunswick, Germany. Manufacturing white Portland cement, etc. Re18,805; Apr. 25.
Berkowitz, Michael, New York, assignor to United Research Corporation, Long Island City, N. Y. Motion picture projecting machine. 1,905,886; Apr. 25.
Berns, John V., Kenosha, Wis., assignor to Simmons Company, New York, N. Y. Orthopedic bed. 1,905,887; Apr. 25.
Bernstein, Max, Cincinnati, Ohio. Dog harness. 1,906,043; Apr. 25.
Bernström, Seth F., Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y. Speed indicator. 1,905,261; Apr. 25.
Berns, Otto, Co. Inc. (See Berns, W., Flitcroft, and Imfeld, assignors.)
Berns, William, J. B. Flitcroft, and J. M. Imfeld, assignors to Otto Berns Co. Inc., Newark, N. J. Plumber's furnace. 1,905,617; Apr. 25.
Berry, George P., assignor to General Motors Research Corporation, Detroit, Mich. Screw type mechanical lash adjuster for valves. 1,905,888; Apr. 25.
Berry, Thomas D., Markdale, Ontario, Canada. Lightning arrester. 1,905,970; Apr. 25.
Bertran, Benjamin E., Los Angeles, Calif., assignor of one-half to Josie A. Bertran. Underreamer. 1,905,905; Apr. 25.
Bertran, Josie A. (See Bertran, Benjamin E., assignor.)
Beryllium Development Corporation. (See Smith, Joseph K., assignor.)
Best, Virgil H., Pasadena, Calif. Fish lure. 1,905,407; Apr. 25.
Bethlehem Steel Company. (See Stevens, Richard H., assignor.)
Bicker, Edgar B., St. Louis, Mo. Paper receptacle and making the same. 1,905,284; Apr. 25.
Biel, Fa. Richard. (See von Fischer, Waldemar, assignee.)
Biggert, Florence C., jr., Crafton, and L. Johnson, Ingram, assignors to United Engineering & Foundry Company, Pittsburgh, Pa. Rolling mill. 1,905,129; Apr. 25.
Bijur, Joseph, New York, N. Y., assignor to Auto Research Corporation. Chassis lubricating installation and the flow control elements thereof. 1,905,335; Apr. 25.
Billiter, Irvin A., Burnham, Pa. Open hearth furnace. 1,905,677; Apr. 25.
Binder, George A., assignor to R. Malcom, Chicago, Ill. Goggles. 1,905,130; Apr. 25.
Birdseye, Clarence, and B. Hall, Gloucester, Mass., assignors to Frosted Foods Company, Inc., Dover, Del. Refrigerating apparatus. 1,905,131; Apr. 25.
Bishop, Benjamin S. T., Shrewsbury, and R. J. Hirvonen, Worcester, Mass., assignors to Leland-Gifford Company. Control for hydraulic feeding mechanism. 1,905,132; Apr. 25.
Bishop, Benjamin S. T., Shrewsbury, and R. J. Hirvonen, Worcester, Mass., assignors to Leland-Gifford Company. Hydraulic feed for machinery. 1,905,133; Apr. 25.
Bixby, John L., Arlington, assignor to Ke-Bond Company, Incorporated, Boston, Mass. Mold and bonding means. 1,905,134; Apr. 25.
Black, Herman, W. Holmes, and M. A. Hesse, assignors to Evening American Publishing Company, Chicago, Ill. Apparatus for coloring paper. 1,905,889; Apr. 25.
Black, John E. (See Jacobus, D. S., and Black.)
Blackwood, Oswald H., Pittsburgh, Pa., and L. P. Bass, Woods Hole, Mass., assignors to The Koppers Company of Delaware. Humidifying apparatus. 1,905,135; Apr. 25.
Bladin, Walter C. (See Wardwell, H. F., and Bladin.)
Blaikie, Kenneth G., and G. O. Morrison, Shawinigan Falls, assignors to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Ester-aldehyde gum emulsion and making same. 1,906,207; Apr. 25.
Blaivas, Abraham J., Brooklyn, N. Y. Ampoule. 1,905,362; Apr. 25.
Blakely, Sidney B., Minneapolis, Minn., assignor to Mitchell Battery Company. Collapsible luggage carrier. 1,905,890; Apr. 25.
Blanchard, Frederick C., Boston, Mass. Machine for combing textile fibers. 1,905,336; Apr. 25.
Blanchard, Werner J., Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc. Aeronautical propeller. 1,905,891; Apr. 25.
Blaw-Knox Company. (See Voelker, Fred, jr., assignor.)
Bliss, John, assignor to C. C. Wakefield & Company, Limited, London, England. Lubricating device. 1,905,136; Apr. 25.
Block, Samuel R. (See Duraney, Stephen J., assignor.)
Blomberg, Per H., Chicago, Ill. Collapsible shipping crate. 1,905,137; Apr. 25.
Blume, George F., Philadelphia, Pa. Bearing structure. 1,906,122; Apr. 25.
Bodard, Fernand. (See Bodart, Jules, assignor.)
Bodart, Jules, Brussels, assignor to F. Bodart, Marchienne au Pont, Belgium. Metallic packing means for the shafts of centrifugal pumps and other rotary machines. 1,905,618; Apr. 25.
Boecking, Ewald. (See Frappier, L. S., and Boecking.)
Bogley, Preston P., Chicago, Ill. Rubber clothespin. 1,905,958; Apr. 25.
Bogren, Edward C., Portland, Oreg. Convertible paper box. 1,905,992; Apr. 25.
Bohlin, Olof G., assignor to Helsingborgs Gummifabriks Aktiebolag, Helsingborg, Sweden. Rubber articles of every kind. 1,905,338; Apr. 25.
Bolcom, Clarence A., Ionia, Mich. Safety attachment for aeroplanes. 1,905,337; Apr. 25.
Bollinger, William A., Pittsburgh, Pa. Heating apparatus. 1,905,550; Apr. 25.
Bond Electric Corporation. (See Barber, George H., assignor.)
Bond, Harlan A., Metuchen, N. J., assignor, by mesne assignments, to The Roessler and Hasslacher Chemical Company, New York, N. Y. Concentration of formaldehyde solutions. 1,905,023; Apr. 25.
Bonner, Daniel B., Philadelphia, Pa. Thread printing apparatus. 1,905,138; Apr. 25.
Bonsall, Charles D., assignor to P. H. Murphy Company, New Kensington, Pa. Load lifting arrangement. 1,905,678; Apr. 25.
Booth, Clement. (See Haas, F. S., and Booth.)
Borland, Bruce, Chicago, Ill. Seal. 1,905,139; Apr. 25.
Borsig, A., G. m. b. H. (See Oechel, Wilhelm, assignor.)
Bosch, Robert, Aktiengesellschaft. (See Allendorff, Fritz, assignor.)
Bosch, Robert, Aktiengesellschaft. (See Lorenze, Max, assignor.)
Boss, Lester F. (See Blackwood, O. H., and Boss.)
Bossart, Paul N., assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical amplifier. 1,905,209; Apr. 25.
Bossini, Raoul F. (See Maiuri, G., and Bossini.)
Botsford, Albert E., Walla Walla, Wash. Seeding implement. 1,905,892; Apr. 25.
Bottle, Edward K., Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada. Manifolding book. 1,905,893; Apr. 25.
Bowers, Frederick M., Chester, Pa. Welder's mask. 1,905,210; Apr. 25.
Bowser, S. F., & Company. (See Griffith, Clement P., assignor.)
Boyce, William F., Toronto, Ontario, Canada. Valve for internal combustion engines. 1,905,140; Apr. 25.
Boyens, Paul J., et al. (See Ryan, Thomas H., assignor.)
Boyer, Fernand, St. Quentin, France. Hopper crane of the movable and traveling type. 1,905,434; Apr. 25.
Boynton, Arthur J. (See Andrews, C. W., and Boynton.)
Boynton, Arthur J., and P. Zimmerman, assignors to H. A. Brassert & Company, Chicago, Ill. Apparatus for charging furnaces. 1,905,679; Apr. 25.
Boynton, Vera K., Milwaukee, Wis., assignor to Duplate Corporation. Process and apparatus for making composite glass or other composite articles. 1,905,211; Apr. 25.
Bracke, Robert F., Chicago, assignor, by mesne assignments, to L. A. Williams, Evanston, and C. C. Bradbury, Glencoe, Ill., trustees. Carburetor. 1,905,435; Apr. 25.
Bradbury, Clifford C., et al., trustees. (See Bracke, Robert F., assignor.)

Bradshaw, William M., Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company. Auxiliary meter attachment for wattbour meters. 1,905,262; Apr. 25.
Brand, Frederick F., Pittsfield, Mass., assignor to General Electric Company. Magnetic core with supporting and clamping structure. 1,905,790; Apr. 25.
Brandt, Francis L., Wakefield, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Locating shank pieces. 1,905,894; Apr. 25.
Brassert, H. A., & Company. (See Andrews, C. W., and Boynton, assignors.)
Brassert, H. A., & Company. (See Boynton, A. J., and Zimmermann, assignors.)
Braun, Carl A., Munich, Germany, assignor to International Bitumen Emulsions Corporation, San Francisco, Calif. Water-proofing materials with aqueous emulsions. 1,905,212; Apr. 25.
Brierly, Benjamin R., Seattle, Wash. Canned fish package and preparing the same. 1,905,338; Apr. 25.
Briggs Manufacturing Company. (See Ball, Albert P., assignor.)
Briggs, Norman R. (See Halsted, H. J., and Briggs.)
Briggs & Stratton Corporation. (See Fitz Gerald, John W., assignor.)
Briggs & Stratton Corporation. (See Jacobi, Edward N., assignor.)
Brindley, Ralph, Tacoma, Wash. Electric branding iron. 1,905,864; Apr. 25.
British Coal Distillation Limited. (See Machen, Clifford, assignor.)
Bronson, Budd, assignor to The Ohio Rubber Company, Cleveland, Ohio. Running board. 1,905,895; Apr. 25.
Brooks, Frank M. (See Haase, L. G., and Brooks.)
Brown, Carl A., East Cleveland, and F. B. Van Sickle, Wickliffe, Ohio, assignors to General Electric Company. Apparatus for sorting rods and tubes. 1,905,791; Apr. 25.
Brown Company. (See Burke, Edmund, assignor.)
Brown Company. (See Richter, G. A., Van Arsdel, and Hill, assignors.)
Brown Company. (See Schur, Milton O., assignor.)
Brown Company. (See Vannah, Harold P., assignor.)
Brown, Frank, New York, N. Y. Skylight awning. 1,905,339; Apr. 25.
Brown, Horatio W., Concord, assignor to Bemis Industries, Incorporated, Boston, Mass. Strand treating apparatus and method. 1,905,896; Apr. 25.
Brown & Sharpe Mfg. Co. (See Harley, John, assignor.)
Brown & Sharpe Mfg. Co. (See Rich, Charles A., assignor.)
Browne, Vere B., Brackenridge, Pa. Alloy for use in the cracking of petroleum. 1,905,436; Apr. 25.
Bruce, Edmond, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission system. 1,905,792; Apr. 25.
Bruce, William McA., assignor to The Permutit Company, New York, N. Y. Making zeolites. 1,906,202; Apr. 25.
Bruce, William McA., assignor to The Permutit Company, New York, N. Y. Manufacture of water-softening zeolites. 1,906,203; Apr. 25.
Bruijnes, Johannes. (See Zecher, Gustav, and Bruijnes.)
Brundage, James W., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio. Vulcanizer. Re18,808; Apr. 25.
Bryant Electric Company. (See Webster, Benjamin C., assignor.)
Buchan, Hugh G., Philadelphia, Pa. Mechanism for shifting sheets. 1,905,437; Apr. 25.
Buchi, Alfred, Winterthur, Switzerland. Turbo blower aggregate for internal combustion engines. 1,906,132; Apr. 25.
Buckingham, Alfred O., New Rochelle, assignor to Cluett, Peabody & Co., Troy, N. Y. Garment board. 1,905,793; Apr. 25.
Budd Wheel Company. (See Tarbox, John P., assignor.)
Buff, Carl T., Berlin-Spandau, Germany, assignor, by mesne assignments, to International Precipitation Company, Los Angeles, Calif. Treatment of gases. 1,905,993; Apr. 25.
Bunting Brass & Bronze Company, The. (See Yager, George F., assignor.)
Burda, John L. (See Palmer, R. C., Burda, and Oliver.)
Burgess, Louis, New York, N. Y. Concentrating beryllium oxide occurring in materials containing beryllium silicate or silicates. 1,905,340; Apr. 25.
Burk, Robert E., assignor to The Standard Oil Company, Cleveland, Ohio. Improving cracked petroleum distillates. 1,906,044; Apr. 25.
Burke, Edmund, Portland, Me., assignor to Brown Company, Berlin, N. H. Conduit for subway cables. 1,905,794; Apr. 25.
Burke, James P., Wayne, N. J., assignor to Kept-Kant, Inc., Knoxville, Tenn. Collapsible dispenser. 1,905,994; Apr. 25.
Burkle, Philip J., assignor to C. G. Conn, Ltd., Elkhart, Ind. Wind musical instrument. 1,905,141; Apr. 25.
Burlet, Berthe. (See Malleval, F., Veuve.)
Burner, James A., assignor to Air Systems Incorporated, Minneapolis, Minn. Process and apparatus for producing dehydrated products. 1,905,263; Apr. 25.
Burnett, Richard W., Chicago, Ill. Side hand brake for railway cars. 1,905,213; Apr. 25.
Burns, Bruce, and H. B. Lewis, Los Angeles, Calif., assignors to Hughes Tool Company, Houston, Tex. Boiler water control. 1,905,142; Apr. 25.
Burns, Erwin. (See Baash, L. F., Burns, and Garrard.)
Burns, Fred J., assignor to Columbia Mills, Incorporated, Saginaw, Mich. Venetian blind. 1,905,979; Apr. 25.
Burns, Fred J., assignor to The Columbia Mills, Saginaw, Mich. Shade roller. 1,905,980; Apr. 25.
Burns, James E., Bridgeport, Conn., assignor to Remington Arms Company, Inc. Ammunition. 1,905,795; Apr. 25.
Burns, James E., Bridgeport, Conn., assignor to Remington Arms Company, Inc. Ammunition. 1,905,796; Apr. 25.
Burns, Peter E., assignor to Pass & Seymour, Inc., Syracuse, N. Y. Convenience outlet for canopies. 1,905,341; Apr. 25.
Burton, Warren D., Oak Park, assignor to Combustioneer, Inc., Cicero, Ill. Mechanical stoker. 1,905,342; Apr. 25.
Bush, Leroy F., Edwardsville, Kans. Radio clock. 1,905,214; Apr. 25.
Busse, Edwin G., assignor to Chicago Railway Equipment Company, Chicago, Ill. Railway truck construction. 1,905,680; Apr. 25.
Butler Manufacturing Company. (See Norquist, V. C., and Treanor, assignors.)
C-S Engineering Company. (See Schellens, Eugene L. and C. A., assignors.)
Cadieux, Joseph O., assignor to Connecticut Telephone & Electric Corporation, Meriden, Conn. Telephone system and apparatus. 1,905,215; Apr. 25.
Cadwell, Sidney M., Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn. Treating rubber and product obtained thereby. 1,905,797; Apr. 25.
Cadwell, Sidney M., Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn. Mercapto aryl thiazoles and making them. 1,905,798; Apr. 25.
Cahill, Charles T., Boston, Mass. Mold. 1,905,897; Apr. 25.
Cain, William E. (See Gotthardt, H. B., and Cain.)
Camel Company. (See Tobin, Kenneth J., assignor.)
Cameron, Hugh M., Woodhaven, N. Y., assignor, by mesne assignments, to Seederer-Kohlbusch, Inc., Jersey City, N. J. Low type even balance counter scale. 1,905,898; Apr. 25.
Camille, Dreyfus, New York, N. Y., and G. Schneider, Montclair, N. J., assignors to Celanese Corporation of America. Discharge printing and fabric produced thereby. 1,905,347; Apr. 25.
Campbell, Samuel J., assignor of one-half to Hudson-Sharp Machine Company, Green Bay, Wis. Paper folding, winding, and cutting, and mechanism therefor. 1,905,899; Apr. 25.
Campbell, Walter H., Springfield, and W. C. Ellsworth and C. J. Madsen, Chicopee Falls, Mass., assignors to Westinghouse Electric and Manufacturing Company. Built-up condenser plate. 1,905,264; Apr. 25.
Canadian Electro Products Company, Limited. (See Blaikie, K. G., and Morrison, assignors.)
Candor, Robert R., assignor to Frigidaire Corporation, Dayton, Ohio. Refrigerating apparatus. 1,904,991; Apr. 25.
Cappa, Frank L., Milford, Conn. Radio receiving apparatus. 1,905,216; Apr. 25.
Caprio, Amerigo F. (See Walsh, J. F., and Caprio.)
Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic color process. 1,905,438; Apr. 25.
Carey, Philip, Manufacturing Company, The. (See Fischer, Albert C., assignor.)
Carleton, Robert A., Brooklyn, assignor to National Electric Heating Co., Inc., New York, N. Y. Electric fluid heating apparatus. 1,905,439; Apr. 25.
Carlin, James C., Norristown, assignor to Lee Rubber and Tire Corporation, Conshohocken, Pa. Making inner tubes. 1,905,365; Apr. 25.
Carlin, James C., Norristown, assignor to Lee Rubber and Tire Corporation, Conshohocken, Pa. Machine for cutting rubber stock. 1,905,366; Apr. 25.
Carlisle, Paul J., and R. P. Ward, Niagara Falls, assignors to The Roessler & Hasslacher Chemical Company, New York, N. Y. Vapor recovery. 1,905,900; Apr. 25.
Carlson, Edwin G., Riverside, assignor to Speidel Chain Co., Providence, R. I. Extension device. 1,905,681; Apr. 25.
Carlson, Elof L., assignor to The E. Ingraham Company, Bristol, Conn. Wrist watch and the like. 1,905,682; Apr. 25.
Carpenter, Webster I., Norfolk, Va. Fluid temperature maintainer. 1,905,343; Apr. 25.
Carr, James D., Detroit, Mich., assignor to Pittsburgh Reflector Company, Pittsburgh, Pa. Electric light strip. 1,905,143; Apr. 25.
Carraway, Thomas W., Chicago, Ill., assignor to General Fire Extinguisher Company, Providence, R. I. Thermostatically controlled valve. 1,905,683; Apr. 25.
Carrier Engineering Company Limited. (See Robertson, Kenneth J. R., assignor.)
Carse, Orlando M., Maple Heights, Ohio. Apron for car dumpers. 1,905,867; Apr. 25.

Carswell, Thomas S., E. T. Stebby, and N. J. G. Alosert, assignors to Monsanto Chemical Works, St. Louis, Mo. Producing esters. 1,905,144; Apr. 25.
Carter, Arthur P., and M. J. Hynes, Chicago, and J. C. Cronin, Oak Park, Ill., assignors to Arco Vacuum Corporation, New York, N. Y. Squeegee machine. 1,905,440; Apr. 25.
Carter, John F., assignor to The Arc Equipment Corporation, Bryan, Ohio. Grease gun. Des. 89,678; Apr. 25.
Carter, Samuel C., Los Angeles, Calif. Transmission. 1,905,145; Apr. 25.
Carton, Arthur, et al. (See Carton, Lee C., assignor.)
Carton, Lee C., Detroit, assignor to A. Carton, J. H. Henderson, J. H. Montgomery, and H. Trimble, Toronto, and T. Watson, Woodstock, Ontario, Canada. Cement block molding machine. 1,905,619; Apr. 25.
Case, Frank E., Erie, Pa., assignor to General Electric Company. Constant level lubricating device for bearings. 1,905,799; Apr. 25.
Case, J. I., Company. (See Traphagen, Harry R., assignor.)
Casey, William F. (See Pullen, R. S., Casey, and Thomas.)
Cash, A. W., Company. (See Terry, Charles M., assignor.)
Catalyst Research Corporation. (See Bennett, O. G., and Jackson, assignors.)
Cavanagh, Gerald F. (See Marbach, E. R., and Cavanagh.)
Cegler, Carl. (See Schorno, Albert, assignor.)
Celanese Corporation of America. (See Cope, E. C., and Kinsella, assignors.)
Celanese Corporation of America. (See Dreyfus, C., and Schneider, assignors.)
Celanese Corporation of America. (See Ellis, G. H., and Olpin, assignors.)
Celluloid Corporation. (See Walsh, J. F., and Caprio, assignors.)
Champion Corporation. (See Farquhar, John B., assignor.)
Chandler, Robert W., assignor to Graton & Knight Company, Worcester, Mass. Oil seal. 1,905,800; Apr. 25.
Chapin, Fenton G., East St. Louis, Ill., assignor of one-tenth to W. A. Thum, St. Louis, Mo. Flow controlled switch. 1,905,146; Apr. 25.
Chapman, Charles H., Scotia, N. Y., assignor to General Electric Company. Electrical heater. 1,905,801; Apr. 25.
Chapman, Everett, Cleveland Heights, Ohio. Homopolar electric generator, distributor, and method of application. 1,905,147; Apr. 25.
Charman, Walter M. (See Hushour, Perry D., assignor.)
Chase Companies, The. (See Zinno, Frank D., assignor.)
Chemnitzer Strickmaschinen-Fabrik. (See Stenglein, Oswald, assignor.)
Chestnut, Robert, Grantwood, assignor to Aluminum Screw Machine Products Company, Edgewater, N. J. Haircurling device. 1,905,148; Apr. 25.
Chevrolet, Louis, Baltimore, Md., and R. J. Parrish, Indianapolis, Ind., assignors, by mesne assignments, to The Glenn L. Martin Co., Baltimore, Md. Aviation engine. 1,906,045; Apr. 25.
Chicago Forging & Manufacturing Company. (See Falk, Frank A., assignor.)
Chicago Railway Equipment Company. (See Busse, Edwin G., assignor.)
Chicago Railway Equipment Company. (See Garrard, James G., assignor.)
Chisholm, Clifton, Cleveland, Ohio, assignor to Multigraph Company, Wilmington, Del. Printing apparatus. 1,905,344; Apr. 25.
Chrisman, Horace, and H. G. Weymouth, assignors to Pittsburgh Equitable Meter Company, Pittsburgh, Pa. Meter by-pass controlling means. 1,906,133; Apr. 25.
Christenson, Albert J. (See Sundling, Fritz E., assignor.)
Christianson, David A., Atlanta, Ga., assignor, by mesne assignments, to The Ad-Bag Sales Corporation. Bag. Des. 89,679; Apr. 25.
Chromy, Ben J., Hopkins, Minn., assignor to Wired Radio, Inc., New York, N. Y. Electrical control system. 1,906,046; Apr. 25.
Chrysler Corporation. (See Kent, P. J., and McKechnie, assignor.)
Chrysler Corporation. (See Lee, Roger K., assignor.)
Chrysler Corporation. (See McCall, Charles D., assignor.)
Chrysler Corporation. (See Pfeiffer, Karl, assignor.)
Chrysler Corporation. (See Shay, Edgar, assignor.)
Chrysler Corporation. (See Smith, Adelbert R., assignor.)
Chrysler Corporation. (See White, Jay B., assignor.)
Chryst, William A., assignor to Delco Products Corporation, Dayton, Ohio. Shock absorber valve. 1,905,149; Apr. 25.
Cibulas, Stephen R., Bridgeport, Conn. Turret or window construction. 1,905,902; Apr. 25.
Cincinnati Grinders Incorporated. (See Haas, F. S., and Booth, assignors.)
Cincinnati Milling Machine Company, The. (See Archea, Walter D., assignor.)
Clark, Arthur M., Norton-on-Tees, assignor to Imperial Chemical Industries, Limited, London, England. Collection of sulphur from gases or vapors. 1,905,901; Apr. 25.
Clark Equipment Company. (See Clark, Eugene B., assignor.)
Clark, Ernest, Abington, assignor to Abington Textile Machinery Works, Boston, Mass. Pneumatic stripper for carding engines. 1,905,265; Apr. 25.
Clark, Ernest W., Schenectady, N. Y., assignor to General Electric Company. Wire drawing machine. 1,905,803; Apr. 25.
Clark, Eugene B., assignor to Clark Equipment Company, Buchanan, Mich. Making axle housings. 1,905,150; Apr. 25.
Clark, Frederick J., Buffalo, N. Y., assignor to Steam Pressing Iron Company, Chicago, Ill. Pressing iron. 1,905,804; Apr. 25.
Clark, George F., West Drayton, England, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Automatic stopping device for talking machines. 1,905,151; Apr. 25.
Clark, Lee H., Haverford, assignor to The Sharples Specialty Company, Philadelphia, Pa. Filter. 1,905,806; Apr. 25.
Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)
Clinton, Charles H., Hinsdale, and P. F. Theobald and E. H. Stitt, assignors to United States Gypsum Company, Chicago, Ill. Mineral wool and method of and apparatus for granulating same. 1,905,152; Apr. 25.
Cloud, Raymond T., Chicago, Ill., assignor, by mesne assignments, to General Theatres Equipment, Inc., New York, N. Y. Producing high frequency light variations. 1,905,153; Apr. 25.
Clouse, William L., assignor to The National Machinery Co., Tiffin, Ohio. Forging machine. 1,905,620; Apr. 25.
Cluett, Peabody & Co. (See Buckingham, Alfred O., assignor.)
Coated Paper Products Company, The. (See Gluck, Alva F., assignor.)
Coated Paper Products Company, The. (See Gluck, Fred C., assignor.)
Coats, George S., Visalia, Calif. Packless turbine pump shaft. 1,905,368; Apr. 25.
Cochrane Corporation. (See Rohlin, Victor A., assignor.)
Coffman, John E., assignor to The Columbus Valve Manufacturing Corporation, Columbus, Ohio. Valve structure. 1,905,684; Apr. 25.
Cohen, Joseph H., Bridgeport, Conn. Fender apron. Des. 89,680; Apr. 25.
Coil, Grover C., assignor to Ohmer Fare Register Company, Dayton, Ohio. Interlocking mechanism. 1,905,807; Apr. 25.
Coldwell, Joseph, Fall River, Mass. Loom shuttle. 1,905,266; Apr. 25.
Cole, Edward J., assignor, by mesne assignments, to Helen M. Cole, Peekskill, N. Y. Producing self-locking nuts. 1,905,621; Apr. 25.
Cole, Helen M. (See Cole, Edward J., assignor.)
Cole, Robert M., Bryn Athyn, Pa., assignor to American Dyewood Company, New York, N. Y. Preparing carbon and product thereof. 1,905,688; Apr. 25.
Collins, Edward W., Detroit, Mich., assignor, by mesne assignments, to Delco-Remy Corporation, Anderson, Ind. Coil positioning machine. 1,905,154; Apr. 25.
Colman, Howard D. (See Colman, Duncan J., assignor.)
Colorado Fuel and Iron Company, The. (See Stuart, Kenneth B., assignor.)
Columbia Mills, The. (See Burns, Fred J., assignor.)
Columbia Valve Manufacturing Corporation. (See Coffman, John E., assignor.)
Combustioneer, Inc. (See Burton, Warren D., assignor.)
Commercial Investment Trust Incorporated. (See Malocsay, Francis X., assignor.)
Commercial Solvents Corporation. (See Goebel, Max, assignor.)
Communication Patents, Inc. (See Nicolson, Alexander M., assignor.)
Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord reunies Etablissements Kuhlmann. (See Sack, Ernest, assignor.)
Conforti, Matthew, New York, and R. Malerba, Brooklyn, N. Y. Cigarette ejector and lighter. 1,906,154; Apr. 25.
Conn, C. G., Ltd. (See Burkle, Philip J., assignor.)
Conn, C. G., Ltd. (See Neptune, Frederick W., assignor.)
Connecticut Telephone & Electric Corporation. (See Cadieux, Joseph O., assignor.)
Conover Company, The. (See Stoddard, Edgar S., assignor.)
Consolidated Mining and Smelting Company of Canada, Limited. (See McCallum, A. L., Sutherland, and Thompson, assignors.)
Constable, Charles E., and H. F. Kuncid, Cincinnati, Ohio. Mechanical assorting device. 1,905,217; Apr. 25.
Continental Can Company. (See Kronquest, Alfred L., assignor.)
Continental Gin Company. (See Elliott, Thomas, assignor.)
Continental Oil Company. (See Bennett, Edwin O., assignor.)
Cook, John E., Estate, Incorporated, The. (See Dante, Joseph J., assignor.)
Cooke, Troughton & Simms Limited. (See Linn, John D., assignor.)
Cooper, William, and W. F. Knapp, Apalachin, N. Y. Nonskid device. 1,905,441; Apr. 25.
Cooper, William O. (See Craig, E., and Cooper.)
Coors, Fritz, jr., Berlin, Germany, assignor to Eastman Kodak Company, Rochester, N. Y. Producing motion picture film. 1,905,442; Apr. 25.

CARNEGIE LIBRARY OF ATLANTA

Coors, William F., Tacoma, Wash. Track oiler. 1,905,155; Apr. 25.
Cope, Ernest C., and E. Kinsella, Spondon, near Derby, England, assignors to Celanese Corporation of America. Bearing and application thereof. 1,905,442; Apr. 25.
Corbitt, Howard E., assignor to International Precipitation Company, Los Angeles, Calif. Apparatus for producing rectified high voltage electric current. 1,905,629; Apr. 25.
Corey, Flournoy, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Direction-indicating beacon. 1,905,267; Apr. 25.
Corneliussen, Elias S. (See Alsaker, A., and Corneliussen.)
Cornish, Vernon R. (See Forbregd, G. T., and Cornish.)
Cotchett, Louis M., Brookline, assignor to Textile Patent & Process Co. Incorporated, Boston, Mass. Drafting textile fibers. 1,905,268; Apr. 25.
Conbrough, George B., Long Beach, Calif., assignor to The Lummus Company, New York, N. Y. Dividing petroleum bottoms. 1,905,156; Apr. 25.
Coupleux, Edouard E., Tourcoing, and J. A. M. V. de P. Givelet, Paris, France. Electric organ. 1,905,996; Apr. 25.
Couwenhoven, Abraham, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Motor control system. 1,905,808; Apr. 25.
Cowan, Roysel J., assignor to Surface Combustion Corporation, Toledo, Ohio. Preventing oxidation of metals during heat treatment. 1,905,809; Apr. 25.
Cowan, Roysel J., and O. E. Cullen, assignors to Surface Combustion Corporation, Toledo, Ohio. Low-temperature bright-annealing. 1,905,810; Apr. 25.
Cox, John R., assignor to Thompson Products, Incorporated, Cleveland, Ohio. Composite piston. 1,905,157; Apr. 25.
Crafts, Curtis S., Oak Park, assignor to The Goss Printing Press Company, Chicago, Ill. Folding mechanism. 1,905,687; Apr. 25.
Craftsman Radiator Enclosure Company. (See Greenberg, Meyer, assignor.)
Crago, Paul H., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway car retarder. 1,905,218; Apr. 25.
Craig, Edward, and W. O. Cooper, Brea, Calif. Drill pipe protector. 1,905,158; Apr. 25.
Craig, Thomas W., et al. (See Hatfield, Floyd H., assignor.)
Cramer, Albert M., assignor to Horn and Hardart Baking Company, Philadelphia, Pa. Vending drum for coin controlled vending machines. 1,905,083; Apr. 25.
Craven, Thomas C., Dumont, N. J. Closure for locomotive cab windows. 1,905,389; Apr. 25.
Creed and Company, Limited. (See Griffith, Ronald G., assignor.)
Crespinel, William T., and C. W. Prynne, Los Angeles, Calif. Auto light checking means. 1,905,406; Apr. 25.
Crichton, James V., Philadelphia, Pa. Folding table. 1,905,219; Apr. 25.
Crimmel, Alvie C. and H. H., Hartford City, Ind. Combined glass container and cover. Des. 89,681; Apr. 25.
Crimmel, Henry H. (See Crimmel, Alvie C. and H. H.)
Critchfield, Robert M., and J. W. Lawson, assignors to Delco-Remy Corporation, Anderson, Ind. Windshield cleaner. 1,906,047; Apr. 25.
Crites, Wilbur J. (See Knowlton, D. E., and Crites.)
Croasdale, John P., jr., Berwyn, and J. A. Roberts, Philadelphia, Pa. Planting tool. Des. 89,682; Apr. 25.
Cronin, James C. (See Carter, A. P., Hynes, and Cronin.)
Cullen-Friestedt Company. (See Schmidt, Albert G. A., assignor.)
Cullen, Orville E. (See Cowan, R. J., and Cullen.)
Culver, Charles A., Northfield, Minn., assignor to Wired Radio, Inc., New York, N. Y. Cooling system for vacuum tubes. 1,905,811; Apr. 25.
Cummins Perforator Company. (See Swanson, Hjalmar A., assignor.)
Cunningham, Melville B., Fort Worth, Tex. Condiment shaker. 1,906,135; Apr. 25.
Curran, Frank M. (See Norris, C. B., Curran, and Van Steenwyk.)
Currie, Gilbert. (See James, H. D., and Currie.)
Curtis, John C., assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Steel retainer attachment for rock drills. 1,905,981; Apr. 25.
Curtiss Aeroplane & Motor Company. (See Blanchard, Werner J., assignor.)
Cuthbertson, Robert E. (See Weinig, A. J., and Cuthbertson.)
Cutler-Hammer, Inc. (See Krieger, Alvin W., assignor.)
Cutler, Leonard W., and C. A. Klein, Enfield, assignors, by mesne assignments, to Goodlass Wall and Lead Industries Limited, London, England. Metal coated material. 1,905,959; Apr. 25.
Dahrén, Johan A., Gottenborg, Sweden. Driving pile shells. 1,906,136; Apr. 25.
Dandini, Alessandro O., San Francisco, Calif. Marine vessel. 1,905,345; Apr. 25.
D'Angelo, Philip, Algonac, Mich. Ash can. 1,905,622; Apr. 25.
Daniels, Lloyd C. (See Jaeger, A. O., and Daniels.)
Dante, Joseph J., Bantam, assignor to The John E. Cook Estate, Incorporated, Torrington, Conn. Electric switch. 1,905,812; Apr. 25.
Deprato Statuary Company. (See Riccini, Bruno, assignor.)
Dardelet Threadlock Corporation. (See Heke, William E., assignor.)
Davenport, Talmon A. (See Eksergian, C. L., and Davenport.)
Davidson, Clinton, San Francisco, Calif. Carbureting device. 1,905,159; Apr. 25.
Davies, Emyr Conwy. (See Powell, A. R., Davies, and Scott.)
Davis, Alfred U., Baltimore, Md., assignor to Davis Instrument Manufacturing Company, Incorporated. Anemometer. 1,905,444; Apr. 25.
Davis, Chester L., Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y. Thermionic tube. 1,906,048; Apr. 25.
Davis, Dean W., Pendleton, assignor to Joseph H. Staley, Columbus, Ind. Mercury tube switch. 1,905,813; Apr. 25.
Davis Instrument Manufacturing Company, Incorporated. (See Davis, Alfred U., assignor.)
Davis, Robert E., Fort Payne, Ala. Combination sock and anklet. 1,906,137; Apr. 25.
Davisson, Delos W., and F. G. Welke, assignors to Shell Development Company, San Francisco, Calif. Process and apparatus for refrigeration with liquefied fuel gas. 1,905,971; Apr. 25.
Dawson, Elma N. (See Dawson, James C., assignor.)
Dawson, James C., assignor to E. N. Dawson, Webster Groves, Mo. Loose leaf binder. Re18,806; Apr. 25.
De Angelis, Frederick, West Orange, N. J., assignor to Metal Textile Corporation. Knitted metallic fabric. 1,905,160; Apr. 25.
De Back, William, assignor to Food Machinery Corporation, San Jose, Calif. Clean-out mechanism. 1,906,049; Apr. 25.
Decarie Incinerator Corporation. (See Woodman, Joseph C., assignor.)
Deere & Company. (See Johnson, Ellsworth T., assignor.)
Deere & Company. (See Silver, Walter H., assignor.)
Deere & Company. (See Strandlund, Carl G., assignor.)
Deere & Company. (See White, Charles H., assignor.)
De Groot, Willem, and E. H. Reerink, Eindhoven, Netherlands, assignors, by mesne assignments, to General Electric Company. Electric discharge tube. 1,905,688; Apr. 25.
Deitz, John G., Tulsa, Okla. Door mount for accessory equipment of motor vehicles. 1,905,623; Apr. 25.
Delaney, Ada W., Estate of (See Delaney, John H., assignor.)
Delaney, John H., deceased, Los Angeles, Calif., Union Bank & Trust Co. of Los Angeles, administrator, assignor to estate of Ada W. Delaney, deceased. Acoustic material. 1,906,138; Apr. 25.
De Laval Separator Company, The. (See Bernström, Seth F., assignor.)
Delco Products Corporation. (See Aseltine, Fred E., assignor.)
Delco Products Corporation. (See Chryst, William A., assignor.)
Delco Products Corporation. (See Dybvig, Henry G., assignor.)
Delco-Remy Corporation. (See Collins, Edward W., assignor.)
Delco-Remy Corporation. (See Critchfield, R. M., and Lawson, assignors.)
Delco-Remy Corporation. (See Norviel, Harry E., assignor.)
Delco-Remy Corporation. (See Norviel, H. E., and Ecoff, assignors.)
Delco-Remy Corporation. (See Prescott, F. H., and Arthur, assignors.)
Delco-Remy Corporation. (See Swayze, Clare S., assignor.)
Delco-Remy Corporation. (See Whelchel, Rupert C., assignor.)
Delta Manufacturing Company. (See Tauts, Herbert E., assignor.)
Delta Star Electric Company, The. (See Alsaker, A., and Corneliussen, assignors.)
Demstädt, Friedrich. (See Demstädt, Hermann and F., and Weichert.)
Demstädt, Hermann and F., and M. Weichert, Neubrandenburg, Germany. Machine for setting rows of plants deeper. 1,906,139; Apr. 25.
Denton, Geoffrey P., Rickmansworth, England. Producing Expanded rubber material. 1,905,269; Apr. 25.
De Orlow, Stephen, East Lansing, assignor to Ternstedt Manufacturing Company, Detroit, Mich. Hood fastener. 1,905,220; Apr. 25.
De Orlow, Stephen, assignor to Ternstedt Manufacturing Company, Detroit, Mich. Hood latch. 1,905,814; Apr. 25.
De Orlow, Stephen, assignor to Ternstedt Manufacturing Company, Detroit, Mich. Hood latch. 1,905,815; Apr. 25.
Depasse, Henri, Neuilly-sur-Seine, France. Shaving brush having a reservoir for the soap. 1,906,140; Apr. 25.
De Phillips, Joseph, New York, N. Y. Fountain brush. 1,905,960; Apr. 25.
De Reamer, Frank C., Bridgeport, Conn., assignor to General Electric Company. Switch for radio phonograph sets. 1,905,689; Apr. 25.

De Ridder, Ernst, and H. Altwicker, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation. Alloy. 1,905,445; Apr. 25.
Dessenberg, Josef, Cologne, Germany. Machine for grinding and polishing optical lenses, spectacle glasses, and the like. 1,906,050; Apr. 25.
De Sherbinin, Helen K. (See Ingram, E. H., and Pearson, assignors.)
Despard, Victor R., assignor to Pass & Seymour, Inc., Syracuse, N. Y. Electric snap switch. Des. 89,683; Apr. 25.
Despard, Victor R., assignor to Pass & Seymour, Inc., Syracuse, N. Y. Electric convenience outlet. Des. 89,684; Apr. 25.
Dewey and Almy Chemical Company. (See Almy, Richard, assignor.)
Dewey and Almy Chemical Company. (See Slagle, Willard J., assignor.)
Dewey, Haywood G., and J. G. Jones, assignors to Eastman Kodak Company, Rochester, N. Y. Film backing paper making machine. 1,906,446; Apr. 25.
Diamant, Nicholas S., Detroit, Mich. Radiator. 1,905,447; Apr. 25.
Dickinson, Lloyd W., assignor of one-half to M. K. Arford, Stone Lake, Wis. Combined cigarette extinguisher and ash receptacle. 1,905,271; Apr. 25.
Diehl Manufacturing Company. (See Peets, Wilbur J., assignor.)
Dillingham, Charles L., Indianapolis, Ind. Vehicle signal lamp. Des. 89,685; Apr. 25.
Dillingham, Charles L., Indianapolis, Ind. Vehicle signal lamp. Des. 89,686; Apr. 25.
Dina, Augusto, Elizabeth, N. J., assignor to International Projector Corporation, New York, N. Y. Motion picture projection machine structure. 1,905,816; Apr. 25.
Dixie Dental Manufacturing Co. (See Levy, Arthur S., assignor.)
Dixon, John W., Indianapolis, Ind. Routing machine. 1,905,448; Apr. 25.
Dobrovolny, Frank J., Niagara Falls, assignor, by mesne assignments, to The Roessler and Hasslacher Chemical Company, New York, N. Y. Odorant for refrigeration. 1,905,817; Apr. 25.
Dodge, Ira J. (See Freese, Paul S., assignor.)
Doran, John F., Portage, Wis. Folding ironing table. 1,905,551; Apr. 25.
Dorsey, Dorothy. (See Dorsey, John J. and D.)
Dorsey, John J. and D., New York, N. Y. Hair protecting headband. 1,906,370; Apr. 25.
Dosch, Charles R. (See Locke, S. D., Dosch, and Stegeman.)
Douglass, Harry A., Bronson, Mich. Electric lamp. 1,905,818; Apr. 25.
Douthett, Orin R., Perth Amboy, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa. Bituminous emulsion. 1,905,680; Apr. 25.
Dow Chemical Company, The. (See Barstow, E. O., and Heath, assignors.)
Dow Chemical Company, The. (See Grebe, J. J., and Stoesser, assignors.)
Dow, Dewey M. (See Riebel, F., jr., and Dow.)
Doyle, Frederick W., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Assembling machine and jig. 1,906,690; Apr. 25.
Doyle, Michael P., Brooklyn, N. Y. Boring and facing tool with feed attachment. 1,905,819; Apr. 25.
Doyle, William T., Dorchester, assignor to Sturtevant Mill Company, Boston, Mass. Method of and apparatus for hydrating cellulose pulp. 1,905,161; Apr. 25.
Draper Corporation. (See Ross, Edward, assignor.)
Dreffein, Henry A., Chicago, Ill. Heat treating process. 1,905,272; Apr. 25.
Dreffein, Henry A., Chicago, Ill. Kiln and burner apparatus. 1,905,820; Apr. 25.
Dreyfus, Camille, New York, N. Y., and G. Schneider, East Orange, N. J., assignors to Celanese Corporation of America. Discharge printing and fabric produced thereby. 1,905,846; Apr. 25.
Drury, Horace B., Washington, D. C. Antiskid chain. 1,905,998; Apr. 25.
Drury, Horace F., Washington, D. C. Antiskid device. 1,905,997; Apr. 25.
Dubilier Condenser Corporation. (See Houck, Harry W., assignor.)
Duffy, James F., assignor to Duffy Manufacturing Company, Holland, Mich. Mat. 1,905,371; Apr. 25.
Duffy, James F., assignor to Duffy Manufacturing Co., Holland, Mich. Plate covering and attachment. 1,905,372; Apr. 25.
Duffy, John M., Ventnor, N. J. Furnace appliance. Re18,803; Apr. 25.
Duffy Manufacturing Company. (See Duffy, James F., assignor.)
Dunbar, Howard W., and J. C. Baker, assignors to Norton Company, Worcester, Mass. Lapping device for cylindrical objects. 1,905,821; Apr. 25.
Duncan, Joseph S., Chicago, Ill., assignor to Addressograph Company, Wilmington, Del. Printing machine. 1,905,982; Apr. 25.
Dunkelberg, Ralph C., Fort Wayne, Ind. Water softening apparatus. 1,905,221; Apr. 25.
Dunlop, James, Park Ridge, Ill., assignor to Westinghouse Electric Elevator Company. Buffer safety shop. 1,905,273; Apr. 25.
Dunlop, James, Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company. Elevator governor. 1,905,274; Apr. 25.
Dunn, Irwin L., Tulsa, Okla. Packing. 1,905,822; Apr. 25.
Dunn, William Earl, Kansas City, Mo. Fishhook fastening means. 1,905,449; Apr. 25.
Duplate Corporation. (See Boynton, Vern K., assignor.)
Duplate Corporation. (See Sherts, James H., assignor.)
Du Pont, E. I., de Nemours & Company. (See Goodrich, E. J., and Howell, assignors.)
Du Pont, E. I., de Nemours & Company. (See Holmes, Walter C., assignor.)
Du Pont, E. I., de Nemours & Company. (See Howell, E. T., and Goodrich, assignors.)
Du Pont Film Manufacturing Corporation. (See Seane, Virgil B., assignor.)
Durasey, Stephen J., assignor of one-half to S. R. Block, Johnstown, Pa. Permanent wave winder. 1,905,378; Apr. 25.
Duvall, James, Camas, Wash. Bag and closure means therefor. 1,905,982; Apr. 25.
Dwork, Max, Brooklyn, N. Y. Jack. 1,905,634; Apr. 25.
Dybvig, Henry G., assignor to Delco Products Corporation, Dayton, Ohio. Thermostatic switch. 1,905,823; Apr. 25.
Dyggve, Eigil V. P., assignor to Koefoed, Hauberg, Marstrand & Helweg, Aktieselskabet Titan, Copenhagen, Denmark. Grab. 1,905,450; Apr. 25.
Dysthe, Martinius, Minneapolis, Minn. Jointed metallic hose casing. 1,905,824; Apr. 25.
Eames, William F., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Motor control system. 1,905,275; Apr. 25.
Earnshaw, George F., assignor to Earnshaw Knitting Company, Newton, Mass. Sun suit. 1,905,451; Apr. 25.
Earnshaw Knitting Company. (See Earnshaw, George F., assignor.)
Eastman Kodak Company. (See Capstaff, John G., assignor.)
Eastman Kodak Company. (See Coors, Fritz, jr., assignor.)
Eastman Kodak Company. (See Dewey, H. G., and Jones, assignors.)
Eastman Kodak Company. (See Hickman, Kenneth C. D., assignor.)
Eastman Kodak Company. (See Mihalyi, Joseph, assignor.)
Eastman Kodak Company. (See Smith, Henry B., assignor.)
Eastman Kodak Company. (See Stephenson, Paul A., assignor.)
Eastman Kodak Company. (See Webber, C. S., and Stand, assignors.)
Eastman Kodak Company. (See Wittel, Otto, assignor.)
Eaton, George, Cleveland, Ohio, assignor to May C. Eaton. Electric plug. 1,905,452; Apr. 25.
Eaton, Leslie B., Los Angeles, assignor, by mesne assignments, to Kalite Company, Limited, Pasadena, Calif. Acoustic plaster. 1,906,128; Apr. 25.
Eaton, May C. (See Eaton, George, assignor.)
Ebbw Vale Steel Iron & Coal Company Limited. (See Harvey, Arthur H., assignor.)
Eby, Eugene D., Pittsfield, Mass., assignor to General Electric Company. Joint for high tension underground cables. 1,905,691; Apr. 25.
Eclipse Aviation Corporation. (See Nowosielski, Edward B., assignor.)
Ecoff, Vance. (See Norviel, H. E., and Ecoff.)
Edgar, John, assignor to Barber-Colman Company, Rockford, Ill. Making spline couplings. 1,906,276; Apr. 25.
Edwards, Donald V., New York, N. Y., and E. K. Smith, East Orange, N. J., assignors to Electrons, Inc., of Delaware. Rectifier. 1,905,692; Apr. 25.
Edwards, Herbert E., Brookline, Mass. Shoe bottom ornamenting machine. 1,905,961; Apr. 25.
Edwards, Herbert E., Brookline, Mass. Embroiderer. 1,905,962; Apr. 25.
Edwards, Paul S. (See Barbulesco, Constantin D., assignor.)
Edwards, Paul S., and C. D. Barbulesco, Dayton, Ohio. Direct reading ohmmeter. 1,905,948; Apr. 25.
Edwards, Paul S., and C. D. Barbulesco, Dayton, Ohio. Direct reading capacimeter. 1,905,949; Apr. 25.
Egger, Walter F., Cleveland, and L. A. Becker, Lakewood, Ohio, assignors, by mesne assignments, to Norton Company, Worcester, Mass. Machine for honing and polishing crank shafts. 1,905,825; Apr. 25.
Egy, Willard L., assignor to W. & L. E. Gurley, Troy, N. Y. Testing machine. 1,905,276; Apr. 25.
Ehrhardt, Earl, Chicago, Ill. Composition for acoustical devices. 1,905,631; Apr. 25.
Ekelöf, John, Lidingo, Sweden. Rotary pump, compressor, and the like. 1,906,141; Apr. 25.
Ekelöf, John, Lidingo, Sweden. Rotary pump or compressor. 1,906,142; Apr. 25.
Eksergian, Carolus L., and T. A. Davenport, Detroit, Mich. Disk wheel. Des. 89,687; Apr. 25.
Electric Railway Improvement Company, The. (See Smith, Benjamin A., assignor.)
Electrified Sugar Company. (See Lima, Alfred, jr., assignor.)
Electrolock Manufacturing Company, The. (See Kulicke, Frederick W., assignor.)

Electrolux Servel Corporation. (See Lennmor, Gosta G., assignor.)
Electrolux Servel Corporation. (See Maiuri, G., and Bossini, assignors.)
Electrons, Inc. (See Edwards, D. V., and Smith, assignors.)
Elevator Supplies Company. (See Orr, Carroll R., assignor.)
Elion, Henry. (See Vangrevenynge, C., and Elion.)
Elliott, Harold F., Palo Alto, Calif., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. High frequency amplifier. 1,905,826; Apr. 25.
Elliott, Thomas, Birmingham, Ala., assignor to Continental Gin Company. Hull extractor. 1,905,632; Apr. 25.
Elliott, Wilbert N. (See Milne, W. G., and Elliott.)
Ellis, Carleton, Montclair, N. J., assignor, by mesne assignments, to Resyl Corporation, New York, N. Y. Floor covering. 1,905,827; Apr. 25.
Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Catalysed urea resin. 1,905,999; Apr. 25.
Ellis-Foster Company. (See Ellis, Carleton, assignor.)
Ellis, George H., St. Paul, assignor to The Insulite Company, Minneapolis, Minn. Fireproof bodies and making the same. 1,905,222; Apr. 25.
Ellis, George H., and H. C. Olpin, Spondon, near Derby, England, assignors to Celanese Corporation of America. Treatment of cellulose derivatives. 1,905,453; Apr. 25.
Ellsworth, Carl F., Collingswood, assignor to The R. M. Hollingshead Co., Camden, N. J. Liquid sprayer and making the same. 1,905,828; Apr. 25.
Ellsworth, William C. (See Campbell, W. H., Ellsworth, and Madsen.)
Endres, Walter, and H. Hootz, Berlin, Germany, assignors to General Electric Company. Motor control system. 1,905,693; Apr. 25.
Engelhardt, Felix. (See Bergen, G., Engelhardt, and Steckhan.)
Engelmann, Max, Lausa, Germany. Cinematographic apparatus. 1,905,454; Apr. 25.
English, Solomon, London, England, assignor to Holophane Company, Inc., New York, N. Y. Luminair employing prismatic reflectors. 1,905,829; Apr. 25.
Ensenat, Ramon, deceased, Newark, N. J. E. J. C. Joerg, executor. Stern paddle-wheel propulsion mechanism for boats. 1,905,162; Apr. 25.
Enterprise Manufacturing Company, The. (See Pflueger, Charles T., assignor.)
Erickson, Ellis O., Pasadena, Calif., assignor to Westinghouse Electric & Manufacturing Company. Photocell amplifier unit. 1,905,276; Apr. 25.
Ericson, George R., assignor to Metalcraft Corporation, St. Louis, Mo. Headlight for toy vehicles. 1,905,931; Apr. 25.
Ericson, Philip E. G., St. Charles, assignor to The W. H. Howell Company, Geneva, Ill. Folding chair. 1,905,830; Apr. 25.
Evans, Allen S. (See Horne, Harry F., assignor.)
Evans, James, jr., administrator. (See Horne, Harry F.)
Evans, Merwin W., Holland Patent, N. Y. Helicopter. 1,906,143; Apr. 25.
Evans, William L., Washington, Ind. Electric fluid heater. 1,906,144; Apr. 25.
Evans, William L., Washington, Ind. Electric fluid heater. 1,906,145; Apr. 25.
Evening American Publishing Company. (See Black, H., Holmes, and Hesse, assignors.)
Ewert, Otto F., Genoa City, Wis. Making spline couplings. 1,905,277; Apr. 25.
Ewest, Hans. (See Skaupy, F., Ewest, and Pulfrich.)
Ewest, Hans, Berlin, and M. Pirani, Berlin-Wilmersdorf, Germany, assignors to General Electric Company. Gaseous electric discharge device. 1,905,831; Apr. 25.
Excell, Stuart W., assignor to Standard Oil Company, Chicago, Ill. Insulating wall. 1,905,832; Apr. 25.
Fagan, Thomas A., Denver, Colo. Conservation valve. 1,906,625; Apr. 25.
Falk, Frank A., Stacyville, Iowa, assignor to Chicago Forging & Manufacturing Co., Chicago, Ill. Hood latch. 1,905,554; Apr. 25.
Falk, Frank A., Stacyville, Iowa, assignor to Chicago Forging & Manufacturing Co., Chicago, Ill. Hood latch. 1,905,555; Apr. 25.
Falk, Rudolph D., Peoria, Ill. Building material. 1,905,553; Apr. 25.
Fansteel Products Company. (See Balke, Clarence W., assignor.)
Farquhar, John B., assignor to Champion Corporation, Chicago, Ill. Cleaning device. 1,905,163; Apr. 25.
Farrel-Birmingham Company. (See Schnuck, C. F., and Banbury, assignors.)
Fathauer, Alvin J., Cleveland, Ohio. Wringer. 1,905,556; Apr. 25.
Feagley, Chester C., Philadelphia, Pa., assignor, by mesne assignments, to The Grasselli Chemical Company. Non-hygroscopic composition comprising aluminum sulphate and an acid salt. 1,905,833; Apr. 25.
Federwitz, Theodore A., and W. T. Bailey, assignors to Stokes and Smith Company, Philadelphia, Pa. Conveying system. 1,906,051; Apr. 25.
Fehrle, Alfred. (See Streitwolf, Fehrle, Hilmer, and Schmidt.)
Felix, Friedrich, and W. Huber, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Azodyestuffs and making same. 1,905,374; Apr. 25.
Felt & Tarrant Manufacturing Company. (See Turck, Joseph A. V., assignor.)
Feltham, Douglas L., Toledo, Ohio. Dental mirror. 1,905,633; Apr. 25.
Fensky, Charles, assignor of one-half to V. F. Flader, St. Louis, Mo. Copy holder. 1,905,834; Apr. 25.
Fentress, George E. (See Golish, Frank A., assignor.)
Ferris, John P., Whitefish Bay, and W. Ferris, assignors to The Oilgear Company, Milwaukee, Wis. Broaching machine. 1,905,164; Apr. 25.
Ferris, Walter. (See Ferris, John P. and W.)
Fesler, Douglas F., Evanston, assignor to Alemite Corporation, Chicago, Ill. Compressor. 1,905,455; Apr. 25.
Fibreboard Products Inc. (See Ford, G. F., and Pittman, assignors.)
Fieg, Joseph F., La Grange, assignor to United Screw and Bolt Corporation, Chicago, Ill. Manufacture of bolts. 1,905,084; Apr. 25.
Field, Ethel A., New York, N. Y. Flower holder. Des. 89,688; Apr. 25.
Field, Ethel A., New York, N. Y. Flower holder. Des. 89,689; Apr. 25.
Field, Ethel A., New York, N. Y. Flower holder. Des. 89,690; Apr. 25.
Field, Ethel A., New York, N. Y. Flower holder. Des. 89,691; Apr. 25.
Fifth Avenue Coach Company. (See Forrester, Michael J., assignor.)
Fina, Valentine, assignor to Milwaukee Valve Company, Milwaukee, Wis. Boiler return trap. 1,906,062; Apr. 25.
Finlay, John S., and E. B. Royle, Eureka, Utah. Mucker. 1,906,000; Apr. 25.
Finlay, John S., and E. B. Royle, Eureka, Utah. Shoveling machine. 1,906,001; Apr. 25.
Finn, Sidney J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sheet-separating apparatus. 1,905,835; Apr. 25.
Finsen, Eyvind, assignor to Gleason Works, Rochester, N. Y. Automatic throw-out mechanism for gear cutting machines. 1,905,456; Apr. 25.
Fischer, Albert C., Chicago, Ill., assignor to The Philip Carey Manufacturing Company. Constructional unit. 1,905,875; Apr. 25.
Fischer, Albert C., Chicago, Ill., assignor to The Philip Carey Manufacturing Company. Roofing mastic. 1,905,876; Apr. 25.
Fischer, Samuel M., Pittsburgh, Pa. Supporting stand for porch gliders. 1,905,557; Apr. 25.
Fischmann, Nettie, St. Louis, Mo. Dress. Des. 89,692; Apr. 25.
Fischmann, Nettie, St. Louis, Mo. Lady's suit. Des. 89,693; Apr. 25.
Fish, Gilbert D. (See James, H. D., and Fish.)
Fisher, Roy S., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa. Electrodynamic reproducer. 1,906,196; Apr. 25.
Fitch, Elbert L., Newburgh, N. Y. Capsule filling machine. 1,905,279; Apr. 25.
Fitz Gerald, John W., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Engine starter. 1,905,836; Apr. 25.
Flader, Vera F. (See Fensky, Charles, assignor.)
Fleischhauer, Richard. (See Kalischer, G., and Fleischhauer.)
Fletcher, Harold W., assignor to Hughes Tool Company, Houston, Tex. Disk bit. 1,905,165; Apr. 25.
Fletcher Works. (See Schaum, Fletcher, assignor.)
Fliether, Walter, Velbert, Germany. Leaf turner. 1,905,963; Apr. 25.
Flink, John H., Watertown, Mass., assignor to The B. F. Goodrich Company, New York, N. Y. Method and apparatus for producing cut articles or blanks from plastic strip material. 1,905,837; Apr. 25.
Flitcroft, James E. (See Berns, W., Flitcroft, and Imfeld.)
Florang, Emil A., Burlington, Iowa. Basket. 1,906,146; Apr. 25.
Flueler, Alfred K., Collingswood, N. J., assignor, by mesne assignments, to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Control system for electric motors. 1,905,838; Apr. 25.
Foley, Ernest L., Newton, assignor to Underwood Machinery Company, South Boston, Mass. Article treating apparatus. 1,905,694; Apr. 25.
Folk, Joseph, assignor to U. S. Slicing Machine Company, La Porte, Ind. Combined top clamp and end grip for slicing machines. 1,905,457; Apr. 25.
Food Machinery Corporation. (See de Back, William, assignor.)
Foote, Leonard, Pedro Miguel, Canal Zone. Measuring device. 1,905,558; Apr. 25.
Forbregd, Gustav T., and V. R. Cornish, Elkhart, Ind., assignors to The Adlake Company, Chicago, Ill. Sash forming machine. 1,905,839; Apr. 25.
Ford, George F., Hollywood, and W. Pittman, Huntington Park, assignors to Fibreboard Products Inc., San Francisco, Calif. Printing, cutting, and scoring press. 1,905,559; Apr. 25.

Foreseman, Robert A., Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company. Ash disposal apparatus. 1,906,223; Apr. 25.
Forges & Ateliers de Constructions Electriques de Jeumont. (See Letrilliart, Pierre, assignor.)
Formed Steel Products Company, The. (See Priddy, Thomas D., assignor.)
Forney, John D., Chatham, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. System for starting and operating gaseous electric discharge devices. 1,906,840; Apr. 25.
Forney, John D., Chatham, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Electric discharge device and operating circuits therefor. 1,905,841; Apr. 25.
Forrester, Michael J., Astoria, N. Y., assignor to Fifth Avenue Coach Company. Double deck passenger vehicle. 1,905,842; Apr. 25.
Foster, John E., San Bernardino, Calif. Projector. 1,906,923; Apr. 25.
Foster, Walter F., San Francisco, Calif. Door closer. 1,905,972; Apr. 25.
Foulke, Ted E., Nutley, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Base and socket for electric lamps. 1,905,843; Apr. 25.
Fourness Development Corporation Ltd. (See Fourness, Wilfred, assignor.)
Fourness, Wilfred, Oakland, Calif., assignor to Fourness Development Corporation Ltd., New York, N. Y. High speed compressor. 1,905,933; Apr. 25.
Fox Edge Co. Inc., The. (See Fox, Harry, assignor.)
Fox, Harry, assignor to The Fox Edge Co. Inc., Lowell, Mass. Upholstery edge. 1,905,166; Apr. 25.
Franklin Railway Supply Company. (See Martin, Frederick W., assignor.)
Franklin Simon & Company. (See Long, Dorothy, assignor.)
Frappier, Louis S., and E. Boecking, Brooklyn, assignors to International Projector Corporation, New York, N. Y. Film gate support for motion picture projection machines. 1,906,063; Apr. 25.
Freedman, Benjamin H., assignor to Hudson Holding Corporation, New York, N. Y. Match package. 1,905,695; Apr. 25.
Freedman, Benjamin H., assignor to Hudson Holding Corporation, New York, N. Y. Match package. 1,905,696; Apr. 25.
Freedman, Benjamin H., assignor to Hudson Holding Corporation, New York, N. Y. Match package. 1,905,844; Apr. 25.
Freese, Paul S., assignor of one-fourth to I. J. Dodge, Marietta, Ohio. Fruit juice extractor. 1,906,064; Apr. 25.
Frey, Frederick E. (See Huppke, W. F., and Frey.)
Freydberg, Aaron, assignor to Freydberg Brothers, Inc., New York, N. Y. Tying strand or strip. 1,905,392; Apr. 25.
Freydberg Brothers, Inc. (See Freydberg, Aaron, assignor.)
Friedl, Joseph, Covington, Ky., assignor to The Avey Drilling Machine Company, Cincinnati, Ohio. Drilling machine. 1,906,560; Apr. 25.
Friedrichsen, Heinrich, Berlin-Treptow, Germany, assignor to General Electric Company. Polarity indicator. 1,905,697; Apr. 25.
Frigidaire Corporation. (See Candor, Robert R., assignor.)
Frigidaire Corporation. (See Matthews, William H., assignor.)
Frigidaire Corporation. (See Reeves, Donald H., assignor.)
Fritch, Elue O., assignor to The Kelly-Springfield Tire Company, Cumberland, Md. Vehicle tire. Des. 89,694; Apr. 25.
Fronek, Anthony. (See Kaltenbach, R. W., and Fronek, assignor.)
Frosted Foods Company. (See Birdseye, C., and Hall, assignors.)
Fuchs, Henry, assignor to W. H. Miner, Inc., Chicago, Ill. Hand brake. 1,906,845; Apr. 25.
Fuller Lehigh Company. (See Gaffney, Joseph B., assignor.)
Fulton, James S., Shields, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Sand blast nozzle. 1,905,696; Apr. 25.
Fulton Sylphon Company, The. (See Giesler, Jean V., assignor.)
Furedi, Stephen, New York, N. Y. Perpetual calendar. 1,905,846; Apr. 25.
Gaffney, Joseph B., Bethlehem, assignor to Fuller Lehigh Company, Fullerton, Pa. Separator. 1,906,458; Apr. 25.
Garnier, George E. (See Place, Bion C., assignor.)
Gail, John F., Evanston, Ill., assignor to Simmons Company, New York, N. Y. Spring assembling machine. 1,905,459; Apr. 25.
Gaisman, Henry J., New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass. Safety razor. 1,906,680; Apr. 25.
Galyean, Elmer E., Topeka, Kans. Rotary engine. 1,905,847; Apr. 25.
Gamichon, Paul, Paris, France. Converting into soluble salts lead and other metals contained in lead bearing ores. 1,905,460; Apr. 25.
Gardiner, Charles W., High Barnet, assignor to Gardiner's Conveyors Limited, London, England. Band conveyor. 1,906,147; Apr. 25.
Gardiner's Conveyors Limited. (See Gardiner, Charles W., assignor.)
Gardner, Henry A., Washington, D. C. Dehumidifying. 1,906,148; Apr. 25.
Gardner, Henry A., Washington, D. C. Dehumidifying. 1,906,149; Apr. 25.
Garner, Samuel R., Mercer, Pa. Highway guardrail. 1,905,377; Apr. 25.
Garrard, George B. (See Baash, L. F., Burns, and Garrard.)
Garrard, James G., Grand Rapids, Mich., assignor to Chicago Railway Equipment Company, Chicago, Ill. Foundry ladle. 1,906,634; Apr. 25.
Gassen, Josef, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany. Cooling means for rolled bars. 1,905,461; Apr. 25.
Gast, Paul H., Buffalo, N. Y. Process and apparatus for straightening rails. 1,906,062; Apr. 25.
Gaus, George E., Washington, D. C., dedicated to the free use of the Government and the people. Wire bale-tie. 1,905,581; Apr. 25.
Gay, Fraser W., Newark, N. J. Hot water storage for power generation. 1,905,085; Apr. 25.
Ganda, Anton, Vienna, Austria. Piston with cooling effect. 1,905,582; Apr. 25.
Gebruder, Hardy, Maschinenfabrik us Giesserei A. G. (See Leuchter, Richard L., assignor.)
Gechter, Herman J., Cleveland, Ohio. Traffic regulating device. 1,905,378; Apr. 25.
Gelaris, Arnold J., New York, N. Y. Zirconium citrate hexamethylenetetramine. 1,906,848; Apr. 25.
Gellman, Israel C., Rock Island, assignor to Northwestern Barb Wire Company, Sterling, Ill. Wire fabric making machine. 1,905,086; Apr. 25.
Gelsthorp, Frederick, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company. Making sheet glass. 1,906,849; Apr. 25.
General Aniline Works, Inc. (See Hern, R., and Schubert, assignors.)
General Aniline Works, Inc. (See Hern, R., and Zerweck, assignors.)
General Aniline Works, Inc. (See Kalischer, G., and Fleischhauer, assignors.)
General Cable Corporation. (See Bonner, A. A., and Schatzel, assignors.)
General Cable Corporation. (See Roux, Adrian F., assignor.)
General Electric Company. (See Brand, Frederick F., assignor.)
General Electric Company. (See Brown, C. A., and Van Sickle, assignors.)
General Electric Company. (See Case, Frank R., assignor.)
General Electric Company. (See Chapman, Charles H., assignor.)
General Electric Company. (See Clark, Ernest W., assignor.)
General Electric Company. (See De Groot, W., and Burink, assignors.)
General Electric Company. (See De Remer, Frank C., assignor.)
General Electric Company. (See Eby, Eugene D., assignor.)
General Electric Company. (See Endres, W., and Hootz, assignors.)
General Electric Company. (See Ewest, H., and Pirani, assignors.)
General Electric Company. (See Friedrichsen, H., assignor).
General Electric Company. (See Harries, Wolfgang, assignor.)
General Electric Company. (See Hasenpatt, Wolfgang, assignor.)
General Electric Company. (See Hendry, Johannes F., assignor.)
General Electric Company. (See Hill, Charles H., assignor.)
General Electric Company. (See Holst, Gilles, assignor.)
General Electric Company. (See Jones, Benjamin W., assignor.)
General Electric Company. (See Oliver, James H., assignor.)
General Electric Company. (See Rankin, William K., assignor.)
General Electric Company. (See Rupp, Emil, assignor.)
General Electric Company. (See Schwartz, Emil W., assignor.)
General Electric Company. (See Skaupy, F., Ewest, and Pulfrich, assignors.)

General Electric Company. (See Thompson, L. W., and Zucker, assignors.)
General Electric Company. (See Zocher, Gustav, assignor.)
General Electric Company. (See Zocher, G., and Brudnoe, assignors.)
General Electric Vapor Lamp Company. (See Forney, John D., assignor.)
General Electric Vapor Lamp Company. (See Foulke, Ted E., assignor.)

General Electric Vapor Lamp Company. (See Walker, Warren R., assignor.)
General Fire Extinguisher Company. (See Barclay, Sidney F., assignor.)
General Fire Extinguisher Company. (See Carraway, Thomas W., assignor.)
General Motors Corporation. (See Manning, William H., assignor.)
General Motors Corporation. (See Williams, Charles E., assignor.)
General Motors Research Corporation. (See Berry, George P., assignor.)
General Spring Bumper Company. (See Jandus, Herbert S., assignor.)
General Theatres Equipment, Inc. (See Cloud, Raymond T., assignor.)
Getz Exterminators, Inc. (See Raley, Thomas C., assignor.)
Giesler, Jean V., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Flexible corrugated tubular wall. 1,905,583; Apr. 25.
Giesler, Jean V., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Making thin walled tubes. 1,905,584; Apr. 25.
Giesler, Jean V., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Steam engine. 1,905,585; Apr. 25.
Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)
Gilbert, Alfred C., North Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Electric drill or similar tool. 1,905,462; Apr. 25.
Gilbertson, Harry A. (See Reishus, Sondre S., assignor.)
Gillette Safety Razor Company. (See Gaisman, Henry J., assignor.)
Gillette Safety Razor Company. (See Testi, Nicholas, assignor.)
Ginsburg, Fred, Chicago, Ill. Gear shifting mechanism. 1,905,635; Apr. 25.
Ginsburg, Joseph. (See Hamilton, Warren G., assignor.)
Givelet, Joseph A. M. V. de P. (See Coupleux, E. E., and Givelet.)
Glaesner, Harry, Philadelphia, Pa. Four-wheel trailer truck and ash hopper. 1,905,636; Apr. 25.
Gleaner Harvester Corporation. (See Hanson, Perren J., assignor.)
Gleason Works. (See Finsen, Eyvind, assignor.)
Globe Ticket Company. (See Thomson, Henry A., assignor.)
Gluck, Alva F., assignor to The Coated Paper Products Company, Minerva, Ohio. Dispensing carton. 1,905,561; Apr. 25.
Gluck, Fred C., assignor to The Coated Paper Products Company, Minerva, Ohio. Paper dispensing device. 1,905,562; Apr. 25.
Goddard, George N., Newton, Mass. Device for spinning and twisting textile fibers. 1,905,280; Apr. 25.
Godshalk, Clarence A., Ardmore, and F. Henke and D. Behrsing, Philadelphia, assignors, by mesne assignments, to Ocean City Manufacturing Co., Philadelphia, Pa. Fishing reel. 1,904,992; Apr. 25.
Goebel, Max, assignor to Commercial Solvents Corporation, Terre Haute, Ind. Reactivation of spent filter materials. 1,905,067; Apr. 25.
Golden, Thomas H., Pottsville, Pa., assignor to Phillips-Jones Corporation, New York, N. Y. Shirt package. 1,906,150; Apr. 25.
Goldsholl, Morton, Chicago, Ill. Pocket keyholder. Des. 89,695; Apr. 25.
Goldsmith, Bertram J., Allentown, Pa., and J. W. Stark, New York, N. Y. Ribbon reel. 1,906,055; Apr. 25.
Golish, Frank A., South Gate, assignor of one-half to G. E. Fentress, Los Angeles, Calif. Underreamer. 1,906,056; Apr. 25.
Goodlass Wall and Lead Industries Limited. (See Cutler, L. W., and Klein, assignors.)
Goodman, Elisabeth A. (See Goodman, Patrick, assignor.)
Goodman, Elisabeth A., et al., administratrices. (See Goodman, Patrick.)
Goodman, Francis G. (See Goodman, Patrick, assignor.)
Goodman Manufacturing Company. (See Kraft, Robert H., assignor.)
Goodman, Mary, et al., administratrices. (See Goodman, Patrick.)
Goodman, Patrick, Brooklyn, N. Y.; M. Goodman and E. A. Goodman, administratrices of said Patrick Goodman, deceased, assignors to F. G. Goodman and E. A. Goodman, Brooklyn, N. Y. Inflatable conduit stopper. 1,906,151; Apr. 25.
Goodrich, B. F., Company, The. (See Flink, John H., assignor.)
Goodrich, B. F., Company, The. (See Leguillon, Charles W., assignor.)
Goodrich, B. F., Company, The. (See Matthias, Gilbert L., assignor.)
Goodrich, Robert J. (See Howell, E. T., and Goodrich.)
Goodrich, Robert J., and E. T. Howell, South Milwaukee, Wis., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company. Anthraquinone vat dyes and making the same. 1,905,088; Apr. 25.
Goss Printing Press Company, The. (See Crafts, Curtis S., assignor.)
Gotthardt, Henry R., Louisville, Ky., and W. E. Cain, Jeffersonville, Ind., assignors to Logan Co. Inc., Louisville, Ky. Conveying system. 1,905,579; Apr. 25.
Gough, Fred J., Fort Dodge, assignor to United States Gypsum Company, Chicago, Ill. Apparatus for the continuous calcination of gypsum. 1,905,089; Apr. 25.
Government and the people, Dedicated to the free use of. (See Gaus, George E., assignor.)
Graef, Russell C., Westfield, N. J. Building wall structure. 1,905,167; Apr. 25.
Grandjean, Georges, assignor to Isothermos Corporation, New York, N. Y. Collecting and feeding oil to journal bearings. 1,905,281; Apr. 25.
Grange, Leo O., assignor to Walter J. Jarratt, Chicago, Ill. Vulcaniser. 1,905,463; Apr. 25.
Granstedt, Erik, assignor to Aktiebolaget Formator, Stockholm, Sweden. Machine for the separation and formation of the filler of cigar bunches. 1,905,586; Apr. 25.
Granstedt, Karl E., assignor to Aktiebolaget Formator, Stockholm, Sweden. Cigar bunching machine. 1,906,152; Apr. 25.
Grasselli Chemical Company. (See Feagley, Chester C., assignor.)
Grasselli Chemical Company, The. (See Jenemann, Joseph A., assignor.)
Grasselli Chemical Company, The. (See Lawrence, Ralph E., assignor.)
Graton & Knight Company. (See Chandler, Robert W., assignor.)
Gray, Ffolliott. (See Hodgson, J. L., and Gray.)
Gray, Martin V., Stockton, Calif. Garment hanger. 1,906,058; Apr. 25.
Grebe, John J., and S. M. Stoesser, assignors to The Dow Chemical Company, Midland, Mich. Synthetic lubricant and making same. 1,905,850; Apr. 25.
Green, Burnett E., assignor to Huron Industries, Inc., Alpena, Mich. Vibrating screen. 1,905,398; Apr. 25.
Green, Frank R., assignor to Joseph Peter, Chicago, Ill. Cigarette ring. 1,906,003; Apr. 25.
Green, Louis D., San Francisco, Calif. Surgical instrument. 1,905,851; Apr. 25.
Greenberg, Meyer, Lynbrook, assignor to Craftsman Radiator Enclosure Company, Inc., Oceanside, N. Y. Cabinet construction. 1,906,208; Apr. 25.
Greenfield, Nathan R., et al. (See Hatfield, Floyd H., assignor.)
Greenholt, Harry A., Chicago, Ill., assignor to National Biscuit Company, New York, N. Y. Facing machine. 1,905,700; Apr. 25.
Greenholt, Harry A., Chicago, Ill., assignor to National Biscuit Company, New York, N. Y. Conveying mechanism. 1,905,701; Apr. 25.
Greenstreet, Oliver P., Owensville, Mo. Antifreeze compound for radiators. 1,905,880; Apr. 25.
Greer, Palmore, Higginsville, Mo. Garage. 1,905,852; Apr. 25.
Greve, Edgar E., Bellevue, assignor to Oil Well Supply Company, Oil City, Pa. Lubricating system for pumping power. 1,906,004; Apr. 25.
Griffin, Adella V., San Diego, Calif. Educational device. 1,905,881; Apr. 25.
Griffith, Clement P., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind. Dome for a liquid dispensing apparatus. Des. 89,696; Apr. 25.
Griffith, Ronald G., assignor to Creed and Company, Limited, Croydon, England. Clutch mechanism. 1,905,090; Apr. 25.
Griffiths, Richard T., Akron, Ohio, assignor, by mesne assignments, to Miller Rubber Company Inc., Wilmington, Del. Heat insulating panel member. 1,905,853; Apr. 25.
Grip, Carl A. O., Newtonville, assignor to The Reece Button Hole Machine Company, Boston, Mass. Buttonhole sewing machine. 1,905,854; Apr. 25.
Gritt, Frank A., assignor to Gritt Incorporated, Indianapolis, Ind. Simulation of fast-moving objects. 1,905,168; Apr. 25.
Gritt Incorporated. (See Gritt, Frank A., assignor.)
Gross, William M., assignor of one-half to Will Beckley, Las Vegas, Nev. Loading and dumping truck. 1,905,855; Apr. 25.
Guhl, Maclyn, Forest Hills, assignor to William Willheim Co., Inc., New York, N. Y. Textile fabric or similar article. Des. 89,697; Apr. 25.
Guide Lamp Corporation. (See Mead, Howard C., assignor.)
Gurley, W. & L. E. (See Egy, Willard L., assignor.)
Guttzeit, Chas. W. (See Kenn, William H., assignor.)
Guy, Frederick M., assignor to Guy-Murton Incorporated, Detroit, Mich. Universal joint. 1,906,057; Apr. 25.
Guy-Murton Incorporated. (See Guy, Frederick M., assignor.)
Haas, Fred S., and C. Booth, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Grinding machinery. 1,905,224; Apr. 25.
Haase, Leo G., Long Beach, and F. M. Brooks, assignors to Art Concrete Works, Inc., Pasadena, Calif. Curb valve box. 1,905,856; Apr. 25.
Hadaway, John B., Swampscott, Mass. Focusing device for cameras. 1,906,059; Apr. 25.
Haeussler, Alfred F. W., San Juan, Puerto Rico. Apparatus for signaling. 1,905,924; Apr. 25.
Hafer, John J., sr., Stratford, Conn., and M. Hafer, sr., College Point, N. Y. Fastening device. 1,905,567; Apr. 25.

Hafer, Mathias, sr. (See Hafer, John J. and M.)
Hager, Floyd D. (See Rhodes, R. O., and Hager.)
Hairlock Company Inc., The. (See Weber, A. E., and Howard, assignors.)
Haley, Kenneth W. (See Smith, W. M., and Haley.)
Halsite Corporation. (See Hawerlander, Adolf, assignor.)
Hall, Bicknell. (See Birdseye, C., and Hall.)
Hall, Theodore P., Rochester, N. Y. Airplane. 1,906,005; Apr. 25.
Hall, William T., assignor of one-third to H. McCullough, San Diego, Calif. Window lock. 1,906,153; Apr. 25.
Halsted, Hobart J., and N. R. Briggs, Buffalo, N. Y. Fraud preventive device. 1,905,935; Apr. 25.
Hamilton, Edward P., assignor to Hamilton Manufacturing Company, Two Rivers, Wis. Drawer structure. 1,905,857; Apr. 25.
Hamilton, George H., East Grand Rapids, assignor to American Seating Company, Grand Rapids, Mich. Hinge having friction bearings. 1,905,858; Apr. 25.
Hamilton, George H., East Grand Rapids, assignor to American Seating Company, Grand Rapids, Mich. Chair with swingable table leaves. 1,905,859; Apr. 25.
Hamilton, Gertrude, administratrix. (See Hamilton, Warren G., assignor.)
Hamilton Manufacturing Company. (See Hamilton, Edward P., assignor.)
Hamilton, Warren G., deceased, Atlantic City, N. J.; G. Hamilton, administratrix, assignor of one-half to J. Ginsburg, Philadelphia, Pa. Safety attachment for typographical composing and casting machines. 1,906,060; Apr. 25.
Hammer, Otto, Whittier, Calif., assignor to Security Engineering Company, Reno, Nev. Well reamer. 1,905,860; Apr. 25.
Hammes, Michael A., Racine, Wis. Washing device. 1,905,861; Apr. 25.
Hammond, Myron B., assignor to The Thos. P. Taylor Company, Bridgeport, Conn. Sanitary pad supporter belt. 1,905,964; Apr. 25.
Hanlon-Waters, Inc. (See Waters, Millard F., assignor.)
Hanna Engineering Works. (See Norris, Allan A., assignor.)
Hanson, Miles G. (See Babitch, A. M., and Hanson.)
Hanson, Perren J., assignor, by mesne assignments, to Gleaner Harvester Corporation, Independence, Mo. Combined harvester, thresher, and separator. 1,905,091; Apr. 25.
Hanson, Walter M., assignor to American Seating Company, Grand Rapids, Mich. Seat. 1,906,061; Apr. 25.
Harden, Stephen W. (See Morgan, R. M., and Harden.)
Harder, John F., Omaha, Nebr. Detent for window sashes. 1,905,963; Apr. 25.
Harding, Charles P., Montreal, Quebec, and J. A. Shaw, Westmount, Quebec, Canada. Pipe support. 1,906,209; Apr. 25.
Hardisty, Rupert W., Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y. Loudspeaker. 1,905,702; Apr. 25.
Hardoll (Etablissements Hariveau & Dolimier, et René Porte & Cie reunis). (See Porte, René, assignor.)
Hardy, Peter S., Stratford, Conn., assignor to Health Developing Apparatus Company, Inc., New York, N. Y. Exercise machine. 1,905,092; Apr. 25.
Harley, John, Glasgow, Scotland, assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Index center. 1,906,062; Apr. 25.
Harman, Frank B., Kenosha, Wis., assignor to Simmons Company, New York, N. Y. Folding card or like tables. 1,905,862; Apr. 25.
Harmon, John B. (See Wiener, J. A., and Harmon.)
Harnischfeger Corporation. (See Wadd, Roy J., assignor.)
Harper, James G. (See Newman, S. F., and Harper.)
Harries, Wolfgang, Jena, Germany, assignor to General Electric Company. Contact rectifier. 1,905,703; Apr. 25.
Harris, Allyn, Wheaton, Ill., assignor to Safety Mining Company. Blasting cartridge. 1,905,863; Apr. 25.
Harris, Charles W., Michigan City, Ind., assignor, by mesne assignments, to Pullman Car & Manufacturing Corporation. Journal box waste roll winding machine. 1,905,464; Apr. 25.
Harris, Leonard B., New York, N. Y. Vehicle seat. 1,905,563; Apr. 25.
Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 1,905,704; Apr. 25.
Harter, Isaac, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J. Steam boiler. 1,905,465; Apr. 25.
Hartford-Empire Company. (See Howard, George E., assignor.)
Hartford-Empire Company. (See Lorenz, Edward H., assignor.)
Hartford-Empire Company. (See Peiler, Karl E., assignor.)
Hartford-Empire Company. (See Wadman, Harold A., assignor.)
Hartle, Jacob E., jr., Madison, N. J. Vending machine attachment. 1,906,160; Apr. 25.
Hartness, James, Springfield, Vt. Screw thread gauge. 1,905,705; Apr. 25.
Harvey, Arthur H., assignor of one half to The Ebbw Vale Steel, Iron & Coal Company Limited, Ebbw Vale, England. Railway and like sleeper. 1,906,006; Apr. 25.
Hars, Hermann, Berlin-Siemensstadt, Germany, assignor to Radio Patents Corporation, New York, N. Y. Electric voltage regulation. 1,906,210; Apr. 25.
Haseltine, Stacy E., assignor to W. H. Miner, Inc., Chicago, Ill. Shock absorbing mechanism. 1,905,864; Apr. 25.
Hasenpatt, Wolfgang, Berlin-Friedenau, Germany, assignor to General Electric Company. Advertising device. 1,906,706; Apr. 25.
Haskelite Manufacturing Corporation. (See Norris, C. B., Curran, and Van Steenwyk, assignors.)
Hatfield, Floyd H., assignor of one-tenth to N. R. Greenfield, one-tenth to T. W. Craig, and one one-hundredth to G. M. Bergen, Rawlins, Wyo. Folding table. 1,905,282; Apr. 25.
Hatke, Charles W., Denver, Colo. Reversible attraction sign. 1,905,563; Apr. 25.
Havemeyer, Henry O., jr., Mahwah, N. J. Indicating means for turntables and the like. 1,905,707; Apr. 25.
Hawerlander, Adolf, assignor to Halsite Corporation, New York, N. Y. Compressed laminated products. 1,905,225; Apr. 25.
Hawkins, Charles A., and H. L. Hirschler, San Francisco, and M. Lothrop, Berkeley, Calif., assignors to Hawkins Patents, Ltd., Reno, Nev. Vehicle. 1,905,865; Apr. 25.
Hawkins Patents, Ltd. (See Hawkins, C. A., Hirschler, and Lothrop, assignors.)
Hasel, Ernest C., jr. (See Hasel, Ernest C. and E. C., jr.)
Hasel, Ernest C. and E. C., jr., Atchison, Kans. Cover for permanently bound books. 1,905,093; Apr. 25.
Health Developing Apparatus Company. (See Hardy, Peter S., assignor.)
Heany, John A., New Haven, Conn., assignor to Sirian Lamp Company, Newark, N. J. Producing yttrium and metals of the yttrium group. 1,905,866; Apr. 25.
Heard, James J., Phoenix, Ariz. Automatic pressure valve seal cap for collapsible tubes. 1,905,936; Apr. 25.
Heath, Sheldon B. (See Barstow, E. O., and Heath.)
Heaton, Herman C., Chicago, Ill. Process and apparatus for generating vapors. 1,905,283; Apr. 25.
Hefty, Henry, St. Louis, Mo. Ventilated cabinet. 1,905,867; Apr. 25.
Hein, George N., San Francisco, Calif. Driving mirror. 1,905,868; Apr. 25.
Heitger, Frank H., deceased, by Mattie G. Heitger, Flint, Mich., administratrix. Pump. 1,905,284; Apr. 25.
Heitger, Mattie G., administratrix. (See Heitger, Frank H., assignor.)
Helsingborgs Gummifabriks Aktiebolag. (See Bohlin, Olof G., assignor.)
Hemann, Bernard, Ashland, Ky. Coating metal objects. 1,906,154; Apr. 25.
Henderson, J. H., et al. (See Carton, Lee C., assignor.)
Hendry, Johnson F., Schenectady, N. Y., assignor to General Electric Company. Packing case for fragile articles. 1,905,708; Apr. 25.
Henke, Frederick. (See Godshalk, C. A., Henke, and Behrsing.)
Henle, Franz, Frankfort-on-the-Main-Hochst, G. Meder, Munster in Taunus, V. Lanz, Frankfort-on-the-Main-Hochst, F. Privinsky, Hofheim in Taunus, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Preparing acetic anhydride. 1,905,466; Apr. 25.
Heraeus-Vacuumschmelze A-G. (See Rohn, Wilhelm, assignor.)
Herb, Otto J. (See Thomas, G. F., and Herb.)
Hercules Powder Company. (See Humphrey, Irvin W., assignor.)
Herman, Raymond L., New York, assignor to Benjamin May and Louis Schulman, Brooklyn, N. Y. Collapsible tap. 1,905,709; Apr. 25.
Hershey, John A., Cherryville, Pa. Scaffolding. 1,905,026; Apr. 25.
Hervey, Earl C., assignor to Hydraulic-Press Brick Company, Indianapolis, Ind. Ornamental brick and producing same. 1,905,170; Apr. 25.
Herz, Richard, Frankfort-on-the-Main, and W. Zerweck, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Bromінating anthanthrone. 1,905,285; Apr. 25.
Herz, Richard, Frankfort-on-the-Main, and W. Zerweck, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Chlorinating anthanthrone. 1,905,286; Apr. 25.
Herz, Richard, Frankfort-on-the-Main, and M. Schubert, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Manufacturing nuclear halogenated derivatives of arylaminothiasole compounds. 1,905,287; Apr. 25.
Hesse, Maurice A. (See Black, H., Holmes, and Hesse.)
Heuser, Herman, and R. S. Heuser, Evanston, assignors to United States Process Corporation, Chicago, Ill. Removal of volatile constituents from fermented liquids. 1,906,007; Apr. 25.
Heuser, Raymond S. (See Heuser, Herman, and R. S.)
Hickman, Kenneth C. D., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic processing. 1,905,467; Apr. 25.
Hicks, William W. (See Kercher, A. J., and Hicks.)

Hilder, Stuart, Glenearlyn, Va., assignor to Monroe Calculating Machine Company, Orange, N. J. Keyboard for registers. 1,906,068; Apr. 25.
Hill, Charles H., Drexel Hill, Pa., assignor to General Electric Company. Interlocking system. 1,906,710; Apr. 25.
Hill, Edward G., assignor to Hill Engineering Corporation, Richmond, Va. Clutch operating device for motor vehicles. 1,905,964; Apr. 25.
Hill Engineering Corporation. (See Hill, Edward G., assignor.)
Hill, Roger B., et al. (See Richter, G. A., Van Arsdel, and Hill.)
Hill, William H. (See Rose, H. J., and Hill.)
Hilmer, Hans. (See Streitwolf, K., Fehrle, Hilmer, and Schmidt.)
Hinrichsen, Edward R., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,905,711; Apr. 25.
Hirschler, Horace L. (See Hawkins, C. A., Hirschler, and Lothrop.)
Hirvonen, Eric J. (See Bishop, B. S. T., and Hirvonen.)
Hirvonen, Eric J., Worcester, Mass., assignor to Leland-Gifford Company. Hydraulic feed system for machine tools. 1,905,094; Apr. 25.
Himmay, Leopoldine, Ithaca, N. Y., and R. Amann, Brookline, Mass. Cooking utensil. 1,905,227; Apr. 25.
Heag, Eugene A., Pacific Grove, Calif. Door call. 1,905,937; Apr. 25.
Hoard, Bert V., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Series capacitor with combination protective equipment. 1,905,226; Apr. 25.
Hodgson, Edward S., East St. Louis, Ill. Folding desk. 1,906,064; Apr. 25.
Hodgson, John L., and F. Gray, Luton, assignors to George Kent Limited, London, England. Indicating or recording mechanism. 1,906,155; Apr. 25.
Hofbauer, Caspar E., assignor to Paramount Carburetor Corporation, New York, N. Y. Carbureting system. 1,905,712; Apr. 25.
Hoffman, Earl E., Springfield, Mass. Magneto electric machine. 1,906,065; Apr. 25.
Hoffman, Hugo. (See Hoffman, Joe and H.)
Hoffman, Joe and H., Two Rivers, Wis. Motor barrow. 1,905,589; Apr. 25.
Hoffman-La Roche Inc. (See Aeschlimann, John A., assignor.)
Hoffman, Morris J., Chicago, Ill., assignor to The Tabulating Machine Company, New York, N. Y. Key controlled printing machine. 1,905,268; Apr. 25.
Hoke, William E., Baltimore, Md., assignor to Dardelet Threadlock Corporation, New York, N. Y. Self-locking coupled screw element. 1,905,869; Apr. 25.
Holland, Sidney S., assignor of one-half to Oscar Reiger, Kansas City, Mo. Ironer attachment for washers. 1,905,870; Apr. 25.
Holland, Sidney S., assignor of one-half to Oscar Rieger, Kansas City, Mo. Wringer roll. 1,905,871; Apr. 25.
Holland, Walter, Washington, D. C. Apparatus for electrolysis. 1,905,627; Apr. 25.
Hollerith, Herman, jr., Riverton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Amplifier. 1,905,985; Apr. 25.
Hollingshead, R. M. Co., The. (See Ellsworth, Carl F., assignor.)
Holmes, Walter C., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Explosive. 1,905,290; Apr. 25.
Holmes, William. (See Black, H., Holmes, and Hesse.)
Holophane Company. (See English, Solomon, assignor.)
Holst, Gilles, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company. Gas filled discharge tube. 1,905,713; Apr. 25.
Holst, Gilles, R. Shepherd, and P. H. A. van Lis, Eindhoven, Netherlands, assignors to Radio Corporation of America. Diaphragm and coil support. 1,906,066; Apr. 25.
Hoots, Herbert. (See Endres, W., and Hoots.)
Hopkins, Edwin, New York, N. Y. Re-vocalised phonograph record. 1,906,124; Apr. 25.
Hoppe, Arthur, River Edge, N. J., assignor to J. R. Wood & Sons, Inc., Brooklyn, N. Y. Finger ring. Des. 89,698; Apr. 25.
Hoppe, Oscar, Rorschach, Switzerland. Milling or cutting machine. 1,905,552; Apr. 25.
Hopwood, John M. (See Peebles, Thomas A., assignor.)
Horn and Hardart Baking Company. (See Cramer, Albert M., assignor.)
Horn & Hardart Baking Co. (See Lowther, Leonard W., assignor.)
Horne, Harry F., deceased, Los Angeles, Calif.; J. Evans, jr., administrator, assignor to A. S. Evans. Shaving brush. 1,905,171; Apr. 25.
Herzung, Ernest W., Cleveland, Ohio. Ventilator. 1,906,004; Apr. 25.
Hornley, George F., Norton-on-Tees, assignor to Imperial Chemical Industries Limited, London, England. Production of aldol. 1,905,290; Apr. 25.
Horton, Joseph W., Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system. 1,905,714; Apr. 25.
Hotchkiss, B. H., Company, The. (See Polser, Fridolin, assignor.)
Hotchkiss, B. H., Company, The. (See Vogel, Max, assignor.)
Hotstream Heater Company, The. (See Macrow, Clarence H., assignor.)
Hotz, Wilhelm, Basel, Switzerland. Compressed air brake with stage braking. 1,906,166; Apr. 25.
Houck, Harry W., East Orange, N. J., assignor to Dubilier Condenser Corporation, New York, N. Y. Thermionic valve. 1,905,572; Apr. 25.
Houde Engineering Corporation. (See Peo, Ralph F., assignor.)
Howard, George E., Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn. Process and apparatus for forming shaped mold charges of molten glass. 1,905,463; Apr. 25.
Howard, George H., Alhambra, Calif. Starter drive. 1,906,067; Apr. 25.
Howard, Joseph A. (See Weber, A. E., and Howard.)
Howe, John H., South Orange, N. J. Loop forming and cutting device. 1,905,687; Apr. 25.
Howell, Edward T. (See Goodrich, E. J., and Howell.)
Howell, Edward T., Milwaukee, and E. J. Goodrich, South Milwaukee, Wis., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company. Black vat dyestuff preparation. 1,905,095; Apr. 25.
Howell, W. H., Company, The. (See Ericson, Philip E. G., assignor.)
Howse, Curtis L., Detroit, assignor, by mesne assignments, to A C Spark Plug Company, Flint, Mich. Liquid gauge. 1,905,172; Apr. 25.
Huber, Wilhelm. (See Felix, F., and Huber.)
Hudson Holding Corporation. (See Freedman, Benjamin H., assignor.)
Hudson, Patrick, New York, N. Y. Self-holding auto license frame. 1,905,874; Apr. 25.
Hudson-Sharp Machine Company. (See Campbell, Samuel J., assignor.)
Hughes, James R., South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y. Combined fender, head lamp, parking lamp, and horn casing. Des. 89,699; Apr. 25.
Hughes, James R., South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y. Combined fender, head lamp, parking lamp, and horn casing. Des. 89,700; Apr. 25.
Hughes, James R., South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y. Combined fender, head lamp, parking lamp, and horn casing. Des. 89,701; Apr. 25.
Hughes, James R., South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y. Combined fender and head lamp casing. Des. 89,702; Apr. 25.
Hughes, James R., South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y. Combined fender, head lamp casing, parking lamp casing, and horn casing. Des. 89,703; Apr. 25.
Hughes Tool Company. (See Burns, E., and Lewis, assignors.)
Hughes Tool Company. (See Fletcher, Harold W., assignor.)
Hughes Tool Company. (See Lansford, Robert C., jr., assignor.)
Hughes Tool Company. (See McKellar, Marion S., assignor.)
Hughes Tool Company. (See Ricker, Norman H., assignor.)
Hughes Tool Company. (See Scott, Floyd L., assignor.)
Hughes Tool Company. (See Wellenstein, Louis H., assignor.)
Hughes Tool Company. (See Wellenstein, L. H., and Smith, assignors.)
Hughes Tool Company. (See Woods, Henry B., assignor.)
Humphrey, Irwin W., Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del. Refining resin. 1,905,178; Apr. 25.
Hund, August, West Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y. Detector circuit for three-element gaseous discharge tubes. 1,905,873; Apr. 25.
Hupptz, Walter F., and F. R. Frey, assignors to Phillips Petroleum Company, Bartlesville, Okla. Hydrogenating or dehydrogenating hydrocarbons. 1,905,323; Apr. 25.
Huron Industries, Inc. (See Green, Burnett R., assignor.)
Hushour, Perry D., assignor to Walter M. Chapman, Youngstown, Ohio. Valve seat. 1,905,628; Apr. 25.
Hutches, Benjamin F., jr., Allendale, N. J. Parking clock. 1,905,875; Apr. 25.
Hydraulic-Press Brick Company. (See Harvey, Earl C., assignor.)
Hyland, Lawrence A., Washington, D. C. Direct current generator voltage regulator. 1,905,291; Apr. 25.
Hynes, Michael J. (See Carter, A. F., Hynes, and Cronin.)
I. G. Farbenindustrie Aktiengesellschaft. (See Henle, F., Meder, Lanz, and Privinsky, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Steigerwald, Christian, assignor.)
Imfeld, Joseph M. (See Beran, W., Fliteroft, and Imfeld.)
Imperial Chemical Industries, Limited. (See Clark, Arthur M., assignor.)
Imperial Chemical Industries Limited. (See Hornley, George F., assignor.)
Indiana Condensed Milk Company. (See Mott, Samuel B., assignor.)

Individual Drinking Cup Company. (See Wenzman, Edwin G., assignor.)
Ingersoll-Rand Company. (See Fulton, J. S., assignee.)
Ingersoll-Rand Company. (See Lear, Earl E., assignor.)
Ingersoll-Rand Company. (See Peters, Arthur E., assignor.)
Ingraham, E., Company, The. (See Carlson, Olof L., assignor.)
Ingraham, E., Company, The. (See Simpson, John O., assignor.)
Ingram, Edward H., Philadelphia, Pa., and V. B. Pearson, Buffalo, N. Y., assignors, by mesne assignments, to H. K. de Sherbinin. Nut blank feeding mechanism. 1,906,718; Apr. 25.
Innes, George, Davenport, assignor to Innes Manufacturing Company, Bettendorf, Iowa. Harvesting grain. 1,905,409; Apr. 25.
Innes, George, assignor to Innes Manufacturing Company, Bettendorf, Iowa. Harvesting machine. 1,905,410; Apr. 25.
Innes Manufacturing Company. (See Innes, George, assignor.)
Insulite Company, The. (See Ellis, George H., assignor.)
International Bitumen Emulsion Corporation. (See Braun, Carl A., assignor.)
International Precipitation Company. (See Buff, Carl T., assignor.)
International Precipitation Company. (See Corbitt, Howard E., assignor.)
International Projector Corporation. (See Dina, Augusto, assignor.)
International Projector Corporation. (See Frappier, L. S., and Boecking.)
International Standard Electric Corporation. (See Baker, John H. R., assignor.)
Irgens, Finn T., Wauwatosa, assignor to Outboard Motors Corporation, Milwaukee, Wis. Breaker mechanism. 1,905,094; Apr. 25.
Irving, Clarence B., Kansas City, Mo., assignor to Wilson-Jones Company, Chicago, Ill. Loose leaf memorandum book. 1,905,007; Apr. 25.
Isaacson, Fred A., Chicago, Ill. Car gaming device. 1,905,098; Apr. 25.
Ingrig, Walter V., Milwaukee, Wis. Automobile bumper. 1,905,599; Apr. 28.
Isothermos Corporation. (See Grandjean, Georges, assignee).
Isted, Gerald A. (See Mathieu, G. A., and Isted.)
Ives, Herbert E., Montclair, N. J. Printing stereoscopic positives from inverted relief negatives. 1,905,469; Apr. 25.
Ives, Herbert E., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Making stereoscopic parallax panoramagrams from pseudoscopic parallax panoramagrams. 1,905,716; Apr. 25.
Jackson, Alfred F., Providence, R. I., assignor to L. B. Smith, receiver of Apsco Mossberg Corporation. Automobile indicating device. 1,905,717; Apr. 25.
Jackson, Carey B. (See Bennett, O. G., and Jackson.)
Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 1,906,620; Apr. 25.
Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock. 1,906,902; Apr. 25.
Jacobs, Charles H., and E. E. Nash, San Francisco, Calif., assignors to Syphonator Company, Ltd. Beverage carbonating and dispensing apparatus. 1,905,966; Apr. 25.
Jacobs, Isidor, Union City, N. J., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn. Fastener. 1,905,718; Apr. 25.
Jacobus, David S., Montclair, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Economizer. 1,905,470; Apr. 25.
Jacobus, David S., Montclair, and J. E. Black, Rumson, assignors to The Babcock & Wilcox Company, Bayonne, N. J. Interdeck superheater for water tube boilers. 1,905,322; Apr. 25.
Jacquelet, Robert C. (See Liebel, J. G. H., and Jacquelet.)
Jaeger, Alphons O., Mount Lebanon, assignor, by mesne assignments, to Selden Research & Engineering Corporation, Pittsburgh, Pa. Catalytic apparatus. 1,905,719; Apr. 25.
Jaeger, Alphons O., Mount Lebanon, and L. C. Daniels, Crafton, assignors to The Selden Company, Pittsburgh, Pa. Purification of crude aromatic compounds. 1,905,905; Apr. 25.
James, Henry D., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Signaling system for elevators. 1,905,225; Apr. 25.
James, Henry D., Edgewood, Pa., and G. D. Fish, Pelham, N. Y., assignors to Westinghouse Electric and Manufacturing Company. Circuitous elevator. 1,905,220; Apr. 25.
James, Henry D., Edgewood, and G. Currie, Forest Hills, Pa., assignors to Westinghouse Electric and Manufacturing Company. Circuitous elevator. 1,905,220; Apr. 25.
Jandus, Herbert S., assignor to General Spring Bumper Company, Detroit, Mich. Impact bar for automobile bumpers. Des. 89,704; Apr. 25.
Jaquiery, William, Waterbury, Conn., assignee, by mesne assignments, to Johns-Manville Corporation, New York, N. Y. Machine for producing strip moldings. 1,906,849; Apr. 25.
Jarratt, Walter J. (See Grange, Leo O., assignor.)
Jam, Carl, Horicon, Wis. Pulverizing roller. 1,905,884; Apr. 25.
Jam, Carl, Horicon, Wis. Control means for earth pulverizing machine. 1,905,885; Apr. 25.
Jam, Carl, Horicon, Wis. Earth pulverizing machine. 1,905,886; Apr. 25.
Jay, William C., assignor to Sanitary Products Corporation of America, Philadelphia, Pa. Safety device for die presses. 1,905,089; Apr. 25.
Jenemann, Joseph A., Philadelphia, Pa., assignor to The Grasselli Chemical Company, Cleveland, Ohio. Lactic acid. 1,906,088; Apr. 25.
Jenkins, Jesse M., Summit, N. J. Tobacco pipe. 1,905,298; Apr. 25.
Jenkinson, Louis, Auckland, New Zealand. Towel rail. 1,905,088; Apr. 25.
Jerowsek, Frank, Baltimore, Md. Drip catcher for paint brushes and the like. 1,906,157; Apr. 25.
Jett, George C., assignee of two-fifths to W. H. Stiemke, Milwaukee, Wis. Brake mechanism. 1,906,321; Apr. 25.
Johns, C. T., et al. (See Schurts, Ralph E., assignor.)
Joerg, Edwin J. C., executor. (See Emanuel, Ramon.)
John, Elmer N., Wauwatosa, assignor to Reliable Knitting Works, Milwaukee, Wis. Knitted footwear and making the same. Re18,864; Apr. 25.
John, Alex, Port Huron, Mich. Ventilator. 1,906,158; Apr. 25.
Johns Manville Corporation. (See Jaquiery, William, assignor.)
Johnson, Al. Construction Co. (See Johnson, Algot F., assignor.)
Johnson, Algot F., assignor to Al. Johnson Construction Co., Minneapolis, Minn. Apparatus for sinking bodies such as caissons and piles. 1,905,642; Apr. 25.
Johnson, Carl O., Lincoln, Nebr. Truck mainteiner. 1,905,904; Apr. 25.
Johnson, Ellsworth T., assignor to Deere & Company, Moline, Ill. Bundle carrier. 1,905,100; Apr. 25.
Johnson, Erland. (See Pendergast, J. F., and Johnson.)
Johnson, Halbert T., Paso Robles, Calif. Air conditioner. 1,905,101; Apr. 25.
Johnson, John F., Bellevue, Pa., assignor to Pittsburgh Plate Glass Company. Clamp for plate glass racks. 1,905,905; Apr. 25.
Johnson, Joseph, Milwaukee, Wis. Spinning top. Des. 89,705; Apr. 25.
Johnson, Lane. (See Biggert, F. C., jr., and Johnson.)
Johnson, Leonard W., Batavia, Ill. Aligning fixture. 1,905,102; Apr. 25.
Johnson, Leonard W., Batavia, Ill. Valve guide cleaner. 1,905,103; Apr. 25.
Johnson Matthey & Company Limited. (See Powell, A. R., Davies, and Scott, assignors.)
Johnston, James W., assignor to Lacene Manufacturing Company, Manchester, N. H. Grading machine. 1,905,174; Apr. 25.
Jones, Benjamin W., Schenectady, N. Y., assignor to General Electric Company. Motor starter. 1,906,720; Apr. 25.
Jones, John G. (See Dewey, H. G., and Jones.)
Jones, Oliver A., and J. A. Struthers, Bacchus, Utah. Synchroniser. 1,905,591; Apr. 25.
Jones, William A. (See Kerr, H. J., and Jones.)
Joyce, Lyndon W., assignor to Joyce-Venning Manufacturing Co., Inc., Greensboro, N. C. Suspender slide with bars flattened and embossed across weld. 1,906,020; Apr. 25.
Joyce-Venning Manufacturing Co., Inc. (See Joyce, Lyndon W., assignor.)
Juestrich, Max U., Ridgefield, N. J., assignor to The American Fabrics Company, Bridgeport, Conn. Textile fabric. Des. 89,706; Apr. 25.
Jugel, Rudolf P., Denver, Colo., assignor to American Ball Mill Company. Grinding mill. 1,906,411; Apr. 25.
Junker, Otto, Lammersdorf, Germany. Tensioning device for maintaining a given catenary curve in metal strips continuously pulled through an annealing furnace. 1,906,211; Apr. 25.
Kalamazoo Stied Company. (See Kidder, William R., assignor.)
Kallscher, Georg, Frankfort-on-the-Main, and R. Steinhauer, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azo dyestuffs and making same. 1,905,204; Apr. 25.
Kaltite Company. (See Eaton, Leslie R., assignor.)
Kalunn Steel Company. (See White, William R., assignor.)
Kaltenbach, Robert W., Cleveland Heights, and A. Franek, Cleveland, Ohio; said Franek assignor to said Kaltenbach. Pile driver. 1,905,906; Apr. 25.
Kanter, Alfred, University City, Mo. Display sign or similar article. Des. 89,707; Apr. 25.
Kant-Glare Manufacturing Company. (See Walker, John S., assignor.)
Karle, John D., Roselle Park, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Workholder for sewing machine durating operations. 1,905,907; Apr. 25.
Karnes, Orla B., Caldwell, Tex. Display stand. 1,905,909; Apr. 25.

Kanson, Charles L., Mattapan, Mass. Testing. 1,905,412; Apr. 25.

Kayler, Frank H., Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill. Coupler. 1,905,641; Apr. 25.

Ke-Bond Company. (See Bixby, John L., assignor.)

Keen, William H., Albany, assignor to Chas. W. Guttseit, New York, N. Y. Stainless iron and producing the same. 1,905,721; Apr. 25.

Keiser, Charles R., assignor to The Serton Rubber Company, Dayton, Ohio. Manufacturing rubber soles. 1,905,909; Apr. 25.

Kellett, Irvine, and N. Armitage, Lawrence, and W. J. Wood, Methuen, Mass. Bobbin winding and bunch forming mechanism and method. 1,905,910; Apr. 25.

Kellett, William R., Menasha, assignor to Paper Patents Company, Neenah, Wis. Paper making apparatus. 1,905,911; Apr. 25.

Kelly-Springfield Tire Company, The. (See Fritch, Elue O., assignor.)

Kelsey-Hayes Wheel Corporation. (See White, John W., assignor.)

Kendall, James M., Woodbury Heights, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Sound recording and reproducing unit. 1,905,175; Apr. 25.

Kennedy, Edward C. (See Lacks, F. A., and Kennedy.)

Kent, George, Limited. (See Hodgson, J. L., and Gray, assignors.)

Kent, Philip J., Birmingham, and I. C. McKechnie, assignors to Chrysler Corporation, Detroit, Mich. Lamp and lamp mounting. 1,905,471; Apr. 25.

Kept-Kapt, Inc. (See Burke, James P., assignor.)

Kercher, Arthur J., Berkeley, Calif. Thermostat. 1,905,283; Apr. 25.

Kercher, Arthur J., Berkeley, and W. W. Hicks, assignors to Wesix National Company, San Francisco, Calif. Electrical heating element and manufacture. 1,905,282; Apr. 25.

Kerr, Arthur D., Holden, assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass. Bearing for ink roll doctors. 1,905,104; Apr. 25.

Kerr, Howard J., Westfield, N. J., and W. A. Jones, Westerleigh, N. Y., assignors to The Babcock & Wilcox Company, Bayonne, N. J. Boiler with interdeck superheater. 1,906,125; Apr. 25.

Kersten, Harold J., assignor to Board of Directors of the University of Cincinnati, Cincinnati, Ohio. Electrodeposition of tin-gold alloys. 1,905,105; Apr. 25.

Kersten, Harold J., assignor to Board of Directors of the University of Cincinnati, Cincinnati, Ohio. Electrodeposition of zinc-gold alloys. 1,905,106; Apr. 25.

Kersting, Albert H., Los Angeles, Calif. Sash balance. 1,905,107; Apr. 25.

Kidder, William E., assignor to Kalamazoo Sled Company, Kalamazoo, Mich. Sled. 1,905,642; Apr. 25.

Kieckhefer, Edwin F., Wauwatosa, Wis. Preparing lawns. 1,905,176; Apr. 25.

Kilgore Mfg. Company, The. (See Peake, Edward S., assignor.)

Kinsella, Edward. (See Cope, E. C., and Kinsella.)

Kinsman, Russell C., assignor to Taylor Instrument Companies, Rochester, N. Y. Milk heater control. 1,905,722; Apr. 25.

Kirby, James B., West Richfield, Ohio. Washing machine. 1,905,912; Apr. 25.

Kirk, William C., Indianapolis, Ind. Knockdown convertible stand. Re18,807; Apr. 25.

Kirkwood, Arthur M., Portland, Oreg. Debarking machine. 1,905,887; Apr. 25.

Kirkwood, Harry R., assignor of one-fourth to R. C. Speer, Pittsburgh, Pa. Lock. 1,905,177; Apr. 25.

Klasing, Augustus F., Chicago, Ill. Brake mechanism. 1,905,400; Apr. 25.

Klein, Carl A. (See Cutler, L. W., and Klein.)

Kliem, Max, Leipsig, Germany. Newspaper stand. 1,905,564; Apr. 25.

Knapp, William F. (See Cooper, W., and Knapp.)

Knowlton, Donald R., and W. J. Crites, assignors to Phillips Petroleum Company, Bartlesville, Okla. Control device for wells. 1,905,592; Apr. 25.

Koefoed, Hauberg, Marstrand & Helweg, Aktieselskabet Titan. (See Dyggve, Rigil V. P., assignor.)

Koehler Manufacturing Company. (See Wheat, Grant, assignor.)

Kohler, Kurt P., Salem, Ohio, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Collapsible reel. 1,905,178; Apr. 25.

Konstantinoff, Jean, Meudon, France. Apparatus for the distribution and injection of compressed air for internal combustion engines. 1,906,008; Apr. 25.

Kopp, Philip E., Kansas City, Mo. Grease gun. 1,905,913; Apr. 25.

Koppers Company of Delaware, The. (See Blackwood, O. H., and Boss, assignors.)

Koppers Company of Delaware, The. (See Koppers, Heinrich, assignor.)

Koppers Company of Delaware, The. (See Powell, Alfred R., assignor.)

Koppers Company of Delaware, The. (See Rose, H. J., and Hill, assignors.)

Koppers Company of Delaware, The. (See Sperr, Frederick W., jr., assignor.)

Koppers Company of Delaware, The. (See Totzek, Friedrich, assignor.)

Koppers, Heinrich, Essen, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa. Distillation of gas liquor. 1,905,106; Apr. 25.

Kurz, Willi, Berlin-Friedenau, Germany. Coding machine. 1,905,593; Apr. 25.

Kraft, Robert H., assignor to Goodman Manufacturing Company, Chicago, Ill. Loading machine. 1,905,472; Apr. 25.

Krakauer, Samuel, and S. S. Marcus, New York, N. Y. Spring cushion construction. 1,906,159; Apr. 25.

Kramer, Andrew A., Kansas City, Mo. Reenforced metallic structural sheet and making the same. 1,905,413; Apr. 25.

Kramer, Louis E. (See Lutz, G. A., and Kramer.)

Krauth & Benninghofen. (See Krauth, Marie W., assignor.)

Krauth, Marie W., assignor to Krauth & Benninghofen, Hamilton, Ohio. Sheet holding rack. 1,906,109; Apr. 25.

Krebs Pigment & Color Corporation. (See Mertes, Albert T., assignor.)

Kreidler, Urban A., East Orange, N. J., assignor to National Biscuit Company, New York, N. Y. Pastry cup. Des. 89,708; Apr. 25.

Kremmling, Aribert, Hammersleben, Germany. Apparatus for forming molded or embossed articles of plastic material. 1,906,160; Apr. 25.

Krieger, Alvin W., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric snap switch. 1,905,914; Apr. 25.

Kris, Joseph, Chicago, Ill. Power operated talking machine. 1,906,161; Apr. 25.

Krocks, John S. (See Nosik, William A. and R. J., Krocks, and Moncher.)

Kronquest, Alfred L., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Seaming head for closing machines. 1,906,162; Apr. 25.

Kulicke, Frederick W., Philadelphia, Pa., assignor, by mesne assignments, to The Electrolock Manufacturing Company, Vicksburg, Miss. Electric switch lock. 1,906,110; Apr. 25.

Kunold, Henry F. (See Constable, C. H., and Kunold.)

Kurowski, Alfred G. F., Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y. Braille-writing machine. Des. 89,700; Apr. 25.

Laaba, Max A., assignor to American Optical Company, Southbridge, Mass. Ophthalmic lens. 1,906,644; Apr. 25.

Labberton, John M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Preventing oil leakage from bearings. 1,905,234; Apr. 25.

Lacene Manufacturing Company. (See Johnston, James W., assignor.)

Lachowitz, Samuel, Brooklyn, and I. Shiffman, New York, N. Y. Wrist watch or similar article. Des. 89,719; Apr. 25.

Lacks, Felix A., Pelham Manor, and E. C. Kennedy, New Haven, Conn.; said Kennedy assignor to said Lacks. Making hats. 1,906,212; Apr. 25.

Lamb, Joseph F., assignor to Landers, Frary, & Clark, New Britain, Conn. Percolator. 1,905,111; Apr. 25.

Lamb, Judson D., Reno, Nev. Universal ratchet wrench. 1,905,888; Apr. 25.

Lambert, Alvan R., Hollywood, Calif., assignor, by mesne assignments, to Burnett Walker, New York, N. Y. Wheel. 1,905,473; Apr. 25.

Lambert, Henry C., Anthon, Iowa. Hack saw. 1,905,940; Apr. 25.

Lamson Company, The. (See Allen, Lavont C., assignor.)

Lancaster Iron Works, Inc. (See Luce, Grafton H., assignor.)

Landers, Frary & Clark. (See Lamb, Joseph F., assignor.)

Landis Machine Company. (See Newman, S. F., and Harper, assignors.)

Landsman, Wesley E., Cedar Grove, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration damping device. 1,905,722; Apr. 25.

Lane, Wilton V., Guthrie, assignor of one-half to Zella M. Lane, Oklahoma City, Okla. Electrically heated wax spatula. 1,905,987; Apr. 25.

Lane, Zella M. (See Lane, Wilton V., assignor.)

Lanz, Gregory, Yuba City, Calif. Fruit picker's stilt. 1,905,112; Apr. 25.

Lanning, Samuel W., New Lexington, Ohio. Aeroplane. 1,905,389; Apr. 25.

Lansing, Raymond P., Montclair, N. J., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid pump. 1,905,941; Apr. 25.

Lansing, Raymond P., Montclair, N. J., assignor to Bendix Aviation Corporation, South Bend, Ind. Engine starting apparatus. 1,905,943; Apr. 25.

Lanz, Valentin. (See Henle, F., Meder, Lanz, and Privinsky.)

Lasker, Charles H., Joliet, Ill. Operating means for a crank press. 1,905,113; Apr. 25.

Laskey, Rose D. (See Laskey, William B.)

Laskey, William B., deceased, by R. D. Laskey, executrix, assignor to Mason, Au & Magenheimer Confectionery Manufacturing Company, Brooklyn, N. Y. Method of and machine for producing candy units. 1,906,069; Apr. 25.

Lasselle, Percy, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y. Making base exchange materials for water softening. 1,906,162; Apr. 25.

Latham Machinery Company. (See Metcalf, Irving E., assignor.)

Lattig, Melvin T., Hillsboro, N. C. Tread block. 1,906,009; Apr. 25.

Lauterbur, Edward J. (See Lauterbur, Frank X. and E. J.)

Lauterbur, Frank X. and E. J., Sidney, Ohio. Variable-mostatic radiator valve. 1,905,642; Apr. 25.

Laver, Anna, Philadelphia, Pa. Undergarment. 1,905,645; Apr. 25.

Lawler, James J., Mount Vernon, N. Y. Automatic thermostatic radiator valve. 1,906,942; Apr. 25.

Lawrence, Ralph E., Wichita, assignor to The Grasselli Chemical Company, Cleveland, Ohio. Condensation product of cinchona bark alkaloids with thiuram sulphides as inhibitors. 1,905,915; Apr. 25.

Lawson, John W. (See Critchfield, E. M., and Lawson.)

Leach, Edgar J., Janesville, Wis., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Pilot light controlled safety valve. 1,905,414; Apr. 25.

Lear, Earl B., Philipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Safety device for rock drills. 1,906,474; Apr. 25.

Lederer, Ernest A. (See Mardon, J. W., and Lederer.)

Ledwinka, Hans, Koprivnica, Czechoslovakia. Power-driven vehicle. 1,905,994; Apr. 25.

Lee, Roger K., Highland Park, assignor to Chrysler Corporation, Detroit, Mich. Vibration damper. 1,905,475; Apr. 25.

Lee Rubber and Tire Corporation. (See Carlin, James C., assignor.)

Leguillon, Charles W., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Method and apparatus for treating textile material. 1,905,916; Apr. 25.

Leguillon, Charles W., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Separable fastener. 1,905,917; Apr. 25.

Leland-Gifford Company. (See Bishop, B. S. J., and Hirvonen, assignors.)

Leland-Gifford Company. (See Hirvonen, Eric J., assignor.)

Lemel, Samuel L., Shaker Heights, Ohio. Device for the protection of the eyes. 1,905,415; Apr. 25.

Lennmor, Gösta G., Stockholm, Sweden, assignor, by mesne assignments, to Electrolux Servel Corporation, New York, N. Y. Control for wick type liquid fuel burner. 1,905,918; Apr. 25.

Leschke, Hans M., and P. J. Anselmo, San Francisco, Calif. Electric safe lock. 1,905,965; Apr. 25.

Leslie Company. (See Soderberg, Sten M. B., assignor.)

Letrilliart, Pierre, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Paris, France. Asynchronous electrical machine. 1,906,164; Apr. 25.

Leuchter, Richard L., Weidlingau-Hadersdorf, assignor to Gebruder Hardy, Maschinenfabrik und Giesserei A. G., Vienna, Austria. Pressure release valve. 1,906,165; Apr. 25.

Levine, Louis, Cincinnati, Ohio. Automobile cover. 1,905,972; Apr. 25.

Levis, W. Kent, Selma, Calif. Irrigation pipe screen. 1,905,919; Apr. 25.

Levy, Arthur B., Birmingham, Ala., assignor, by mesne assignments, to Dixie Dental Manufacturing Co., Philadelphia, Pa. Interchangeable porcelain root facing. 1,905,595; Apr. 25.

Lewis, Howard B. (See Burns, B., and Lewis.)

Lewis Invisible Stitch Machine Company. (See Mueller, Charles W., assignor.)

Lewis, Lloyd L., Wellaston, Mass. Stanchion. 1,905,596; Apr. 25.

Libbey Glass Manufacturing Company, The. (See Nash, Arthur D., assignor.)

Libbey-Owens-Ford Glass Company. (See Ball, Edward M., assignor.)

Liegel, John G. H., Cincinnati, and E. C. Jacquelot, Norwood, Ohio, assignors, by mesne assignments, to The Union Switch & Signal Company. Electric current valve. 1,905,724; Apr. 25.

Liebknecht, Otto, Neubabelsberg, Germany, assignor to Permutit Company, New York, N. Y. Recovering base exchange material. 1,906,166; Apr. 25.

Lima, Alfred, jr., assignor to Electrified Sugar Company, Los Angeles, Calif. Apparatus for treating sugar containing liquid. 1,906,305; Apr. 25.

Liming, John, jr., Philadelphia, Pa. Fluid pump. 1,906,966; Apr. 25.

Lind, Howard E., assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio. Production of signs, decorations, and the like. 1,906,965; Apr. 25.

Lindegaard, Emil. (See Nicolai, C. A., and Lindegaard.)

Lindemann, Frederick W., St. Paul, assignor to The Unipress Company, Incorporated, Minneapolis, Minn. Garment press. 1,906,071; Apr. 25.

Lindemon, William H., assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Mechanical pencil. 1,905,920; Apr. 25.

Lindner, Herbert, Berlin, Germany. Device for shaping and truing grinding rolls. 1,905,860; Apr. 25.

Lindsay, Lyan G., near Dayton, assignor to Trupar Manufacturing Company, Dayton, Ohio. Softening water. 1,905,725; Apr. 25.

Lindstrom, Nils O. (See Olofson, C. F. E., and Lindstrom.)

Linhares, Aurelio, Rio de Janeiro, Brazil. Electrically operated typewriter. 1,906,167; Apr. 25.

Linn, John D., assignee of one-half to Cooke, Troughton & Simms, Limited, York, England. Engraving machine. 1,906,735; Apr. 25.

Lisenby Manufacturing Company. (See Low, Charles L., assignor.)

Litchfield, Isaac W., assignor to Bemis Industries, Incorporated, Boston, Mass. Casement locking mechanism. 1,905,921; Apr. 25.

Livingston, John W., Kirkwood, assignor to Monsanto Chemical Works, St. Louis, Mo. Manufacture of liquid dialkyl phthalate esters. 1,906,974; Apr. 25.

Locke, Sylvanus D., Bridgeport, and C. E. Beach, Stratford, and H. J. Stegeman, Fairfield, Conn., assignors, by mesne assignments, to Alemite Corporation, Chicago, Ill. Lubricating apparatus. 1,905,179; Apr. 25.

Locomotive Finished Material Company, The. (See Muchnic, Henry E., assignor.)

Lofgren, Peter, assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass. Seating ring for pipe couplings. 1,905,115; Apr. 25.

Logan Co. Inc. (See Gotthardt, H. E., and Cain, assignors.)

Long, Dorothy, assignor to Franklin Simon & Company, Inc., New York, N. Y. Ensemble dress. Des. 89,711; Apr. 25.

Long, Joseph H., Cleveland, Ohio. Refrigerator. 1,905,597; Apr. 25.

Loomis, Chauncey C., Lenox, Mass., and A. D. Macdonald, New York, N. Y., assignors, by mesne assignments, to New England Lime Company, Pittsfield, Mass. Simultaneous production of condensed carbon dioxide and slow setting cement. 1,905,598; Apr. 25.

Loomis, Crawford C., Ilion, N. Y., assignor to Remington Arms Company, Inc. Firearm. 1,905,922; Apr. 25.

Lord, Hugh C. (See Whitehouse, Irving P., assignor.)

Lorenz, Edward H., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for handling glassware. 1,906,476; Apr. 25.

Lorenz, Max, Stuttgart, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Carburetor. 1,905,938; Apr. 25.

Lorensen, Christian, Berlin-Treptow, Germany, assignor, by mesne assignments, to Bendix Aviation Corporation, Chicago, Ill. Making tubular turbine blades. 1,905,944; Apr. 25.

Lothrop, Marcus. (See Hawkins, C. A., Hirschler, and Lothrop.)

Low, Albert H., Denver, Colo. Cigarette. 1,905,410; Apr. 25.

Low, Charles L., Benton Harbor, Mich., assignor to Lisenby Manufacturing Company, Fresno, Calif. Elevator structure and control for printing presses. 1,906,070; Apr. 25.

Lowther, Leonard W., Audubon, N. J., assignor to Horn and Hardart Baking Co., Philadelphia, Pa. Dispensing machine. 1,905,180; Apr. 25.

Luce, Grafton H., Chicago, Ill., assignor to Lancaster Iron Works, Inc., Lancaster, Pa. Brick edging machine. 1,906,477; Apr. 25.

Lummus Company, The. (See Coubrough, George R., assignor.)

Lumsden, David, Sikeston, Mo. Overflow trap for automobile radiators. 1,906,072; Apr. 25.

Lundquist, Hendrick W., Los Angeles, Calif. Floor sander. 1,905,296; Apr. 25.

Lunsford, Robert C., jr., assignor to Hughes Tool Company, Houston, Tex. Mounting for acid bottles. 1,905,116; Apr. 25.

Lutz, George A., Cranford, N. J., assignor to American Circular Loom Company, Inc., Dover, Del. Electric welding. 1,905,478; Apr. 25.

Lutz, George A., Cranford, N. J., assignor to American Circular Loom Company, Inc., Dover, Del. Electric welding. 1,905,479; Apr. 25.

Lutz, George A., and L. E. Kramer, Cranford, N. J., assignors to American Circular Loom Company, Inc., Dover, Del. Electric welding. 1,905,480; Apr. 25.

Lux Clock Manufacturing Company. (See Lux, Paul, assignor.)

Lux, Paul, assignor to Lux Clock Manufacturing Company, Waterbury, Conn. Combined alarm clock case and dial. Des. 89,712; Apr. 25.

Lyon, Harry H., New Rochelle, assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y. Tape feeding device. 1,905,481; Apr. 25.

Macdonald, Alexander D. (See Loomis, C. C., and Macdonald.)

MacDonald, Charles H., San Francisco, Calif. Rod mill. 1,905,417; Apr. 25.

Macbeth, Clifford, Westminster, assignor to British Coal Distillation Limited, London, England. Method of and apparatus for separating solid carbonaceous material from foreign impurities. 1,905,965; Apr. 25.

Mackenzie, Fred L., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening-pulling machine. 1,905,297; Apr. 25.

MacLaren, Frederick H., Hammond, assignor to Standard Oil Company, Whiting, Ind. Wax composition. 1,905,923; Apr. 25.
MacLanchlan, James H., New York, N. Y. Conveyer. 1,905,924; Apr. 25.
Madsen, Carl J. (See Campbell, W. H., Ellsworth, and Madsen.)
Magnesium Development Corporation. (See de Ridder, E., and Altwicker, assignors.)
Magri, Abel A., Rochester, N. Y. Saw adapter. 1,905,482; Apr. 25.
Maluri, Guido, and R. F. Bossini, London, England, assignors, by mesne assignments, to Electrolux Servel Corporation. Absorption refrigerating system. 1,905,727; Apr. 25.
Malcom, Robert. (See Binder, George A., assignor.)
Malcom, Robert, Chicago, Ill. Face protector. 1,904,993; Apr. 25.
Malerba, Robert. (See Conforti, M., and Malerba.)
Malleval, Veuve F., neé Berthe Burlet, Paris, France. Decorating metals. 1,906,168; Apr. 25.
Mallgraf, Ferdinand, Little Neck, assignor to The American Tobacco Company, New York, N. Y. Display device. 1,905,395; Apr. 25.
Malocsay, Francis X., Upper Saddle River, N. J., assignor, by mesne assignments, to Commercial Investment Trust Incorporated. Cigar handling machine. 1,905,728; Apr. 25.
Malone, John M., Pittsburgh, Pa. Steam trap. 1,904,994; Apr. 25.
Mandelert, Charles L., Chippewa Falls, Wis. Hunting coat with detachable pocket. 1,905,235; Apr. 25.
Mangan, George B., Washington, D. C., assignor to Westinghouse Electric & Manufacturing Company. Expulsion fuse. 1,905,236; Apr. 25.
Mangin, James, assignor to New Brunswick Electric Supply Company, New Brunswick, N. J. Adjustable crossbar or strap for electric fixtures. 1,906,197; Apr. 25.
Manning, William H., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Making connecting rods. 1,905,925; Apr. 25.
Man-O-Lamp Corporation. (See Baetz, Walter, assignor.)
Mansitto, Joe, Omaha, Nebr. Electric heater. 1,906,169; Apr. 25.
Marbach, Edward R., and G. F. Cavanagh, assignors to The Ohio Rubber Company, Cleveland, Ohio. Making steering wheels. 1,905,926; Apr. 25.
Marcus, Samuel S. (See Krakauer, S., and Marcus.)
Marden, John W., East Orange, N. J., assignor to Westinghouse Lamp Company. Electron discharge device. 1,905,035; Apr. 25.
Marden, John W., and E. A. Lederer, East Orange, N. J., assignors to Westinghouse Lamp Company. Electron emission device. 1,905,034; Apr. 25.
Marsh, Harry V., Chicago, Ill. Placard. 1,905,927; Apr. 25.
Martel, Edgar J., Laconia, N. H. Chain for automobile tires. 1,905,237; Apr. 25.
Matthens, Arthur S., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. 1,905,238; Apr. 25.
Martin, Dennis E., Glassport, assignor to United States Glass Company, Pittsburgh, Pa. Goblet or similar article. Des. 89,713; Apr. 25.
Martin, Dennis E., Glassport, assignor to United States Glass Company, Pittsburgh, Pa. Goblet or similar article. Des. 89,714; Apr. 25.
Martin, Frederick W., Bronxville, assignor to Franklin Railway Supply Company, New York, N. Y. Flexible pipe coupling for railway vehicles. 1,905,647; Apr. 25.
Martin, Glenn L., Co., The. (See Chevrolet, L., and Parrish, assignors.)
Martin, Joseph, New York, assignor to United States Cabinet Bed Co., Brooklyn, N. Y. Day-bed. 1,905,928; Apr. 25.
Martin, William A., Trenton, Mo. Mausoleum. 1,905,036; Apr. 25.
Mason, Au & Magenheimer Confectionery Manufacturing Company. (See Laskey, William B.)
Mathieu, Gaston A., London, and G. A. Isted, Essex, England, assignors to Radio Corporation of America. Automatic gain control. 1,905,946; Apr. 25.
Matthews, William H., assignor to Frigidaire Corporation, Dayton, Ohio. Refrigerating apparatus. 1,905,037; Apr. 25.
Matthias, Gilbert L., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Vulcanizing apparatus. 1,905,929; Apr. 25.
Mausin, André E., Paris, France. Device for recording the warp of railway tracks. 1,906,170; Apr. 25.
Maxmoor Corporation. (See Moore, Arlington, assignor.)
May, Benjamin, et al. (See Herman, Raymond L., assignor.)
Maynes, Emma C. (See Maynes, Hyla F., assignor.)
Maynes, Hyla F., assignor of one half to Emma C. Maynes, North Tonawanda, N. Y. Fishing reel. 1,905,483; Apr. 25.
Maywood Chemical Works. (See Weber, F. W., and Schaefer, assignors.)
McCall, Charles D., assignor to Chrysler Corporation, Detroit, Mich. Steering gear mechanism. 1,905,484; Apr. 25.
McCallum, Arthur L., B. P. Sutherland, and J. B. Thompson, Trail, British Columbia, assignors to The Consolidated Mining and Smelting Company of Canada, Limited, Montreal, Canada. Preparing calcium nitrate from phosphate rock. 1,905,930; Apr. 25.
McCarthy, Charles J. (See Alden, J. L., and McCarthy.)
McCarthy, Charles J., et al. (See Ryan, Thomas H., assignor.)
McCarty, Grace V. F., Park Ridge, Ill. Dog collar. 1,906,073; Apr. 25.
McClure, Robert R., Warren, Ohio. Game board. Des. 89,715; Apr. 25.
McCullough, Herbert. (See Hall, William T., assignor.)
McDaniel Glider Incorporated. (See McDaniel, Taylor, assignor.)
McDaniel, Taylor, assignor to McDaniel Glider Incorporated, Washington, D. C. Flying machine. 1,905,288; Apr. 25.
McDonald, William H., Overton, Nev. Advertising device. 1,905,239; Apr. 25.
McDowell, Thomas R., assignor to The Pyle-National Company, Chicago, Ill. Arc reducing electric switch. 1,905,085; Apr. 25.
McFeely, William R., Ponca City, Okla. Removable valve mechanism for underground liquid tanks. 1,905,729; Apr. 25.
McIntosh, Roy E., New York, N. Y., and T. J. Noonan, Jersey City, assignors to J. Edward Ogden Company, Inc., East Orange, N. J. Bolt anchor. 1,905,730; Apr. 25.
McKechnie, Ian C. (See Kent, P. J., and McKechnie.)
McKee, Ralph H., Jersey City, N. J. Digesting pulp and apparatus therefor. 1,905,731; Apr. 25.
McKellar, Marion S., assignor to Hughes Tool Company, Houston, Tex. Antifriction thread for shafts. 1,905,089; Apr. 25.
McLaughlin, William I., Piedmont, and R. G. Wedemeyer, Palo Alto; said Wedemeyer assignor to Standard Oil Company of California, San Francisco, Calif. Instrument for recording inclination. 1,905,290; Apr. 25.
McMahon, William F., Riverside, Calif. Pump piston. 1,905,181; Apr. 25.
McMasters, W. C., et al. (See Badgett, James L., assignor.)
McNeal, Eli H., assignor of one-half to M. Newald, Muskegon, Mich. Garden and flower hoe. 1,906,171; Apr. 25.
McPherson, Clyde G. (See Monroe, Edward B., assignor.)
Mead, Howard C., assignor to Guide Lamp Corporation, Anderson, Ind. Tail lamp. 1,905,182; Apr. 25.
Mead-Morrison Manufacturing Company. (See Snow, Frederick O., jr., assignor.)
Meder, Georg. (See Henle, F., Meder, Lans, and Privinsky.)
Melcher, Lee W., Winnetka, Ill. Air conditioning system for railway cars. 1,905,040; Apr. 25.
Mello, Manuel P., Fall River, Mass. Machine for combing textile fibers. 1,905,300; Apr. 25.
Merchant, Berenice W., Kensington, Md. Cigarette package. 1,906,172; Apr. 25.
Merkt, Gustav A., assignor to Morgan Construction Company, Worcester, Mass. Recirculating system and apparatus for waste furnace gases. Re18,801; Apr. 25.
Mertes, Albert T., Newport, assignor, by mesne assignments, to Krebs Pigment & Color Corporation, Wilmington, Del. Production of zinc salt solutions. 1,906,074; Apr. 25.
Metalcraft Corporation. (See Ericson, George E., assignor.)
Metal Textile Corporation. (See De Angelis, Frederick, assignor.)
Metcalf, Irving R., St. Charles, Ill., assignor to Latham Machinery Company. Stitching machine. 1,906,075; Apr. 25.
Metropolitan Device Corporation. (See Murray, Thomas E., jr., assignor.)
Meyes, Robert H., Berlin-Fridenau, Germany. Letter file. 1,905,418; Apr. 25.
"Miag" Mühlenbau und Industrie Aktiengesellschaft. (See Bergen, G., Engelhardt and Steckhan, assignors.)
Michelet, Wilhelm J., Waukegan, Ill. Cabinet desk. 1,905,396; Apr. 25.
Mihalyi, Joseph, assignor to Eastman Kodak Company, Rochester, N. Y. Base type range finder. 1,905,466; Apr. 25.
Miller, Charles, Long Island City, N. Y. Fastener for hand-bags. 1,905,117; Apr. 25.
Miller, David, Brooklyn, N. Y. Collapsible basket. 1,906,173; Apr. 25.
Miller, David, Brooklyn, N. Y. Collapsible basket. 1,906,174; Apr. 25.
Miller, James A., Forest Hills, N. Y. Sound record blank. 1,905,732; Apr. 25.
Miller, Max C., Cumberland, R. I. Knitting machine. 1,905,419; Apr. 25.
Miller Rubber Company Inc. (See Griffiths, Richard T., assignor.)
Miller, Stanley C. (See St. John, E., and Miller.)
Millet, Paul, assignor of one-half to Societe en Nom Collectif dite: Veuve Paul Luc & Cie, Nancy, France. Machine for determining the resisting qualities in wear of leather for soles. 1,906,175; Apr. 25.

Milne, Winford G., assignor to N. Slater Company, Limited, Hamilton, Ontario, Canada. Cable clamp. 1,906,267; Apr. 25.
Milne, Winford G., and W. M. Elliott, assignors to N. Slater Company, Hamilton, Ontario. Eye and loop for anchor rods. 1,905,906; Apr. 25.
Milprint Products Corporation. (See Nelson, John V., assignor.)
Milwaukee Valve Company. (See Fina, Valentine, assignor.)
Miner, Alice T., executrix. (See Miner, W. H., and Sidley.)
Miner, W. H., Inc. (See Fuchs, Henry, assignor.)
Miner, W. H., Inc. (See Hazeltine, Stacy B., assignor.)
Miner, W. H., Inc. (See Miner, W. H., and Sidley, assignors.)
Miner, W. H., Inc. (See O'Connor, John F., assignor.)
Miner, William H., deceased, by A. T. Miner, executrix, Chazy, and W. P. Sidley, executor, Wilmettka, N. Y., assignors to W. H. Miner, Inc., Chicago, Ill. Buffer. 1,905,496; Apr. 25.
Minerals Beneficiation Incorporated. (See Wuensch, Charles R., assignor.)
Minneapolis-Honeywell Regulator Company. (See Leach, Edgar J., assignor.)
Mitchell Battery Company. (See Blakely, Sidney B., assignor.)
Mitchell, John E., Dallas, Tex. Cotton cleaning equipment. 1,906,076; Apr. 25.
Modine, Arthur R., assignor to Modine Manufacturing Company, Racine, Wis. Automobile heater. 1,905,487; Apr. 25.
Modine, Arthur R., assignor to Modine Manufacturing Company, Racine, Wis. Radiator. 1,906,077; Apr. 25.
Modine Manufacturing Company. (See Modine, Arthur R., assignor.)
Mohr, Georg. (See Paschen, P., and Mohr.)
Möller, Waldemar, Berlin-Charlottenburg, assignor to Askania-Werke Aktiengesellschaft, Berlin-Friedenau, Germany. Measuring apparatus. 1,905,491; Apr. 25.
Moncher, Walter. (See Nosik, William A. and R. J., Krocka, and Moncher.)
Monroe Calculating Machine Company. (See Hilder, Stuart, assignor.)
Monroe, Edward B., Bay City, assignor of one-fourth to C. G. McPherson, Black River, Mich. Hydraulic clutch. 1,905,041; Apr. 25.
Monsanto Chemical Works. (See Carswell, T. S., Stehlby, and Alonerij, assignors.)
Monsanto Chemical Works. (See Livingston, John W., assignor.)
Montgomery, James R., et al. (See Carton, Lee C., assignor.)
Moore, Arlington, assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y. Combustion chamber construction. 1,905,905; Apr. 25.
Moore Company, The. (See Wunderlich, William E., assignor.)
Moore, Emmett B., Evanston, Ill. Pressure controlled valve. 1,905,042; Apr. 25.
Moore, Jess G., Los Angeles, Calif. Sterilizer. 1,905,506; Apr. 25.
Moore, Morris C. (See Nicols, A. C., and Moore.)
Moore, William F., Flushing, assignor to The Texas Company, New York, N. Y. Flow divider. 1,905,733; Apr. 25.
Morgan Construction Company. (See Merkt, Gustav A., assignor.)
Morgan, David H., assignor to Truscon Steel Company, Youngstown, Ohio. Gangway. 1,905,947; Apr. 25.
Morgan, Robert M., Alhambra, and S. W. Hardan, Maywood, assignors, by mesne assignments, to Pacific Coast Steel Corporation, San Francisco, Calif. Nutting machine. 1,906,078; Apr. 25.
Morin, George G., Holyoke, Mass. Fluid operated dipper trip. 1,905,188; Apr. 25.
Moritz, Charles V. Effingham, Ill. Road grader. 1,905,420; Apr. 25.
Morrill, Alfred R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe supporting jack. 1,905,184; Apr. 25.
Morrill, Alfred R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Driving and stopping mechanism. 1,905,735; Apr. 25.
Morrin, Fearing H., assignor to Standard Oil Company, Whiting, Ind. Heat transfer. 1,905,185; Apr. 25.
Morrison, George O. (See Blaikie, K. G., and Morrison.)
Morrison, Montford, Montclair, N. J., assignor, by mesne assignments, to Westinghouse Lamp Company. Luminous discharge device. 1,905,043; Apr. 25.
Morrison, Montford, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc. Constant potential device. 1,905,044; Apr. 25.
Morrow, Clarence H., assignor to The Hotstream Heater Company, Cleveland, Ohio. Draft regulator. 1,905,734; Apr. 25.
Morse, William G., Fleetwood, F. D. Wilson and H. C. Wagenhorst, Harvey, assignors to Austin Manufacturing Co., Chicago, Ill. Blade adjusting mechanism for road machines. 1,906,079; Apr. 25.
Mott, Samuel R., Noblesville, assignor to Indiana Condensed Milk Company, Indianapolis, Ind. Conveying and unpacking cans and the like. 1,906,126; Apr. 25.
Mushak, Henry R., assignor to The Locomotive Finished Material Company, Atchison, Kans. Spring hoop. 1,906,724; Apr. 25.
Mueller, Charles W., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo. Sewing machine. 1,905,891; Apr. 25.
Multigraph Company. (See Chisholm, Clifton, assignor.)
Mundie Manufacturing Co., The. (See Nolan, Egbert E., assignor.)
Murphy, P. H., Company. (See Bonsall, Charles D., assignor.)
Murray, Thomas E., jr., Brooklyn, N. Y., assignor to Metropolitan Device Corporation. Switch and fuse mounting. 1,906,080; Apr. 25.
Nack, Leo W., Chicago, Ill. Collapsible steel cable reel. 1,906,486; Apr. 25.
Nadell, Aaron, Brooklyn, N. Y. Eradicating typewritten matter. 1,905,118; Apr. 25.
Nash, Arthur D., assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio. Glass container. Des. 89,716; Apr. 25.
Nash, Edgar R. (See Jacobs, C. H., and Nash.)
Nash, Walter H., Arlington, Calif. Bottle stopper and the like. 1,905,201; Apr. 25.
Nathan Manufacturing Company. (See Sharp, John C., assignor.)
Nathanson, Isidore. (See Rodstein, H., and Nathanson.)
National Biscuit Company. (See Greenbelt, Harry A., assignor.)
National Biscuit Company. (See Kreidler, Urban A., assignor.)
National Electric Heating Co. (See Carleton, Robert A., assignor.)
National Machinery Co. (See Clouse, William L., assignor.)
National Paper Box Co. (See Newton, Edwin H., assignor.)
National Rubber Machinery Company. (See Brundage, James W., assignor.)
Naugatuck Chemical Company. (See Cadwell, S. M., assignor.)
Naylor, Carl G., assignor to Naylor Pipe Company, Chicago, Ill. Pipe and making the same. 1,906,010; Apr. 25.
Naylor, Carl G., assignor to Naylor Pipe Company, Chicago, Ill. Tubing or pipe. 1,906,011; Apr. 25.
Naylor Pipe Company. (See Naylor, Carl G., assignor.)
Nekoosa-Edwards Paper Company. (See Pelot, Leon V. and F.)
Nelson, Henry F., La Fayette, Ind. Toy gun. 1,905,737; Apr. 25.
Nelson, John V., Chicago, Ill., assignor, by mesne assignments, to Milprint Products Corporation, Milwaukee, Wis. Machine for wrapping packages. 1,905,432; Apr. 25.
Neptune, Frederick W., assignor to C. G. Conn, Ltd., Elkhart, Ind. Trombone. 1,905,045; Apr. 25.
Neuschotz, Robert, and N. C. Ratner, New York, N. Y. Card table. 1,906,913; Apr. 25.
Newald, Martin. (See McNeal, Eli H., assignor.)
New Brunswick Electric Supply Company. (See Mangin, James, assignor.)
New England Line Company. (See Loomis, C. C., and MacDonald, assignors.)
Newman, Samuel F., and J. G. Harper, assignors to Landis Machine Company, Waynesboro, Pa. Chaser. 1,906,176; Apr. 25.
Newport Industries, Inc. (See Palmer, R. C., Burda, and Oliver, assignors.)
Newton, Edwin H., assignor to National Paper Box Co., Kansas City, Mo. Berry or fruit basket or box. 1,905,119; Apr. 25.
Nicolai, Charles A., and E. Lindegaard, Bloomfield, N. J., assignor to Westinghouse Lamp Company. Machine for feeding coiled sections. 1,905,046; Apr. 25.
Nicols, Andrew C., and M. C. Moore, Girard, Ohio. Safety device. 1,906,081; Apr. 25.
Nicolson, Alexander M., assignor to Communication Patents, Inc., New York, N. Y. High frequency phonograph apparatus. 1,906,214; Apr. 25.
Nicolson, Alexander M., assignor to Communication Patents, Inc., New York, N. Y. Projection system. 1,906,215; Apr. 25.
Nielsen, Peter C., Pocatello, Idaho. Garbage can and holder therefor. 1,906,082; Apr. 25.
Noble, F. H., & Co. (See Shields, John M., assignor.)
Nolan, Squire E., Spring Valley, assignor to The Mundie Manufacturing Co., Peru, Ill. Oil burner. 1,905,930; Apr. 25.
Nonn Electric Corporation. (See Propp, Louis, assignor.)
Noonan, Thomas J. (See McIntosh, R. E., and Noonan.)
Norin, Allan A., assignor to Hanna Engineering Works, Chicago, Ill. Roller wedge riveter. 1,906,047; Apr. 25.
Norquist, Victor C., and N. E. Treanor, assignors to Butler Manufacturing Company, Kansas City, Mo. Filter. 1,905,738; Apr. 25.
Norrick, Stanley A., Newcastle, assignor to The Perfect Circle Company, Hagerstown, Ind. Molding machine. 1,905,490; Apr. 25.
Norris, Charles R., F. M. Curran, and H. W. Van Stonwyk, Grand Rapids, Mich., assignors to Hasbelite Manufacturing Corporation. Making wood mold disc. 1,905,048; Apr. 25.

Northrup, Edwin F., Princeton, N. J. Method and apparatus for producing light. 1,904,995; Apr. 25.
Northwestern Barb Wire Company. (See Gellman, Israel C., assignor.)
Norton Company. (See Belden, A. G., and Silven, assignors.)
Norton Company. (See Dunbar, H. W., and Baker, assignors.)
Norton Company. (See Egger, W. F., and Becker, assignors.)
Norton Company. (See Whittles, Joseph R., assignor.)
Norviel, Harry E., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio. Lock switch. 1,905,049; Apr. 25.
Norviel, Harry E., deceased, by Anderson Baking Company, executor, assignor to Delco-Remy Corporation, Anderson, Ind. Switch. 1,906,084; Apr. 25.
Norviel, Harry E., deceased, by Anderson Baking Company, executor, assignor to Delco-Remy Corporation, Anderson, Ind. Electric switch. 1,906,085; Apr. 25.
Norviel, Harry E., and V. Ecoff, assignors to Delco-Remy Corporation, Anderson, Ind. Switch. 1,906,083; Apr. 25.
Nosik, Rudolph J. (See Nosik, William A. and R. J., Krocka, and Moncher.)
Nosik, William A. and R. J., J. S. Krocka, and W. Moncher, Milwaukee, Wis. Pajamas. 1,905,948; Apr. 25.
Notvest, Robert, assignor to J. D. Adams Manufacturing Company, Indianapolis, Ind. Coated welding wire. 1,905,848; Apr. 25.
Nowitsky, Herman S., Norfolk, Va. Ventilator. 1,905,599; Apr. 25.
Nowosielski, Edward B., Bloomfield, assignor to Eclipse Aviation Corporation, East Orange, N. J. Making spark plugs. 1,905,600; Apr. 25.
Noyes, Gertrude E. (See Noyes, Hazlehurst R., assignor.)
Noyes, Hazlehurst R., assignor to G. E. Noyes, Los Angeles, Calif. Windowscreen and structure. 1,905,421; Apr. 25.
Null, Abraham E., Memphis, Tenn. Folding table. 1,905,491; Apr. 25.
Oatley, Henry B., Great Neck, assignor to The Superheater Company, New York, N. Y. Superheater. 1,905,789; Apr. 25.
Ocean City Manufacturing Co. (See Godhalk, C. A., Henke, and Behrsing, assignors.)
Ochel, Wilhelm, assignor to A. Borsig, G. m. b. H., Berlin-Tegel, Germany. Regulator for multistage compressor systems. 1,906,012; Apr. 25.
O'Connor, John F., assignor to W. H. Miner, Inc., Chicago, Ill. Shock absorbing mechanism. 1,905,492; Apr. 25.
Oehler Machine Company. (See Schneider, Kurt, assignor.)
Ogden, Clarence E., Cincinnati, Ohio, assignor, by mesne assignments, to The Union Switch & Signal Company. Operating dry disk rectifiers at capacities greater than normal. 1,905,740; Apr. 25.
Ogden, J. Edward, Company. (See McIntosh, R. E., and Noonan, assignors.)
O'Hagan, Bernard E., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 1,905,186; Apr. 25.
Ohio Rubber Company, The. (See Bronson, Budd, assignor.)
Ohio Rubber Company, The. (See Marbach, E. R., and Cavanagh, assignors.)
Ohmer Fare Register Company. (See Coil, Grover C., assignor.)
Oilgear Company, The. (See Ferris, John P. and W., assignors.)
Oil Well Supply Company. (See Greve, Edgar E., assignor.)
Old Colony Trust Company, trustee. (See Spencer, Percy L., assignor.)
Oliver, Anthony F. (See Palmer, E. C., Burda, and Oliver.)
Oliver, James H., Aldan, Pa., assignor to General Electric Company. Storage battery voltage regulator. 1,905,741; Apr. 25.
Olofson, Carl F. E., West Orange, and N. O. Lindstrom, Nutley, N. J., assignors to A. B. See Elevator Company, Inc. Electric elevator system. 1,905,742; Apr. 25.
Olpin, Henry C. (See Ellis, G. H., and Olpin.)
O'Neill, Frank, Toledo, Ohio. Glass blank transfer. 1,906,086; Apr. 25.
Orr, Carroll E., Orange, assignor to Elevator Supplies Company, Hoboken, N. J. Circuit controlling mechanism. 1,906,198; Apr. 25.
Osgood, Charles F., Claremont, N. H., assignor to Sullivan Machinery Company. Hoisting mechanism. 1,906,219; Apr. 25.
Oswego Falls Corporation. (See Wright, W. L., and Pierce, assignors.)
Outboard Motors Corporation. (See Irgens, Finn T., assignor.)
Owen, William, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company. Apparatus for making plate glass. 1,905,743; Apr. 25.
Pacific Coast Steel Corporation. (See Morgan, R. M., and Harder, assignors.)
Pacific Egg Producers Cooperative, Inc. (See Powell, Charles K., assignor.)
Page, Albert E., Brooklyn, and H. Swinglehurst, jr., Floral Park, assignors to Scott & Williams, Incorporated, New York, N. Y. Machine for making knitted fabric. 1,906,204; Apr. 25.
Page, Charles H., Los Angeles, Calif. Drip coffee maker. 1,906,350; Apr. 25.
Paige and Williams Company, The. (See Vrooman, William S., assignor.)
Palmer, Robert C., J. L. Burda, and A. F. Oliver, Pensacola, Fla., assignors, by mesne assignments, to Newport Industries, Inc. Purifying rosin. 1,905,493; Apr. 25.
Paper Patents Company. (See Kellett, William E., assignor.)
Paramount Carburetor Corporation. (See Hofbauer, Casper H., assignor.)
Parnell, Charles E., Vinton, Iowa. Variable condenser. 1,906,901; Apr. 25.
Parker, Humphrey F., assignor to Bendix Brake Company, South Bend, Ind. Brake. 1,904,996; Apr. 25.
Parker, Humphrey F., assignor to Bendix Brake Company, South Bend, Ind. Brake. 1,904,997; Apr. 25.
Parker, Humphrey F., assignor to Bendix Brake Company, South Bend, Ind. Brake. 1,904,998; Apr. 25.
Parker, Lionel D., Barrow-in-Furness, assignor to Vickers-Armstrongs Limited, Westminster, England. Rotary kiln for burning cement, ore, and similar materials. 1,905,744; Apr. 25.
Parkes, Jeremiah V. B., administrator. (See Parkes, William N.)
Parkes, William N., deceased, Brooklyn, N. Y., by J. V. B. Parkes, administrator, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Needle-thread take-up mechanism for sewing machines. 1,906,087; Apr. 25.
Parkin, Ernest V., Tacoma, Wash. Amalgam mixing device. 1,905,802; Apr. 25.
Patrish, Russell J. (See Chevrolet, L., and Parrish.)
Parsons, Mauran F., Millinocket, Me. Pulp treating process and the product. 1,906,088; Apr. 25.
Paschen, Paul, and G. Mohr, Nuremberg, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. Measuring instrument. 1,906,089; Apr. 25.
Pass & Seymour, Inc. (See Burns, Peter E., assignor.)
Pass & Seymour, Inc. (See Despard, Victor R., assignor.)
Patchell, Charles E., Portland, Me. Joint construction for shovel handles and the like. 1,906,218; Apr. 25.
Patent Button Company, The. (See Purinton, Forrest G., assignor.)
Patterson, Frank H., Fredonia, Kans. Quick freezing. 1,905,602; Apr. 25.
Peake, Edward S., assignor to The Kilgore Mfg. Company, Westerville, Ohio. Wheeled toy. 1,905,649; Apr. 25.
Pearson, Victor E. (See Ingram, E. H., and Pearson.)
Peebles, Thomas A., Mount Lebanon, assignor to J. M. Hopwood, Dormont, Pa. Automatic combustion safety control system. 1,905,745; Apr. 25.
Pelts, Wilbur J., assignor to Diehl Manufacturing Company, Elizabeth, N. J. Phonograph driving mechanism. 1,905,746; Apr. 25.
Peller, Karl E., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for supplying molten glass. 1,906,494; Apr. 25.
Peller, Karl E., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for supplying molten glass. 1,905,495; Apr. 25.
Pekar, Joseph, Bridgeport, Conn. Antiglare device. 1,906,090; Apr. 25.
Pelot, Frank. (See Pelot, Leon V. and F.)
Pelot, Leon V., Wisconsin Rapids, and F. Pelot, assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis. Apparatus for and method of cooking wood pulp. 1,905,050; Apr. 25.
Pendergast, James F., Leicester, and E. Johnson, Genesee, N. Y. Parachute. 1,906,091; Apr. 25.
Pennsylvania Wire Glass Company. (See Shuman, Arno, assignor.)
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Shifting device. 1,906,496; Apr. 25.
Perfect Circle Company, The. (See Norrick, Stanley A., assignor.)
Perling, Albert, Paris, Ky. Automatic merchandise displaying device. 1,905,851; Apr. 25.
Permutit Company, The. (See Bruce, William M., assignor.)
Permutit Company, The. (See Lasselle, Percy, assignor.)
Permutit Company, The. (See Liebknecht, Otto, assignor.)
Peter, Joseph. (See Green, Frank E., assignor.)
Peters, Arthur E., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Working implement for percussive tools. 1,905,497; Apr. 25.
Peters, Arthur E., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Compressor. 1,905,747; Apr. 25.
Peterson, Alfred J. A., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Protective system for generator field circuits. 1,906,240; Apr. 25.
Peterson, Guy S., East Cleveland, assignor to The Streng-Carlisle & Hammond Company, Cleveland, Ohio. Conveyer furnace. 1,906,092; Apr. 25.

Petroleum Iron Works Co. of Ohio, The. (See Shaner, Edgar E., assignor.)
Pfeifer, Karl, assignor to Chrysler Corporation, Detroit, Mich. Valve spring. 1,905,166; Apr. 25.
Pflueger, Charles T., assignor to The Enterprise Manufacturing Company, Akron, Ohio. Floating bug or lure. 1,905,567; Apr. 25.
Phalen, Maurice J., Marathon, N. Y. Plant spraying machine. 1,906,013; Apr. 25.
Philadelphia Storage Battery Company. (See Fisher, Roy S., assignor.)
Phillips-Jones Corporation. (See Golden, Thomas H., assignor.)
Phillips Petroleum Company. (See Huppke, W. F., and Frey, assignors.)
Phillips Petroleum Company. (See Knowlton, D. E., and Crites, assignors.)
Phillips Petroleum Company. (See Riney, Arthur H., assignor.)
Pierce-Arrow Motor Car Company, The. (See Hughes James E., assignor.)
Pierce, Lee D. (See Wright, W. L., and Pierce.)
Pinto, Joseph. (See Adams, Roy S., assignor.)
Pioneer Instrument Company, Incorporated. (See Simmons, John W., assignor.)
Pirani, Marcello. (See Ewest, H., and Pirani.)
Pittman, Walter P. (See Ford, G. F., and Pittman.)
Pittsburgh Equitable Meter Company. (See Chrisman, H., and Weymouth, assignors.)
Pittsburgh Plate Glass Company. (See Golstharp, Frederick, assignor.)
Pittsburgh Plate Glass Company. (See Johnson, John F., assignor.)
Pittsburgh Plate Glass Company. (See Owen, William, assignor.)
Pittsburgh Plate Glass Company. (See Redshaw, Joseph H., assignor.)
Pittsburgh Reflector Company. (See Carr, James D., assignor.)
Place, Bion C., assignor of one-half to G. H. Gagnier, Detroit, Mich. Wall insert. 1,905,603; Apr. 25.
Podd, Ernest A., Houston, Tex. Spreader clamp. 1,905,051; Apr. 25.
Podolsky, Jacob, Dorchester, Mass. Valve. 1,905,490; Apr. 25.
Polser, Fridolin, South Norwalk, assignor to The H. H. Hotchkiss Company, Norwalk, Conn. Tacking machine. 1,905,241; Apr. 25.
Pomeroy, J. E., et al. (See Badgett, James L., assignor.)
Ponce, Lucien G., Parnassus, assignor to Allegheny Steel Company, Brackenridge, Pa. Pipe thread protector. 1,906,093; Apr. 25.
Porte, René, assignor to Societe Hardoll (Etablissements Harivean & Dollmier et René Porte & Cie reunis) Levallois-Perret, France. Automatic device for measuring and delivering liquids. 1,906,177; Apr. 25.
Porter, David M., Hopkinsville, Ky. Punting machine. 1,905,852; Apr. 25.
Porter, Howard C., La Grange Park, assignor to Signode Steel Strapping Company, Chicago, Ill. Stretching tool. 1,905,052; Apr. 25.
Potter, Ralph K., Landing, N. J., assignor to American Telephone and Telegraph Company. Attenuation units. 1,905,858; Apr. 25.
Potter, Thomas E., Los Angeles, Calif. Table football game. 1,905,908; Apr. 25.
Powell, Alan E., H. C. Davies, and A. W. Scott, assignors to Johnson Matthey & Company Limited, London, England. Preparation and operation of platinum plating baths. 1,906,178; Apr. 25.
Powell, Alan E., H. C. Davies, and A. W. Scott, assignors to Johnson Matthey & Company Limited, London, England. Alkali metal platinates and their manufacture. 1,906,179; Apr. 25.
Powell, Alfred E., Elizabeth, N. J., assignor to The Koppers Company of Delaware. Treatment of gas. 1,905,053; Apr. 25.
Powell, Charles K., Dobbs Ferry, assignor to Pacific Egg Producers Cooperative, Inc., New York, N. Y. Egg marking apparatus. 1,906,094; Apr. 25.
Pranke, Edward J., Bayside, N. Y. Cyanide process. 1,906,804; Apr. 25.
Prentice, Alfred T., Valparaiso, Ind. Internal combustion engine. 1,906,095; Apr. 25.
Prentice, G. E., Manufacturing Company. (See Jacobs, Isidor, assignor.)
Prescott, Frank H., and J. L. Arthur, assignors to Delco-Remy Corporation, Anderson, Ind. Ignition apparatus. 1,906,054; Apr. 25.
Pribil, Alexis E., Saginaw, Mich. Trolley construction. 1,906,097; Apr. 25.
Priddy, Thomas D., Cleveland, assignor to The Formed Steel Products Company, Cleveland, Ohio. Metal studding. 1,906,098; Apr. 25.
Privitsky, Franz. (See Henle, F., Meder, Lanz, and Privitsky.)
Propp, Louis, assignor to Noma Electric Corporation, New York, N. Y. Decorative device. 1,906,500; Apr. 25.
Prynne, Charles W. (See Crespinel, W. T., and Prynne.)
Pwenig, Pfann, O'Hara Township, Allegheny County, Pa. Method of and apparatus for producing coke. 1,906,863; Apr. 25.
Pulfrich, Hans. (See Skaupy, F., West, and Pulfrich.)
Pullen, Rodney S., Akron, Ohio, and W. F. Casey and G. M. Thomas, Philadelphia, Pa., assignors to Pullenite Company. Match packaging machine. 1,906,096; Apr. 25.
Pullenite Company. (See Pullen, R. S., Casey, and Thomas, assignors.)
Pullman Car & Manufacturing Corporation. (See Harris, Charles W., assignor.)
Purinton, Forrest G., assignor to The Patent Button Company, Waterbury, Conn. Mechanism for distributing articles upon a travelling assembling carrier. 1,905,048; Apr. 25.
Pyle-National Company, The. (See McDowell, Thomas R., assignor.)
Pyratone Products Corporation. (See Barrett, Harold G., assignor.)
Queneau, Augustin L. J., New York, N. Y. Roasting oven. 1,906,604; Apr. 25.
Radio Corporation of America. (See Clark, George F., assignor.)
Radio Corporation of America. (See Elliott, Harold F., assignor.)
Radio Patents Corporation. (See Harz, Hermann, assignor.)
Radio Corporation of America. (See Hollerith, Herman, jr.)
Radio Corporation of America. (See Holst, G., Shepherd, and van Lis, assignors.)
Radio Corporation of America. (See Kendall, James M., assignor.)
Radio Corporation of America. (See Mathies, G. A. and Isted, assignors.)
Radke, William A., assignor to The Studebaker Corporation, South Bend, Ind. Tail lamp fixture. 1,906,366; Apr. 25.
Radio, Leopold, Berlin-Halensee, Germany. Metal film. 1,906,199; Apr. 25.
Raley, Thomas C., assignor to Getz Exterminators, Inc., St. Louis, Mo. Distributor for insecticides and the like. 1,905,650; Apr. 25.
Ramsden, John T. (See Wallace, F. R., and Ramsden.)
Randall, Karl C., Edgewood, Pa., assignors to Westinghouse Electric & Manufacturing Company. Circuit breaker. 1,905,501; Apr. 25.
Rankin, Knott C., assignor to Rockland & Rockport Lime Corporation, Rockland, Me. Material for making waterproof mortar and producing the same. 1,905,187; Apr. 25.
Rankin, William K., Lansdowne, Pa., assignor to General Electric Company. Vacuum sealing structure. 1,905,751; Apr. 25.
Rapellin, René, San Gabriel, Calif. Grease gun. 1,906,569; Apr. 25.
Rasmussen, Aksel F., et al. (See Rasmussen, Robert P., assignor.)
Rasmussen, Edvald L., et al. (See Rasmussen, Robert P., assignor.)
Rasmussen, Robert P., assignor of one-fourth to E. L. Rasmussen and one-fourth to A. F. Rasmussen, Chicago, Ill. Air conditioning apparatus. 1,905,422; Apr. 25.
Ratner, Nathaniel C. (See Nemschotz, E., and Ratner.)
Raule, Clifford T., Brooklime, Pa. Safety device for grinders. 1,906,651; Apr. 25.
Redshaw, Joseph H., Homestead Park, Pa., assignor to Pittsburgh Plate Glass Company. Glass drawing apparatus. 1,905,748; Apr. 25.
Reece Button Hole Machine Company, The. (See Gris, Carl A. O., assignor.)
Reed, Harry M., Chattanooga, Tenn., assignor of one-half to H. L. Reis, Birmingham, Ala. Garment hanger cover. 1,904,909; Apr. 25.
Meerink, Engbert H. (See De Groot, W., and Reerink.)
Reed, Byron, Salt Lake City, Utah. Cartridge for medicinal applications. 1,905,752; Apr. 25.
Rees, Edmund S. G., Oxton, England. Propeller, pump, or fan. 1,906,180; Apr. 25.
Reeves, Donald H., assignor to Frigidaire Corporation, Dayton, Ohio. Drinking water cooler fountain. Des. 89,717; Apr. 25.
Reeves, Donald H., assignor to Frigidaire Corporation, Dayton, Ohio. Drinking water cooler fountain. Des. 89,718; Apr. 25.
Reid, Chauncey E., Brownsville, Tex. Frost control machine. 1,905,502; Apr. 25.
Reis, H. L. (See Reed, Harry M., assignor.)
Reisbaw, Rondre E., assignor of one-half to H. A. Gilbertson, Valley City, N. Dak. Weed and foul seed destroying machine. 1,906,137; Apr. 25.
Reliable Knitting Works. (See John, Elmer N., assignor.)
Remington Arms Company, Inc. (See Burns, James E., assignor.)
Remington Arms Company, Inc. (See Loomis, Crawford C., assignor.)
Republic Flow Meters Company. (See Sandison, Alexander G. S., assignor.)
Resch, Henry, Bayonne, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y. Combined typewriting and computing machine. 1,905,905; Apr. 25.
Reuter, Baptist, Kraiking-Planegg, Germany. 4-brom-diethylacetylaminoal-phenyl-2, 3-dimethyl-5-pyrazoline and preparing the same. 1,906,200; Apr. 25.
Reynolds, Clifton G., San Francisco, Calif. Wall board construction. 1,905,897; Apr. 25.

Rayl Corporation. (See Ellis, Carleton, assignor.)
Rhodes, Edmund O., and F. D. Hager, Pittsburgh, Pa., assignors to The American Tar Products Company. Treatment of tar. 1,905,423; Apr. 25.
Ribe, Léon, St. Etienne, France. Superposed barrel. breech-loading firearm. 1,906,216; Apr. 25.
Riccini, Bruno, assignor to Daprato Statuary Company, Chicago, Ill. Lock. 1,905,057; Apr. 25.
Rice, Barton & Fales, Incorporated. (See Kerr, Arthur D., assignor.)
Rich, Charles A., assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Nut making machine. 1,906,099; Apr. 25.
Richardson, James H., Indianapolis, Ind. Rolling turner. 1,906,100; Apr. 25.
Richardson, Joseph L., Nashville, Ark. Automobile bed. 1,905,605; Apr. 25.
Richter, George A., W. B. Van Arsdel, and R. B. Hill, assignors to Brown Company, Berlin, N. H. Manufacture of artificial leather. 1,905,749; Apr. 25.
Ricker, Norman H., assignor to Hughes Tool Company, Houston, Tex. Swab plunger. 1,905,058; Apr. 25.
Rickey, Walter J., Helensburgh, and W. Tivendale, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J. Needle straightening machine and method. 1,906,101; Apr. 25.
Riebel, Frederick, jr., and D. M. Dow, assignors to Air Way Electric Appliance Corporation, Toledo, Ohio. Vacuum cleaner. 1,905,059; Apr. 25.
Rieger, Oscar. (See Holland, Sidney S., assignor.)
Riley, Ray, Paterson, N. J., assignor to American Zeolite Corporation, New York, N. Y. Compound silicate gels and making the same. 1,906,181; Apr. 25.
Riney, Arthur H., assignor to Phillips Petroleum Company, Bartlesville, Okla. Protector for threaded pipe ends. 1,906,182; Apr. 25.
Rinman, Erik L., Djursholm, Sweden. Alkalising the waste liquors from the soda or sulphate pulp manufacture for the purpose of making them suitable for dry distillation. 1,906,102; Apr. 25.
Roberts, Eugene, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah. Centrifugal apparatus. 1,906,806; Apr. 25.
Roberts, John A. (See Croasdale, J. P., jr., and Roberts.)
Roberts & Mander Stove Company. (See Antrim, William D., assignor.)
Robertson, Kenneth J. R., assignor to Carrier Engineering Company Limited, London, England. Method and apparatus for cleaning articles, particularly metallic goods. 1,905,968; Apr. 25.
Robertson, Lloyd T., Milwaukee, Wis. System of remote radiocontrol. 1,905,503; Apr. 25.
Robinson, Emmet M., Minneapolis, Minn. Applicator and massage instrument. 1,905,750; Apr. 25.
Rockland & Rockport Lime Corporation. (See Rahkin, Knott C., assignor.)
Rockwood Sprinkler Company of Massachusetts. (See Lofgren, Peter, assignor.)
Rodstein, Harry, and I. Nathanson, New York, N. Y. Footboard for a bedstead or similar article. Des. 89,719; Apr. 25.
Roessler and Hasslacher Chemical Company, The. (See Bond, Harlan A., assignor.)
Roessler & Hasslacher Chemical Company, The. (See Carlisle, P. J., and Ward, assignors.)
Roessler and Hasslacher Chemical Company, The. (See Dobrovolny, Frank J., assignor.)
Rogers, Charles A., L. J., and H. L., Albion, Pa. Heavy duty vehicle. 1,905,242; Apr. 25.
Rogers, Henry C. (See Rogers, Robert, assignor.)
Rogers, Hugh L. (See Rogers, Charles A., L. J., and H. L.)
Rogers, Louis J. (See Rogers, Charles A., L. J., and H. L.)
Rogers, Louis J., Albion, Pa. Method of and apparatus for removing fumes from buildings. 1,905,243; Apr. 25.
Rogers Products Company. (See Albertine, Herman, assignor.)
Rogers, Robert, assignor to H. C. Rogers, Dallas, Tex. Automatic water heater control valve. 1,905,949; Apr. 25.
Rohlin, Victor A., assignor to Cochrane Corporation, Philadelphia, Pa. Apparatus for controlling rate of flow of a liquid. 1,905,244; Apr. 25.
Rohm & Haas Aktiengesellschaft. (See Bauer, Walter, assignor.)
Rohn, Wilhelm, Hanau, assignor to Heraeus-Vacuumschmelze A-G., Hanau-on-the-Main, Germany. Reducing metal oxides. 1,906,184; Apr. 25.
Rollodor Manufacturing Company. (See Barbé, Edgar H., assignor.)
Rome, Jacob, Philadelphia, Pa., assignor to The Allen-Sherman-Hoff Company. Nozzle oscillating means. 1,905,570; Apr. 25.
Ross, Harold J., Penn Township, Allegheny County, Pa., and W. H. Hill, New York, N. Y., assignors to The Koppers Company of Delaware. Treating coal with oil. 1,905,060; Apr. 25.
Rossman, Leo, Newark, N. J. Machine for sewing fastener tape and the like. 1,905,504; Apr. 25.
Ross, Edward, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Loom shuttle. 1,905,000; Apr. 25.
Rossmann, Rudolf, Munich, Germany, assignor to Tefag Textil Finanz A. G. Zurich, Zurich, Switzerland. Loom. 1,906,185; Apr. 25.
Roth, Sol, Columbus, Ohio. Chip container. Des. 89,720; Apr. 25.
Rouse, Adrian P., Oriskany, assignor to General Cable Corporation, New York, N. Y. Metallic composition and making the same. 1,906,505; Apr. 25.
Rowley, Charles A., East Orange, N. J. Cable terminal. 1,906,245; Apr. 25.
Royle, Edwin B. (See Finlay, J. S., and Royle.)
Russe, Félix P., Deptford, London, England. Cigarette making machine. 1,906,014; Apr. 25.
Rubber Service Laboratories Company, The. (See Sibley, Robert L., assignor.)
Rupp, Emil, Berlin-Frohnau, assignor to General Electric Company. Inorganic metal insulation. 1,905,753; Apr. 25.
Russell, George J., Waltham, Mass. Broaching machine. 1,905,506; Apr. 25.
Russell, George J., Waltham, Mass. External broaching machine. 1,905,507; Apr. 25.
Russell, George J., Waltham, Mass. Broach centering apparatus. 1,905,508; Apr. 25.
Russell, George J., Waltham, Mass. Broaching guide. 1,905,509; Apr. 25.
Russell, George J., Waltham, Mass. Cylinder construction. 1,905,510; Apr. 25.
Ruthaldo Company Inc. (See Barthelemy, Henri L., assignor.)
Ryan, Thomas H., assignor of one-sixth to P. J. Boyens and one-sixth to C. J. McCarthy, San Francisco, Calif. Mechanical power transmission. 1,906,103; Apr. 25.
Ryder, Henry K., Laurel, Mont. Gas saver. 1,905,906; Apr. 25.
S. & C. Holding Corporation. (See Sherrick, Samuel T., assignor.)
Saad, John. (See Thomas, Joseph L., assignor.)
Sabourin, Jean B., Norton, Mass. Cigarette making device. 1,905,652; Apr. 25.
Sachs, Joseph, West Hartford, Conn. Electric circuit controlling appliance. 1,905,001; Apr. 25.
Sachs, Joseph, West Hartford, Conn. Electric appliance inclosing cabinet. 1,905,002; Apr. 25.
Sachs, Joseph, West Hartford, Conn. Electric meter service appliance. 1,905,003; Apr. 25.
Sachs, Joseph, West Hartford, Conn. Fuse device. 1,905,004; Apr. 25.
Sack, Ernest, Neuilly, assignor to Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord reunis, Etablissements Kuhlmann, Paris, France. Diazo-compound of 2-amino-chloro-1-oxy-3-sulphobensene and its production. 1,906,354; Apr. 25.
Sack, Rud. (See Schirmer, Werner, assignor.)
Safety Mining Company. (See Harris, Allyn, assignor.)
Safir, Charles. (See Safir, Leo C. and C.)
Safir, George and L. C., South Norwalk, Conn. Robe construction. 1,905,685; Apr. 25.
Safir, Leo C. (See Safir, George and L. C.)
Safir, Leo C., South Norwalk, Conn., and C. Safir, New York, N. Y. Garment monogram. 1,905,909; Apr. 25.
Salter, Rudolph J., Townley, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Strip-guiding means for sewing machines. 1,906,104; Apr. 25.
Salute Claire Deville, Etienne, assignor to Societe des Etablissements Gaumont, Paris, France. Film-drawing device for cinematographic apparatus. 1,906,186; Apr. 25.
St. John, Everett, Westport, Conn., and S. C. Miller, Mountain Lakes, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cable suspension. 1,905,761; Apr. 25.
Sandison, Alexander G. S., Kelda, Balta Sound, Shetland Islands, assignor to Republic Flow Meters Company, Chicago, Ill. Electrical recording instrument of the relay type. 1,906,105; Apr. 25.
Sanitary Products Corporation of America. (See Jay, William C., assignor.)
Sato, Seikichi, Sendai, Japan. Self recording dilatometer. 1,905,607; Apr. 25.
Sax, Harry, Chicago, Ill. Shading drawings. 1,905,061; Apr. 25.
Schaefer, Eugene. (See Weber, F. W., and Schaefer.)
Schaefer, Joseph M., assignor to Zenith Radio Corporation, Chicago, Ill. Key-operated device for radio systems. 1,906,106; Apr. 25.
Schaeffers, Joseph, Camden, N. J. Internal combustion engine. 1,905,062; Apr. 25.
Schatzel, Rudolph A. (See Benner, A. A., and Schatzel.)
Schaum, Fletcher, assignor to Fletcher Works, Philadelphia, Pa. Drive release and brake for extractors. 1,905,950; Apr. 25.
Schellens, Christopher A. (See Schellens, Eugene L. and C. A.)
Schellens, Eugene L., Millburn, N. J., and C. A. Schellens, Marblehead, Mass., assignors to C-S Engineering Company, Jersey City, N. J. Locomotive. 1,906,063; Apr. 25.
Schick, Jacob, Sound Beach, Conn., assignor to Schick Dry Shaver, Inc. Internal combustion engine. 1,905,754; Apr. 25.
Schicker, Oscar F., Teaneck, N. J. Lace or the like. Des. 89,721; Apr. 25.
Schicker, Oscar F., Teaneck, N. J. Lace or the like. Des. 89,722; Apr. 25.

Schicker, Oscar F., Teaneck, N. J. Lace or the like. Des. 89,723; Apr. 25.
Schierich, Henry, Kansas City, Mo. Control mechanism for steam heating systems. 1,905,005; Apr. 25.
Schirmer, Werner, assignor to Rud Sack, Leipzig, Germany. Agricultural implement. 1,906,107; Apr. 25.
Schlieper, Rudolf, Remscheid-Hasten, Germany. Hydraulic driven washing apparatus. 1,906,424; Apr. 25.
Schloemann Aktiengesellschaft. (See Gussen, Josef, assignor.)
Schlott, Sarah R., St. Paul, Minn. Preserving jar handling means. 1,905,904; Apr. 25.
Schlueter, Henry W., Beverly Hills, Calif. Concrete structural member. 1,906,108; Apr. 25.
Schmidt, Albert G. A., assignor to Cullen-Friestedt Company, Chicago, Ill. Crane. 1,906,109; Apr. 25.
Schmidt, Hans. (See Stretiwolf, K., Fuhrle, Hilmer, and Schmidt.)
Schnakenberg, Henry, Honesdale, Pa. Brake. 1,905,951; Apr. 25.
Schneider, George. (See Dreyfus, C., and Schneider.)
Schneider, Kurt, Brooklyn, N. Y., assignor to Oehler Machine Company, Inc. Automatic light control. 1,905,511; Apr. 25.
Schnell, William, assignor to Ternstedt Manufacturing Company, Detroit, Mich. Method and apparatus for making a sill plate. 1,905,398; Apr. 25.
Schnuck, Carl F., New Haven, and F. H. Bantury, assignors to Farrel-Birmingham Company, Incorporated, Ansonia, Conn. Mixing machine. 1,906,755; Apr. 25.
Schoenfeldt, Henry W., Youngstown, Ohio. Pencil sharpener. 1,905,909; Apr. 25.
Scholes, Howard S. (See Wilmarth, Louis R., assignor.)
Scholl, Bernhard, Rolsdorf, near Duren, assignor to Zimmermann & Jansen, G. m. b. H., Duren-Rhld., Germany. Valve actuating means for air heaters. 1,905,065; Apr. 25.
Schorno, Albert, assignor of one-half to C. Cegler, Grand Rapids, Mich. Ice cream roll cake. 1,905,755; Apr. 25.
Schrader's, A., Son, Incorporated. (See Williams, Belden T., assignor.)
Schram, Charles A., assignor to W. Wood, trading as R. D. Wood & Company, Philadelphia, Pa. Plug for steam plateau and other metallic articles. 1,905,683; Apr. 25.
Schubert, Max. (See Herz, R., and Schubert.)
Schulhof, Baltimore, Md. Steel wool holder. 1,905,907; Apr. 25.
Schulman, Louis, et al. (See Herman, Raymond L., assignor.)
Schur, Milton O., assignor to Brown Company, Berlin, N. H. Deodorization of paper. 1,906,757; Apr. 25.
Schurtz, Ralph R., assignor, by mesne assignments, of one-half to R. W. Bailey and C. F. Jobes, Kansas City, Mo. Refrigerating system. 1,906,906; Apr. 25.
Schutte & Koerting Company. (See Teller, Martin F., assignor.)
Schwartz, Emil W., Bridgeport, Conn., assignor to General Electric Company. Manufacture of electrical insulation. 1,905,760; Apr. 25.
Schwarzkopf, Otto, Linz, Austria. After treatment of artificial silk. 1,906,015; Apr. 25.
Schweisthal, Fred G., assignor to Stewart-Warner Corporation, Chicago, Ill. Mechanical fuel pump. 1,906,246; Apr. 25.
Scott, Arthur W. (See Powell, A. R., Davies, and Scott.)
Scott, Floyd L., assignor to Hughes Tool Company, Houston, Tex. Rolling drill cutter. 1,905,066; Apr. 25.
Scott, Howard, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Welding electrode. 1,905,947; Apr. 25.
Scott, Robert F., Charleston, W. Va. Steering mechanism for tractors having endless tread members. 1,905,962; Apr. 25.
Scott & Williams, Incorporated. (See Page, A. R., and Swinglehurst, jr., assignors.)
Scully, John T., New York, N. Y. Friction lighting device. 1,906,217; Apr. 25.
Sease, Virgil B., Perth, N. J., assignor to Du Pont Film Manufacturing Corporation, New York, N. Y. Positive photographic film. 1,906,188; Apr. 25.
Security Engineering Company. (See Hammer, Otto, assignor.)
Seederer-Kohlbusch, Inc. (See Cameron, Hugh M., assignor.)
Selden Company, The. (See Jaeger, A. O., and Daniels, assignors.)
Selden Research & Engineering Corporation. (See Jaeger, Alphons O., assignor.)
Serton Rubber Company, The. (See Keiser, Charles R., assignor.)
Sevison, Harry D., Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill. Weather strip. 1,906,110; Apr. 25.
Shafer, Alvin O., Kalamazoo, Mich. Clamp for saws and the like. 1,905,512; Apr. 25.
Shaner, Edgar E., assignor to The Petroleum Iron Works Co. of Ohio, Sharon, Pa. Shipping drum. 1,906,905; Apr. 25.
Sharp, John C., Chattanooga, Tenn., assignor to Nathan Manufacturing Company, New York, N. Y. Trunnion for locomotive valve motions. 1,906,800; Apr. 25.
Sharples Specialty Company, The. (See Clark, Lee H., assignor.)
Shaw, Harold F., assignor to F. A. Whitney Carriage Company, Leominster, Mass. Article with associated plunger rod. 1,905,425; Apr. 25.
Shaw, John A. (See Harding, C. P., and Shaw.)
Shay, Edgar, Pleasant Ridge, assignor to Chrysler Corporation, Detroit, Mich. Antiskimming structure for vehicles. 1,905,518; Apr. 25.
Sheaffer, W. A., Pen Company. (See Lindeman, William H., assignor.)
Shell Development Company. (See Davieson, D. W., and Wolke, assignors.)
Shell Development Company. (See van Heuru, Franz C., assignor.)
Shepard, George F., Bethel, Conn. Adjustable combination awning and shutter. 1,905,514; Apr. 25.
Shepherd, Richard. (See Holst, G., Shepherd, and van Lis.)
Sherrick, Samuel T., assignor to S. & C. Holding Corporation, Denver, Colo. Liquid fuel burner. 1,905,907; Apr. 25.
Sherts, James H., Brackenridge, Pa., assignor to Duplate Corporation. Process and apparatus for making composite glass. 1,905,189; Apr. 25.
Shick Dry Shaver, Inc. (See Schick, Jacob, assignor.)
Shields, John M., assignor to F. H. Noble & Co., Chicago, Ill. Box for displaying jewelry and the like. 1,906,111; Apr. 25.
Shields, Thomas T., Los Angeles, Calif. Power unit for slicing machines. 1,905,654; Apr. 25.
Shiffman, Irving. (See Lechowitz, S., and Shiffman.)
Shultz, Charles L., Brookline, Pa. Hospital bed. 1,905,355; Apr. 25.
Shuman, Arno, assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa. Making corrugated wire glass. 1,905,006; Apr. 25.
Sibley, Robert L., Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio. Manufacture of mercaptoarylthiazoles. 1,906,112; Apr. 25.
Sidley, William P., executor. (See Miner, W. H., and Sidley.)
Siemens-Schuckertwerke Aktiengesellschaft. (See Pamhen, P., and Mohr, assignors.)
Signode Steel Strapping Company. (See Porter, Howard C., assignor.)
Silven, Herbert A. (See Belden, A. G., and Silven.)
Silver, Walter H., assignor to Deere & Company, Moline, Ill. Ridge burster. 1,906,113; Apr. 25.
Silverman, Joseph, Chicago, Ill. Aerial craft construction. 1,906,114; Apr. 25.
Silvester, Lisa, et al. (See Silvester, Thomas P., assignor.)
Silvester, Thomas P., assignor of one third to L. Silvester and one third to V. J. Silvester, New York, N. Y. Marble working machine. 1,906,190; Apr. 25.
Silvester, Vincent J., et al. (See Silvester, Thomas P., assignor.)
Simmons Company. (See Berns, John V., assignor.)
Simmons Company. (See Gail, John F., assignor.)
Simmons Company. (See Harman, Frank B., assignor.)
Simmons, John W., Cleveland, Ohio, assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y. Speed indicating device. 1,906,187; Apr. 25.
Simpson, John O., assignor to The B. Ingraham Company, Bristol, Conn. Clock. 1,905,955; Apr. 25.
Simpson, William R., Creston, assignor to Thermoid Rubber Company, Trenton, N. J. Burnishing machine. 1,906,201; Apr. 25.
Sinderson, John B., assignor to Barber-Colman Company, Rockford, Ill. Method of and machine for hobbing gears and the like. 1,905,510; Apr. 25.
Sinderson, John B., assignor to Barber-Colman Company, Rockford, Ill. Method of and machine for hobbing gear teeth. 1,905,511; Apr. 25.
Singer, Hayward, et al. (See Tavis, John, assignor.)
Singer, M., & Sons. (See Tavis, John, assignor.)
Singer Manufacturing Company, The. (See Earle, John D., assignor.)
Singer Manufacturing Company, The. (See Pushee, William N., assignor.)
Singer Manufacturing Company, The. (See Risley, W. J., and Tivendale, assignors.)
Singer Manufacturing Company, The. (See Sailer, Rudolph J., assignor.)
Singer, Mendel, et al. (See Tavis, John, assignor.)
Singer, Nathaniel, et al. (See Tavis, John, assignor.)
Singer, Samuel, et al. (See Tavis, John, assignor.)
Sink, James F., Winston-Salem, N. C. Telephone installation apparatus. 1,905,662; Apr. 25.
Sioberg, Charles F., assignor to York Safe & Lock Company, York, Pa. Chest depository. 1,905,873; Apr. 25.
Sirian Lamp Company. (See Henny, John A., assignor.)
Sisseler, Sidney, New Orleans, La. Finger ring. Des. 89,724; Apr. 25.
Sisseler, Sidney, New Orleans, La. Finger ring. Des. 89,725; Apr. 25.
Sisseler, Sidney, New Orleans, La. Finger ring. Des. 89,726; Apr. 25.
Skaife, Arthur F., Berkeley, Calif., assignor to Westinghouse Electric & Manufacturing Company. Elevator guide system. 1,905,248; Apr. 25.
Skaupy, Franz, Berlin-Lichterfelde, H. Sweet, Berlin, and H. Pulfrich, Berlin-Baumschulenweg, Germany, assignors to General Electric Company. Gaseous electric discharge device. 1,905,750; Apr. 25.

Skoko, Stephen, Portland, Oreg. Combination automobile license carrier, bumper, and release. 1,905,007; Apr. 25.
Slagle, Willard J., assignor to Dewey and Almy Chemical Company, Cambridge, Mass. Rug underlay. 1,905,008; Apr. 25.
Slater, N., Company. (See Milne, Winford G., assignor.)
Slater, N., Company. (See Milne, W. G., and Elliott, assignors.)
Smally, Emanuel C., Canton, Ohio. Incandescent lamp. 1,906,188; Apr. 25.
Smidth, F. L., & Co. (See Ahlmann, Nikolai, assignor.)
Smith, Adelbert B., Newcastle, Ind., assignor to Chrysler Corporation, Detroit, Mich. Bending machine. 1,905,515; Apr. 25.
Smith, Albert L. (See Walker, A. W., and Smith.)
Smith, Alfa K. (See Smith, Carl C. V., assignor.)
Smith, Benjamin A., Lakewood, assignor to The Electric Railway Improvement Company, Cleveland, Ohio. Combined rail bond and clamp. 1,906,115; Apr. 25.
Smith, Carl C. V., assignor to Alfa Klara Smith, Copenhagen, Denmark. Rotary toothbrush. 1,905,656; Apr. 25.
Smith, Earl K. (See Edwards, D. V., and Smith.)
Smith, Fred C., jr. (See Wellensiek, L. H., and Smith.)
Smith, Henry B., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulosic composition of matter containing a dialkyl hydrophthalate. 1,905,516; Apr. 25.
Smith, Henry B., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose ester composition of matter containing the tetraethyl ester of a tetracarboxyl derivative of a saturated aliphatic hydrocarbon. 1,905,517; Apr. 25.
Smith, Henry B., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose organic derivative composition of matter containing a BB'-dialkoxy ethyl carbonate. 1,905,518; Apr. 25.
Smith, Joseph K., Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y. Beryllium aluminum alloy. 1,905,312; Apr. 25.
Smith, Joseph K., Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y. Beryllium aluminum alloy. 1,905,313; Apr. 25.
Smith, Joseph K., Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y. Copper alloy. 1,905,314; Apr. 25.
Smith, Lewis R. (See Jackson, Alfred F., assignor.)
Smith, Lowell J., assignor to Stant Manufacturing Co., Connersville, Ind. Combined paper weight and pen holder. Des. 89,727; Apr. 25.
Smith, Ronald G., Fairfield, Conn. Toy railway system. 1,905,571; Apr. 25.
Smith, Wayne M., and K. W. Haley, Fellows, Calif. Oil well surveying instrument. 1,905,573; Apr. 25.
Smooth Saw Equipment Company. (See Taylor, Samuel M., assignor.)
Smythe, Frank A., assignor to The Thew-Shovel Company, Lorain, Ohio. Tractor. 1,906,116; Apr. 25.
Snow, Frederick O., jr., Winchester, assignor to Mead-Morrison Manufacturing Company, East Boston, Mass. Excavator. 1,905,191; Apr. 25.
Snyder, Christopher H., Berkeley, Calif. Building and constructing the same. 1,906,117; Apr. 25.
Snyder, Franklin L., Sharon,, Pa., assignor to Westinghouse Electric & Manufacturing Company. Tap-changing-underload equipment. 1,905,249; Apr. 25.
Societe des Etablissements Gaumont. (See S. Deville, Etienne, assignor.)
Societe en Nom Collectif dite: Veuve Paul Luc & Cie. (See Millet, Paul, assignor.)
Society of Chemical Industry in Basle. (See Felix, F., and Huber, assignors.)
Soderberg, Sten E. B., Passaic, assignor to Leslie Company, Lyndhurst, N. J. Regulator. 1,905,519; Apr. 25.
Southwark Foundry & Machine Company. (See Stringfellow, Henry A., assignor.)
Speer, Reid C. (See Kirkwood, Harry R., assignor.)
Speidel Chain Co. (See Carlson, Edwin G., assignor.)
Spencer, Percy L., Medford, Mass., assignor, by mesne assignments, to Old Colony Trust Company, trustee. Gaseous discharge device. 1,906,110; Apr. 25.
Sperr, Frederick W., jr., Pittsburgh, Pa., assignor to The Koppers Company of Delaware. Apparatus for dehydrating gas. 1,905,068; Apr. 25.
Staege, Stephen A., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Taking up slack. 1,905,250; Apr. 25.
Stair, Ray L., Los Angeles, Calif. Soap dish. 1,905,069; Apr. 25.
Staley, Joseph H. (See Davis, Dean W., assignor.)
Staley, Joseph H., Columbus, Ind. Mercury switch. 1,906,118; Apr. 25.
Standard Conveyor Company. (See Wego, Peter C., assignor.)
Standard Oil Company, The. (See Bruk, Robert E., assignor.)
Standard Oil Company. (See Excell, Stuart W., assignor.)
Standard Oil Company. (See MacLaren, Frederick H., assignor.)
Standard Oil Company. (See Morris, Fearing H., assignor.)
Standard Oil Company. (See Wilson, Robert E., assignor.)
Standard Oil Company (Indiana). (See Wilson, Robert E., assignor.)
Standard Oil Company of California. (See McLaughlin, W. L., and Wedemeyer, assignors.)
Standard Oil Company of California. (See Webster, Hugh B., assignor.)
Standerwick, Reginald G., Marblehead, Mass., assignor to General Electric Company. Elastic fluid turbine. 1,905,760; Apr. 25.
Standish, Myles, Omaha, Nebr. Truck body. 1,905,009; Apr. 25.
Stant Manufacturing Co. (See Smith, Lowell J., assignor.)
Stark, Joseph W. (See Goldsmith, B. J., and Stark.)
Staud, Cyril J. (See Webber, C. S., and Staud.)
Steam Pressing Iron Company. (See Clark, Frederick J., assignor.)
Stecher, Karl. (See Stecher, Leopold, assignor.)
Stecher, Leopold, assignor of one-third to K. Stecher, Wichita, Kans. Poultry water and feed protector. 1,906,016; Apr. 25.
Steckhan, Richard. (See Bergen, G., Engelhardt, and Steckhan.)
Stegeman, Henry J. (See Locke, S. D., Dosch, and Stegeman.)
Stehlby, Ernest T. (See Carswell, T. S., Stehlby, and Aloserij.)
Steigerwald, Christian, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Conversion of methane into liquid hydrocarbons. 1,905,520; Apr. 25.
Steiner, Hans, Winterthur, Switzerland. Cooling facilities for rotary compressors. 1,905,521; Apr. 25.
Steinle, Adolf, assignor to the Firm of Carl Zeiss, Jena, Germany. Telescope sight. 1,905,070; Apr. 25.
Stenglein, Oswald, Markersdorf-Chemnitztal, assignor to Chemnitzer Strickmaschinen-Fabrik, Chemnitz, Germany. Winding frame. 1,905,426; Apr. 25.
Stephenson, Edward B., Washington, D. C. Subaqueous system of artillery fire adjustment. 1,905,315; Apr. 25.
Stephenson, Paul A., Newton, Mass., assignor to Eastman Kodak Company, Rochester, N. Y. Motion picture camera control. 1,905,522; Apr. 25.
Sternberg, Carrie, Philadelphia, Pa. Window clothes rack. 1,905,574; Apr. 25.
Stevens, Richard H., Baltimore, Md., assignor to Bethlehem Steel Company. Ventilator. 1,905,010; Apr. 25.
Stewart, Duncan J., assignor to H. D. Colman, Rockford, Ill. Temperature regulating system. 1,905,011; Apr. 25.
Stewart, Edward E., Wichita Falls, Tex. Treating hydrocarbons. 1,905,671; Apr. 25.
Stewart-Warner Corporation. (See Schweisthal, Fred G., assignor.)
Stewart-Warner Corporation. (See Whitted, John B., assignor.)
Stiemke, Walter H. (See Jett, George C., assignor.)
Stitt, Roger H. (See Clinton, C. H., Theobald, and Stitt.)
Stoddard, Edgar S., Berwyn, assignor to The Conover Company, Chicago, Ill. Dishwashing machine. 1,905,523; Apr. 25.
Stoecklin, Josef, Zurich, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Distance relay for electric lines. 1,905,609; Apr. 25.
Stoeckly, Johann J., and R. Bartunek, Teltow Seehof near Berlin, Germany, assignors to American Glanzstoff Corporation, New York, N. Y. Maintaining the composition of viscose precipitating baths containing magnesium sulphate. Re18,802; Apr. 25.
Stoesser, Sylvia M. (See Grebe, J. J., and Stoesser.)
Stokes and Smith Company. (See Federwitz, T. A., and Bailey, assignors.)
Stoll, Edgar A., South Bend, Ind. Method and apparatus for reducing fuel oil or the like to a comminuted condition. 1,905,610; Apr. 25.
Stone, R. Harry, Irvington, N. J., assignor to Titeflex Metal Hose Co. Die. 1,905,762; Apr. 25.
Strandlund, Carl G., assignor to Deere & Company, Moline, Ill. Cultivator. 1,905,524; Apr. 25.
Strasburger, Lee L., Atlanta, Ga. Apparatus for producing suds. 1,906,953; Apr. 25.
Streitwolf, Karl, Frankfort-on-the-Main, A. Fehrle, Bad Soden-on-the-Taunus, H. Hillmer, Frankfort-on-the-Main, and H. Schmidt, Wuppertal-Vohwinkel, Germany, assignors to Winthrop Chemical Company Inc., New York, N. Y. Water-soluble complex compounds of heavy metals with 3.4-dihydroxybenzene arsonic acid. 1,905,316; Apr. 25.
Stringfellow, Henry A., Philadelphia, assignor to Southwark Foundry & Machine Company, Eddystone, Pa. Cable shearing mechanism. 1,905,317; Apr. 25.
Strobel, Charles K., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical rectifier. 1,905,525; Apr. 25.
Strong, Carlisle & Hammond Company, The. (See Peterson, Guy S., assignor.)
Struthers, James A. (See Jones, O. A., and Struthers.)
Stuart, Harold V., Milwaukee, Wis. Shoulder strap maintenance device. 1,905,318; Apr. 25.
Stuart, Kenneth B., Pueblo, assignor to The Colorado Fuel and Iron Company, Denver, Colo. Filmed coal and composition of matter for producing same. 1,905,072; Apr. 25.

Stuart, Kenneth B., Pueblo, assignor to The Colorado Fuel and Iron Company, Denver, Colo. Filming coal. 1,905,073; Apr. 25.
Studebaker Corporation, The. (See Radke, William A., assignor.)
Stuebing Automatic Machine Co., The. (See Todd, Frederick C., assignor.)
Sturges, Norman D., New York, N. Y. Storage battery. 1,905,319; Apr. 25.
Sturtevant Mill Company. (See Doyle, William T., assignor.)
Styer, Charles A., Forest Hills, Pa., assignor to Westinghouse Electric Manufacturing Company. Self compensating light control. 1,905,251; Apr. 25.
Sullivan Machinery Company. (See Osgood, Charles F., assignor.)
Sundling, Frits R., assignor of one-fourth to A. J. Christenson, Chicago, Ill. Airplane. 1,906,017; Apr. 25.
Sundling, Frits R., assignor of one-fourth to A. J. Christenson, Chicago, Ill. Airplane. 1,906,018; Apr. 25.
Sunnen, Joseph, Kirkwood, Mo. Combined valve lifter, spring compressor, and replacer. 1,905,012; Apr. 25.
Superheater Company, The. (See Oatley, Henry B., assignor.)
Surface Combustion Corporation. (See Beam, Vilynn O., assignor.)
Surface Combustion Corporation. (See Cowan, Roysel J., assignor.)
Surface Combustion Corporation. (See Cowan, R. J., and Cullen, assignors.)
Sutherland, Brian P. (See McCallum, A. L., Sutherland, and Thompson.)
Sutherland, Wallace B., Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del. Brake shoe. 1,905,575; Apr. 25.
Sutherland, Wallace B., Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del. Brake shoe. 1,905,576; Apr. 25.
Sutton, William S., Rockford, Ill. Radio apparatus. 1,906,189; Apr. 25.
Svensson, Victor A., Montclair, assignor to The Bates Manufacturing Company, West Orange, N. J. Numbering machine. 1,906,019; Apr. 25.
Swanson, Hjalmar A., Chicago, Ill., assignor to Cummins Perforator Company. Type carrying cylinder. 1,905,526; Apr. 25.
Swayze, Clare S., assignor to Delco-Remy Corporation, Anderson, Ind. Coil test apparatus. 1,906,020; Apr. 25.
Sweeley, Edward A., Alexandria, Va., and N. T. Anderson, Washington, D. C. Heater for refrigerator cars and other structures. 1,905,954; Apr. 25.
Swinglehurst, Harry, jr. (See Page, A. E., and Swinglehurst.)
Symington, T. H., & Son, Inc. (See Symington, Thomas H., assignor.)
Symington, Thomas H., assignor to T. H. Symington & Son, Inc., Baltimore, Md. Railway car truck springs. 1,905,252; Apr. 25.
Syphonator Company. (See Jacobs, C. H., and Nash, assignors.)
Tabor Manufacturing Company, The. (See Wallace, F. E., and Ramsden, assignors.)
Tabulating Machine Company, The. (See Hoffman, Morris J., assignor.)
Tagliabue, Charles J., Mfg. Co. (See Bast, Frank J., assignor.)
Talbot, Howard H., assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Reel. 1,905,192; Apr. 25.
Tarbox, John P., assignor to Budd Wheel Company, Philadelphia, Pa. Brake cooling system. 1,906,657; Apr. 25.
Tauts, Herbert E., assignor to Delta Manufacturing Company, Milwaukee, Wis. Surfacing tool. 1,906,190; Apr. 25.
Tavis, John, Bayside, assignor to M., S., N., and H. Singer, copartners trading as M. Singer & Sons, New York, N. Y. Upholstered sofa or similar article. Des. 89,728; Apr. 25.
Taylor, Frederick A., Tadworth, England. Windscreen. 1,905,763; Apr. 25.
Taylor Instrument Companies. (See Amdursky, Samuel S., assignor.)
Taylor Instrument Companies. (See Kinsman, Russell C., assignor.)
Taylor, Samuel M., assignor to Smooth Saw Equipment Company, Loyalton, Calif. Tooth swage. 1,905,013; Apr. 25.
Taylor, Thos. P., Company, The. (See Hammond, Myron B., assignor.)
Tefag Textil Finanz A. G. Zurich. (See Roesmann, Rudolf, assignor.)
Teller, Martin P., assignor to Schutte & Koerting Company, Philadelphia, Pa. Combined shut off and trip valve. 1,905,014; Apr. 25.
Ternstedt Manufacturing Company. (See DeOrlow, Stephen, assignor.)
Ternstedt Manufacturing Company. (See Schnell, William, assignor.)
Terry, Charles M., assignor to A. W. Cash Company, Decatur, Ill. Method and apparatus for controlling combustion. 1,905,606; Apr. 25.
Testi, Nicholas, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass. Safety razor. 1,905,764; Apr. 25.
Texas Company, The. (See Moore, William F., assignor.)
Textile Patent & Process Co., Incorporated. (See Cotchett, Louis M., assignor.)
Tharp, Bessie M., administratrix. (See Tharp, Victor S.)
Tharp, Victor S., deceased, Hinsburst, by Bessie M. Tharp, administratrix, assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Telephone system. 1,905,765; Apr. 25.
Theobald, Paul F., et al. (See Clinton, C. H., Theobald, and Stitt.)
Thermoid Rubber Company. (See Simpson, William R., assignor.)
Thew-Shovel Company, The. (See Smythe, Frank A., assignor.)
Thomann, Albert H. (See Thomann, Alois and A.)
Thomann, Alois A., Brookline, and A. H. Thomann, Medford, Mass. Motor vehicle speedometer. 1,905,015; Apr. 25.
Thomas, Bertram and R., Hulme, Manchester, England. Box and shelves and partitions therefor. 1,906,191; Apr. 25.
Thomas, Charles C. H., Mill Valley, Calif. Concrete block molding machine. 1,906,975; Apr. 25.
Thomas, Eustace. (See Thomas, Bertram and R.)
Thomas, George F., Berwyn, and O. J. Herb, assignors to Alemite Corporation, Chicago, Ill. Gravity lubricating system. 1,905,527; Apr. 25.
Thomas, George M. (See Pullen, R. S., Casey, and Thomas.)
Thomas, Joseph L., Milan, assignor of one-half to J. Saad, Spokane, Wash. Ash receiver. 1,906,403; Apr. 25.
Thomas, Mable M., executrix. (See Thomas, Thomas H.)
Thomas, Thomas H., deceased, Edgewood, by M. M. Thomas, executrix, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Safety car equipment. 1,905,258; Apr. 25.
Thompson, Howard A., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 1,906,021; Apr. 25.
Thompson, Joshua B. (See McCallum, A. L., Sutherland, and Thompson.)
Thompson, Louis W., Schenectady, N. Y., and M. Zucker, Royal Oak, Mich., assignors to General Electric Company. Power responsive means. 1,905,766; Apr. 25.
Thompson Products, Incorporated. (See Cox, John R., assignor.)
Thomson, Henry A., Lansdowne, assignor to Globe Ticket Company, Philadelphia, Pa. Ticket printing and issuing machine. 1,905,659; Apr. 25.
Thornley, Joseph H., Evanston, Ill. Pile driver. 1,905,528; Apr. 25.
Thum, Walter A. (See Chapin, Fenton G., assignor.)
Titeflex Metal Hose Co. (See Stone, R. Harry, assignor.)
Tivendale, William. (See Rickey, W. J., and Tivendale.)
Tobin, Kenneth J., assignor to Camel Company, Chicago, Ill. Pliable clock block. 1,906,022; Apr. 25.
Tobin, Kenneth J., Chicago, Ill. Incinerator appliance for heating units. 1,906,023; Apr. 25.
Todd, Frederick C., assignor to The Stuebing Automatic Machine Co., Cincinnati, Ohio. Metal binding for calendars. 1,906,024; Apr. 25.
Toledo Porcelain Enamel Products Company, The. (See Lind, Howard B., assignor.)
Topham, Laurence E., Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe sewing machine. 1,905,074; Apr. 25.
Torio, Thomas, Corona, N. Y. Shoe. 1,905,529; Apr. 25.
Totzek, Friedrich, Essen-Stoppenberg, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa. Retort oven for producing gas and coke. 1,905,075; Apr. 25.
Trans-Lux Daylight Picture Screen Corporation. (See Lynn, Harry H., assignor.)
Traphagen, Harry R., Rockford, Ill., assignor to J. I. Case Company, Racine, Wis. Universal footpiece for cultivator shovels and the like. 1,905,016; Apr. 25.
Traphagen, Harry R., Rockford, Ill., assignor to J. I. Case Company, Racine, Wis. Fertiliser boot. 1,905,767; Apr. 25.
Travis, Bert, Santa Fe Springs, Calif. Cat line spool. 1,905,577; Apr. 25.
Treanor, Earl E. (See Norquist, V. C., and Treanor.)
Trimble, E., et al. (See Carton, Lee C., assignor.)
Trogner, Arthur M., Maplewood, N. J., assignor to Wired Radio, Inc., New York, N. Y. Combined clock and radio system. 1,905,193; Apr. 25.
Trueman, Walter B., Mattoon, Ill. Closure fastener. 1,905,320; Apr. 25.
Trupar Manufacturing Company. (See Lindsay, Lynn G., assignor.)
Truscon Steel Company. (See Morgan, David H., assignor.)
Tucker, John T., Berkeley, Calif. Fruit peeler. 1,905,578; Apr. 25.
Tucker, Louis, Chicago, Ill. Combined lamp and fan. Des. 89,729; Apr. 25.
Tuck-Tite Lock and Fastener Company Limited. (See Widmer, Harry A., assignor.)
Tufts, Edward P., Bow, N. H. Sawmill dog. 1,905,768; Apr. 25.
Tuvek, Joseph A. V., Wilmette, assignor to Felt & Tarrant Manufacturing Company, Chicago, Ill. Calculating machine. 1,905,579; Apr. 25.

Turner, Dee, Hollywood, Calif. Exercising apparatus. 1,905,019; Apr. 25.
Tyler, De Witt C., Chicago, Ill. Soap dispensing apparatus. 1,905,611; Apr. 25.
Ulrich, Horace W., Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,905,662; Apr. 25.
Underwood Elliott Fisher Company. (See Kurowski, Alfred G. F., assignor.)
Underwood Elliott Fisher Company. (See Resch, Henry, assignor.)
Underwood Machinery Company. (See Foley, Ernest L., assignor.)
Ungerer, Fritz, Pforzheim, Germany. Adjusting device for plate straightening machines. 1,905,530; Apr. 25.
Union Bank & Trust Co. of Los Angeles, administrator. (See Delaney, John H.)
Union Switch & Signal Company, The. (See Bossart, Paul N., assignor.)
Union Switch & Signal Company, The. (See Crago, Paul H., assignor.)
Union Switch & Signal Company. (See Liebel, J. G. H., and Jacquelet, assignors.)
Union Switch & Signal Company, The. (See Ogden, Clarence E., assignor.)
Union Switch & Signal Company. (See O'Hagan, Bernard E., assignor.)
Union Switch & Signal Company, The. (See Strobel, Charles K., assignor.)
Union Switch & Signal Company, The. (See Thompson, Howard A., assignor.)
Unipress Company, The. (See Lindemann, Frederick W., assignor.)
United Engineering & Foundry Company. (See Biggert, F. C., jr., and Johnson, assignors.)
United Engineering & Foundry Company. (See Kohler, Kurt P., assignor.)
United Engineering & Foundry Company. (See Talbot, Howard H., assignor.)
United Research Corporation. (See Berkowitz, Michael, assignor.)
United Screw and Bolt Corporation. (See Fieg, Joseph F., assignor.)
United Shoe Machinery Corporation. (See Adams, Oscar C., assignor.)
United Shoe Machinery Corporation. (See Ashworth, Fred assignor.)
United Shoe Machinery Corporation. (See Brandt, Francis L., assignor.)
United Shoe Machinery Corporation. (See Finn, Sidney J., assignor.)
United Shoe Machinery Corporation. (See Mackenzie, Fred L., assignor.)
United Shoe Machinery Corporation. (See Morrill, Alfred R., assignor.)
United Shoe Machinery Corporation. (See Topham, Laurence E., assignor.)
United States Cabinet Bed Co. (See Martin, Joseph, assignor.)
United States Glass Company. (See Martin, Dennis E., assignor.)
United States Gypsum Company. (See Clinton, C. H., Theobald, and Stitt, assignors.)
United States Gypsum Company. (See Gough, Fred J., assignor.)
United States Process Corporation. (See Heuser, Herman and R. S., assignors.)
U. S. Slicing Machine Company. (See Folk, Joseph, assignor.)
U. S. Slicing Machine Company. (See van Berkel, Cornelis F. M., assignor.)
University of Cincinnati, Board of Directors of the. (See Kersten, Harold J., assignor.)
Urschel, William E., Valparaiso, Ind. Harvesting machine. 1,905,194; Apr. 25.
Vallas, Lionel, Chicago, Ill. Roof flashing. 1,905,017; Apr. 25.
Van Arsdel, Wallace B., et al. (See Richter, G. A., Van Arsdel, and Hill.)
Van Berkel, Cornelis F. M., Wassenaar, Holland, assignor to U. S. Slicing Machine Company, La Porte, Ind. Slicing machine. 1,905,531; Apr. 25.
Vangrevenynge, Charles, La Celle-St. Cloud, and H. Ellon, Paris, France. Metal alloy. 1,906,192; Apr. 25.
Van Heurn, Frans C., Amsterdam, Netherlands, assignor, by mesne assignments, to Shell Development Company, San Francisco, Calif. Manufacturing ebonite in which stone chippings or the like are incorporated. 1,905,404; Apr. 25.
Van Hise, Amos S., Brooklyn, N. Y. Combined fountain pen and desk stand holder therefor. Des. 89,730; Apr. 25.
Van Hise, Amos S., Brooklyn, N. Y. Combined fountain pen and desk stand holder therefor. Des. 89,731; Apr. 25.
Van Lis, Pieter H. A. (See Holst, G., Shepherd, and van Lis.)
Vannah, Harold P., West Palm Beach, Fla., assignor to Brown Company, Berlin, N. H. Fungicide. 1,905,532; Apr. 25.
Van Sciver, Lloyd, Chestnut Hill, Pa. Walking stick. 1,905,076; Apr. 25.
Van Sickle, Frank B. (See Brown, C. A., and Van Sickle.)
Van Steenkiste, Theodore, Chicago, Ill. Game apparatus. 1,906,025; Apr. 25.
Van Steenwyk, Hendrik W. (See Norris, C. B., Curran, and Van Steenwyk.)
Velen, Luther T., Cheswold, Del. Shock handling machine. 1,905,321; Apr. 25.
Vickers-Armstrongs Limited. (See Parker, Lionel D., assignor.)
Vitale, Vincent V., Brooklyn, N. Y. Signal device. 1,906,193; Apr. 25.
Voelker, Fred, jr., assignor to Blaw-Knox Company, Pittsburgh, Pa. Material measuring and handling apparatus. 1,905,018; Apr. 25.
Vogel, Max, Frankfort-on-the-Main, Germany, assignor to The E. H. Hotchkiss Company, Norwalk, Conn. Stapling machine. 1,905,254; Apr. 25.
Vogt, Clarence W., assignor to Vogt Instant Freezers, Incorporated, Louisville, Ky. Frozen comestible package. 1,906,183; Apr. 25.
Vogt Instant Freezers, Incorporated. (See Vogt, Clarence W., assignor.)
Von Fischer, Waldemar, assignor to Fa. Richard Biel, Hamburg, Germany. Tilting device for sliding windows. 1,906,026; Apr. 25.
Von Platen, Baltzar C., Stockholm, Sweden. Electric machine. 1,905,660; Apr. 25.
Voorhees, Daniel W., jr., Peru, Ill. Steel wheel. 1,905,661; Apr. 25.
Vroman, William S., assignor to The Paine and Williams Company, Cleveland, Ohio. Automobile running board and the like. 1,905,769; Apr. 25.
Wackman, Louis B., St. Louis, Mo. Bushing and solder sealed cap therefor for metallic containers. 1,905,969; Apr. 25.
Wadd, Roy J., assignor to Harnischfeger Corporation, Milwaukee, Wis. Crane type charger. 1,905,195; Apr. 25.
Wadman, Harold A., assignor to Hartford-Empire Company, Hartford, Conn. Forehearth of glass melting furnaces. 1,905,533; Apr. 25.
Wadman, Harold A., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for and method of making glass. 1,905,534; Apr. 25.
Wachner, Paul E., Brooklyn, N. Y. Receptacle. 1,905,955; Apr. 25.
Wagner Electric Corporation. (See Weichsel, Hans, assignor.)
Wagner, John A., Decatur, Ill. Marker unit. 1,905,612; Apr. 25.
Wagner, L. A. (See Williams, William J., assignor.)
Wagner, Richard E., Rockaway Park, N. Y. Water softening apparatus. 1,905,021; Apr. 25.
Wagner, Tosca, Seattle, Wash. Brush for eyelashes and eyebrows. 1,905,899; Apr. 25.
Wahl Clipper Corporation. (See Wahl, Leo J., assignor.)
Wahl, Leo J., assignor to Wahl Clipper Corporation, Sterling, Ill. Vibrator control device. 1,906,027; Apr. 25.
Wakefield, C. C. & Company. (See Bliss, John, assignor.)
Waldron, John, Corporation. (See Banner, Otto A., assignor.)
Walker, Arthur W., Malden, and A. L. Smith, West Medway, assignors to Walker & Pratt Mfg. Co., Boston, Mass. Electric heating unit and manufacturing same. 1,905,770; Apr. 25.
Walker, Burnett. (See Lambert, Alvan R., assignor.)
Walker, Henry A., Rockport, Wash. Safety means for hydraulic brakes. 1,905,077; Apr. 25.
Walker, John S., assignor to Kant-Glare Manufacturing Company, Incorporated, Pittsburgh, Pa. Antiglare device. 1,905,822; Apr. 25.
Walker & Pratt Mfg. Co. (See Walker, A. W., and Smith, assignors.)
Walker, Warren R., Bloomfield, N. J., assignors to General Electric Vapor Lamp Company. Switch mounting. 1,905,771; Apr. 25.
Wallace, Archibald L., Brooklyn, N. Y. Continuous vulcanizing apparatus. 1,905,663; Apr. 25.
Wallace, Edward, Cleveland Heights, Ohio. Attachment for vehicles. 1,905,823; Apr. 25.
Wallace, Frank R., and J. T. Ramsden, assignors to The Tabor Manufacturing Company, Philadelphia, Pa. Automatic equalizing support. 1,905,020; Apr. 25.
Walsh, James F., South Orange, and A. F. Caprio, Newark, N. J., assignors to Celluloid Corporation. Modifier for cellulose acetate plastics. 1,905,535; Apr. 25.
Walton, Julian N., Brooklyn, N. Y., assignor to The Anchor Packing Company, Philadelphia, Pa. Packing means for shafts. 1,905,772; Apr. 25.
Waltz, Susie R., Ross, Calif. Necktie. 1,906,120; Apr. 25.
Ward, Raleigh P. (See Carlisle, P. J., and Ward.)
Wardwell, Henry F., and W. C. Bladin, Chicago, Ill. Side bearing for railway cars. 1,905,196; Apr. 25.
Waters, Millard F., assignor to Hanlon-Waters, Inc., Tulsa, Okla. Pipe coupling. 1,905,524; Apr. 25.
Watson, Cecil A. B., Auckland, New Zealand. Exposure indicator attachment to photographic cameras. 1,905,956; Apr. 25.
Watson, Thomas, et al. (See Carton, Leo C., assignor.)
Weatherhead, Albert J., jr., Cleveland, Ohio. Producing a controlling device. 1,905,664; Apr. 25.
Weatherhead, Albert J., jr., and J. D. Baldwin, jr., Cleveland, Ohio; said Baldwin assignor to said Weatherhead. Producing couplings. 1,905,665; Apr. 25.

Webb, Hartwell W., assignor to A C Spark Plug Company, Flint, Mich. Flexible cable. 1,905,197; Apr. 25.
Webber, Charles S., Springfield, Mass., and C. J. Staud, assignors to Eastman Kodak Company, Rochester, N. Y. Hydrolysis of cellulose acetate. 1,905,536; Apr. 25.
Webber, Charles S., Springfield, Mass., and C. J. Staud, assignors to Eastman Kodak Company, Rochester, N. Y. Hydrolysis of cellulose acetate. 1,905,537; Apr. 25.
Weber, Arthur E., Forest Hill, and J. A. Howard, Streatham Hill, London, England, assignors to The Hairlock Company, Inc., New York, N. Y. Upholstery pad and making the same. 1,906,028; Apr. 25.
Weber, Friedrich W., Hackensack, and E. Schaefer, Englewood, assignors to Maywood Chemical Corks, Maywood, N. J. Method for weighting artificial silk consisting of cellulose esters. 1,906,306; Apr. 25.
Webster, Benjamin C., Southport, assignor to The Bryant Electric Company, Bridgeport, Conn. Attachment plug with pilot light. 1,906,104; Apr. 25.
Webster, Hugh B., Oakland, assignor to Standard Oil Company of California, San Francisco, Calif. Instrument for recording inclination. 1,905,546; Apr. 25.
Wedemeyer, Rupert G. (See McLaughlin, W. I., and Wedemeyer.)
Wege, Peter C., St. Paul, assignor to Standard Conveyor Company, North St. Paul, Minn. Sealed bearing. 1,906,066; Apr. 25.
Weichert, Max. (See Denstädt, Hermann and F., and Weichert.)
Weichsel, Hans, assignor to Wagner Electric Corporation, St. Louis, Mo. Single phase motor. 1,905,773; Apr. 25.
Weinig, Arthur J., and R. H. Cuthbertson, Golden, Colo., assignors to The American Metal Company, Limited, New York, N. Y. Ore separation. 1,906,029; Apr. 25.
Weinreich, George F., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Train-control trackway equipment. 1,905,667; Apr. 25.
Weisker, Ellis, Bronx, N. Y. Apparatus for illuminating objects to be reproduced. 1,906,588; Apr. 25.
Welke, Ferdinand G. (See Davisson, D. W., and Welke.)
Wellensiek, Louis H., assignor to Hughes Tool Company, Houston, Tex. Core drill reamer. 1,905,078; Apr. 25.
Wellensiek, Louis H., and F. C. Smith, jr., assignors to Hughes Tool Company, Houston, Tex. Roller cutter retaining device. 1,905,079; Apr. 25.
Wendtland, Heinz, Altona-on-the-Elbe, Germany. Water lock for acetylene generators. 1,905,198; Apr. 25.
Wensley, Roy J., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Remote control system. 1,905,255; Apr. 25.
Wesix National Company. (See Kercher, A. J., and Hicks, assignors.)
Wessman, Edwin G., assignor to Individual Drinking Cup Company, Inc., Easton, Pa. Dispenser. 1,905,613; Apr. 25.
West, George E., Washington, D. C. Cap for containers. 1,905,356; Apr. 25.
Western Electric Company. (See Alden, J. L., and McCarthy, assignors.)
Western Electric Company. (See Hardisty, Rupert W., assignor.)
Western States Machine Company, The. (See Roberts, Eugene, assignor.)
Westinghouse Air Brake Company, The. (See Thomas, Thomas H., assignor.)
Westinghouse Electric Elevator Company. (See Dunlop, James, assignor.)
Westinghouse Electric & Manufacturing Company. (See Barton, James P., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bradshaw, William M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Campbell, W. H., Ellsworth, and Madsen, assignors.)
Westinghouse Electric & Manufacturing Company. (See Corey, Flournoy, assignor.)
Westinghouse Electric & Manufacturing Company. (See Eames, William F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Erickson, Ellis O., assignor.)
Westinghouse Electric & Manufacturing Company. (See Foresman, Robert A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hoard, Bert V., assignor.)
Westinghouse Electric & Manufacturing Company. (See James, Henry D., assignor.)
Westinghouse Electric & Manufacturing Company. (See James, H. D., and Currie, assignors.)
Westinghouse Electric & Manufacturing Company. (See James, H. D., and Fish, assignors.)
Westinghouse Electric & Manufacturing Company. (See Labberton, John M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Mangan, George B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Marthens, Arthur S., assignor.)
Westinghouse Electric & Manufacturing Company. (See Peterson, Alfred J. A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Randall, Karl C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Scott, Howard, assignor.)
Westinghouse Electric & Manufacturing Company. (See Skaife, Arthur F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Snyder, Franklin L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Steere, Stephen A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Styer, Charles A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Wensley, Roy J., assignor.)
Westinghouse Electric & Manufacturing Company. (See White, Thomas U., assignor.)
Westinghouse Lamp Company. (See Amatel, Harold, assignor.)
Westinghouse Lamp Company. (See Marden, John W., assignor.)
Westinghouse Lamp Company. (See Marden, J. W., and Lederer, assignors.)
Westinghouse Lamp Company. (See Morrison, Montford, assignor.)
Westinghouse Lamp Company. (See Nicolai, C. A., and Lindegaard, assignors.)
Westinghouse X-Ray Company. (See Morrison, Montford, assignor.)
Weymouth, Harry G. (See Chrisman, H., and Weymouth.)
Wheat, Grant, assignor to Koehler Manufacturing Company, Marlboro, Mass. Portable electric lamp. 1,905,774; Apr. 25.
Whelchel, Rupert C., assignor to Delco-Remy Corporation, Anderson, Ind. Armature test machine. 1,906,000; Apr. 25.
White, Charles H., assignor to Deere & Company, Moline, Ill. Middle burster. 1,905,022; Apr. 25.
White, Everett H., St. Paul, Minn. Remote control regulator motor. 1,905,325; Apr. 25.
White, Jay E., assignor to Chrysler Corporation, Detroit, Mich. Control apparatus for radio receiving instruments. 1,905,539; Apr. 25.
White, John W., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich. Method of and apparatus for forming and testing switches. 1,905,668; Apr. 25.
White, Thomas U., Pittsburgh, Pa., assignor to Westinghouse Electric Manufacturing Company. Control system. 1,905,256; Apr. 25.
White, William E., assignor to Kalman Steel Company, Chicago, Ill. Bead strip and support. 1,905,923; Apr. 25.
Whitehouse, Irving P., assignor to H. C. Lord, Erie, Pa. Mounting. 1,905,540; Apr. 25.
Whitney, F. A., Carriage Company. (See Shaw, Harold F., assignor.)
Whitted, John B., assignor to Stewart-Warner Corporation, Chicago, Ill. Thermostat radiator shutter control. 1,905,257; Apr. 25.
Whittles, Joseph R., Rockford, Ill., assignor to Norton Company, Worcester, Mass. Hydraulically actuated table reciprocating mechanism. 1,905,080; Apr. 25.
Wicke, A. C., Manufacturing Company. (See Wicke, Charles E., assignor.)
Wicke, Charles E., Mount Vernon, assignor to A. C. Wicke Manufacturing Company, New York, N. Y. Illuminated refrigerator display case. 1,905,775; Apr. 25.
Widmer, Harry Alphonse, assignor to Tuck-Tite Lock and Fastener Company Limited, London, England. Fastening. 1,905,199; Apr. 25.
Wiener, John A., and J. B. Harmon, Oswego, N. Y. Fireproof wall board. 1,905,541; Apr. 25.
Wikstrand, Andres, Mora, Sweden. Cable tightening and holding device for load pulling apparatus. 1,905,542; Apr. 25.
Wilcox, William D., Lawrence, Kans. Producing mixtures of carbon monoxide and hydrogen. 1,905,326; Apr. 25.
Wilford, Edward Burke, Merion, Pa. Aircraft. 1,905,776; Apr. 25.
Willheim, William, Co. (See Guhl, Maclyn, assignor.)
Williams, Charles E., assignor to General Motors Corporation, Detroit, Mich. Carburetor. 1,905,258; Apr. 25.
Williams, Lynn A., et al., trustee. (See Bracke, Robert F., assignor.)
Williams, Selden T., Bellerose, assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y. Air chuck. 1,905,777; Apr. 25.
Williams, William J., South Gate, assignor of one-half to L. A. Wagner, Los Angeles, Calif. Mechanism for recording rotation of a well-surveying instrument. 1,905,200; Apr. 25.
Wilmarth, Louis R., Attleboro, Mass., assignor to Howard S. Scholes, Edgewood, R. I. Article holder. 1,906,031; Apr. 25.
Wilson, Allen B., assignor to Acme Steel Company, Chicago, Ill. Container and forming same. 1,906,032; Apr. 25.
Wilson, Fred D. (See Morse, W. G., Wilson, and Wuestenberg, A.)
Wilson-Jones Company. (See Irving, Clarence B., assignor.)
Wilson, Robert E., assignor to Standard Oil Company, Chicago, Ill. Vacuum distillation. 1,905,201; Apr. 25.
Wilson, Robert E., assignor to Standard Oil Company (Indiana), Chicago, Ill. Vacuum surface distillation. 1,906,033; Apr. 25.
Wine, William E., Toledo, Ohio. Railway car. 1,906,195; Apr. 25.

Winslow, Edward J., Chicago, Ill. Repair device for closing ruptures in concrete structures. 1,905,405; Apr. 25.
Winthrop Chemical Company. (See Streitwolf, K., Fehrle, Hilmer, and Schmidt, assignors.)
Winzenburg, Wilhelm, Dresden, Germany. Combined cinematographic apparatus. 1,905,614; Apr. 25.
Wired Radio, Inc. (See Chromy, Ben J., assignor.)
Wired Radio, Inc. (See Culver, Charles A., assignor.)
Wired Radio, Inc. (See Davis, Chester L., assignor.)
Wired Radio, Inc. (See Hund, August, assignor.)
Wired Radio, Inc. (See Trogner, Arthur M., assignor.)
Wittel, Otto, assignor to Eastman Kodak Company, Rochester, N. Y. Supporting structure for the casing of a motion picture projection screen. 1,905,543; Apr. 25.
Wittstein, Charles T., Newark, N. J. Ornamental display device. 1,905,544; Apr. 25.
Wolf, Marie C., Cleveland Heights, Ohio. Manicuring device. 1,905,976; Apr. 25.
Wolf, Simon, Bronx, N. Y. Collapsible dress form. 1,905,202; Apr. 25.
Wood, J. R., & Sons, Inc. (See Hoppe, Arthur, assignor.)
Wood, James, Noblesville, Ind. Protective entrance to a burglar-proof safe. 1,905,547; Apr. 25.
Wood, R. D., & Company. (See Schrans, Charles A., assignor.)
Wood, Walter. (See Schrans, Charles A., assignor.)
Wood, Walter J. (See Kellett, I., Armitage, and Wood.)
Woodman, Joseph C., Flushing, N. Y., assignor to Decarie Incinerator Corporation. Incinerator. 1,905,120; Apr. 25.
Woods, Henry B., assignor to Hughes Tool Company, Houston, Tex. Covered welding rod. 1,905,081; Apr. 25.
Woolley, Bruce D., Johnstown, Ohio. Tire chain. 1,906,034; Apr. 25.
Wright, Wilbur L., and L. D. Pierce, assignors to Oswego Falls Corporation, Fulton, N. Y. Hood capping container. 1,905,615; Apr. 25.
Wuebling, Harry B., Cincinnati, Ohio. Flush panel construction. 1,905,082; Apr. 25.
Wuensch, Charles E., Joplin, Mo., assignor to Minerals Beneficiation Incorporated. Grinding mill. 1,905,545; Apr. 25.
Wuestenberg, Herbert C. (See Morse, W. G., Wilson, and Wuestenberg.)
Wulff, Robert G., Los Angeles, Calif. Charging compressed gas cylinders. 1,906,035; Apr. 25.
Wunderlich, William E., assignor to The Moore Company, Muncie, Ind. Conveying mechanism. 1,906,036; Apr. 25.
Yager, George F., assignor to The Bunting Brass & Bronze Company, Toledo, Ohio. Metal working machine. 1,905,203; Apr. 25.
Yenser, George R., Woodhaven, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration translating device. 1,905,669; Apr. 25.
York Safe & Lock Company. (See Sloberg, Charles F., assignor.)
Young, Elijah A., Johannesburg, Union of South Africa. Device for securing broom heads to their sticks. 1,905,670; Apr. 25.
Zanella, Apollony, Spadra, Calif. Concrete form board traing bolder. 1,905,616; Apr. 25.
Zecher, Gustav, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company. Installation suitable for the irradiation of substances with ultra-violet light. 1,906,038; Apr. 25.
Zecher, Gustav, Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge device. 1,906,039; Apr. 25.
Zecher, Gustav, and J. Bruijnes, Eindhoven, Netherlands, assignors, by mesne assignments, to General Electric Company. Electrode in discharge tubes. 1,906,037; Apr. 25.
Zeiss, Carl, Firm of. (See Steinle, Adolf, assignor.)
Zenith Radio Corporation. (See Schaefer, Joseph M., assignor.)
Zerweck, Werner. (See Herz, R., and Zerweck.)
Zetmeir, Emil A., Topeka, Kans. Window construction. 1,905,024; Apr. 25.
Ziegs, Karl, Berlin, Germany, assignor to Addressograph Company, Wilmington, Del. Sheet feeding mechanism for printing machines. 1,905,548; Apr. 25.
Zimmerman, Paul. (See Boynton, A. J., and Zimmerman.)
Zimmermann, Gustav, Dusseldorf, Germany. Molding apparatus. 1,905,357; Apr. 25.
Zimmermann, Gustav, Dusseldorf, Germany. Lowering device in molding machines. 1,905,358; Apr. 25.
Zimmermann & Jansen, G. m. b. H. (See Scholl, Bernhard, assignor.)
Zinno, Frank D., assignor to The Chase Companies, Incorporated, Waterbury, Conn. Apparatus for pouring molten metal. 1,905,204; Apr. 25.
Zucker, Myron. (See Thompson, L. W., and Zucker.)
Zugermayer, Melmore, Southampton, Pa. Safety magneto switch. 1,906,121; Apr. 25.
Zumwalt, John H., Tacoma, Wash. Method and composition for preserving wood. 1,905,327; Apr. 25.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF APRIL, 1933

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Acetic anhydride, Preparing. F. Henle, G. Meder, V. Lans, and F. Privinsky. 1,905,466; Apr. 25.
Acid: *See*—
Lactic acid.
Acid esters of phenols containing a basic constituent, Disubstituted carbamic. J. A. Aeschlimann. 1,905,990; Apr. 25.
Acoustic device. H. C. Harrison. 1,905,704; Apr. 25.
Acoustic material. J. H. Delaney. 1,906,138; Apr. 25.
Adjusting device for plate straightening machines. F. Ungerer. 1,905,530; Apr. 25.
Advertising device. W. Hasenpatt. 1,905,706; Apr. 25.
Advertising device. W. H. McDonald. 1,905,239; Apr. 25.
Aerial craft construction. J. Silverman. 1,906,114; Apr. 25.
Aeroplane. S. W. Lanning. 1,905,889; Apr. 25.
Agricultural implement. W. Schirmer. 1,906,107; Apr. 25.
Air conditioner. H. T. Johnson. 1,905,101; Apr. 25.
Air conditioning apparatus. E. P. Rasmussen. 1,905,422; Apr. 25.
Air conditioning system for railway cars. L. W. Melcher. 1,905,040; Apr. 25.
Aircraft. E. B. Wilford. 1,905,776; Apr. 25.
Air for internal combustion engines, Apparatus for the distribution and injection. J. Konstantinoff. 1,906,008; Apr. 25.
Airplane. T. P. Hall. 1,906,005; Apr. 25.
Airplane. F. R. Sundling. 1,906,017–18; Apr. 25.
Aldol, Production of. G. F. Horsley. 1,905,290; Apr. 25.
Aligning fixture. L. W. Johnson. 1,905,102; Apr. 25.
Alloy. E. de Ridder and H. Altwicker. 1,905,445; Apr. 25.
Alloy, Copper. J. K. Smith. 1,905,314; Apr. 25.
Alloy for use in the cracking of petroleum. V. B. Browne. 1,905,436; Apr. 25.
Alloy, Metal. C. Vangrevenynge and H. Elion. 1,906,192; Apr. 25.
Alloys, Electrodisposition of tin-gold. H. J. Kersten. 1,905,105; Apr. 25.
Alloys, Electrodisposition of zinc-gold. H. J. Kersten. 1,905,106; Apr. 25.
Amalgam mixing device. E. V. Parkin. 1,905,802; Apr. 25.
Ammunition. J. E. Burns. 1,905,795–6; Apr. 25.
Amplifier. H. Hollerith, jr. 1,905,985; Apr. 25.
Amplifier, High frequency. H. F. Elliott. 1,905,826; Apr. 25.
Amplifier unit, Photocell. E. O. Erickson. 1,905,276; Apr. 25.
Ampoule. A. J. Blaivas. 1,905,362; Apr. 25.
Anchor, Bolt. R. E. McIntosh and T. J. Noonan. 1,905,730; Apr. 25.
Anemometer. A. U. Davis. 1,905,444; Apr. 25.
Annealing, Low-temperature bright. R. J. Cowan and O. E. Cullen. 1,905,810; Apr. 25.
Anthanthrone, Brominating. R. Herz and W. Zerweck. 1,905,285; Apr. 25.
Anthanthrone, Chlorinating. R. Herz and W. Zerweck. 1,905,286; Apr. 25.
Antifreeze compound for radiators. O. P. Greenstreet. 1,905,880; Apr. 25.
Antifriction equalising bearing. R. W. Barrett. 1,905,333; Apr. 25.
Antiglare device. J. Pekar. 1,906,090; Apr. 25.
Antiglare device. J. S. Walker. 1,905,822; Apr. 25.
Antirattle device. I. Andrews. Re18,800; Apr. 25.
Antiskid chain. H. B. Drury. 1,905,993; Apr. 25.
Antiskid device. H. F. Drury. 1,905,997; Apr. 25.
Apparatus for sinking bodies such as caissons and piles. A. F. Johnson. 1,905,643; Apr. 25.
Applicator and massage instrument. E. M. Robinson. 1,905,750; Apr. 25.
Apron for car dumpers. O. M. Carse. 1,905,867; Apr. 25.
Armature test machine. R. C. Whelchel. 1,906,050; Apr. 25.
Aromatic compounds, Purification of crude. A. O. Jaeger and L. C. Daniels. 1,905,903; Apr. 25.
Article holder. L. R. Wilmarth. 1,906,031; Apr. 25.
Article treating apparatus. E. L. Foley. 1,905,694; Apr. 25.
Article with associated plunger rod. H. F. Shaw. 1,905,425; Apr. 25.
Articles of plastic material, Apparatus for forming molded or embossed. A. Kremmling. 1,906,160; Apr. 25.
Articles upon a traveling assembling carrier, Mechanism for distributing. F. G. Purinton. 1,905,056; Apr. 25.
Arylaminothiazole compounds, Manufacture of nuclear halogenated derivatives of. R. Herz and M. Schubert. 1,905,287; Apr. 25.
Ash can. P. D'Angelo. 1,905,622; Apr. 25.
Ash disposal apparatus. R. A. Foresman. 1,905,228; Apr. 25.
Ash receiver. J. L. Thomas. 1,905,403; Apr. 25.
Assembling machine and jig. F. W. Doyle. 1,905,690; Apr. 25.
Attenuation unit. R. K. Potter. 1,905,353; Apr. 25.
Automatic equalising support. F. R. Wallace and J. T. Ramsden. 1,905,020; Apr. 25.
Automatic gain control. G. A. Mathieu and G. A. Isted. 1,905,946; Apr. 25.
Automatic window regulator. E. L. Ackerman. 1,905,876; Apr. 25.
Automobile cover. L. Levine. 1,905,973; Apr. 25.
Automobile heater. A. B. Modine. 1,905,487; Apr. 25.
Automobile indicating device. A. F. Jackson. 1,905,717; Apr. 25.
Aviation engine. L. Chevrolet and R. J. Parrish. 1,906,045; Apr. 25.
Awning and shutter, Adjustable combination. G. F. Shepard. 1,905,514; Apr. 25.
Awning, Skylight. F. Brown. 1,905,839; Apr. 25.
Axle housings, Making. E. B. Clark. 1,905,150; Apr. 25.
Bag. D. A. Christianson. Des. 89,679; Apr. 25.
Bag and closure means therefor. J. Duvall. 1,905,982; Apr. 25.
Bar for automobile bumpers, Impact. H. S. Jandus. Des. 89,704; Apr. 25.
Barrow, Motor. J. and H. Hoffman. 1,905,589; Apr. 25.
Base and socket for electric lamps. T. E. Foulke. 1,905,843; Apr. 25.
Base exchange material, Recovering. O. Liebknecht. 1,906,166; Apr. 25.
Basket. E. A. Florang. 1,906,146; Apr. 25.
Basket, Collapsible. D. Miller. 1,906,173–4; Apr. 25.
Basket or box, Berry or fruit. E. H. Newton. 1,905,119; Apr. 25.
Baths containing magnesium sulphate, Maintaining the composition of viscose precipitating. J. J. Stoeckly and R. Bartunek. Re18,802; Apr. 25.
Battery: *See*—
Storage battery.
Beacon, Direction-indicating. F. Corey. 1,905,267; Apr. 25.
Bearing: *See*—
Sealed bearing.
Bearing, and application thereof. E. C. Cope and E. Kinsella. 1,905,443; Apr. 25.
Bearing for ink roll doctors. A. D. Kerr. 1,905,104; Apr. 25.
Bearing for railway cars, Side. H. F. Wardwell and W. C. Bladin. 1,905,196; Apr. 25.
Bearing structure. G. F. Blume. 1,906,122; Apr. 25.
Bed, Automobile. J. L. Richardson. 1,905,605; Apr. 25.
Bed, Day. J. Martin. 1,905,928; Apr. 25.
Bed, Hospital. C. L. Shults. 1,905,855; Apr. 25.
Bed, Orthopedic. J. V. Berne. 1,906,887; Apr. 25.
Bending machine. A. R. Smith. 1,905,515; Apr. 25.
Beryllium aluminum alloy. J. K. Smith. 1,905,312–13; Apr. 25.
Beryllium oxide occurring in materials containing beryllium silicate or silicates, Concentrating. L. Burgess. 1,905,340; Apr. 25.
Beverage carbonating and dispensing apparatus. C. H. Jacobs and E. R. Nash. 1,905,986; Apr. 25.
Binder, Loose leaf. J. C. Dawson. Re18,806; Apr. 25.
Binding for calendars, Metal. F. C. Todd. 1,906,024; Apr. 25.
Bit: *See*—
Disk bit.
Blade adjusting mechanism for road machines. W. G. Morse, F. D. Wilson, and H. C. Wuestenberg. 1,906,079; Apr. 25.
Blades, Making tubular turbine. C. Lorensen. 1,905,944; Apr. 25.
Blind, Venetian. F. J. Burns. 1,905,979; Apr. 25.
Block: *See*—
Clock block. Tread block.
Board: *See*—
Fireproof wall board. Running board.
Garment board.
Bobbin winding and bunch forming mechanism and method. I. Kellett, N. Armitage, and W. J. Wood. 1,905,910; Apr. 25.
Boiler: *See*—
Steam boiler.
Boiler return trap. V. Fina. 1,906,052; Apr. 25.
Boiler water control. B. Burns and H. B. Lewis. 1,905,142; Apr. 25.

Boiler with interdeck superheater. H. J. Kerr and W. A. Jones. 1,906,125; Apr. 25.
Bolts, Manufacture of. J. F. Fleg. 1,905,084; Apr. 25.
Book, Loose leaf memorandum. C. B. Irving. 1,905,097; Apr. 25.
Book, Manifolding. E. K. Bottle. 1,905,893; Apr. 25.
Boot, Fertilizer. H. R. Traphagen. 1,905,767; Apr. 25.
Box: *See*—
Paper box. Valve box.
Box and shelves and partitions therefor. B. and E. Thomas. 1,906,191; Apr. 25.
Box for displaying jewelry and the like. J. M. Shields. 1,906,111; Apr. 25.
Braille writing machine. A. G. F. Kurowski. Des. 89,709; Apr. 25.
Brake: *See*—
Hand brake.
Brake. H. F. Parker. 1,904,996–8; Apr. 25.
Brake. H. Schnakenberg. 1,905,951; Apr. 25.
Brake cooling system. J. P. Tarbox. 1,905,657; Apr. 25.
Brake for railway cars, Side hand. R. W. Burnett. 1,905,213; Apr. 25.
Brake mechanism. G. C. Jett. 1,905,231; Apr. 25.
Brake mechanism. A. F. Klaning. 1,905,400; Apr. 25.
Brake shoe. W. B. Sutherland. 1,905,575–6; Apr. 25.
Brake with stage braking, Compressed air. W. Hotz. 1,906,156; Apr. 25.
Breaker mechanism. F. T. Irgens. 1,905,096; Apr. 25.
Brick and producing same, Ornamental. E. C. Hervey. 1,905,170; Apr. 25.
Brick edging machine. G. E. Luce. 1,905,477; Apr. 25.
Broach centering apparatus. G. J. Russell. 1,905,508; Apr. 25.
Broaching guide. G. J. Russell. 1,905,509; Apr. 25.
Broaching machine. J. P. and W. Ferris. 1,905,164; Apr. 25.
Broaching machine. G. J. Russell. 1,905,506; Apr. 25.
Broaching machine, External. G. J. Russell. 1,905,507; Apr. 25.
Broom heads to their sticks, Device for securing. E. A. Young. 1,905,670; Apr. 25.
Brush for eyelashes and eyebrows. T. Wagner. 1,905,399; Apr. 25.
Brush, Fountain. J. De Phillips. 1,905,960; Apr. 25.
Brush having a reservoir for the soap, Shaving. H. Depasse. 1,906,140; Apr. 25.
Brush, Shaving. H. F. Horne. 1,905,171; Apr. 25.
Buffer. W. H. Miner. 1,905,486; Apr. 25.
Buffer safety shop. J. Dunlop. 1,905,273; Apr. 25.
Bug or lure, Floating. C. T. Pflueger. 1,905,567; Apr. 25.
Building and constructing the same. C. H. Snyder. 1,906,117; Apr. 25.
Building material. R. D. Falk. 1,905,553; Apr. 25.
Building structure. G. Alexander. 1,906,040; Apr. 25.
Bumper, Automobile. W. V. Isgrig. 1,905,590; Apr. 25.
Bundle carrier. E. T. Johnson. 1,905,100; Apr. 25.
Burner: *See*—
Liquid fuel burner. Oil burner.
Burnishing machine. W. R. Simpson. 1,906,201; Apr. 25.
Bushing and solder sealed cap therefor for metallic containers. L. B. Wackman. 1,905,969; Apr. 25.
Cabinet and towel pack therefor, Towel. A. Allen. 1,905,206; Apr. 25.
Cabinet construction. M. Greenberg. 1,906,208; Apr. 25.
Cabinet, Electric appliance inclosing. J. Sachs. 1,905,002; Apr. 25.
Cabinet, Ventilated. H. Hefty. 1,905,867; Apr. 25.
Cable clamp. W. G. Milne. 1,905,967; Apr. 25.
Cable, Flexible. H. W. Webb. 1,905,197; Apr. 25.
Cable shearing mechanism. H. A. Stringfellow. 1,905,317; Apr. 25.
Cable suspension. E. St. John and S. C. Miller. 1,905,761; Apr. 25.
Cable terminal. C. A. Rowley. 1,905,245; Apr. 25.
Cable tightening and holding device for load pulling apparatus. A. Wikstrand. 1,905,542; Apr. 25.
Cake, Ice cream roll. A. Schorno. 1,905,756; Apr. 25.
Calcium nitrate from phosphate rock, Preparing. A. L. McCallum, B. P. Sutherland, and J. B. Thompson. 1,905,930; Apr. 25.
Calculating machine. J. A. V. Turck. 1,905,579; Apr. 25.
Calendar, Perpetual. S. Furedi. 1,905,846; Apr. 25.
Camera control, Motion picture. P. A. Stephenson. 1,905,522; Apr. 25.
Cameras, Exposure indicator attachment to photographic. C. A. B. Watson. 1,905,956; Apr. 25.
Cameras, Focusing device for. J. B. Hadaway. 1,906,059; Apr. 25.
Can: *See*—
Ash can.
Can and holder therefor, Garbage. P. C. Nielsen. 1,906,082; Apr. 25.
Cans and the like, Conveying and unpacking. S. B. Mott. 1,906,126; Apr. 25.
Candy units, Method of and machine for producing. W. B. Laskey. 1,906,069; Apr. 25.
Canned fish package and preparing the same. B. R. Brierly. 1,905,338; Apr. 25.
Canopies, Convenience outlet for. P. E. Burns. 1,905,841; Apr. 25.
Cap for collapsible tubes, Automatic pressure valve seal. J. J. Heard. 1,905,936; Apr. 25.
Cap for containers. G. E. West. 1,905,856; Apr. 25.
Cap with spare bulb carrier, Flashlight bottom. G. H. Barber. 1,905,787; Apr. 25.
Capacitometer, Direct reading. P. S. Edwards and C. D. Barbulesco. 1,905,849; Apr. 25.
Capsule filling machine. E. L. Fitch. 1,905,279; Apr. 25.
Car equipment, Safety. T. H. Thomas. 1,905,253; Apr. 25.
Car gassing device. F. A. Isaacson. 1,905,098; Apr. 25.
Car, Railway. W. E. Wine. 1,906,195; Apr. 25.
Car retarder, Railway. P. H. Crago. 1,905,218; Apr. 25.
Carbon and product thereof, Preparing. R. M. Cole. 1,905,686; Apr. 25.
Carbon dioxide and slow setting cement, Simultaneous production of condensed. C. C. Loomis and A. D. MacDonald. 1,905,598; Apr. 25.
Carbon monoxide and hydrogen, Producing mixtures of. W. D. Wilcox. 1,905,826; Apr. 25.
Carbonaceous material from foreign impurities, Method of and apparatus for separating solid. C. Machen. 1,905,945; Apr. 25.
Carbureting device. C. Davidson. 1,905,159; Apr. 25.
Carbureting system. C. E. Hofbauer. 1,905,712; Apr. 25.
Carburetor. R. F. Bracke. 1,905,485; Apr. 25.
Carburetor. M. Lorens. 1,905,968; Apr. 25.
Carburetor. C. E. Williams. 1,905,258; Apr. 25.
Card table. R. Neuschotz and N. C. Batner. 1,906,218; Apr. 25.
Carrier: *See*—
Bundle carrier. Luggage carrier.
Carton, Dispensing. A. F. Gluck. 1,905,561; Apr. 25.
Cartridge, Blasting. A. Harris. 1,905,863; Apr. 25.
Cartridge for medicinal applications. B. Rees. 1,905,752; Apr. 25.
Case: *See*—
Display case.
Case and dial, Combined alarm clock. P. Lux. Des. 89,712; Apr. 25.
Case for fragile articles, Packing. J. F. Hendry. 1,905,708; Apr. 25.
Casing: *See*—
Hose casing.
Catalyst, Hydrogenation. O. G. Bennett and C. B. Jackson. 1,905,433; Apr. 25.
Catalytic apparatus. A. O. Jaeger. 1,905,719; Apr. 25.
Cellulose acetate, Hydrolysis of. C. S. Webber and C. J. Staud. 1,905,536–7; Apr. 25.
Cellulose derivatives, Treatment of. G. H. Ellis and H. C. Olpin. 1,905,453; Apr. 25.
Cellulose ester composition of matter containing the tetraethyl ester of a tetracarboxyl derivative of a saturated aliphatic hydrocarbon. H. B. Smith. 1,905,517; Apr. 25.
Cellulose organic derivative composition of matter containing a BB'-dialkoxy ethyl carbonate. H. B. Smith. 1,905,518; Apr. 25.
Cellulose pulp, Method of and apparatus for hydrating. W. T. Doyle. 1,905,161; Apr. 25.
Cellulosic composition of matter containing a dialkyl hydrophthalate. H. B. Smith. 1,905,516; Apr. 25.
Cement block molding machine. L. C. Carton. 1,905,619; Apr. 25.
Cement, etc., Manufacturing white Portland. G. Bergen, F. Engelhardt, and R. Steckhan. Re18,805; Apr. 25.
Centrifugal apparatus. E. Roberts. 1,905,306; Apr. 25.
Centrifugal separator. W. Alexander. 1,905,779; Apr. 25.
Chain: *See*—
Antiskid chain. Tire chain.
Chain for automobile tires. E. J. Martel. 1,905,237; Apr. 25.
Chair: *See*—
Folding chair.
Chair with swingable table leaves. G. H. Hamilton. 1,905,859; Apr. 25.
Channel selection. H. A. Affel. 1,905,359; Apr. 25.
Charge forming device. F. E. Aseltine. 1,905,030; Apr. 25.
Charge forming device, Duplex. F. E. Aseltine. 1,905,029; Apr. 25.
Charger, Crane type. R. J. Wadd. 1,905,195; Apr. 25.
Chaser. S. F. Newman and J. G. Harper. 1,906,176; Apr. 25.
Chassis lubricating installation and the flow control elements thereof. J. Bijur. 1,905,335; Apr. 25.
Chest depository. C. F. Sioberg. 1,905,572; Apr. 25.
Chip container. S. Roth. Des. 89,720; Apr. 25.
Chuck, Air. S. T. Williams. 1,905,777; Apr. 25.
Cigar bunching machine. K. E. Granstedt. 1,906,152; Apr. 25.
Cigar handling machine. F. X. Malocsay. 1,905,728; Apr. 25.
Cigarette. A. H. Low. 1,905,416; Apr. 25.
Cigarette ejector and lighter. M. Comforti and R. Malerba. 1,906,134; Apr. 25.
Cigarette extinguisher and ash receptacle, Combined. L. W. Dickinson. 1,905,271; Apr. 25.
Cigarette making device. J. B. Sabourin. 1,905,652; Apr. 25.
Cigarette making machine. F. F. Ruau. 1,906,014; Apr. 25.
Cigarette ring. F. R. Green. 1,906,003; Apr. 25.
Cinematographic apparatus. M. Engelmann. 1,905,454; Apr. 25.

Cinematographic apparatus and box, Combined. W. Winzenburg. 1,905,614; Apr. 25.
Circuit breaker. K. C. Randall. 1,905,501; Apr. 25.
Circuit controlling appliance, Electric. J. Sachs. 1,905,001; Apr. 25.
Circuit controlling mechanism. C. E. Orr. 1,906,198; Apr. 25.
Circuit for three-element gaseous discharge tubes, Detector. A. Hund. 1,905,873; Apr. 25.
Circuitous elevator. H. D. James and G. Currie. 1,905,230; Apr. 25.
Circuitous Elevator. H. D. James and G. D. Fish. 1,905,229; Apr. 25.
Circuits, Protective system for generator field. A. J. A. Peterson. 1,905,240; Apr. 25.
Clamp: *See*—
Cable clamp.. Spreader clamp.
Clamp for plate glass racks. J. F. Johnson. 1,905,905; Apr. 25.
Clamp for saws and the like. A. O. Shafer. 1,905,512; Apr. 25.
Clean-out mechanism. W. de Back. 1,906,049; Apr. 25.
Cleaner: *See*—
Vacuum cleaner. Windshield cleaner.
Valve guide cleaner.
Cleaning articles, particularly metallic goods, Method and apparatus for. K. J. R. Robertson. 1,905,968; Apr. 25.
Cleaning device. J. B. Farquhar. 1,906,164; Apr. 25.
Clock. J. O. Simpson. 1,905,655; Apr. 25.
Clock and radio system, Combined. A. M. Trogner. 1,905,193; Apr. 25.
Clock block, Pliable. K. J. Tobin. 1,906,022; Apr. 25.
Clock, Parking. B. F. Hutches, jr. 1,905,875; Apr. 25.
Clock, Radio. L. F. Bush. 1,905,214; Apr. 25.
Closure fastener. W. B. Trueman. 1,905,320; Apr. 25.
Closure for locomotive cab windows. T. C. Craven. 1,905,369; Apr. 25.
Clothespin, Rubber. P. P. Bogley. 1,905,958; Apr. 25.
Clothes rack, Window. C. Sternberg. 1,905,574; Apr. 25.
Clutch: *See*—
Hydraulic clutch.
Clutch mechanism. R. G. Griffith. 1,905,090; Apr. 25.
Clutch operating device for motor vehicles. E. G. Hill. 1,905,984; Apr. 25.
Coal and composition of matter for producing same, Filmed. K. B. Stuart. 1,905,072; Apr. 25.
Coal, Filming. K. B. Stuart. 1,905,073; Apr. 25.
Coal with oil, Treating. H. J. Rose and W. H. Hill. 1,905,060; Apr. 25.
Coat with detachable pocket, Hunting. C. L. Mandelert. 1,905,235; Apr. 25.
Coding machine. W. Korn. 1,905,593; Apr. 25.
Coffee maker, Drip. C. E. Page. 1,905,250; Apr. 25.
Coil positioning machine. E. W. Collins. 1,905,154; Apr. 25.
Coil test apparatus C. S. Swayne. 1,906,020; Apr. 25.
Coke, Method of and apparatus for producing. F. Puening. 1,905,055; Apr. 25.
Collapsible dispenser. J. P. Burke. 1,905,904; Apr. 25.
Collapsible reel. K. P. Kohler. 1,905,178; Apr. 25.
Collar, Dog. G. V. F. McCarty. 1,906,078; Apr. 25.
Columbium and making the same, Metallic. C. W. Balke. 1,905,882; Apr. 25.
Combustion chamber construction. A. Moore. 1,905,805; Apr. 25.
Combustion, Method and apparatus for controlling. C. M. Terry. 1,905,658; Apr. 25.
Comestible package, Frozen. C. W. Vogt. 1,906,183; Apr. 25.
Commode, Automobile. J. T. Avila. 1,905,881; Apr. 25.
Complex compounds of heavy metals with 3.4-di-hydroxybenzene arsonic acid, Water-soluble. K. Strettwolf, A. Febrle, H. Hilmer, and H. Schmidt. 1,905,816; Apr. 25.
Composition for acoustical devices. E. Ehrhardt. 1,905,631; Apr. 25.
Compressor. D. F. Fesler. 1,905,455; Apr. 25.
Compressor. A. E. Peters. 1,905,747; Apr. 25.
Concrete block molding machine. C. C. H. Thomas. 1,905,975; Apr. 25.
Concrete form board truing holder. A. Zanella. 1,905,616; Apr. 25.
Concrete structural member. H. W. Schlueter. 1,906,108; Apr. 25.
Condensation product of cinchona bark alkaloids with thiuram sulphides as inhibitors. R. E. Lawrence. 1,905,915; Apr. 25.
Condenser: *See*—
Variable condenser.
Condenser plate, Built-up. W. H. Campbell, W. C. Ellsworth, and C. J. Madsen. 1,905,264; Apr. 25.
Conductor, Insulated electrical. A. A. Benner and R. A. Schatzel. 1,905,789; Apr. 25.
Conduit for subway cables. E. Burke. 1,905,794; Apr. 25.
Connecter for repairing metallic measuring tapes. C. B. Alexander. 1,906,128; Apr. 25.
Conservation valve. T. A. Fagan. 1,905,625; Apr. 25.
Constructional unit. A. C. Fischer. 1,905,875; Apr. 25.
Contact rectifier. W. Harries. 1,905,708; Apr. 25.
Container: *See*—
Hood capping container.
Container and cover, Combined glass. A. C. and H. H. Crimmel. Des. 89,681; Apr. 25.
Container and forming same. A. B. Wilson. 1,906,032; Apr. 25.
Container and in sealing closure therefor. C. S. Baron. 1,905,628; Apr. 25.
Control apparatus for radio receiving instruments. J. E. White. 1,905,539; Apr. 25.
Control device for wells. D. R. Knowlton and W. J. Crites. 1,905,592; Apr. 25.
Control for hydraulic feeding mechanism. B. S. T. Bishop and E. J. Hirvonen. 1,906,132; Apr. 25.
Control for wick type liquid fuel burners. G. C. Leanmer. 1,905,918; Apr. 25.
Control means for earth pulverizing machines. C. Jass. 1,905,385; Apr. 25.
Control mechanism for steam heating systems. H. Schierloh. 1,905,005; Apr. 25.
Control system. A. S. Marthens. 1,905,238; Apr. 25.
Control system. T. U. White. 1,905,256; Apr. 25.
Control system for electric motors. A. K. Flueler. 1,905,838; Apr. 25.
Control valve, Automatic water heater. R. Rogers. 1,905,949; Apr. 25.
Controlling device, Producing a. A. J. Weatherhead, jr. 1,905,664; Apr. 25.
Controlling means. W. J. Andres. 1,905,328; Apr. 25.
Conveyer. J. H. MacLauchlan. 1,905,924; Apr. 25.
Conveyer, Band. C. W. Gardiner. 1,906,147; Apr. 25.
Conveyer furnace. G. S. Peterson. 1,906,092; Apr. 25.
Conveyer system. L. C. Allen. 1,905,025; Apr. 25.
Conveying mechanism. H. A. Greenholt. 1,905,701; Apr. 25.
Conveying mechanism. W. E. Wunderlich. 1,906,036; Apr. 25.
Conveying system. T. A. Federwitz and W. T. Bailey. 1,906,051; Apr. 25.
Conveying system. H. R. Gotthardt and W. E. Cain. 1,905,379; Apr. 25.
Cooling facilities for rotary compressors. H. Steiner. 1,905,521; Apr. 25.
Cooling means for rolled bars. J. Gassen. 1,905,461; Apr. 25.
Cooling system for vacuum tubes. C. A. Culver. 1,905,811; Apr. 25.
Copy holder. C. Fensky. 1,905,834; Apr. 25.
Core drill reamer. L. H. Wellensiek. 1,905,078; Apr. 25.
Core with supporting and clamping structure, Magnetic. F. F. Brand. 1,905,790; Apr. 25.
Cotton cleaning equipment. J. E. Mitchell. 1,906,076; Apr. 25.
Coupler. F. H. Kayler. 1,905,641; Apr. 25.
Coupling: *See*—
Pipe coupling. Shaft coupling.
Coupling for railway vehicles, Flexible pipe. F. W. Martin. 1,905,647; Apr. 25.
Couplings, Making spline. J. Edgar. 1,905,278; Apr. 25.
Couplings, Making spline. O. F. Ewert. 1,905,277; Apr. 25.
Couplings, Producing. A. J. Weatherhead, jr., and J. D. Baldwin, jr. 1,905,665; Apr. 25.
Cover: *See*—
Automobile cover. Garment hanger cover.
Cover for permanently bound books. E. C. and E. C. Hazel, jr. 1,905,093; Apr. 25.
Crane. A. G. A. Schmidt. 1,906,109; Apr. 25.
Crane of the movable and traveling type, Hopper. F. Boyer. 1,905,434; Apr. 25.
Crate, Collapsible shipping. P. H. Blomberg. 1,905,137; Apr. 25.
Crib, Baby's folding. P. F. Benson. 1,905,128; Apr. 25.
Crossbar or strap for electric fixtures, Adjustable. J. Mangin. 1,906,197; Apr. 25.
Cultivator. C. G. Strandlund. 1,905,524; Apr. 25.
Cultivator shovels and the like, Universal footpiece for. H. R. Traphagen. 1,905,016; Apr. 25.
Current, Apparatus for producing rectified high voltage electric. H. E. Corbitt. 1,905,629; Apr. 25.
Cut articles or blanks from plastic strip material, Method and apparatus for producing. J. H. Flink. 1,905,837; Apr. 25.
Cutter: *See*—
Rolling drill cutter.
Cyanide process. E. J. Pranke. 1,905,804; Apr. 25.
Cylinder construction. G. J. Russell. 1,905,510; Apr. 25.
Cylinder, Type carrying. H. A. Swanson. 1,905,526; Apr. 25.
Cylinders, Charging compressed gas. R. G. Wulff. 1,906,035; Apr. 25.
Damper, Vibration. R. K. Lee. 1,905,475; Apr. 25.
Debarking machine. A. M. Kirkwood. 1,905,887; Apr. 25.
Decorative device. L. Propp. 1,905,500; Apr. 25.
Dehydrated products, Process and apparatus for producing. J. A. Burner. 1,905,263; Apr. 25.
Delustering. H. A. Gardner. 1,906,148–9; Apr. 25.
Desk, Cabinet. W. J. Michelet. 1,905,396; Apr. 25.
Desk, Folding. E. S. Hodgson. 1,906,064; Apr. 25.
Detent for window sashes. J. F. Harder. 1,905,983; Apr. 25.
Diaphragm and coil support. G. Holst, R. Shepherd, and P. H. A. van Lis. 1,906,066; Apr. 25.
Diazo-compound of 2-amino-chloro-1-oxy-3-sulphobenzene and its production. E. Sack. 1,905,354; Apr. 25.
Die. R. H. Stone. 1,905,763; Apr. 25.
Dies, Making wood mold. C. B. Norris, F. M. Curran, and H. W. Van Steenwyk. 1,905,048; Apr. 25.

Dilatometer, Self recording. S. Sato. 1,905,607; Apr. 25.
Dipper trip, Fluid operated. G. G. Morin. 1,905,183; Apr. 25.
Discharge printing and fabrics produced thereby. C. Dreyfus and G. Schneider. 1,905,346–7; Apr. 25.
Discharge tube, Gas filled. G. Holst. 1,905,713; Apr. 25.
Dish, Soap. R. L. Stair. 1,905,069; Apr. 25.
Dish washing machine. E. S. Stoddard. 1,905,523; Apr. 25.
Disk bit. H. W. Fletcher. 1,905,165; Apr. 25.
Disk wheel. C. L. Eksergian and T. A. Davenport. Des. 89,687; Apr. 25.
Dispenser: *See*—
Collapsible dispenser.
Dispenser. E. G. Wessman. 1,905,613; Apr. 25.
Dispensing machine. L. W. Lowther. 1,905,180; Apr. 25.
Display case, Illuminated refrigerator. C. E. Wicke. 1,905,775; Apr. 25.
Display device. F. Mallgraf. 1,905,395; Apr. 25.
Display device, Ornamental. C. T. Wittstein. 1,905,544; Apr. 25.
Display stand. O. E. Karnes. 1,905,908; Apr. 25.
Distance relay for electric lines. J. Stoecklin. 1,905,609; Apr. 25.
Distributor for insecticides and the like. T. C. Raley. 1,905,650; Apr. 25.
Dome for a liquid dispensing apparatus. C. P. Griffith. Des. 89,696; Apr. 25.
Door and window construction. A. P. Ball. 1,905,429; Apr. 25.
Door call. E. A. Hoag. 1,905,937; Apr. 25.
Door closer. W. F. Foster. 1,905,972; Apr. 25.
Door mount for accessory equipment of motor vehicles. J. G. Deits. 1,905,623; Apr. 25.
Draft regulator. C. H. Morrow. 1,905,734; Apr. 25.
Drawer structure. E. P. Hamilton. 1,905,857; Apr. 25.
Drawings, Shading. H. Sax. 1,905,061; Apr. 25.
Dress. N. Fischmann. Des. 89,692; Apr. 25.
Dress, Ensemble. D. Long. Des. 89,711; Apr. 25.
Drill or similar tool, Electric. A. C. Gilbert. 1,905,462; Apr. 25.
Drilling machine. J. Friedl. 1,905,560; Apr. 25.
Drip catcher for paint brushes and the like. F. Jerousek. 1,906,157; Apr. 25.
Drive release and brake for extractors. F. Schaum. 1,905,950; Apr. 25.
Drive, Starter. G. H. Howard. 1,906,067; Apr. 25.
Driving and stopping mechanism. A. R. Morrill. 1,905,735; Apr. 25.
Drum for dyeing, etc. S. Bailey, jr. 1,906,130; Apr. 25.
Drum, Shipping. E. E. Shanor. 1,906,205; Apr. 25.
Dry ice conversion unit. E. O. Bennett. 1,905,885; Apr. 25.
Dyes and making the same, Anthraquinone vat. R. J. Goodrich and E. T. Howell. 1,905,088; Apr. 25.
Dyestuff preparation, Black vat. E. T. Howell and R. J. Goodrich. 1,905,095; Apr. 25.
Dyestuffs and making same, Azo. F. Felix and W. Huber. 1,905,374; Apr. 25.
Dyestuffs and making same, Azo. G. Kalischer and R. Fleischhauer. 1,905,294; Apr. 25.
Earth pulverizing machine. C. Jass. 1,905,386; Apr. 25.
Ebonite in which stone chippings or the like are incorporated, Manufacturing. F. C. van Heurn. 1,905,404; Apr. 25.
Economizer. D. S. Jacobus. 1,905,470; Apr. 25.
Educational device. A. V. Griffin. 1,905,381; Apr. 25.
Egg marking apparatus. C. K. Powell. 1,906,094; Apr. 25.

Lock. H. R. Kirkwood. 1,905,177; Apr. 25.
Lock. B. Riccini. 1,905,057; Apr. 25.
Lock switch. H. E. Norviel. 1,905,049; Apr. 25.
Locking mechanism, Casement. I. W. Litchfield. 1,905,921; Apr. 25.
Locomotive. E. L. and C. A. Schellens. 1,905,063; Apr. 25.
Loom. R. Rossmann. 1,906,185; Apr. 25.
Loom shuttle. J. Coldwell. 1,905,266; Apr. 25.
Loom shuttle. E. Ross. 1,905,000; Apr. 25.
Loop forming and cutting device. J. H. Howe. 1,905,637; Apr. 25.
Loudspeaker. R. W. Hardisty. 1,905,702; Apr. 25.
Lowering device in molding machines. G. Zimmermann. 1,905,358; Apr. 25.
Lubricant and making same, Synthetic. J. J. Grebe and S. M. Stoesser. 1,905,850; Apr. 25.
Lubricating apparatus. H. Albertine. 1,905,878; Apr. 25.
Lubricating apparatus. S. D. Locke, C. R. Dosch, and H. J. Stegeman. 1,905,179; Apr. 25.
Lubricating device. J. Bliss. 1,905,136; Apr. 25.
Lubricating device for bearings, Constant level. F. E. Case. 1,905,799; Apr. 25.
Lubricating system for pumping power. E. B. Greve. 1,906,004; Apr. 25.
Luggage carrier, Collapsible. S. B. Blakely. 1,905,890; Apr. 25.
Luminair employing prismatic reflectors. S. English. 1,905,829; Apr. 25.
Luminous discharge device. M. Morrison. 1,905,043; Apr. 25.
Machine for combing textile fibers. F. C. Blanchard. 1,905,336; Apr. 25.
Machine for combing textile fibers. M. P. Mello. 1,905,300; Apr. 25.
Machine for cutting rubber stock. J. C. Carlin. 1,905,366; Apr. 25.
Machine for determining the resisting qualities in wear of leather for soles. P. Milliet. 1,906,175; Apr. 25.
Machine for feeding coiled sections. C. A. Nicolai and E. Lindegaard. 1,905,046; Apr. 25.
Machine for grinding and polishing optical lenses, spectacle glasses, and the like. J. Desenberg. 1,906,050; Apr. 25.
Machine for honing and polishing crank shafts. W. F. Egger and L. A. Becker. 1,905,825; Apr. 25.
Machine for making knitted fabric. A. E. Page and H. Swinglewurst. 1,906,204; Apr. 25.
Machine for producing strip moldings. W. Jaquiery. 1,905,640; Apr. 25.
Machine for setting rows of plants deeper. H. and F. Denstädt and M. Weichert. 1,906,139; Apr. 25.
Machine for sewing fastener tape and the like. L. Roseman. 1,905,504; Apr. 25.
Machine for the separation and formation of the filler or cigar bunches. F. Granstedt. 1,905,586; Apr. 25.

Machine for wrapping packages. J. V. Nelson. 1,905,489; Apr. 25.
Magnets, Electric machine. E. R. Hoffman. 1,906,065; Apr. 25.
Manicuring device. M. C. Wolf. 1,905,976; Apr. 25.
Manometers. S. S. Amdursky. 1,905,782; Apr. 25.
Marble working machine. T. P. Silvester. 1,905,190; Apr. 25.
Marker unit. J. A. Wagner. 1,905,612; Apr. 25.
Mask, Welder's. F. M. Bowers. 1,905,210; Apr. 25.
Mat. J. F. Duffy. 1,905,871; Apr. 25.
Match package. B. H. Freedman. 1,905,695–6; Apr. 25.
Match package. B. H. Freedman. 1,905,844; Apr. 25.
Match packaging machine. R. S. Pullen, W. F. Casey, and G. M. Thomas. 1,905,098; Apr. 25.
Material for making waterproof mortar and producing the same. K. C. Rankin. 1,905,187; Apr. 25.
Material measuring and handling apparatus. F. Voelker, jr. 1,905,018; Apr. 25.
Materials, Apparatus for contacting solid and gaseous. E. O. Barstow and S. B. Heath. 1,905,683; Apr. 25.
Materials for water softening, Making base exchange. P. Lasselle. 1,906,163; Apr. 25.
Materials with aqueous emulsions, Waterproofing. C. A. Braun. 1,905,212; Apr. 25.
Mausoleum. W. A. Martin. 1,905,036; Apr. 25.
Measuring apparatus. W. Möller. 1,905,401; Apr. 25.
Measuring device. L. Foote. 1,905,558; Apr. 25.
Measuring instrument. P. Paschen and G. Mohr. 1,906,089; Apr. 25.
Mechanical assorting device. C. E. Constable and H. F. Kynold. 1,905,217; Apr. 25.
Mechanism for shifting sheets. H. G. Buchan. 1,905,437; Apr. 25.
Mercaptoarylthiazoles, Manufacture of. R. L. Sibley. 1,906,112; Apr. 25.
Merchandise displaying device, Automatic. A. Perling. 1,905,351; Apr. 25.
Mercury switch. J. H. Staley. 1,906,118; Apr. 25.
Mercury tube switch. D. W. Davis. 1,905,813; Apr. 25.
Metal, Apparatus for pouring molten. F. D. Zinno. 1,905,204; Apr. 25.
Metal coated material. L. W. Cutler and C. A. Klein. 1,905,959; Apr. 25.
Metal objects, Coating. B. Hemana. 1,906,154; Apr. 25.
Metal oxides, Reducing. W. Rohn. 1,906,184; Apr. 25.
Metal working machine. G. F. Yager. 1,905,203; Apr. 25.
Metallic composition and making the same. A. P. Roux. 1,905,505; Apr. 25.
Metals, Decorating. V. F. Malleval. 1,906,168; Apr. 25.
Metals during heat treatment, Preventing oxidation of. R. J. Cowan. 1,905,809; Apr. 25.
Meter. C. J. Bassler. 1,905,549; Apr. 25.
Meter attachment for watthour meters, Auxiliary. W. M. Bradshaw. 1,905,262; Apr. 25.
Meter by-pass controlling means. H. Chrisman and H. G. Weymouth. 1,906,133; Apr. 25.
Meter service appliance, Electric. J. Sachs. 1,905,003; Apr. 25.
Methane into liquid hydrocarbons, Conversion of. C. Steigerwald. 1,905,520; Apr. 25.
Middle burster. C. H. White. 1,905,022; Apr. 25.

Recirculating system and apparatus for waste furnace gases. G. A. Merkt. Re18,801; Apr. 25.
Rectifier. D. V. Edwards and E. K. Smith. 1,905,692; Apr. 25.
Rectifiers at capacities greater than normal, Operating dry disk. C. E. Ogden. 1,905,740; Apr. 25.
Reel: *See*—
Collapsible reel. Ribbon reel.
Fishing reel. Steel cable reel.
Reel. H. H. Talbot. 1,905,192; Apr. 25.
Refrigerating apparatus. C. Birdseye and B. Hall. 1,905,131; Apr. 25.
Refrigerating apparatus. R. R. Candor. 1,904,991; Apr. 25.
Refrigerating apparatus. W. H. Matthews. 1,905,037; Apr. 25.
Refrigerating system. R. E. Schurts. 1,905,308; Apr. 25.
Refrigerating system, Absorption. G. Maiuri and R. F. Rossini. 1,905,727; Apr. 25.
Refrigeration with liquefied fuel gas, Process and apparatus for. D. W. Davisson and F. G. Welke. 1,905,971; Apr. 25.
Refrigerator. J. H. Long. 1,905,597; Apr. 25.
Regulator: *See*—
Automatic window regulator. Generator voltage regulator.
Draft regulator. Voltage regulator.
Furnace regulator.
Regulator. S. E. B. Soderberg. 1,905,519; Apr. 25.
Regulator for multistage compressor systems. W. Ochel. 1,906,012; Apr. 25.
Regulator motor, Remote control. E. H. White. 1,905,325; Apr. 25.
Relay, Capacity controlled. C. D. Barbulesco. 1,905,332; Apr. 25.
Remote control system. R. J. Wensley. 1,905,255; Apr. 25.
Repair device for closing ruptures in concrete structures. E. J. Winslow. 1,905,405; Apr. 25.
Reversible attraction sign. C. W. Hatke. 1,905,563; Apr. 25.
Rewinding mechanism for clock springs. J. M. Andersen. 1,905,783; Apr. 25.
Ribbon reel. B. J. Goldsmith. 1,906,055; Apr. 25.
Ridge burster. W. H. Silver. 1,906,113; Apr. 25.
Ring: *See*—
Cigarette ring.
Ring for pipe couplings, Seating. P. Lofgren. 1,905,115; Apr. 25.
Riveter, Roller wedge. A. A. Norin. 1,905,047; Apr. 25.
Road grader. C. J. Morits. 1,905,420; Apr. 25.
Road strip and support. W. E. White. 1,905,028; Apr. 25.
Robe construction. G. and L. C. Safir. 1,905,685; Apr. 25.
Rod: *See*—
Welding rod.
Rod mill. C. H. MacDonald. 1,905,417; Apr. 25.
Rods and tubes, Apparatus for sorting. C. A. Brown and F. B. Van Sickle. 1,905,791; Apr. 25.
Rods, Making connecting. W. H. Manning. 1,905,925; Apr. 25.
Roller: *See*—
Pulverizing roller. Shade roller.
Roller cutter retaining device. L. H. Wellensiek and F. C. Smith, jr. 1,905,079; Apr. 25.
Rolling drill cutter. F. L. Scott. 1,905,066; Apr. 25.
Rolling mill. F. C. Biggert, jr., and L. Johnson. 1,905,129; Apr. 25.
Rolling turner. J. H. Richardson. 1,906,100; Apr. 25.
Rolls, Device for shaping and truing grinding. H. Lindner. 1,905,390; Apr. 25.
Roof flashing. L. Vallas. 1,905,017; Apr. 25.
Roofing mastic. A. C. Fischer. 1,905,376; Apr. 25.
Rosin, Purifying. E. C. Palmer, J. L. Burda, and A. F. Oliver. 1,905,493; Apr. 25.
Rosin, Refining. I. W. Humphrey. 1,905,173; Apr. 25.
Rotary engine. E. E. Galyean. 1,905,847; Apr. 25.

Routing machine. J. W. Dixon. 1,905,448; Apr. 25.
Rubber and product obtained thereby, Treating. S. M. Cadwell. 1,905,797; Apr. 25.
Rubber articles of every kind. O. G. Bohlin. 1,905,363; Apr. 25.
Rubber in nonaqueous liquids, Dispersion of. R. Almy. 1,905,026; Apr. 25.
Rubber material, Producing expanded. G. P. Denton. 1,905,269; Apr. 25.
Rug underlay. W. J. Slagle. 1,905,008; Apr. 25.
Running board. B. Bronson. 1,905,895; Apr. 25.
Running board and the like, Automobile. W. S. Vrooman. 1,905,769; Apr. 25.
Safe lock, Electric. H. M. Leschke and P. J. Anselmo. 1,905,965; Apr. 25.
Safety attachment for aeroplanes. C. A. Bolcom. 1,905,237; Apr. 25.
Safety attachment for typographical composing and casting machines. W. G. Hamilton. 1,906,060; Apr. 25.
Safety control system, Automatic combustion. T. A. Peebles. 1,905,745; Apr. 25.
Safety device. A. C. Nicols and M. C. Moore. 1,906,081; Apr. 25.
Safety device for die presses. W. C. Jay. 1,905,099; Apr. 25.
Safety device for grinders. C. T. Raule. 1,905,651; Apr. 25.
Safety device for rock drills. E. B. Lear. 1,905,474; Apr. 25.
Safety magneto switch. M. Zugermayer. 1,906,121; Apr. 25.
Safety means for hydraulic brakes. H. A. Walker. 1,905,077; Apr. 25.
Safety valve, Pilot light controlled. E. J. Leach. 1,905,414; Apr. 25.
Sand tester. J. L. Badgett. 1,905,208; Apr. 25.
Sanitary pad supporter belt. M. B. Hammond. 1,905,964; Apr. 25.
Sash balance. A. H. Kersting. 1,905,107; Apr. 25.
Sash forming machine. G. T. Forbregd and V. R. Cornish. 1,905,839; Apr. 25.
Saw adapter. A. A. Magri. 1,905,482; Apr. 25.
Sawmill dog. E. P. Tufts. 1,905,766; Apr. 25.
Scaffolding. J. A. Hershey. 1,906,626; Apr. 25.
Scale, Low type even balance counter. H. M. Cameron. 1,905,898; Apr. 25.
Screen: *See*—
Pipe screen. Window screen.
Vibrating screen.
Screen and structure, Window. H. R. Noyes. 1,905,421; Apr. 25.
Screw element, Self-locking coupled. W. E. Hoke. 1,905,869; Apr. 25.
Screw thread gauge. J. Hartness. 1,905,705; Apr. 25.
Seal. B. Borland. 1,905,139; Apr. 25.
Seal, Oil. R. W. Chandler. 1,905,800; Apr. 25.
Sealed bearing. P. C. Wego. 1,905,666; Apr. 25.
Seaming head for closing machines. A. L. Kronquest. 1,906,162; Apr. 25.
Seat: *See*—
Valve seat. Vehicle seat.
Seat. W. M. Hanson. 1,906,061; Apr. 25.
Seeding implement. A. E. Botsford. 1,905,892; Apr. 25.
Separable fastener. C. W. Leguillon. 1,905,917; Apr. 25.
Separator: *See*—
Centrifugal separator.
Separator. J. B. Gaffney. 1,905,458; Apr. 25.
Series compacitator with combination protective equipment. B. V. Hoard. 1,905,226; Apr. 25.
Sewing machine. C. W. Mueller. 1,905,891; Apr. 25.
Sewing machine, Buttonhole. C. A. O. Grip. 1,905,854; Apr. 25.
Sewing machine darning operations, Workholder for. J. D. Karle. 1,905,907; Apr. 25.
Sewing machine, Shoe. F. Ashworth. 1,905,031; Apr. 25.
Sewing machine, Shoe. L. E. Topham. 1,905,074; Apr. 25.
Sewing machine shuttle. F. Ashworth. 1,905,032; Apr. 25.
Sewing machines, Needle-thread take-up mechanism for. W. N. Parkes. 1,906,067; Apr. 25.
Sewing machines, Strip-guiding means for. R. J. Sailer. 1,906,104; Apr. 25.
Shade roller. F. J. Burns. 1,905,980; Apr. 25.
Shaft coupling. O. A. Banner. 1,905,431; Apr. 25.
Shaker, Condiment. M. B. Cunningham. 1,906,185; Apr. 25.
Shank pieces, Locating. F. L. Brandt. 1,905,894; Apr. 25.
Sharpener, Pencil. H. W. Schoenfeldt. 1,905,608; Apr. 25.
Sheet and making the same, Reenforced metallic structural. A. A. Kramer. 1,905,418; Apr. 25.
Sheet holding rack. M. W. Krauth. 1,905,109; Apr. 25.
Sheet-separating apparatus. S. J. Finn. 1,905,835; Apr. 25.
Shifting device. R. F. Peo. 1,905,496; Apr. 25.
Shirt package. T. H. Golden. 1,906,150; Apr. 25.
Shock absorber valve. W. A. Chryst. 1,905,149; Apr. 25.
Shock absorbing mechanism. S. B. Haseltine. 1,905,864; Apr. 25.
Shock absorbing mechanism. J. F. O'Connor. 1,905,492; Apr. 25.
Shock handling machine. L. T. Velen. 1,905,321; Apr. 25.
Shoe. T. Torio. 1,905,529; Apr. 25.
Shoe and the manufacture thereof. O. C. Adams. 1,906,205; Apr. 25.
Shoe bottom ornamenting machine. H. B. Edwards. 1,905,961; Apr. 25.
Shoe supporting jack. A. R. Morrill. 1,905,184; Apr. 25.
Shoveling machine. J. S. Finlay and E. B. Reyle. 1,906,001; Apr. 25.
Shut-off and trip valve, Combined. M. P. Teller. 1,905,014; Apr. 25.
Shutter control, Thermostat radiator. J. B. Whitted. 1,905,257; Apr. 25.
Sign or similar article, Display. A. Kanter. Des. 89,707; Apr. 25.
Signs, decorations, and the like, Production of. H. B. Lind. 1,905,565; Apr. 25.
Signal device. V. V. Vitale. 1,906,193; Apr. 25.
Signaling apparatus. A. F. W. Haeussler. 1,905,934; Apr. 25.
Signaling system. J. W. Horton. 1,905,714; Apr. 25.
Signaling system for elevators. H. D. James. 1,905,236; Apr. 25.
Silicate gels and making the same, Compound. R. Riley. 1,906,181; Apr. 25.
Silk, After treatment of artificial. O. Schwarzkopf. 1,906,015; Apr. 25.
Silk consisting of cellulose esters, Weighting artificial. F. W. Weber and H. Schaefer. 1,906,206; Apr. 25.
Sill plate, Method and apparatus for making a. W. Schnell. 1,905,398; Apr. 25.
Single phase motor. H. Weichsel. 1,905,773; Apr. 25.
Slack, Taking up. S. A. Staege. 1,905,250; Apr. 25.
Sled. W. E. Kidder. 1,905,642; Apr. 25.
Slicing machine. C. F. M. van Berkel. 1,905,531; Apr. 25.
Slicing machines, Combined top clamp and end grip for. J. Folk. 1,905,457; Apr. 25.
Slicing machines, Power unit for. T. T. Shields. 1,905,654; Apr. 25.
Slub detector, catcher or breaker. E. J. Abbott. 1,905,259; Apr. 25.
Snap switch, Electric. V. R. Despard. Des. 89,683; Apr. 25.
Soap dispensing apparatus. De W. C. Tyler. 1,905,611; Apr. 25.
Sock and anklet, Combination. R. E. Davis. 1,906,137; Apr. 25.
Sofa or similar article, Upholstered. J. Tavis. Des. 89,728; Apr. 25.
Soles, Manufacturing rubber. C. R. Keiser. 1,905,909; Apr. 25.
Sound record blank. J. A. Miller. 1,905,732; Apr. 25.
Sound recording and reproducing unit. J. M. Kendall. 1,905,175; Apr. 25.
Spark plug. A. E. Anderson. 1,905,957; Apr. 25.
Spatula, Electrically heated wax. W. V. Lane. 1,905,987; Apr. 25.
Speed compressor, High. W. Fourness. 1,905,923; Apr. 25.
Speed indicating device. J. W. Simmons. 1,906,187; Apr. 25.
Speed indicator. S. F. Bernström. 1,905,261; Apr. 25.
Speedometer, Motor vehicle. A. A. and A. H. Thomann. 1,905,015; Apr. 25.
Spinning cell for the manufacture of artificial filaments with auto-recovery of the volatile solvents. H. L. Barthelemy. 1,906,042; Apr. 25.
Spool, Cat line. B. Travis. 1,905,577; Apr. 25.
Sprayer and making the same, Liquid. C. F. Ellsworth. 1,905,828; Apr. 25.
Spreader clamp. E. A. Podd. 1,905,051; Apr. 25.
Spring: *See*—
Truck spring. Valve spring.
Spring assembling machine. J. F. Gail. 1,905,489; Apr. 25.
Spring cushion construction. S. Krakauer and S. S. Marcus. 1,906,159; Apr. 25.
Spring frog. H. E. Muchnic. 1,905,736; Apr. 25.
Sprinkler or fire extinguisher and other fire device, Automatic. S. F. Barclay. 1,905,676; Apr. 25.
Squeegee machine. A. P. Carter, M. J. Hynes, and J. C. Cronin. 1,905,440; Apr. 25.
Stanchion. L. L. Lewis. 1,905,596; Apr. 25.
Stand: *See*—
Display stand. Newspaper stand.
Knockdown convertible stand.
Stand for porch gliders, Supporting. S. M. Fischer. 1,905,557; Apr. 25.
Stapling machine. M. Vozel. 1,905,254; Apr. 25.
Starter, Engine. J. W. Fits Gerald. 1,905,836; Apr. 25.
Starter, Motor. B. W. Jones. 1,905,720; Apr. 25.
Steam boiler. I. Harter. 1,905,465; Apr. 25.
Steam engine. J. V. Giesler. 1,905,586; Apr. 25.
Steam trap. J. M. Malone. 1,904,994; Apr. 25.
Steel cable reel, Collapsible. L. W. Nack. 1,905,483; Apr. 25.
Steel retainer attachment for rock drills. J. C. Curtis. 1,905,981; Apr. 25.
Steel wheel. D. W. Voorhees, jr. 1,905,661; Apr. 25.
Steel wool holder. S. Schulhof. 1,905,307; Apr. 25.
Steering mechanism for tractors having endless tread members. R. F. Scott. 1,905,952; Apr. 25.
Stereoscopic positives from inverted relief negatives, Printing. H. E. Ives. 1,905,469; Apr. 25.

Steriliser. J. G. Moore. 1,905,586; Apr. 25.
Stick, Walking. L. Van Selver. 1,905,076; Apr. 25.
Stilt, Fruit picker's. G. Lang. 1,905,112; Apr. 25.
Stitching machine. I. R. Metcalf. 1,906,675; Apr. 25.
Stoker, Mechanical. W. D. Burton. 1,905,542; Apr. 25.
Stopper and the like, Bottle. W. H. Nash. 1,905,801; Apr. 25.
Stopper, Inflatable conduit. P. Goodman. 1,906,151; Apr. 25.
Stopping device for talking machines, Automatic. G. F. Clark. 1,905,151; Apr. 25.
Storage battery. N. D. Starges. 1,905,819; Apr. 25.
Strand or strip, Tying. A. Freydberg. 1,905,392; Apr. 25.
Strand treating apparatus and method. H. W. Brown. 1,905,896; Apr. 25.
Strap maintenance device, Shoulder. H. V. Stuart. 1,905,318; Apr. 25.
Stretching tool. H. C. Porter. 1,905,052; Apr. 25.
Stripper for carding engines, Pneumatic. E. Clark. 1,905,265; Apr. 25.
Studding, Metal. T. D. Priddy. 1,906,096; Apr. 25.
Subaqueous system of artillery fire adjustment. E. B. Stephenson. 1,905,815; Apr. 25.
Suds, Apparatus for producing. L. L. Strasburger. 1,905,958; Apr. 25.
Sugar containing liquid, Apparatus for treating. A. Lima, jr. 1,905,295; Apr. 25.
Suit, Lady's. N. Fischmann. Des. 89,693; Apr. 25.
Suit, Sun. G. F. Earnshaw. 1,905,451; Apr. 25.
Sulphur from gases or vapors, Collection of. A. M. Clark. 1,905,901; Apr. 25.
Superheater. H. B. Oatley. 1,905,739; Apr. 25.
Superheater for water tube boilers, Interdeck. D. S. Jacobus and J. E. Black. 1,905,292; Apr. 25.
Support: *See*—
Automatic equalising support.
Diaphragm and coil support.
Pipe support.
Support for motion picture projection machines, Film gate. L. S. Frappier and E. Boecking. 1,906,053; Apr. 25.
Supporting structure for the casing of a motion picture projection screen. O. Wittel. 1,905,543; Apr. 25.
Surfacing tool. H. E. Tautz. 1,906,190; Apr. 25.
Surgical instrument. L. D. Green. 1,905,851; Apr. 25.
Surveying instrument, Oil well. W. M. Smith and K. W. Haley. 1,905,573; Apr. 25.
Suspender slide with bars flattened and embossed across weld. L. W. Joyce. 1,905,939; Apr. 25.
Swab plunger. N. H. Ricker. 1,905,058; Apr. 25.
Switch: *See*—
Electric snap switch.
Electric switch.
Floor controlled switch.
Lock switch.
Mercury tube switch.
Safety magneto switch.
Thermostatic switch.
Switch. H. E. Norviel. 1,906,084; Apr. 25.
Switch. H. E. Norviel and V. Ecoff. 1,906,083; Apr. 25.
Switch for radio phonograph sets. F. C. De Reamer. 1,905,689; Apr. 25.
Switch mounting. W. R. Walker. 1,905,771; Apr. 25.
Switches, Method and apparatus for forming and testing. J. W. White. 1,905,668; Apr. 25.
Synchronizer. O. A. Jones and J. A. Struthers. 1,905,591; Apr. 25.
Table: *See*—
Card table.
Folding table.
Ironing table.
Table reciprocating mechanism, Hydraulically actuated. J. R. Whittles. 1,905,080; Apr. 25.
Tables, Folding card or like. F. B. Harman. 1,905,862; Apr. 25.
Tacking machine. F. Polzer. 1,905,241; Apr. 25.
Tail lamp. H. C. Mead. 1,905,182; Apr. 25.
Talking machine, Power operated. J. Kriz. 1,906,161; Apr. 25.
Tap-changing-underload equipment. F. L. Snyder. 1,905,249; Apr. 25.
Tap, Collapsible. R. L. Herman. 1,905,709; Apr. 25.
Tape feeding device. H. H. Lynn. 1,905,481; Apr. 25.
Tar, Treatment of. E. O. Rhodes and F. D. Hager. 1,905,423; Apr. 25.
Tasseling machine. C. F. Arnold. 1,905,978; Apr. 25.
Telephone installation apparatus. J. F. Sink. 1,905,402; Apr. 25.
Telephone system. E. E. Hinrichsen. 1,905,711; Apr. 25.
Telephone system. V. S. Tharp. 1,905,765; Apr. 25.
Telephone system. H. W. Ulrich. 1,905,662; Apr. 25.
Telephone system and apparatus. J. O. Cadieux. 1,905,215; Apr. 25.
Telephone system using single motion switch by-pass circuits, Automatic. J. H. E. Baker. 1,905,785; Apr. 25.
Telescope sight. A. Steinle. 1,905,070; Apr. 25.
Temperature and pressure controller. F. J. Bast. 1,905,788; Apr. 25.
Temperature regulating system. D. J. Stewart. 1,905,011; Apr. 25.
Temple for spectacles. A. B. Belgard. Des. 89,677; Apr. 25.
Tensioning device for maintaining a given catenary curve in metal strips continuously pulled through an annealing furnace. O. Junker. 1,906,211; Apr. 25.

Traffic controlling apparatus, Railway. H. A. Thompson. 1,906,021; Apr. 25.
Traffic regulating device. H. J. Gechter. 1,905,878; Apr. 25.
Transmission. S. C. Carter. 1,905,145; Apr. 25.
Transmission system. E. Bruce. 1,905,792; Apr. 25.
Trap: *See*—
Boiler return trap.
Steam trap.
Trap for automobile radiators, Overflow. D. Lumsden. 1,906,072; Apr. 25.
Tray, Mobile ash. E. H. Barbé. 1,905,123; Apr. 25.
Tread block. M. T. Lattia. 1,906,009; Apr. 25.
Trolley construction. A. E. Pribil. 1,906,097; Apr. 25.
Trombone. F. W. Neptune. 1,905,045; Apr. 25.
Truck and ash hopper, Four-wheel trailer. H. Glaesner. 1,905,636; Apr. 25.
Truck body. M. Standish. 1,905,009; Apr. 25.
Truck construction, Railway. E. G. Busse. 1,905,680; Apr. 25.
Truck, Loading and dumping. W. M. Gross. 1,905,855; Apr. 25.
Truck maintainer. C. O. Johnson. 1,905,904; Apr. 25.
Truck springs, Railway car. T. H. Symington. 1,905,252; Apr. 25.
Trunnions for locomotive valve motions. J. C. Sharp. 1,905,809; Apr. 25.
Tube: *See*—
Discharge tube.
Electric discharge tube.
Thermionic tube.
Tubes, Making inner. J. C. Carlin. 1,905,865; Apr. 25.
Tubes, Making thin walled. J. V. Geisler. 1,905,584; Apr. 25.
Tubing or pipe. C. G. Naylor. 1,906,011; Apr. 25.
Turbine, Elastic fluid. E. G. Standerwick. 1,905,760; Apr. 25.
Turbo blower aggregate for internal combustion engines. A. Buchi. 1,906,132; Apr. 25.
Turret or window construction. S. E. Cibulas. 1,905,802; Apr. 25.
Typewriter, Electrically operated. A. Linhares. 1,906,167; Apr. 25.
Typewriting and computing machine, Combined. H. Resch. 1,905,305; Apr. 25.
Typewritten matter, Eradicating. A. Nadell. 1,905,118; Apr. 25.
Underreamer. B. E. Bertram. 1,905,995; Apr. 25.
Underreamer. F. A. Golish. 1,906,056; Apr. 25.
Universal joint. F. M. Guy. 1,906,057; Apr. 25.
Upholstery edge. H. Fox. 1,905,168; Apr. 25.
Upholstery pad and making the same. A. E. Weber and J. A. Howard. 1,906,028; Apr. 25.
Urea resin, Catalyzed. C. Hills. 1,906,999; Apr. 25.
Utensil, Cooking. L. Hissmay and R. Amann. 1,906,227; Apr. 25.
Vacuum cleaner. F. Riebel, jr., and D. M. Dow. 1,905,059; Apr. 25.
Vacuum distillation. R. E. Wilson. 1,905,201; Apr. 25.
Vacuum sealing structure. W. K. Rankin. 1,905,751; Apr. 25.

Vacuum surface distillation. R. E. Wilson. 1,906,033; Apr. 25.
Valve: *See*—
Control valve.
Conservation valve.
Electric current valve.
Motor operated valve.
Pressure controlled valve.
Pressure release valve.
Radiator valve.
Safety valve.
Shock absorbing valve.
Shut-off and trip valve.
Thermionic valve.
Thermostatically controlled valve.
Valve. J. Podolsky. 1,905,499; Apr. 25.
Valve actuating means for air heaters. B. Scholl. 1,905,065; Apr. 25.
Valve box, Curb. L. G. Haase and F. M. Brooks. 1,905,856; Apr. 25.
Valve for internal combustion engines. W. F. Boyce. 1,905,140; Apr. 25.
Valve for rubber balls, Check. R. H. Bacon. 1,905,861; Apr. 25.
Valve guide cleaner. L. W. Johnson. 1,905,103; Apr. 25.
Valve lifter, spring compressor and replacer, Combined. J. Sunnen. 1,905,012; Apr. 25.
Valve mechanism for underground liquid tanks, Removable. W. R. McFeely. 1,905,729; Apr. 25.
Valve seat. P. D. Husbour. 1,905,688; Apr. 25.
Valve seat ring driver. F. O. Albertson. 1,905,879; Apr. 25.
Valve spring. K. Pfeiffer. 1,905,496; Apr. 25.
Valve structure. J. R. Coffman. 1,905,684; Apr. 25.
Valves, Screw type mechanical lash adjuster for. G. P. Berry. 1,905,883; Apr. 25.
Vapor recovery. P. J. Carlisle and R. P. Ward. 1,905,900; Apr. 25.
Vapors, Process and apparatus for generating. H. C. Heaton. 1,905,283; Apr. 25.
Variable condenser. C. E. Parcell. 1,905,601; Apr. 25.
Variable-speed mixing machine. F. X. and E. J. Lauterbur. 1,905,114; Apr. 25.
Vehicle. C. A. Hawkins, H. L. Hirschler, and M. Lothrop. 1,905,865; Apr. 25.
Vehicle, Double deck passenger. M. J. Forrester. 1,905,842; Apr. 25.
Vehicle, Heavy duty. C. A., L. J., and H. L. Rogers. 1,905,242; Apr. 25.
Vehicle, Power-driven. H. Ledwinka. 1,905,594; Apr. 25.
Vehicle seat. L. B. Harris. 1,905,588; Apr. 25.
Vehicles, Antishimmying structure for. E. Shay. 1,905,513; Apr. 25.
Vehicles, Attachment for. E. Wallace. 1,905,828; Apr. 25.
Vending drum for coin controlled vending machines. A. M. Cramer. 1,905,083; Apr. 25.
Vending machine attachment. J. E. Hartle. 1,905,169; Apr. 25.
Ventilator. E. W. Hornung. 1,905,394; Apr. 25.
Ventilator. A. John. 1,906,158; Apr. 25.
Ventilator. H. S. Nowitsky. 1,905,599; Apr. 25.
Ventilator. R. H. Stevens. 1,905,010; Apr. 25.
Vessel, Marine. A. O. Dandini. 1,905,845; Apr. 25.
Vibrating screen. B. E. Green. 1,905,893; Apr. 25.
Vibration damping device. W. E. Landsman. 1,905,723; Apr. 25.
Vibration translating device. G. R. Yenser. 1,905,669; Apr. 25.
Vibrator control device. L. J. Wahl. 1,906,027; Apr. 25.
Volatile constituents from fermented liquids, Removal of. H. and R. S. Heuser. 1,906,007; Apr. 25.
Voltage regulation, Electric. H. Hars. 1,906,210; Apr. 25.
Voltage regulator, Storage battery. J. H. Oliver. 1,905,741; Apr. 25.
Vulcaniser. J. W. Brundage. Re18,808; Apr. 25.
Vulcaniser. L. O. Grange. 1,905,463; Apr. 25.
Vulcanising apparatus. G. L. Matthias. 1,905,929; Apr. 25.
Vulcanising apparatus, Continuous. A. L. Wallace. 1,905,665; Apr. 25.
Wall board construction. C. G. Reynolds. 1,905,397; Apr. 25.
Wall, Flexible corrugated tubular. J. V. Giesler. 1,905,585; Apr. 25.
Wall insert. B. C. Place. 1,905,603; Apr. 25.
Wall, Insulating. S. W. Excell. 1,905,822; Apr. 25.
Wall structure, Building. R. C. Graef. 1,905,197; Apr. 25.
Washing apparatus, Hydraulic driven. R. Schlieper. 1,905,424; Apr. 25.
Washing device. M. A. Hammon. 1,905,861; Apr. 25.
Washing machine. J. B. Kirby. 1,905,912; Apr. 25.
Watch and the like, Wrist. E. L. Carlson. 1,905,683; Apr. 25.
Watch or similar article, Wrist. S. Lachowits and I. Shiffman. Des. 89,710; Apr. 25.
Water and feed protector, Poultry. L. Stecher. 1,906,016; Apr. 25.
Water cooler fountain, Drinking. D. H. Reeves. Des. 89,717–18; Apr. 25.
Water lock for acetylene generators. H. Wendtland. 1,905,198; Apr. 25.
Water, Softening. L. G. Lindsay. 1,905,726; Apr. 25.
Water softening apparatus. E. C. Dunkelberg. 1,905,221; Apr. 25.
Water softening apparatus. E. H. Wagner. 1,905,621; Apr. 25.
Water storage for power generation, Hot. F. W. Gay. 1,905,085; Apr. 25.
Wave winder, Permanent. S. J. Duraney. 1,905,373; Apr. 25.
Wax composition. F. H. MacLaren. 1,905,823; Apr. 25.
Weather-strip. H. D. Sevison. 1,906,110; Apr. 25.
Weed and foul seed destroying machine. S. S. Botsham. 1,906,127; Apr. 25.
Weight and pen holder, Combined paper. L. J. Smith. Des. 89,727; Apr. 25.
Welding, Electric. G. A. Lutz. 1,906,478–9; Apr. 25.
Welding, Electric. G. A. Lutz and L. E. Kramer. 1,905,480; Apr. 25.
Welding rod, Covered. H. B. Woods. 1,905,061; Apr. 25.
Well reamer. O. Hammer. 1,905,860; Apr. 25.
Well-surveying instrument, Mechanism for recording rotation of a. W. J. Williams. 1,905,200; Apr. 25.
Wheel: *See*—
Steel wheel.
Wheel. A. E. Lambert. 1,905,473; Apr. 25.
Wheel propulsion mechanism for boats, Stern-paddle. E. Ensenat. 1,905,162; Apr. 25.
Wheels, Making steering. E. R. Marbach and G. F. Cavanagh. 1,905,926; Apr. 25.
Windscreen. F. A. Taylor. 1,905,768; Apr. 25.
Windshield cleaner. R. M. Critchfield and J. W. Lawson. 1,906,047; Apr. 25.
Winding frame. O. Stenglein. 1,905,426; Apr. 25.
Window construction. E. A. Zetmeir. 1,906,054; Apr. 25.
Window lock. W. T. Hall. 1,906,153; Apr. 25.
Wire bale-tie. G. E. Gaus. 1,905,581; Apr. 25.
Wire, Coated welding. E. Notvest. 1,905,648; Apr. 25.
Wire drawing machine. E. W. Clark. 1,905,803; Apr. 25.
Wood, Method and composition for preserving. J. H. Zumwalt. 1,905,327; Apr. 25.
Wood pulp, Apparatus for and method of cooking. L. V. and F. Pelot. 1,905,050; Apr. 25.
Wood-waste feeding system. W. E. Allington. 1,905,781; Apr. 25.
Wool and method of and apparatus for granulating same, Mineral. C. H. Clinton, F. F. Theobald, and E. H. Stitt. 1,905,152; Apr. 25.
Working implement for percussive tools. A. E. Peters. 1,905,497; Apr. 25.
Wrapper, Six-lamp. H. Amatel. 1,905,027; Apr. 25.
Wrench: *See*—
Ratchet wrench.
Wringer. A. J. Fathauer. 1,905,556; Apr. 25.
Wringer roll. S. S. Holland. 1,905,871; Apr. 25.
Yttrium and metals of the yttrium group, Producing. J. A. Heany. 1,905,866; Apr. 25.
Zeolites, Making. W. M. Bruce. 1,906,202; Apr. 25.
Zeolites, Manufacture of water-softening. W. M. Bruce. 1,906,203; Apr. 25.
Zinc salts solutions, Production of. A. T. Mertes. 1,906,074; Apr. 25.
Zirconium citrate hexamethylene tetramine. A. J. Gelarie. 1,905,848; Apr. 25.

CLASSIFICATION OF PATENTS

ISSUED APRIL 25, 1933

NOTE.—First number—class, second number—subclass, third number—patent number

116— 187: 1,905,937
118— 39: 1,905,280
119— 61: 1,905,016
98: 1,905,043
108: 1,905,073
120— 18: 1,905,920
34: 1,905,834
96: 1,905,608
121— 7: 1,905,474
32: 1,905,981
41: 1,905,984
45: 1,905,080
1,905,132
48: 1,905,585
122— 2: 1,905,120
31: 1,905,185
235: 1,905,283
347: 1,905,465
412: 1,905,053
448: 1,905,142
476: 1,905,292
478: 1,905,125
481: 1,905,739
123— 11: 1,905,847
47: 1,905,062
50: 1,905,095
52: 1,905,029
1,905,090
1,905,258
53: 1,905,754
59: 1,905,991
1,905,045
76: 1,905,008
90: 1,905,888
117: 1,905,054
169: 1,905,600
1,905,957
174: 1,905,072
176: 1,905,582
188: 1,905,140
191: 1,905,805
125— 11: 1,905,224
1,905,290
126— 56: 1,905,954
91: 1,905,550
148: R. 18,808
224: 1,906,022
273: 1,905,672
350: 1,905,135
128— 11: 1,905,633
65: 1,905,750
206: 1,905,752
272: 1,905,362
291: 1,905,964
305: 1,905,851
129— 1: 1,905,097
11: 1,905,418
1,905,437
24: R. 18,808
131— 5: 1,905,586
1,905,652
12: 1,905,293
39: 1,905,728
1,905,014
42: 1,905,152
51: 1,905,123
1,905,271
1,905,008
52: 1,905,416
132— 33: 1,905,373
34: 1,905,148
73: 1,905,976
134— 1: 1,905,630
60: 1,905,686
79: 1,906,149
135— 5: 1,905,973
47: 1,905,076
136— 144: 1,905,319
137— 13: 1,905,856
21: 1,905,729
69: 1,905,606
75: 1,905,596
1,906,011
1,906,209
76: 1,906,151
90: 1,905,824
91: 1,906,093
1,906,182
103: 1,904,994
1,906,052
130: 1,905,014
1,905,683
1,905,884
144: 1,905,065
153: 1,905,625
156.5: 1,905,583
166: 1,905,733
139— 131: 1,905,185
214: 1,905,266
217: 1,905,000
140— 3: 1,905,429
4: 1,905,088
132: 1,905,046
141— 9: 1,905,838
149— 126: 1,905,705

144— 208: 1,905,367
145— 34: 1,905,940
108: 1,905,432
146— 3: 1,905,054
43: 1,905,578
60: 1,905,611
102: 1,905,654
103: 1,905,531
217: 1,905,457
148— 7: 1,905,783
8: 1,905,915
12: 1,905,721
16: 1,905,809
1,905,810
21.5: 1,905,272
150— 49: 1,905,173
1,905,174
151— 14: 1,905,869
152— 11.5: 1,905,042
14: 1,905,237
1,905,441
1,905,907
1,905,908
153— 2: 1,905,398
1,905,664
32: 1,905,640
39: 1,905,101
48: 1,905,002
54: 1,905,530
57: 1,905,515
154— 2: 1,905,225
14: 1,905,365
1,905,034
45.9: 1,905,397
49: 1,905,008
1,905,371
1,905,789
52: 1,905,302
155— 7: 1,905,605
53: 1,905,586
85: 1,905,061
125: 1,905,889
140: 1,905,830
160: 1,905,425
184: 1,905,166
156— 17: 1,905,979
36: 1,905,980
44: 1,905,339
158— 7: 1,905,820
32: 1,905,617
53: 1,905,610
72: 1,905,067
91: 1,905,360
117.1: 1,905,414
159— 4: 1,905,263
161— 15: 1,905,875
164— 20: 1,905,537
45: 1,905,266
56: 1,905,317
89: 1,905,446
166— 1: 1,905,208
15: 1,905,592
167— 3: 1,905,566
14: 1,905,532
169— 38: 1,905,676
170— 167: 1,905,891
171— 34: 1,905,262
119: 1,905,249
1,906,210
123: 1,905,660
209: 1,905,680
1,905,685
223: 1,905,291
314: 1,905,238
1,905,741
172— 152: 1,905,742
179: 1,905,428
1,905,803
1,905,808
239: 1,905,275
1,905,735
274: 1,905,838

U. S. GOVERNMENT PRINTING OFFICE: 1963

Patents Nos. 1,903,277 to 1,903,416

CARNEGIE LIBRARY OF ATLANTA

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 429—No. 1 TUESDAY, APRIL 4, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $14.00 per annum, including annual index, $18.25; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,728,425, G. F. Jaubert, Process of separating hydrogen from gaseous mixtures, decided January 16, 1933, claim 1.

Pat. 1,783,295, O. C. Levy, Party line telephone system, decided Mar. 9, 1933, claims 1, 2, 3, 4, 5, 6, 7, 17, 18, 19, 20, 21, 22, 23, 24, 25, and 26.

Pat. 1,790,899, S. E. Agnew, Kitchen implement, decided March 3, 1933, claim 1.

Pat. 1,794,453, G. D. Graves, Reduction of furfural to tetrahydrofurfuryl alcohol, decided March 9, 1933, claims 1, 2, 3, 4, and 9.

Adjudicated Patents

(C. C. A. Mass.) Gullborg patent, No. 1,807,734, for lubricating means, claims 14 and 15 *Held* not infringed. *Alemite Corporation* v. *Lubrair Corporation*, 62 F.(2d) 899.

(C. C. A. Ill.) Hartman and Hartman patent, No. 1,594,947, for field diffusing device, claims 1, 2, and 7 *Held* valid but not infringed, claims 4 and 9 *Held* valid and infringed. *U. S. Ozone Co.* v. *U. S. Ozone Co. of America*, 62 F.(2d) 881.

(C. C. A. Ill.) Hartman and Hartman patent, No. 1,667,316, for dehydrator, claims 1, 2, and 8 *Held* invalid, claims 3, 4, and 7 *Held* valid and infringed. *Id.*

Drawings

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin-lines of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed, and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention. If the application has received a serial number, that should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state, if such be the case, that the new drawings are to be substituted for those previously filed.

Applicant's Address

The requirement of Rule 33, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE RECKFORD

No. 3,128. Decided January 23, 1933

PATENTABILITY—RUBBER ERASER ATTACHMENT FOR LEAD PENCILS.

A claim for a rubber eraser attachment for lead pencils *Held* patentable over the prior art.

APPEAL from the Patent Office. Reversed.

Mr. Philip Mauro and *Mr. Reeve Lewis* for Reckford.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claim 14, the only one in appellant's application for a patent for an alleged invention relating to improvements in rubber eraser attachments for lead pencils.

The appealed claim reads as follows:

An article of manufacture consisting of an integrally formed ferrule whose wall is approximately concentric throughout to a common axis and which comprises an annular shoulder at the middle portion thereof, a pencil receiving portion of relatively small diameter extending from said shoulder in one direction and an eraser receiving portion of substantially larger diameter extending from said shoulder in the opposite direction; a pencil one extremity of which fits within said pencil receiving portion of said ferrule, being closely embraced by the wall thereof and permanently and immovably secured therein; and an eraser of substantially larger diameter than said pencil secured within and closely embraced by the wall of said eraser receiving portion of said ferrule and extending substantially beyond the outer extremity thereof.

The references are: Brauns, 814,890, March 13, 1906; Handly, 897,580, September 1, 1908; Tregoning, 977,762, December 6, 1910; Antler, 1,248,988, December 4, 1917.

The appealed claim defines appellant's ferrule as being integrally formed, with walls approximately concentric throughout to a common axis, and comprising—

an annular shoulder at the middle portion thereof, a pencil receiving portion of relatively small diameter extending from said shoulder in one direction and an eraser receiving portion of substantially larger diameter extending from said shoulder in the opposite direction.

One end of the pencil fits into the receiving portion of the ferrule, where it is permanently and immovably secured. The eraser, secured in the eraser receiving portion of the ferrule and extending substantially beyond its outer end, is substantially larger in diameter than the pencil.

The patent to Brauns discloses a lead pencil having a ferrule, which consists, generally, of a non-rotatable cap securely and permanently attached to the pencil. The outer end of the cap is closed and enlarged to form an annular head or shoulder. Mounted upon the non-rotatable cap is a rotatable sleeve, provided with an annular shoulder at approximately its middle portion which abuts against the shoulder formed by the head of the non-rotatable cap. A rubber eraser, which, from the drawings, appears to be of slightly greater diameter than the pencil, is screwed into the outer end of the rotatable sleeve.

The patent to Handly discloses a pencil of the ordinary type, having a ferrule permanently and immovably secured to the pencil, and an eraser of the same diameter as that of the pencil.

The patents to Tregoning and Antler were cited in the decision of the Primary Examiner, because, he said, they disclosed erasers substantially larger than the pencils to which they were attached. They were not referred to by the Board of Appeals.

The patent to Tregoning relates to eraser tips for pencils and means for securing them in position. It appears from his specification that the purpose of the patentee was to so construct the eraser, and the device by which it was secured to the pencil, that when the eraser became worn, it might be removed,

reversed to present another portion (for use) and again secured in place.

In order to carry out the object of the invention, the patentee provided an eraser—

having a lateral collar or projection intermediate its ends, confined within and upon the upper end of a resilient socket adapted to be secured in place upon the end of a pencil, and a hollow flanged ring or ferrule secured removably upon the upper end of the socket and adapted to confine the collar or lateral projection on the rubber body between it and the upper extremity of the socket.

It is evident from the patentee's specification that his purpose was to provide an eraser that would last approximately as long as the pencil to which it was attached, and, in order to accomplish this purpose, he provided a rather complicated structure.

The patent to Antler discloses an adjustable eraser holder for pencils, so constructed that, as the eraser becomes worn, it may be adjusted, and, when necessary, replaced. It was designed to be detachably connected to a pencil so that when desired, a new pencil could be substituted. The patent discloses the end of the eraser inserted in the holder to be rectangular in shape, the outer or erasing end being beveled or wedge shaped, and of larger diameter than the pencil. The purpose of the patentee was to provide an eraser holder of longer life than either an eraser or a pencil.

The Primary Examiner stated that, in view of the references, the enlargement of the eraser receiving end of the ferrule, in order to permit the attachment of an eraser of substantially larger diameter than the pencil, was only a change in proportion or degree "not productive of a different result," and not involving invention. He further stated that the annular shoulder of the ferrule, between the portions of large and small diameters, was nothing more than an ordinary "reducing coupling, well known in pipes and tubing."

The Board of Appeals, Pierce, Examiner-in-Chief, dissenting, affirmed the decision of the Primary Examiner holding, first, that all applicant had done was to "mount the sleeve * * * of Brauns' device

upon the pencil in the manner suggested by Handly," and, second, that the enlargement of the eraser receiving end of the ferrule disclosed in the patent to Handly, in order that a larger eraser might be used, was devoid of invention.

It appears from the evidence of record that the problem confronting those engaged in the business of manufacturing and selling pencils, and it appears from appellant's specification that the problem confronting him, was to provide an eraser "adapted to furnish a maximum surface for erasing written or other matter with a minimum effort," and of such form and proportions that its maximum wear would approximate that of the pencil, and, for the accommodation of such eraser, a non-adjustable ferrule, simple in construction, producible at low cost, and in such form that it would not interfere with the proper use of the pencil to which it was permanently attached.

The trade had beeen offered complicated structures. It demanded a simple one. Appellant met that demand with a device—non-adjustable, integrally formed, simple in construction, producible at low cost, commercially practicable, and adapted to accommodate an eraser of such form and size that its wear will approximate the maximum wear of the pencil to which it is attached—which, by virtue of its own merits, has become so popular that many of the largest producers of lead pencils in the United States have adopted it. It appears, therefore, that appellant's device is not only novel, useful, and commercially successful, but is of such character as to command the respect of the purchasing public and of appellant's competitors as well.

We are unable to agree that the solution of the problem confronting appellant was as simple as stated by the tribunals of the Patent Office. Neither of the references referred to by the Board of Appeals—Brauns and Handly—anticipates the invention defined by the appealed claim. Furthermore, those references do not suggest, either separately or in combination, appellant's novel structure, nor the useful results obtained therefrom. It is true, as stated by the Board of Appeals, that appellant's device is a simple one. However, when considered in the light of its accomplishment and the state of the prior art, its simplicity is the determining factor that brings us to the conclusion that the exercise of the inventive faculties was required to produce it, and that it was not obvious to one of ordinary mechanical skill. In the case of *Potts* v. *Creager*, 155 U. S. 597, 70 O. G. 494, the Supreme Court, among other things, said:

> * * * The apparent simplicity of a new device often leads an inexperienced person to think that it would have occurred to any one familiar with the subject; but the decisive answer is that with dozens and perhaps hundreds of others laboring in the same field, it had never occurred to any one before. The practised eye of an ordinary mechanic may be safely trusted to see what ought to be apparent to every one. As was said by Mr. Justice Bradley, in *Loom Company* v. *Higgins*, 105 U. S. 580, 591: "Now that it has succeeded, it may seem very plain to any one that he could have done it as well. This is often the case with inventions of the greatest merit. * * *"

The quoted language of the Supreme Court has particular application to the issues in the case at bar.

For the reasons stated, the decision is reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

IN RE DUBILIER

No. 3,063. Decided January 3, 1933

PATENTABILITY—SYSTEMS OF BROADCASTING OVER WIRES OF A POWER SYSTEM.

Claims for a system of broadcasting over the wires of a power system *Held* unpatentable in view of the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Samuel Ostrolenk for Dubilier.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner, rejecting, for want of patentability over the prior art, claims 23 and 24 of appellant's application, filed May 11, 1923.

The appealed claims read as follows:

> 23. In a composite system, a conductor carrying a power supply and high frequency currents superimposed thereon, impedance offering a negligible impedance to said power currents and a high impedance to the high frequency currents and comprising inductance and capacity connected in series with said conductor, one end of said impedance being connected to said conductor, a load connected to the other end of said impedance operated by the power supply, a receiver for the reception of the high frequency signals also connected to the other end of said impedance and means for shunting said first impedance to permit said signalling currents to operate said receiver.
>
> 24. In a composite system, a conductor carrying a power supply and high frequency currents superimposed thereon, means offering a negligible impedance to said power currents and a high impedance to said signalling currrents, one end of said means being connected to said conductor, a load connected to the other end of said means operated by the power supply, a receiver for the reception of the high frequency signals also connected to the other end of said means and means for disabling said first means to permit said signalling currents to operate said receiver.

The references relied upon are: French patent to Drahtlose Tel., 520,285, pub. June 23, 1921; Libby, 1,365,926, January 18, 1921; and Frankis, 1,354,290, September 28, 1920.

The subject matter of appellant's application relates to a system of broadcasting high frequency signals over the wires of a power system, said wires at the same time being in use for the transmission of low frequency commercial electrical current. It is not contended that the simultaneous transmission over one circuit of two currents of different frequencies is new. The object of the alleged invention is an arrangement whereby a subscriber for electric current may enjoy uninterrupted commercial service, and may also be enabled by means of a receiver to hear the broadcast signals upon complying with some requirement to entitle him to this privilege, such as the placing of a coin in a control device; if such requirement is not complied with, the broadcast signals are not available, but in either case the ordinary power current is not affected. In the accomplishment of this, appellant shows the ordinary power line carrying service to various branches. In each branch there is interposed in series with each of the feed wires an impedance, the design of which is such that it offers little or no opposition to the flow of the low frequency power supply, but constitutes a prohibitive impedance to the passage of the signaling currents, which are transmitted at a relatively high frequency. Accordingly, when said impedance is inserted in the line, the result is that, while the power currrent passes on to the subscriber without hindrance, he is unable to receive the broadcast signals because the impedance, while in circuit, chokes such signaling current out of the branch line. In order to permit the clearing of the branch line to permit the reception of the broadcast signals, appellant shows a switch designed to be closed across the terminals of the impedance means, thereby short-circuiting or shunting the same; thereupon both the power current and broadcast signaling current will pass along the switch, since this constitutes a path of less resistance to both, and the subscriber, when this switch is closed, will be able to receive the broadcast programs. While the claims on appeal do not include any such device specifically, the application contemplates a means of permitting the subscriber at his election to bring about the short-circuiting of the impedance, such as by a coin device, and thereby be enabled to receive the programs.

With respect to the design of the impedance to be interposed in the line, appellant has the following to say in his specification:

> In connecting an inductance or impedance in series with the lines, it may be found in certain circumstances that the said inductances or impedance introduces into circuit a resistance sufficiently great to cause considerable losses to occur in respect of the commercial current and to produce a heating up of the coils resulting in further serious objections. In order to reduce these losses and the heating up of the coils to a minimum the inductances or impedance is made up of a few turns only and is magnetically coupled to another inductance, which may be termed a secondary inductance, of many turns, and a condenser is connected across the ends of the said secondary inductance. * * *

The drawings of appellant's application show such an arrangement, having inductances in the lines of the branches, and magnetically coupled with each of them is a secondary inductance, across which latter there is connected a condenser.

The French reference relates to high frequency telegraphy or telephony conducted over wires already in use for the transmissison of high intensity, relatively low frequency, power current. The patentee shows a stretch of transmission line, at each end of which is located high voltage, low frequency, power transformers. At one end of the transmission line there is magnetically coupled to the line a transmitting station for the transmission of the signaling currents, and at the other end of said transmission line there is magnetically coupled a receiving apparatus. According to the patentee, the success of such a system was seriously menaced by the fact that the highly inductive power transformers at each end of the line resulted in a reflection back to the line of the high frequency signaling impulses, resulting in an unsatisfactory transmission of the signaling currents on the one hand and a consequently unsatisfactory reception of them on the other. This trouble was taken care of by the insertion in each of the lines, between the transmitting station and the power apparatus at one end of the line, and between the receiving station and the power apparatus at the other end of the line, of an ohmic resistance, across which was also connected an impedance. The operation of this device, as gathered from the patent, was as follows. The impedance in each line was of such a design that the signaling currrents, being of high frequency, would be unable to pass through said impedances, said signaling currents thereupon being forced to take the path through the ohmic resistance, which was of such a value that the signaling currents would be absorbed, in the form of heat, by their passage through said resistances. The result of this was that the signaling currents would be either totally excluded from the power transformers or other power apparatus, or so nearly so as to obviate the possibility of any serious reflection of the signaling impulses back upon the line. At the same time, the inductance was of such a design as to offer no appreciable impedance to the ordinary power currrent, which is of a relatively low frequency, and accordingly the power current would pass through the said impedances rather than through the relatively high resistance of the resistors.

Figure 4 of the French patent shows a main line 17 and a branch line 22, in the wires of which branch line are connnected the inductances and resistances above described. At the end of this branch line, however, there is not shown any low frequency apparatus, such as transformers, as are shown in Figure 3, upon which our previous description of the French patent is based. The Board of Appeals held that this showed the application of the impedances to a branch line, just as did Dubilier; appellant argues that, while no power apparatus is shown in such branch line, it is impliedly there, and that such condition differentiates this drawing from the situation treated by him, where, as in the ordinary house, no such apparatus is present. We do not regard this question as of great importance to this case, but we may say that we are disposed to accept appellant's view of it. The French patent shows in the conductors of the branch line in Fig. 4 precisely the same impedance means as is shown in Fig. 3. Accordingly, it would seem that the same conditions which necessitated the arrangement in Fig. 3 are impliedly present in the branch line in Fig. 4.

Both the Examiner and the Board of Appeals held that the French patent showed the use of an impedance for the purpose of excluding currrents of high frequency, which at the same time offered no serious opposition to the passage of low frequency commercial currents.

While it is true that the French patentee ultimately treats the high frequency currents differently than does Dubilier, inasmuch as the former dissipates them in the form of heat in the resistances, it is nevertheless true that the effect of the impedances of the French structure is to exclude high

frequency currents *from passing through said impedances while at the same time permitting power current to flow unimpeded through them.* Accordingly the French patent shows a means whereby the high frequency currents are excluded from passage therethrough without interfering with the passage of power currents.

The Board of Appeals in its decision said:

> * * * The Examiner takes the position that there would be no invention in placing a radio receiving set in this branch line [the branch line of the French patent already discussed] beyond the impedance means and in rendering the radio frequency current available by the use of a low impedance shunt in view of the suggestions of the Libby patent.

The low impedance shunt referred to in this quotation is merely a switch shown in Libby for the short-circuiting of certain apparatus in order to eliminate its effect in a circuit. Appellant contends that to place a radio receiver in the French circuit, as suggested by the Board of Appeals in the above quoted language, would be inoperative because, when the reactances and resistances were short-circuited by the "low impedance shunt", the same difficulty would be met in the French circuit that the reactance coils and resistances were designed to prevent. While this is true, we do not think it concludes the matter. We believe that the French patent does show the use of an impedance in a circuit, the function of which is to exclude passage therethrough of the high frequency signaling currents, while permitting unimpeded flow of power current. The question remains whether, in view of such disclosure and the other references, it required more than ordinary skill to bring about the arrangement shown by Dubilier.

With respect to claim 23 above quoted, the Examiner stated in his decision as follows:

> In claim 23 it is stated that the inductance and capacity are connected in parallel [series]. This is effectively true, since the co-operation of E and F with the coil D gives an action similar to that which would be obtained by connecting a condenser across D, so that both the condenser and the inductance D would be in series with the line.
>
> The French patent shows, in Fig. 3, a line 17 for the transmission of power currents between transformers 15 and 16, and shows high frequency signaling apparatus, including a transmitter 18 and receiver 19. To prevent passage of high frequency signaling currents to undesired points, inductances 21 shunted by resistances 20 are inserted in the lines, the combination offering a negligible interference to the passage of power currents, but substantially preventing the passage of high frequency currents. Fig. 4 shows a modification wherein a branch 22 is connected across the conductors 17, with means similar to that of Fig. 3 for permitting the passage of power currents, but excluding the high frequency currents.
>
> * * * This reference does not, however, disclose the form of impedance claimed nor the means for shunting it. However, there would be no invention in replacing this impedance with an arrangement as shown in Fig. 2 of Libby, wherein an impedance including an inductance and condenser is connected in series with a conductor and provided with a switch for short-circuiting it. With the impedances in each of the branch wires 22 replaced by one of these arrangements, high frequency currents could be admitted to or excluded from 22 at will, whereby a receiver connected to 22 would or would not be capable of receiving signals from 18. As an optional arrangement, the elements E, G and H of Frankis, corresponding to applicant's elements D, E, F, might be used in conductors 22 of the French patent and short-circuiting switches provided as suggested by Libby.

An examination of claim 23 shows that the impendance means claimed is described therein as—

> comprising inductance and capacity connected in series with said conductor.

The Solicitor for the Patent Office in his brief urges that this language is met by the ordinary inductance coil alone, since the word "impedance" includes capacity as well as inductance, and since such a coil would have an inherent distributed capacity. While it is true that the word "impedance" includes capacity, and also that a coil has a certain amount of distributed capacity, it is to be observed that the Examiner has otherwise construed this element of the claim; he found that the description of the impedance stated in said claim 23 as—

> comprising inductance and capacity

was

> effectively true, since the co-operation of E and F with the coil D [references are to the Dubilier drawings] gives an action similar to that which would be obtained by connecting a condenser across D, so that both the condenser and the inductance D would be in series with the line.

We think that the language quoted from the claim, respecting the character of the impedance, contemplates a separate capacity to be associated with the inductance.

The Examiner further found that—

> This reference [the French patent] *does not, however, disclose the form of impedance claimed nor the means for shunting it.* Italics ours.)

He thereupon passed on to a consideration of Libby and Frankis with respect to the form of impedance claimed and the means of shunting it.

Frankis shows, in a radio tuning circuit, an inductance coil, coupled to which is a secondary coil, across which latter coil there is connected a condenser. The object of Frankis was to utilize said coupled circuit for the purpose of tuning the whole circuit with a view to permitting the maximum flow of one signal currrent while avoiding the flow of another having a frequency close to the one desired. The coupled structure of Frankis appears to be very much the same, diagrammatically, as the coupled arrrangement of Dubilier; the principal differences are that in the secondary circuit of Frankis the condenser is a variable one, and it also appears that the primary of his impedance means is tapped to permit of the connection of different turns of wire in the main circuit. These differences do not appear to us to be of importance for the purpose of the present discussison. We have already adverted to the language of the Examiner relating to the theory upon which the structure of Dubilier met the impedance means claimed in claim 23; it is our opinion that the same reasoning is applicable to make this showing of Frankis likewise read upon claim 23 in this respect. It is, of course, true that Frankis was dealinng with high frequency currents alone, and had a different problem before him; that these currents were of comparatively small volume, and consequently the wires used in his coils would be correspondingly small. It follows, of course, that the exact structure of Frankis would be inoperative in the Dubilier or the French circuits because the high resistance of the coil would be such as to preclude a circuit offering "negligible impedance to said power currents." The question therefore is whether or not it required the exercise of the inventive faculty so to modify the construction shown by Frankis to adapt it to the conditions faced by Dubilier.

With regard to Libby, we hold that this reference clearly shows it to be old in the art to utilize a short-circuiting switch to nullify the effect of apparatus in a circuit, said apparatus being ineffective when said switch is closed.

It thus appears that all of the elements of claim 23 are old in the electrical art, and the question remains whether to combine these elements as done by Dubilier required the exercise of the inventive faculty. Inasmuch as this is a highly technical matter and the tribunals of the Patent Office have agreed that the arrangement claimed in 23 did not involve the exercise of the inventive faculty, we believe that the rule applies that concurring decisions of the Patent Office will not be disturbed unless manifest error is shown. We are not convinced that such error has been shown, and we believe that the rejection of said claim 23 should be affirmed.

With respect to claim 24, the Examiner found that it was met by merely providing the impedances of the French patent with short-circuiting switches, as shown by Libby. This claim does not require that the impedance consist of a separate inductance and capacity, as the Examiner construed claim 23 to call for, and we are in agreement with the tribunals of the Patent Office that said claim 24 is not patentable in view of the disclosures of the French patent and Libby.

While the decision of the Board of Appeals follows closely that of the Examiner, the latter was more detailed in its discussion of the issues and the references, and for that reason we have deemed it a better basis for our discussion.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

41,904.—*Title:* CHASE AND SANBORN'S SEAL BRAND TENDER LEAF JAPAN GREEN. For Tea Balls. STANDARD BRANDS INCORPORATED, New York, N. Y. Published February 7, 1933.

41,905.—*Title:* CHASE AND SANBORN'S SEAL BRAND TENDER LEAF ORANGE PEKOE AND PEKOE. For Tea Balls. STANDARD BRANDS INCORPORATED, New York, N. Y. Published February 7, 1933.

41,906.—*Title:* STEARNS' ELECTRIC RAT AND ROACH PASTE. For Rat and Roach Paste. STEARNS' ELECTRIC PASTE COMPANY, INC., Chicago, Ill. Published December 22, 1932.

41,907.—*Title:* TASTY-MALT. For Chocolate Flavored Healthful Malted Drink. SUPERIOR PACKING CORP., New York, N. Y. Published November 23, 1931.

41,908.—*Title:* UNGE'S SHRIMP. For Canned Shrimp. E. L. UNGE, doing business as B. W. Unge, Topeka, Kans. Published November 15, 1932.

41,909.—*Title:* WRIGLEY'S LICORICE GUM. For Licorice Gum. WM. WRIGLEY JR. COMPANY, Chicago, Ill. Published January 26, 1933.

41,910.—*Title:* WRIGLEY'S LICORICE GUM. For Licorice Gum. WM. WRIGLEY JR. COMPANY, Chicago, Ill. Published January 26, 1933.

41,911.—*Title:* WRIGLEY'S LICORICE GUM. For Licorice Gum. WM. WRIGLEY JR. COMPANY, Chicago, Ill. Published January 26, 1933.

PRINTS

REGISTERED APRIL 4, 1933

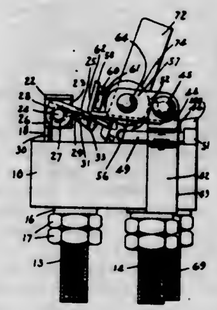
14,124.—*Title:* THE AMERICAN FARMER. For Nitrate of Soda. THE BARRETT COMPANY, New York, N. Y. Published December 20, 1932.

14,125.—*Title:* FLYING IRON. For Electric Heated Sad-Irons and Stands. STANLEY ALEXANDER DUVALL, Edinburg, Tex. Published November 26, 1932.

14,126.—*Title:* SUNSHINE CHAMOIS. For Chamois Leather. HOYT & WORTHEN TANNING CORP., Haverhill, Mass. Published January 19, 1933.

14,127.—*Title:* POCKET PACKETS KLEENEX DISPOSABLE TISSUES. For Pocket Packets of Disposable Tissue Handkerchiefs. KLEENEX COMPANY, Chicago, Ill. Published December 7, 1932.

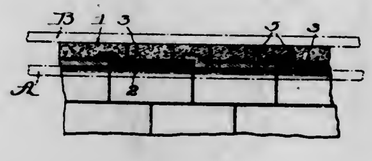
14,128.—*Title:* DRINK ORANGE-CRUSH AND THE OTHER FRESH FRUIT CRUSHES. For Delicious Cooling Vitamin Drinks. ORANGE-CRUSH COMPANY, Chicago, Ill. Published October 19, 1932.



14,129.—*Title:* MEW SUNBRITE CLEANSER. For Cleansing and Scouring Powder. SWIFT & COMPANY, Chicago, Ill. Published January 10, 1933.

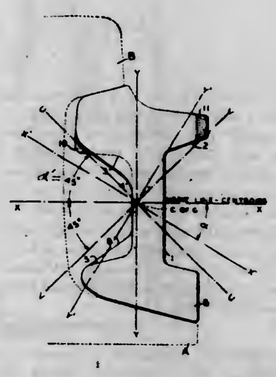
14,130.—*Title:* WRIGLEY'S LICORICE GUM. For Licorice Gum. WM. WRIGLEY JR. COMPANY, Chicago, Ill. Published January 26, 1933.

REISSUES



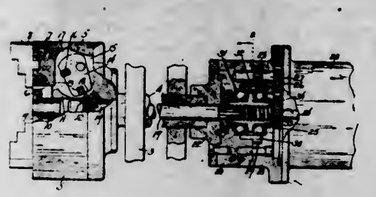
APRIL 4, 1933

18,784. **SELF-SOLDERING CIRCUIT BREAKER.** Roy H. Maple, Indianapolis, Ind., assignor, by mesne assignments, to I-T-E Circuit Breaker Co., a Corporation of New Jersey. Original No. 1,777,888, dated Oct. 7, 1930, Serial No. 555,275, filed Apr. 18, 1922. Renewed Nov. 12, 1928. Application for reissued filed Oct. 3, 1932. Serial No. 636,076. 30 Claims. (Cl. 200—116.)



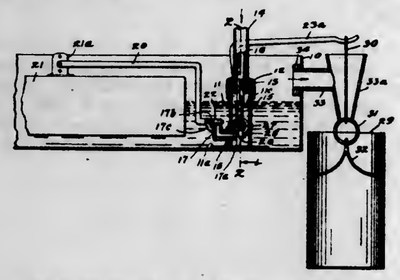
1. In a thermal circuit breaker, contact means, a movable switch contact, a latch for holding said movable switch contact in contact with said first mentioned contact means, thermally releasable means for releasing said latch, means hingedly supporting said latch upon said movable switch contact, a finger portion included in said latch for manually releasing the same, and additional contact means engageable by the movable switch contact when moved into the open-circuit position.

18,785. **SEWER PIPE.** Clare H. Currie, Webster City, Iowa, assignor, by mesne assignments, to L. E. Armstrong Realty & Investment Co., Fort Dodge, Iowa, a Corporation of Iowa. Original No. 1,834,608, dated Dec. 1, 1931, Serial No. 383,005, filed Aug. 2, 1929. Application for reissue filed Jan. 18, 1933. Serial No. 651,501. 4 Claims. (Cl. 72—52.)



1. A sewer pipe comprising an outer shell of cementitious material, a protective lining for the interior of said shell consisting of plate-like sections laid edge to edge, a layer of a sealing compound interposed between said outer shell and lining and anchoring members inserted through holes in said plates and embedded in said shell.

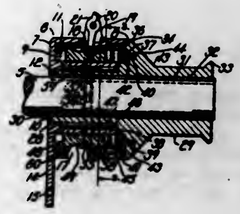
18,786. **RAILWAY JOINT BAR.** Charles W. Breed, Western Springs, and George R. Burkhardt, Chicago, Ill. Original No. 1,809,104, dated June 9, 1931, Serial No. 492,886, filed Nov. 3, 1930. Application for reissue filed Nov. 17, 1931. Serial No. 575,652. 27 Claims. (Cl. 238—243.)



1. A rail joint bar comprising inner and outer upper flanges united by a web to inner and outer lower flanges with integral bracing portions at intervals connecting the web to the inner upper flange and terminating downwardly in the web.

18,787. **CHUCK.** Harry E. Sloan, Hartford, and George A. Highberg, West Hartford, Conn., assignors to The Cushman Chuck Company, Hartford, Conn., a Corporation of Connecticut. Original No. 1,844,445, dated Feb. 9, 1932, Serial No. 464,241, filed June 27, 1930. Application for reissue filed July 18, 1932. Serial No. 622,280. 10 Claims. (Cl. 279—119.)

1. An actuating mechanism for work holding members, said mechanism including a rotating driving shaft, a work-holding body secured to one end of said shaft, a motor secured to the opposite end of said shaft, a holding member movably mounted on said body, an actuating spindle projecting through said shaft and operatively connected with said member to operate it, a rotatably mounted operating member for positively imparting reciprocatory movement to said spindle in opposite directions, means for positively preventing longitudinal movement of said operating member in opposite directions, a connection between said spindle and operating member to effect longitudinal reciprocating movement of the latter, and an operative connection between said operating member and said motor for operation of said operating member.



18,788. FLOAT AND SAFETY VALVE. EDWARD C. ROSENOW, Rochester, Minn. Original No. 1,788,251, dated Jan. 6, 1931, Serial No. 271,731, filed Apr. 21, 1928. Application for reissue filed Sept. 26, 1932. Serial No. 634,932. 20 Claims. (Cl. 137—68.)

1. A valve structure for a water tank having in combination with a supply pipe for said tank, a chamber with which said supply pipe communicates, a discharge conduit leading from said chamber, a valve adapted to engage the end of said conduit to prevent the flow of water therefrom, a float operated lever in said tank for moving said valve, a valve in said chamber adapted to control the flow of liquid through said conduit, said valve being normally open, and an overflow means adapted to move said latter valve to prevent the flow of water through said conduit from said chamber when said first mentioned valve fails to operate.

18,789. CATHEAD. ORREN M. GAHAGAN, Oklahoma City, Okla. Original No. 1,762,715, dated June 10, 1930, Serial No. 332,465, filed Jan. 14, 1929. Application for reissue filed June 9, 1932. Serial No. 616,290. 10 Claims. (Cl. 254—173.)

6. In combination with a rotatable shaft, a shaft support, a cable, a clutch fixed to the shaft, a collar rotatable over the shaft and engaged with the cable, an abutment fixed to the support, and a camming means on the collar

engageable with the abutment for shifting the collar from clutching position.

18,790. PRODUCTION OF TITANIUM DIOXIDES. WERNER MECKLENBURG, Moscow, Union of Soviet Socialist Republics, assignor, by mesne assignments, to Krebs Pigment and Color Corporation, Newark, N. J., a Corporation of Delaware. Original No. 1,758,528, dated May 13, 1930, Serial No. 336,918, filed Feb. 1, 1929, and in Czechoslovakia May 5, 1928. Application for reissue filed Apr. 12, 1932. Serial No. 604,861. 26 Claims. (Cl. 23—202.)

1. A composition comprising titanium hydroxide in aqueous suspension at a hydrogen ion concentration of about pH 2.5–6.0.

3. In a process of preparing a seed suspension for use in the hydrolysis of a titanium salt solution, the steps of mixing caustic soda and a titanium sulfate solution until precipitation is effected and heating the mixture to about 80° to 100° C. for 15 to 30 minutes.

PLANT PATENTS

GRANTED APRIL 4, 1933

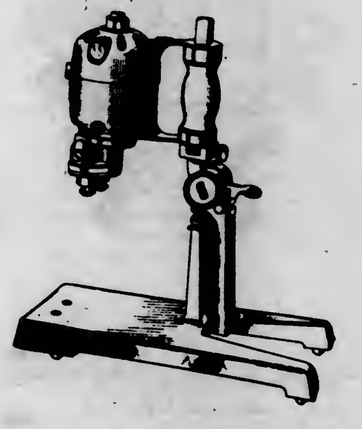
59. HYBRID TEA ROSE. ALBERT J. AMLING and ERNST C. AMLING, Orange, Calif., assignors to Amling Brothers, Santa Ana, Calif., a Partnership. Filed June 21, 1932. Serial No. 618,566. 1 Claim. (Cl. 47—1.)

The variety of hybrid tea rose herein shown and described, characterized particularly by its carmine buds changing to various shades of pink in the opened flower, its full petallage and pleasing form, and its superior growing qualities.

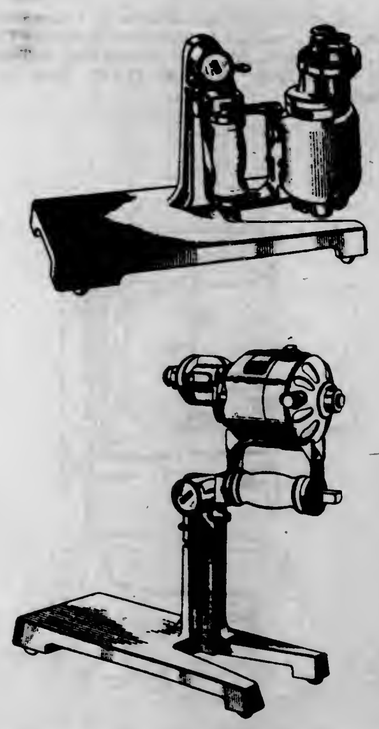
DESIGNS

APRIL 4, 1933

89,563. COMBINED MATCH AND ASH TRAY OR SIMILAR ARTICLE. FERDINAND S. BARBIERS, Lancaster, Ohio, assignor to The Diamond Match Company, Baltimore Md., a Corporation of Maryland. Filed Jan. 31, 1933. Serial No. 47,060. Term of patent 7 years.

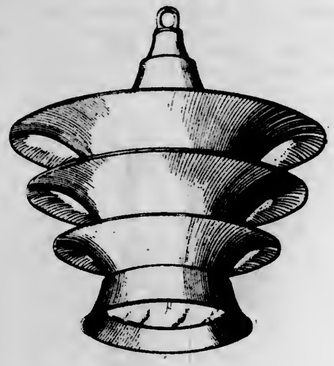


The ornamental design for a combined match and ash tray or similar article as shown and described.

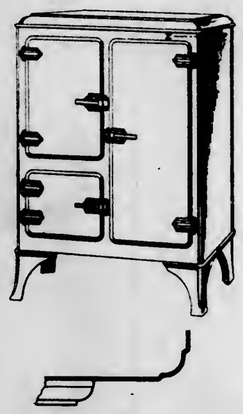


89,564. FINGER RING. RITA BASSEL, New Orleans, La., assignor to Mary Barbara Klaholt, Kirkwood, Mo., as Provincial of and as representing the Central Province of the Ursulines of the Roman Union in the United States, and her successors. Filed Dec. 29, 1932. Serial No. 46,646. Term of patent 14 years.

The ornamental design for a finger ring, substantially as shown.

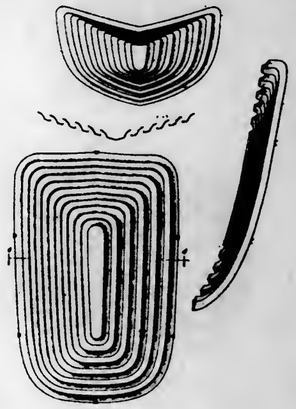


89,565. FOOD MIXING, JUICE EXTRACTING AND GRINDING APPARATUS. PATRICK J. FITZGERALD, Torrington, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Apr. 16, 1932. Serial No. 43,517. Term of patent 7 years.



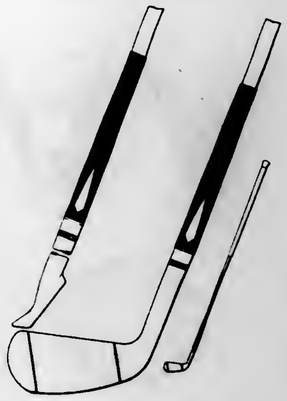
The ornamental design for a food mixing, juice extracting and grinding apparatus, as shown and described.

89,566. LIGHTING FIXTURE. HENRY A. FRAMBURG, Chicago, Ill. Filed Jan. 21, 1933. Serial No. 46,931. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

89,567. REFRIGERATOR. ROBERT T. FRAZIER, Chattanooga, Tenn., assignor to Tennessee Furniture Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Feb. 6, 1933. Serial No. 47,115. Term of patent 7 years.

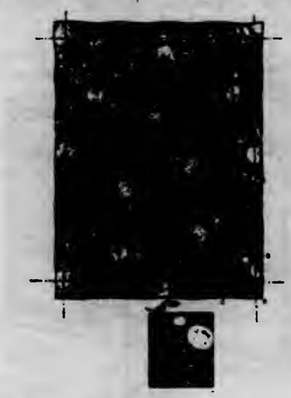


The ornamental design for a refrigerator, substantially as shown and described.

89,568. RADIATOR SHELL FRONT. LEE B. GREEN, Lakewood, Ohio, assignor to The Globe Machine & Stamping Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1933. Serial No. 46,760. Term of patent 14 years.

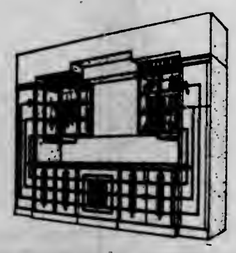
The ornamental design for a radiator shell front, substantially as shown.

89,569. GOLF CLUB. ALLEN F. HERTER, Chicago, Ill., assignor to R. H. Buhrke Company, a Corporation of Illinois. Filed Sept. 26, 1931. Serial No. 41,232. Term of patent 3½ years.



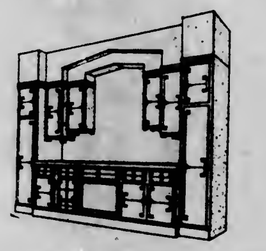
The ornamental design for a golf club as shown and described.

89,570. TOP FOR A GAME TABLE OR SIMILAR ARTICLE. CARL F. KLEIN, Chicago, Ill., assignor to Richard Groetchen, Chicago, Ill. Filed Jan. 14, 1933. Serial No. 46,880. Term of patent 3½ years.



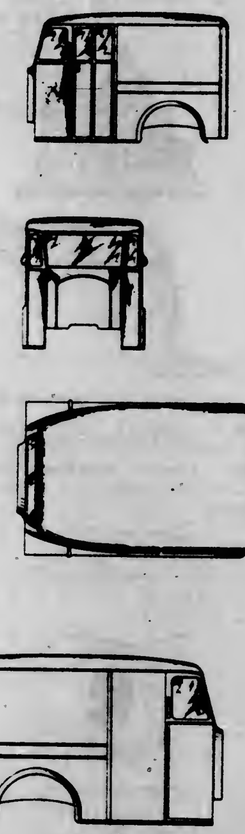
The ornamental design for a top for a game table or similar article, as shown.

89,571. TEXTILE FABRIC OR SIMILAR ARTICLE. ALEXANDER KOHUT, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Nov. 4, 1932. Serial No. 45,736. Term of patent 3½ years.



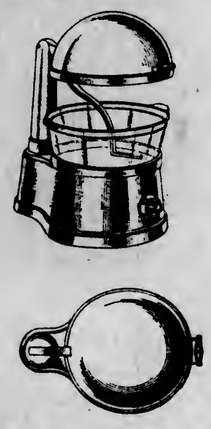
The ornamental design for a textile fabric or similar article as shown and described.

89,572. KITCHEN CABINET. SALVATORE J. LA SUSA and WILLIAM SAMBUR, Jamaica, N. Y. Filed Dec. 9, 1932. Serial No. 46,410. Term of patent 3½ years.



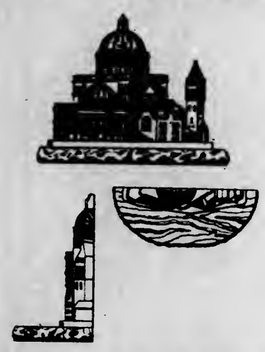
The ornamental design for a kitchen cabinet, as shown.

89,573. KITCHEN CABINET. SALVATORE J. LA SUSA and WILLIAM SAMBUR, Jamaica, N. Y. Filed Dec. 9, 1932. Serial No. 46,412. Term of patent 3½ years.



The ornamental design for a kitchen cabinet, as shown.

89,574. HOUSE-TO-HOUSE DELIVERY VEHICLE BODY. JOHN NICOL, Detroit, Mich., assignor to Continental-Divco Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 9, 1932. Serial No. 46,409. Term of patent 14 years.

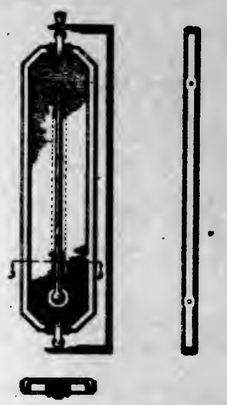


The ornamental design for a house-to-house delivery vehicle body, substantially as shown.

89,575. FOOD WARMER. FRANKLIN J. PETSKE, Minneapolis, Minn. Filed Oct. 26, 1932. Serial No. 45,564. Term of patent 3½ years.

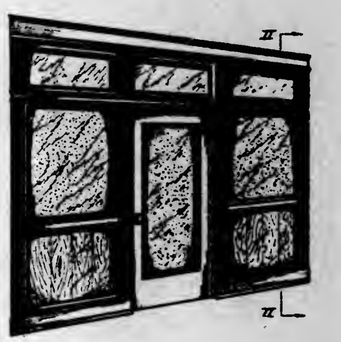
The ornamental design for a food warmer, as shown.

89,576. BOOK END. KURT H. ROY and ROSS R. SWEANEY, Los Angeles, Calif. Filed June 28, 1932. Serial No. 44,213. Term of patent 3½ years.



The ornamental design for a book end as shown.

89,577. LAMP. JOSEPH SCHRADER, Cleveland, Ohio. Filed Jan. 20, 1933. Serial No. 46,908. Term of patent 3½ years.

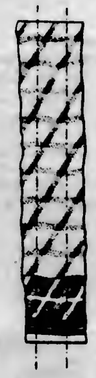


The ornamental design for a lamp as shown and described.

89,578. COMBINED THERMOMETER AND BRACKET. WALTER DORWIN TEAGUE, Forest Hills, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,916. Term of patent 3½ years.

The ornamental design for a combined thermometer and bracket as shown.

89,579. OFFICE PARTITION. WALTER B. WEBER, Merwood Park, Pa. Filed Jan. 19, 1932. Serial No. 42,547. Term of patent 3½ years.

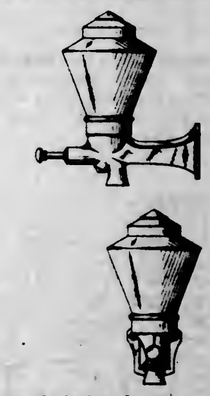


The ornamental design for an office partition, as shown and described.

89,580. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 17, 1932. Serial No. 44,883. Term of patent 3½ years.

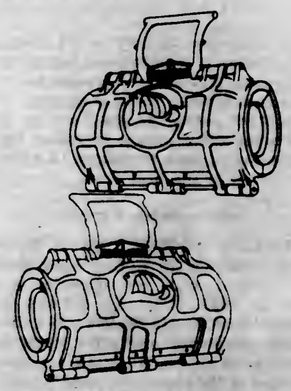
The ornamental design for a textile fabric or similar article as shown and described.

89,581. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 17, 1932. Serial No. 44,940. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown and described.

89,582. SAFETY RAZOR. CURT O. WINTER, Sayleeville, R. I. Filed Jan. 19, 1933. Serial No. 46,884. Term of patent 7 years.

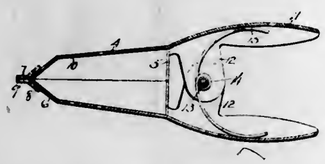


The ornamental design for a safety razor, as shown.

89,583. SOAP DISPENSER. PHILIP A. WOOSTER, San Francisco, Calif. Filed Nov. 16, 1932. Serial No. 46,010. Term of patent 3½ years.

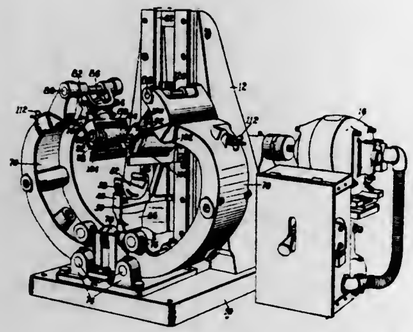
The ornamental design for a soap dispenser, substantially as shown.

89,584. HOSE LEAK STOP. FLORENCE B. MYERS, Los Angeles, Calif. Filed Dec. 30, 1931. Serial No. 42,821. Term or patent 14 years.



The ornamental design for a hose leak stop, as shown.

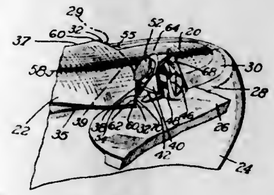
PATENTS



GRANTED APRIL 4, 1933

1,908,277. SINK CLEANING UTENSIL. BRIEN F. BARNES, Hartford, Conn. Filed Apr. 11, 1930. Serial No. 443,342. 2 Claims. (Cl. 15—104.)

2. A sink cleaning utensil including two blades one at least of which is of pan shape having a raised front edge creating a dam to retain matter therein, means for pivotally connecting said blades, handles extending from said blades, and collectors of flexible materials secured to the front edges of said blades and extending forwardly therefrom in contact when the blades are closed.

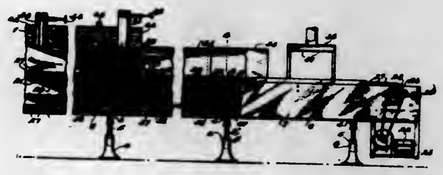


1,903,278. HEEL-COVERING APPARATUS. LEWIS J. BAZZONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 30, 1929. Serial No. 417,423. 24 Claims. (Cl. 12—42.)

1. In a heel-covering apparatus, the combination of a heel support, means for supporting a spread-out heel cover above a heel upon said support, mechanism for effecting relative movement between the heel support and the cover support to apply a portion of the cover to the heel, and means constructed and arranged to engage the cover during a continuation of said movement to apply other portions of the cover to the heel.

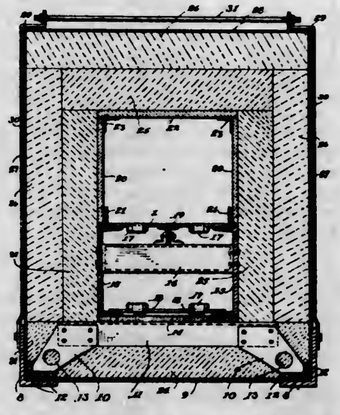
1,903,279. ROTARY CUTTER. EARL A. BESSOM, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 11, 1929, Serial No. 377,438, and in Great Britain July 12, 1928. 15 Claims. (Cl. 12—31.5.)

1. A rotary cutter for operating upon leather comprising two series of circumferentially arranged teeth having cutting edges of the shape of a conic section, the cutting edges of the teeth of one series being in staggered relation circumferentially of the cutter to the teeth of the other series and the teeth of one series forming with the teeth of the other series a chip disposing channel extending substantially circumferentially of the cutter and defined in



part by opposed faces formed on consecutive teeth, respectively, and each of which terminates in one of said cutting edges.

1,903,280. METHOD OF MAKING ROTARY CUTTERS. EARL A. BESSOM, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 11, 1929, Serial No. 377,438. Divided and this application filed Apr. 1, 1932. Serial No. 602,493. 11 Claims. (Cl. 76—10.)

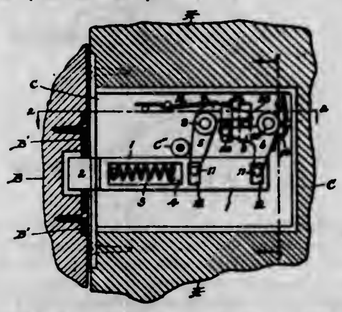


1. That method of making a rotary cutter which comprises the steps of forming a blank of the general shape of two cones having a common base, cutting in the blank a series of grooves each of which begins at the conical surface of one of the cones and terminates at the conical surface of the other cone, and cutting in the blank another series of grooves connecting the grooves of the first series thereby forming two series of circumferentially staggered teeth spaced from each other by a chip-disposing opening extending substantially circumferentially of the cutter.

1,903,281. LEER. SAMUEL B. BOWMAN, Zanesville, Ohio, assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed June 18, 1928. Serial No. 286,125. 6 Claims. (Cl. 49—47.)

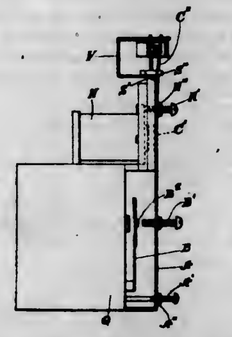
6. A leer including a tunnel, a conveyor extending through and beyond said tunnel, means spaced rearwardly from the tunnel for applying cooling air to the ware on the conveyor, and means for varying the distance through which the top and sides of the ware are fully exposed to the atmosphere before reaching the first-mentioned means.

1,903,282. LEER. SAMUEL B. BOWMAN, Zanesville, Ohio, assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Sept. 14, 1929. Serial No. 392,608. 10 Claims. (Cl. 49—47.)



1. A leer including channel irons partly forming the side walls of the tunnel, heat insulating blocks mounted on said channel irons and completing the tunnel side walls, a roof of heat insulating material mounted on said blocks, and an endless conveyer traveling through the tunnel.

1,903,283. PREPARATION OF FRESH FRUIT FOR MARKET. ERNEST M. BROGDEN and MILES L. TROWBRIDGE, Pomona, Calif., assignors to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Nov. 23, 1928. Serial No. 321,510. 8 Claims. (Cl. 99—1.)



8. In the preparation of fresh fruit for market, the process of protecting the fruit against blue mold or other decay-producing organisms which comprises applying to fresh fruit a solution comprising borax, together with a quantity of casein and glucose insufficient to render the solution substantially viscous, and allowing a substantial quantity of said solution to dry upon the surface of the fruit.

1,903,284. DOORLOCK. STANLEY H. BURTON, Detroit, Mich. Filed Dec. 30, 1931. Serial No. 583,828. 6 Claims. (Cl. 292—164.)

1. A door lock comprising a casing, a longitudinally movable latch bolt in said casing, two bell cranks pivotally mounted in said casing and each having a laterally extending arm in opposed and overlapping relation to and spaced from said arm on the other bell crank, each bell crank being also provided with an arm operatively connected with said latch bolt, and an operating handle member pivotally supported at each side of said casing and each having an arm extending into said casing between said opposed arms on said bell cranks and each adapted to operate one of said bell cranks and retract said bolt when said arm is swung in one direction and to operate the other of said bell cranks and retract said bolt when said arm is swung in an opposite direction.

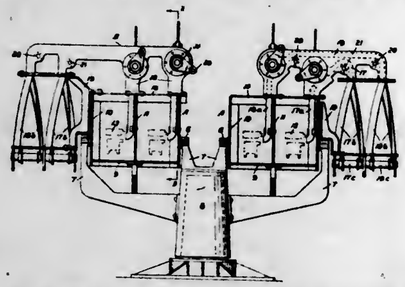
1,903,285. ELECTRICAL CURRENT CONTROLLING MECHANISM. CARL F. CAPELL and EDWIN H. PENDLETON, Santa Monica, Calif., assignors to Pencap Corporation, Santa Monica, Calif., a Corporation of California. Filed Mar. 10, 1931. Serial No. 521,568. 8 Claims. (Cl. 177—329.)

2. An electrical current controlling mechanism comprising, a primary coil functioning both as the primary of an induction coil and also as a vibrator coil, a secondary coil functioning as the secondary of the induction coil, said primary coil being inductively coupled to said secondary coil, a core for the primary coil, a resilient vibratory member of conducting material opposing and normally spaced from said core, said member having one end free and its other end anchored, said member having a contact mounted thereon on the side opposite the core, an electro-magnetic device spaced from the primary coil and including a resilient vibratory armature of conducting material opposing and permanently spaced from said member, said armature having one end anchored and its other end free, the free end of said armature being extended beyond said device, an electrical source, a circuit connection between one side of said source and said device, a circuit connection between the said connection and said primary coil, a circuit connection between said primary coil and said vibratory member, a circuit connection between the opposite side of said source and said armature, a contact piece carried by said armature for intermittently engaging the contact on said vibratory member, a spring controlled governor including a contact mounted thereon in circuit with said electromagnetic device for intermittently engaging the free end of the armature for intermittently closing the circuit of said magnetic device to intermittently energize the latter thereby moving the armature towards said device to cause the contact piece to intermittently engage said member to provide for the vibration of the latter thereby making the induction coil intermittently active.

1,903,286. BAG AND METHOD OF FORMING THE SAME. THOMAS EARL COTY, Watertown, N. Y. Filed Aug. 5, 1930. Serial No. 473,236. 5 Claims. (Cl. 229—59.)

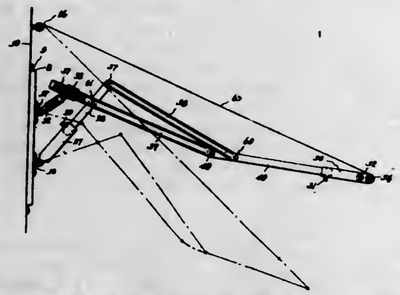
1. As a new article of manufacture, a bag formed from a tube in which the cuts made by the slitters of the bag-

machine are polygonal, so that the corners of the side flaps are cut off, the lines of the cuts crossing the creaser lines of the bag-bottom at an angle other than a right



angle, the paste extending substantially to the outer edges of the side flaps on the portions thereof which are folded upon themselves, sealing the corners of the bag-bottom.

1,903,287. CORROSION INHIBITOR. HENRY L. COX, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Apr. 25, 1932. Serial No. 607,507. 8 Claims. (Cl. 252—5.)

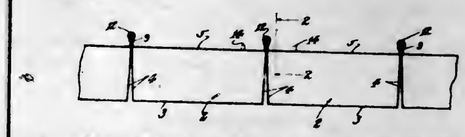


1. Fluid medium suitable for use in heat-exchange devices and pressure-transmitting devices comprising an aqueous solution containing at least one corrosion inhibitor chosen from the group consisting of morpholine and substituted morpholines.

1,903,288. CARTRIDGE FEED MECHANISM. AUGUST DABRASKY, Washington, D. C., and GEORGE W. BEATTY, Decatur, Ill. Filed Feb. 23, 1932. Serial No. 594,648. 9 Claims. (Cl. 89—33.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

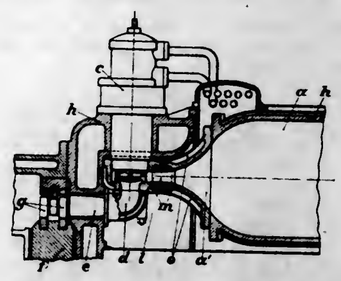
7. In cartridge feed mechanism, a belt advancing member, a driving member, means for normally maintaining a clutch engagement between said members, means for declutching the members, and means for intermittently rotating the driving member.

1,903,289. AWNING OUTRIGGING. JERRY H. DAZZO, New York, N. Y. Filed June 19, 1931. Serial No. 545,536. 2 Claims. (Cl. 156—44.)



1. A foldable awning frame comprising a wall bracket, pivot brackets adjustably mounted in the wall bracket, an outer terminal arm, arms pivotally connected with each of the pivot brackets, and intermediate arms pivotally connected with the outer arm at spaced points, one of said intermediate arms having a terminal pivotal connection with one of the bracket arms and the other intermediate arm having a pivotal connection with the other bracket arm and an intermediate pivotal connection with the other bracket arm, both bracket arms being adjustable as to length to vary the drop by the change in length of the one and vary the projection by the change in length of the other.

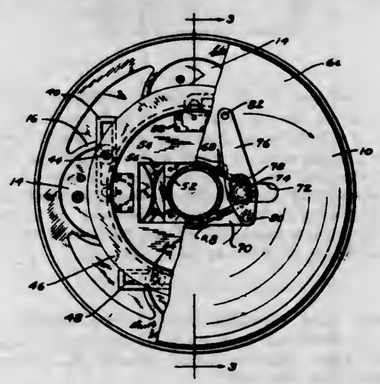
1,903,290. METHOD OF TREATING CELLULOSE DERIVATIVE MATERIAL AND PRODUCT THEREOF. CAMILLE DREYFUS, New York, N. Y., and HERBERT PLATT, Cumberland, Md., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Apr. 16, 1929. Serial No. 355,657. 6 Claims. (Cl. 8—20.)



1. Process of imparting stiffness to textile materials containing esters of cellulose comprising partially saponifying the cellulose ester and then subjecting the textile material to the action of strong sulfuric acid, whereby the amount of stiffness imparted will be controlled by the degree of partial saponification of the cellulose ester.

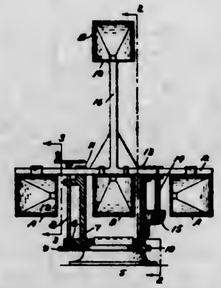
1,903,291. FLOATING DECK. ALVAH M. GRIFFIN, Los Angeles, Calif., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Original applications filed Feb. 23, 1927, Serial No. 170,168, and Oct. 8, 1927, Serial No. 224,786. Divided and this application filed Sept. 6, 1930. Serial No. 480,058. 5 Claims. (Cl. 220—26.)

1. A floating deck comprising a plurality of pontoons, said pontoons being disposed in substantially horizontal alignment with their upper edges connected to form a substantially gas tight deck and their side walls somewhat separated to provide gas channels between the same under the deck and a continuous depending gas retaining skirt attached to the periphery of said deck.



1,903,292. EXPLOSION TURBINE. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed Feb. 5, 1929, Serial No. 337,624, and in Germany Feb. 15, 1928. 1 Claim. (Cl. 60—41.)

The method of operating an explosion turbine having a pistonless constant volume explosion chamber associated therewith and provided with means for intermittently charging air and coal dust into said chamber at the inlet end thereof, which comprises depositing a body of slag of large superficial area at a portion of the chamber near its outlet end, maintaining said portion of the chamber at such an elevated temperature above its surroundings with

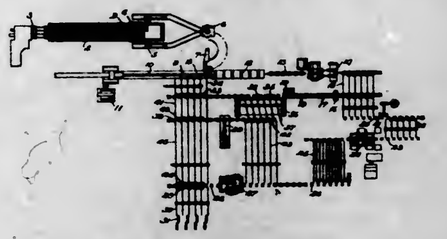


the aid of the hot explosion gases generated in the chamber that said deposit is capable of igniting a coal dust charge and molten slag particles are able to cling thereto, but not at so high a temperature as to cause the deposit to become molten and subject to being blown away by the discharging gases, charging air under pressure into said chamber, and injecting a suspension of coal dust into the body of air in such chamber, whereby such coal dust is suspended in such air and travels in the form of a cloud toward the outlet end of the chamber where it is ignited by the heated slag deposit at the proper instant predetermined by the explosion cycle of the chamber.

1,903,293. FLUID BRAKE. MAX ISAACSON, Dayton, Ohio. Filed Dec. 27, 1930. Serial No. 505,149. 23 Claims. (Cl. 188—90.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A brake adapted for a vehicle wheel supported on an axle, comprising fluid actuating means for dissipating energy bodily rotatable with said wheel, said actuating means including impeller means and an orifice and control means transversely movable relative to said axle for causing said first mentioned means to be actuated at a linear speed in accordance with the speed of rotation of the wheel and the extent of movement of the control means relative to said axle for retarding the rotation of said wheel, said orifice having the same cross-sectional area for like positions of said impeller means for any setting of said control means.

1,903,294. SOUND LOCATING APPARATUS. JAMES C. KARNES, Buffalo, N. Y. Filed Nov. 2, 1931. Serial No. 572,543. 6 Claims. (Cl. 181—26.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

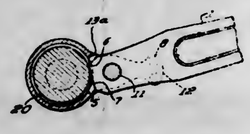


1. In a sound apparatus, a mount including spaced standards, a horizontal support trunnioned in the standards and including a perpendicular arm at its center, a horn on each end of the support outside the standards and on the side of the support opposite the arm, a horn on the support in line with the end horns and positioned between the standards, and a horn on the end of the arm, said arm and horn counterbalancing the remaining horns.

1,903,295. COMPOSITE GUN BARREL. GREGORY J. KRASNICH, Madison, Wis. Filed Mar. 24, 1931. Serial No. 524,939. 8 Claims. (Cl. 89—16.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

8. In a gun, a jacket, a tube insertable in the jacket and spaced therefrom to establish a radial play space, and a deformable seal restorable after firing between the forward end of the jacket and the tube for closing the radial play space.

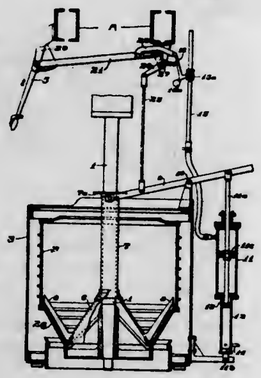
1,903,296. APPARATUS FOR TUBE MANUFACTURE. CARL W. LITTLER, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 9, 1931. Serial No. 536,142. 8 Claims. (Cl. 29—33.)



1. Apparatus for tube manufacture comprising a push bench wherein tubes are formed over mandrels, means for stripping the tubes from the mandrels, a straightening machine, means for conveying the formed tubes from the stripping means to the straightening machine, means for conveying the mandrels thereto from the stripping means, and means for returning straightened mandrels from the straightening machine to a position for use in the push bench.

8. Apparatus for tube manufacture comprising a push bench wherein tubes are formed over mandrels, means for stripping the tubes from the mandrels, a straightening machine, means for conveying the formed tubes to the straightening machine, means for conveying mandrels from the stripping means to the push bench, sizing means for the mandrels, means for conveying mandrels to the straightening machine, and means whereby the straightened mandrels may be fed to the sizing means.

1,903,297. RATCHET WRENCH. RICHARD B. PATTERSON, Chicago, Ill., assignor, by direct and mesne assignments, of one-half to Pansy H. Miller, Chicago, Ill., and one-half to H & E Standard Auto Parts, Chicago, Ill., a Partnership composed of Frank S. Heimbach and Harold J. Ellsworth. Filed Oct. 25, 1930. Serial No. 491,204. 1 Claim. (Cl. 81—58.)

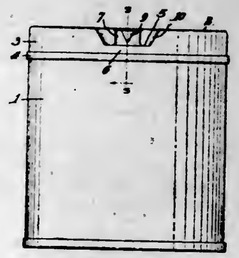


In a ratchet wrench, a hollow chuck open at one end and at its other end provided with an annular flange defining a central opening, an annular wall for the chuck being formed with an opening, a spool in said chuck rotatable therein and having flanges at its ends fitting snugly in the chuck with one flange closing the open end of the chuck, ears extending from said chuck above and below the open-

ing in the marginal wall, one ear being longer than the other, a handle having its front end fitting between said ears, a fastener extending through the ears and handle to pivotally mount the handle, the front end of the handle being cut straight across to form a flat end face and having its corners cut diagonally to form flat corner faces intersecting ends of the end face and forming teeth to

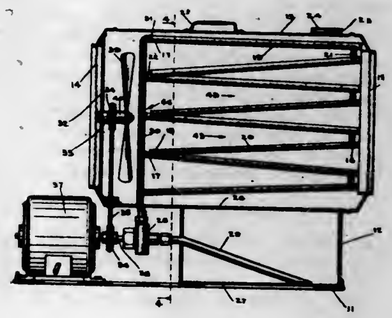
be selectively moved into gripping engagement with the marginal face of the spool between its flanges by rocking the handle upon its pivot, the longer arm being formed with recesses in its inner face spaced from each other transversely thereof and a latch carried by said handle to engage in said recesses and releasably secure the handle in a set position with a desired tooth in engagement with the spool.

1,903,298. CENTRIFUGAL MACHINE. EUGENE ROBERTS, Hastings, N. Y. Filed July 26, 1929. Serial No. 381,171. 11 Claims. (Cl. 210—74.)



1. In a centrifugal, the combination with a centrifugal basket having a frusto-conical bottom with a central discharge opening, a gyratory basket suspending shaft, a slidable bottom closing valve mounted on said shaft, means for raising said valve from the bottom, and means secured to the valve to disrupt the walled up material when the valve is raised.

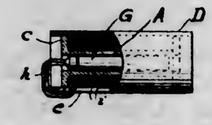
1,903,299. PRODUCTION OF ARTIFICIAL MATERIALS FROM CELLULOSE DERIVATIVES. ROBERT PIERCE ROBERTS, REGINALD IVOR REID DEAN, and LOUIS WILFRED GREGORY, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Feb. 27, 1930, Serial No. 431,966, and in Great Britain May 9, 1929. 7 Claims. (Cl. 18—54.)



1. Process for the manufacture of artificial materials by wet spinning processes from solutions of cellulose derivatives in organic solvents, comprising subjecting the materials continuously with their production to the action of a strong solution of a substance selected from the group consisting of strong mineral acids and acid esters of strong mineral acids.

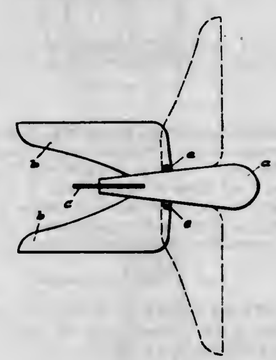
1,903,300. SHEET METAL CONTAINER AND HEAD THEREFOR. CHARLES H. ROLLASON, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Oct. 27, 1930. Serial No. 491,358. 4 Claims. (Cl. 220—24.)

1. A container of the character described comprising a head having therein adjacent to and opening outward through its peripheral edge portion a sunken area, an upright pouring spout located within said area adjacent to said edge portion, the spout encircling portion of said area constituting a drainage channel for receiving and conducting away from said head overflow from said spout, and means below the plane of the bottom of said spout for securing the head to the container.



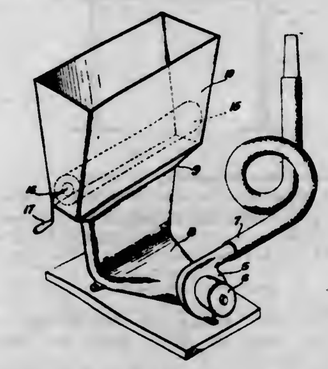
1,903,301. AIR COOLER AND HUMIDIFIER. FREDERIC E. SNOWDEN and JOHN P. ROACH, Los Angeles, Calif. Filed June 20, 1927. Serial No. 200,055. 9 Claims. (Cl. 261—29.)

1. In an air cooler and humidifier, a structure having a plurality of superimposed trays, adjacent trays being inclined in opposite directions, means to force air under pressure simultaneously over the trays from one end in the same direction, the trays at the intake end discharging substantially an upper one into the tray next below and at the discharge end an upper tray discharging into a lower tray by pipes, said trays being spaced apart at the discharge end.



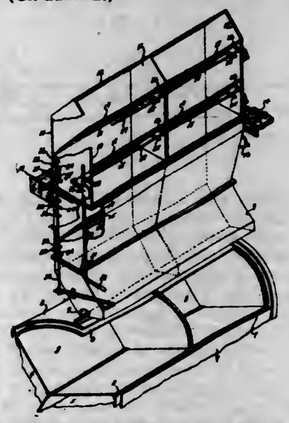
1,903,302. PACKAGE FOR BLASTING CAPS. JOSEPH STUART, 2d, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 3, 1932. Serial No. 596,501. 5 Claims. (Cl. 102—10.)

1. In combination a base having a bore extending from one end, a casing for said base provided with a longitudinally extending slot and a blasting cap provided with lead wires, said lead wires being wrapped from their free ends about said base, and said cap being positioned in the



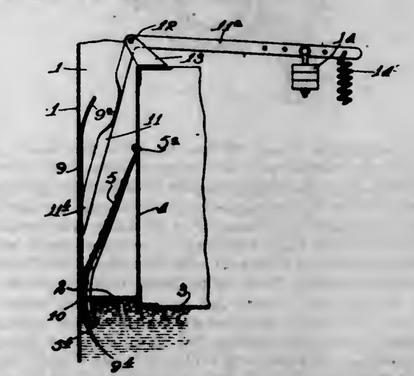
bore therein, said casing being positioned on said base and said lead wires extending from the cap over one end of the casing and through the slot therein.

1,903,303. FLYING ROCKET. REINHOLD TILING, Osnabruck, Germany. Filed June 13, 1931. Serial No. 544,142. 2 Claims. (Cl. 244—18.)



1. A flying rocket, comprising in combination a rocket body, supporting planes shiftable on said body adapted during the ascending to lie behind the centre of gravity of the rocket and in passing over into gliding to move towards the front portion of said body so that their centre of pressure is in line with the centre of gravity of the rocket.

1,903,304. FEEDING HOPPER FOR PNEUMATIC CONVEYERS. EDWIN H. WENZEL, Whitefish Bay, Wis. Filed Nov. 14, 1929. Serial No. 407,101. 2 Claims. (Cl. 302—36.)

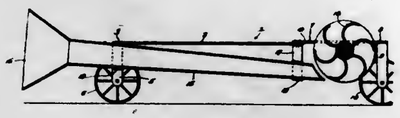


1. In a fluid conveyer, the combination with a fluid propelling device having an inlet pipe, of a hopper serving as the sole inlet port for said pipe, and a rotatable cylindrical brush disposed in said hopper in superficial engagement with the walls thereof, said brush being adapted to support material in the hopper and coacting with the walls thereof to meter said material for delivery into fluid passing through the hopper and brush.

1,903,305. LOADING APPARATUS FOR LAUNDRY WASHERS AND THE LIKE. GEORGE B. WALLACE, Grantwood, N. J., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 18, 1931. Serial No. 516,605. 5 Claims. (Cl. 214—1.)

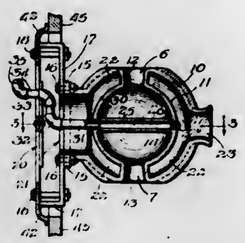
1. In load maintaining and feeding mechanism, a casing having an upper receiving and lower delivering opening, a plurality of hopper forming door portions arranged one above the other and mounted to swing between open and closed positions, means normally tending to move said doors to closed position, first mentioned latch means for holding said doors in closed position, second mentioned latch means for holding said doors in open position, operator operated means for releasing the second mentioned latch means to permit the doors to close, and operator operated control means for successively releasing the first mentioned latch means to produce successive discharges from the hoppers.

1,903,306. SEALING CONSTRUCTION FOR TANKS. DJALMA D. WILLIAMS, Dallas, Tex., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1930. Serial No. 459,798. 6 Claims. (Cl. 220—26.)



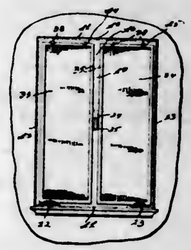
1. A liquid storage tank including: a shell; a roof adapted to float on liquid in the tank; and a substantially gas-tight continuous semi-flexible metal apron of unbroken

CARNEGIE LIBRARY OF ATLANTA



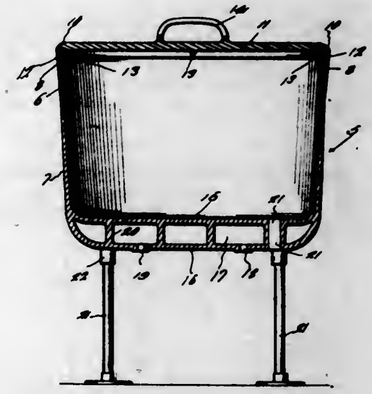
continuity throughout its circumference and with portions having relatively flexible folds therein to make said apron expansible and contractible, said apron having its upper and inner edge attached by one continuous gas-tight connecting seal to the periphery of the roof and its lower and outer edge adapted to be immersed in liquid in the tank.

1,903,307. ELECTRICITY GENERATING APPARATUS. BATTISTA GIOVANNI GILLIO, Worcester, Mass. Filed Jan. 11, 1932. Serial No. 586,004. 1 Claim. (Cl. 170—14.)



In combination with a vehicle including a frame, a transverse shaft journalled in the rear part of the frame, an elongated wind wheel carried by the shaft, a transversely arranged hanger depending from the frame in front of the wind wheel, a substantially channel-shaped bracket depending from the hanger and having its bight part formed with a number of substantially semi-circular recesses, a similar bracket depending from the forward part of the frame, a substantially horizontal row of rearwardly tapered tubes, each of which has its rear part fitting in a recess of the rear bracket and a forward part fitting in a recess of the front bracket, the rear ends of the tubes directing air passing therethrough against the wind wheel and the front ends extending in front of the frame, and a horizontally arranged elongated flaring mouth forming member having a horizontal row of openings in its rear and small end for receiving the front ends of the tubes, the length of the rear end of the row of tubes being slightly greater than the length of the wind wheel.

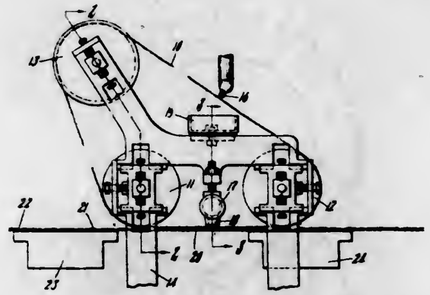
1,903,308. COMBUSTION DEVICE. WILLIAM R. HULBERT, Chicago, Ill. Filed Oct. 19, 1931. Serial No. 569,601. 2 Claims. (Cl. 110—174.)



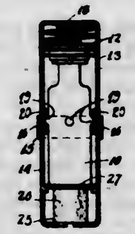
1. A combustion device of the character described comprising walls forming a hollow bulbous outer body having an intake port and a discharge port substantially at opposite ends of the body respectively and having means for securing the body to a furnace at an air intake opening thereof with such intake opening in communication with said intake port and with said body extending into the fire box of such furnace, there being walls forming an inner hollow bulbous body within and spaced from the walls of the outer body to provide a substantially shallow passageway substantially surrounding the inner body and extending between and opening into said ports respectively, there being at least two tubular devices connecting the interior of said inner body with the exterior of said outer body at widely spaced-apart intervals circumferentially of the outer body for the purpose specified, together with a pipe-like member extending across the interior of said hollow bulbous body and opening at one of its ends adjacent to said discharge port, with means for conducting live steam to the other end of said pipe-like member.

1,903,309. WINDOW CONSTRUCTION. CLYDE W. KELLY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 17, 1931. Serial No. 557,656. 9 Claims. (Cl. 189—69.)

1. A window construction comprising a frame having a pair of window openings therein, an outwardly swinging ventilator for each opening, a separate screen for each opening positioned upon the inner side of the frame, and means for latching both of the ventilators in closed position including a single latch mechanism supported upon the frame intermediate the adjacent edges of the screens.



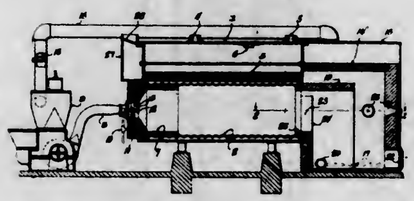
1,903,310. STEAM COOKER. HAROLD E. LAUNDERVILLE, Ogdensburg, N. Y. Filed Aug. 19, 1931. Serial No. 558,169. 4 Claims. (Cl. 53—1.)



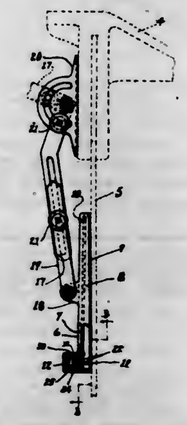
1. A steam cooker comprising in combination a receptacle having a peripheral wall provided with a uniform surface on one side, and having oppositely inclined continuous merging surfaces on its other side, said inclined surfaces merging with one another near the top of the receptacle.

1,903,311. DANDY. FRANK S. MCDONNELL, Milton, Mass. Filed Sept. 15, 1931. Serial No. 562,843. 1 Claim. (Cl. 92—48.)

In a paper making machine, a pair of spaced lower rolls supported tangent to a pulp web produced on said machine, an upper roll above and laterally offset from said lower rolls, an endless foraminous belt passing around the three rolls, means for vertically adjusting each of said lower rolls, means for adjusting the upper roll to regulate the tension on said belt, suction means adjacent to the stretch of belt between said lower rolls, means for washing a stretch of belt between the upper roll and one of the lower rolls, and means for collecting and leading off the washing fluid.

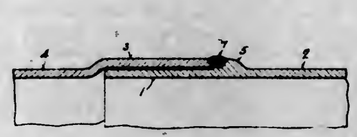


1,903,312. CORN CURE PACKAGE. BERTIE ELLIS, New York, N. Y. Filed July 11, 1931. Serial No. 550,091. 5 Claims. (Cl. 206—47.)



1. A corn cure package, comprising a bottle of liquid corn cure for initial application upon one's corns or the like, pads of corn cure for subsequent application, a carton with an open end engaging upon one end of said bottle and said pads being located between the bottle and the closed end of said carton, and means for bringing the pads to the open end of the carton upon removal of the bottle.

1,903,313. SCOTCH MARINE BOILER CONSTRUCTION. WILLIAM G. JOHNSON, Milwaukee, Wis. Filed Feb. 2, 1931. Serial No. 512,794. 7 Claims. (Cl. 122—149.)

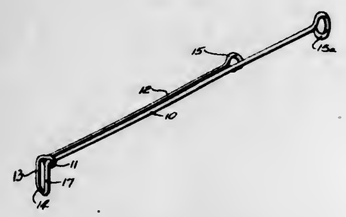


1. A boiler having a furnace tube and flue tubes, means for supplying fuel and air to said furnace tube, a secondary combustion chamber communicating with said furnace tube and said flues, a combustion arch of refractory material beneath and over which the gases from said furnace tube pass, said combustion arch being located within said secondary combustion chamber, and means for admitting air to said secondary combustion chamber.

1,903,314. WINDSHIELD HEATER. ARVID OSNBERG, Chicago, Ill. Filed Jan. 20, 1930. Serial No. 422,026. 4 Claims. (Cl. 219—19.)

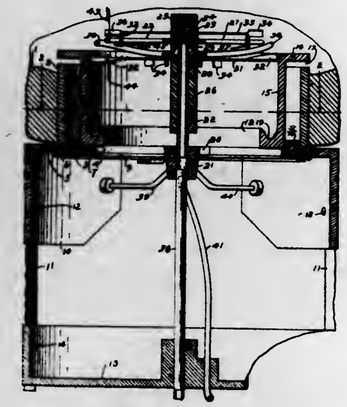
2. A heater of the character described comprising the combination, of a heating device having detachable electrical heating units, a recessed window frame providing a frame for enclosing said device, a window pane in said recessed frame, a pocket in said frame, an opening through a side of said frame and communicating with said pocket, said unit being adapted to be inserted through said opening and into said pocket, means for removably securing said device in place, and means for automatically making an electrical connection with said units and said frame on inserting said device in place and to form a portion of an electric circuit.

1,903,315. PIPE JOINT. ARTHUR W. PAIERE, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 15, 1929. Serial No. 378,330. 4 Claims. (Cl. 285—111.)



1. A pipe joint comprising a bell on one end of a section being joined, a spigot on another end of the other section being joined, said spigot being inserted in said bell and having a welding dam circumferentially thereof adjacent the end of the bell, a spacer provided between said welding dam and the end of the bell to determine the width of the welding groove, and welding metal deposited in the groove between the welding dam and the end of the bell.

1,903,316. COMBINATION POKER AND CLINKER TONGS. JOSEPH RITLEY, Cleveland, Ohio. Filed May 9, 1932. Serial No. 610,158. 1 Claim. (Cl. 294—11.)

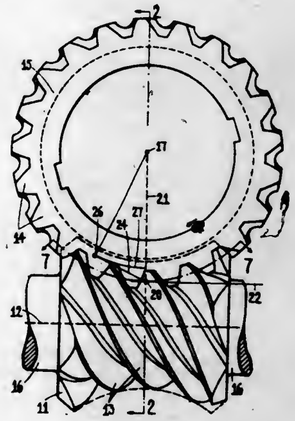


The combination with a poker having a bent end, of an attachment comprising a rod bent laterally to form a

loop through which the poker extends, the end of the rod beyond the loop being bent laterally to form a prong

arranged to cooperate with the bent end of the poker to form a tongs, the poker being rotatable in the loop to open and close the tongs by a pivotal movement.

1,903,317. BURNER. GUY B. TIBBOT, Santa Cruz, Calif. Filed Mar. 15, 1932. Serial No. 598,987. 11 Claims. (Cl. 158—77.)

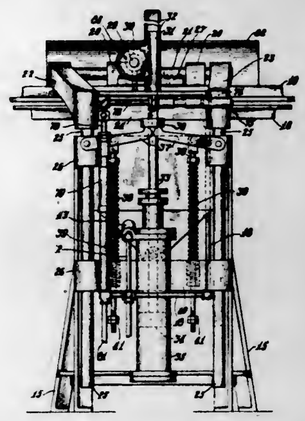


1. A burner of the character described comprising, a tubular member and supporting means therefor, a reaction wheel axially mounted to rotate freely therein, means for discharging fluid under pressure through the wheel to effect the rotation thereof, the wheel having vanes mounted thereon and disposed to move air toward the points of discharge of fluid from the wheel.

10. A structure of the character described comprising, the combination with a fire-box of an annulus seated therein, a base member engaging the annulus from below and forming a seat, a tubular member disposed upon the seat in spaced relation to the annulus and carrying a flange overlying the annulus in spaced relation thereto, an air passage communicating with the space between the tubular member and annulus, and a reaction wheel operatively mounted in the tubular member to discharge over said flange.

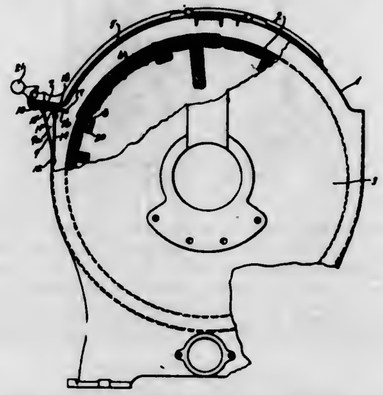
1,903,318. WORM GEARING. ERNEST WILDHABER, Brooklyn, N. Y. Filed Sept. 3, 1931. Serial No. 560,904. 23 Claims. (Cl. 74—41.)

1. Worm gearing, comprising two conjugate worm gears at least one of which has composite tooth surfaces, one component of said tooth surfaces corresponding to a mathematical surface of action which intersects a plane containing the axis of rotation and perpendicular to the axis of the mating worm gear in a curve, said curve extending



from the pitch point in a general direction inwardly towards the axis of rotation and sidewise towards the tooth ends of larger pressure angle.

1,903,319. LINER FOR RECEPTACLE CLOSURES. DANIEL M. GRAY, Wheeling, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed June 13, 1929. Serial No. 370,739. 2 Claims. (Cl. 91—68.)



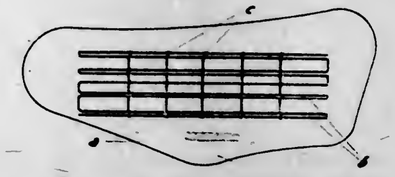
2. A liner for closures including a disc of paper of sufficient density to reduce to a minimum any permeation by a coating applied thereto, and a film of coating material applied to said disc, said material comprising an artificial polymerized vinyl resin treated with a plasticizing agent.

1,903,320. GARMENT PRESSING MACHINE. HARRY H. MCDERMOTT, Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 21, 1927, Serial No. 241,560. Renewed Nov. 11, 1930. 15 Claims. (Cl. 68—9.)

7. A press comprising a buck; a vertically reciprocating head over said buck; and means for first lowering and then laterally sliding said head; said means including a reciprocating element and independent connections between the head and said element operable successively during actuation of said element to effect the said movements of the head.

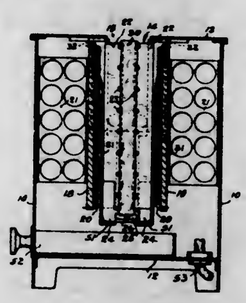
1,903,321. UNLOADING APRON AND DRAIN TROUGH FOR WASHERS. ALONZO D. STALEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1930. Serial No. 430,274. 4 Claims. (Cl. 68—18.)

1. Apparatus of the class described comprising, in combination with a washing machine including a tub having an opening therein and a door closure therefor and a rotatable drum within said tub having a door opening movable into registry with said tub opening and a door closure therefor, a hinged unloading apron mounted within the interior of said tub adjacent the lower edge of the door opening and adapted to be moved from an inoperative position to bridge the gap between said tub and said drum, and means permitting fluid flowing from treated goods being removed from said drum to drain back into said tub including a perforated member having a top portion forming substantially a continuation of said unloading apron when said apron is in bridging position.



1,903,322. MEASURING GAUGE. WARREN AMES, Waltham, Mass. Filed Aug. 16, 1928. Serial No. 299,960. 14 Claims. (Cl. 33—172.)

7. An instrument of the character described having, in combination, a casing, indicator mechanism comprising a reciprocating rack and a rack gear meshing therewith, said casing having an opening and a perforated screw-threaded nipple projecting exteriorly from said casing and aligned with said opening, said rack having a rod extending through said opening and nipple in spaced relation to the walls thereof, and an elongated guide bearing sleeve for said rod in screw-threaded engagement with said nipple.



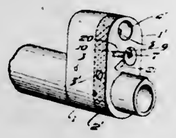
8. An instrument of the character described having, in combination, a casing, a nipple, said nipple carried by said casing at the exterior thereof, said nipple being exteriorly screw threaded and having a longitudinal perforation opening to the interior of said casing, a contact feeler rod in said casing projecting through said perforation of said nipple in spaced relation to the walls thereof, and an elongated guide bearing sleeve for said rod screw threaded on said nipple.

1,903,323. INSOLE. JAKOB BRÖDL, Munich, Germany. Filed Apr. 4, 1931, Serial No. 527,741, and in Germany Feb. 26, 1931. 3 Claims. (Cl. 36—71.)

1. An insole for feet to be orthopedically treated, comprising in combination a piece of leather cut to size and curved like an insole, and an element composed of longitudinal and transverse gut strings stretched on the concave side of said piece of leather, connected at their ends directly to said piece of leather and interconnected at their points of intersection and adapted to limit the depressing of the curved portion of the insole and to return said piece of leather into its initial curved shape when the insole is not loaded.

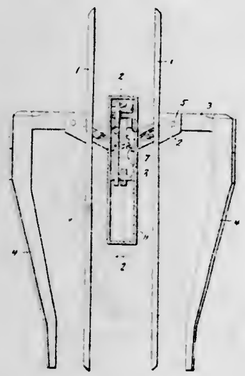
1,903,324. ELECTRIC BROILER. ALLEN BYRON CODLING, Seattle, Wash. Filed June 6, 1931. Serial No. 542,583. 10 Claims. (Cl. 53—5.)

1. In a broiler, a housing, two heating elements disposed in spaced apart parallel relation within said housing, a grill member of adjustable thickness movable into and out of said housing, movable guide members in the housing for receiving therebetween the grill member and movement equalizing devices connecting said movable guide members and compelling equal movement in opposite directions of the same.



1,903,325. PAPER COATING METHOD AND APPARATUS. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Filed Jan. 21, 1929. Serial No. 333,775. 12 Claims. (Cl. 91—68.)

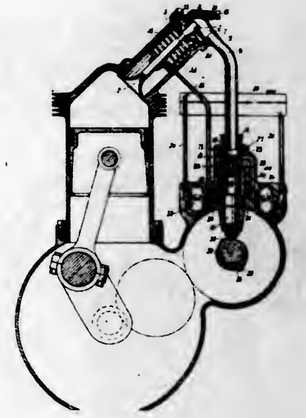
1. The improvement in coating paper characterized by applying to the surface of the paper a preliminary light coat of clay solution, air drying the same, at room tem-



perature while hanging up the sheet in folds, withdrawing the sheet from said folds and applying and brushing similar clay solution on the preliminary coated surface, and then drying the paper by heated air.

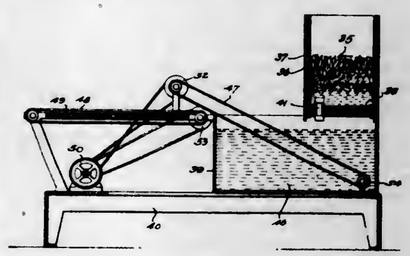
1,903,326. FRONT SIGHT FOR RIFLES. THEODORE B. CRAWLEY, West Point, Ky. Filed Jan. 27, 1930. Serial No. 423,799. 8 Claims. (Cl. 33—54.)

1. A front sight for firearms comprising a base having a sight aperture therein, an arm pivoted for movement within and transversely of the base and having a ring sight at its end of less diameter than said aperture adapted to be brought into axial alignment with the sight aperture with said arm at an angle to the vertical axis of the base to permit clear vision below the sight end of said arm.



1,903,327. LATCHING MECHANISM. ALVA L. KERR, Mansfield, Ohio. Filed Sept. 21, 1932. Serial No. 634,241. 2 Claims. (Cl. 292—164.)

1. Latching mechanism of the class described comprising a housing, a latch bolt having a portion located therein, a lever having an offset upper end of cam shape located in the housing, a pin and slot connection between the bolt and the lower end of the lever, a pair of oppositely arranged handle members having portions entering the housing, said portions having toothed ends, a pinion located in the housing and arranged between said ends and engaging the teeth thereof, each of said handle parts having a head portion for engaging the cam end of the lever for swinging the same when the head part is raised to move the latch bolt to released position, and a spring for normally holding the lever in a position with the latch bolt projected.

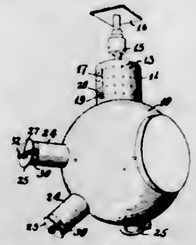


1,903,328. HYDRAULIC VALVE GEAR. WARREN NOBLE, Detroit, Mich. Filed Apr. 1, 1927. Serial No. 180,119. 17 Claims. (Cl. 123—90.)

1. In combination with a puppet valve, valve-closing means, valve actuating means comprising a closed hydraulic fluid casing to the interior of which the stem of said valve is exposed, timed mechanism imposing impulses on fluid in casing whereby said valve is actuated, a source of fluid pressure supply having a communicating passage to said casing, means closing said passage during activity of said

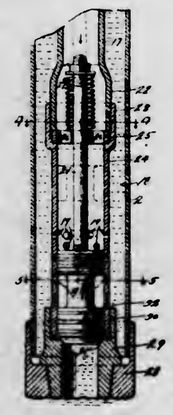
valve, a nonreturn relief valve opening from a region of air accumulation in said casing, and means for closing said relief valve.

1,903,329. METHOD OF PRODUCING LINOTYPE PELLETS FROM LINOTYPE SLUGS. ELMER E. BEARD, Olympia, Wash. Filed Nov. 21, 1929. Serial No. 408,775. 6 Claims. (Cl. 83—91.)



1. The method of melting used slugs of linotype metal and forming from the molten metal particles of shot-like or pellet form for reuse in the melting pot of the machine, which consists in melting the slugs in a container at a temperature above but close to the melting point of the metal, collecting from the metal the oil and other impurities carried thereby and disposing the same in the form of a coating over the metal to protect the same from oxidation during the melting action, and drawing off the molten metal and discharging drops of the same from the container substantially as rapidly as melted into a cooling bath through an air space of restricted depth so as to effect a rapid cooling and hardening of the drops.

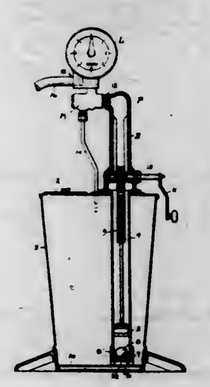
1,903,330. MULTIPLE DISPLAY LAMP. ALBERT M. YOUNG, Brooklyn, and WALTER POLLACK, Richmond Hill, N. Y. Filed Apr. 1, 1932. Serial No. 602,608. 10 Claims. (Cl. 240—10.)



4. A multiple electric display lamp, comprising a hollow casing having a tubular portion at the top, a support attached on the top and including a universal, a bracket within said tubular portion and having studs extended through longitudinal slots formed in said tubular portions, nuts upon said studs, a lamp socket mounted upon

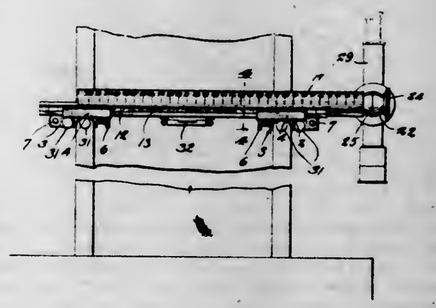
said bracket and in the lowered position of the bracket located within the center of said casing, a plurality of tubes with lenses extended through said casing radially with the center of said lamp when the latter is lowered, a mirror cover adjustably mounted upon the ends of each of the tubes, resilient means for holding said tubes in

various projected positions and catch fingers upon said bracket adapted to engage the peripheries of said tubes when the bracket is in its lowered position, each of said mirror covers being slidably mounted upon an arm, said arm being hingedly mounted upon the tube, and means for holding said cover in various adjusted positions along said arm.



1,903,331. LIQUID LIFT PUMP. PETER R. ALPHONSO, Longview, Tex., assignor to The Argent Corporation, Shreveport, La., a Corporation of Louisiana. Filed Mar. 26, 1932. Serial No. 601,392. 14 Claims. (Cl. 103—240.)

1. A well pump comprising a casing adapted to be disposed in a well, a valve carried by the lower end of said casing and moved to open position upon relief of fluid pressure within the well, a liquid discharge pipe disposed within the casing in spaced relation thereto thereby forming a chamber around the discharge pipe through which air may be forced downwardly, means whereby air forced downwardly through the casing around the discharge pipe will engage and seat the valve and will lift liquid within the casing and force the same upwardly through the discharge pipe.

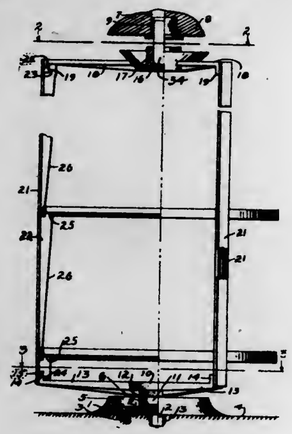


1,903,332. ATTACHMENT FOR DISPENSING AND MEASURING PUMPS. CHARLES J. BELLAR and CHARLES R. YIRAVA, Cleveland, Ohio. Filed Jan. 14, 1932. Serial No. 586,527. 6 Claims. (Cl. 221—95.)

1. An attachment for a liquid dispensing pump, comprising a body, a valve chamber within said body, inlet, outlet, and by-pass passages communicating with said valve chamber, a pressure operated piston valve shiftably arranged within said valve chamber controlling said inlet and outlet passage, a perforation in the end wall of said valve and a needle valve centrally mounted within

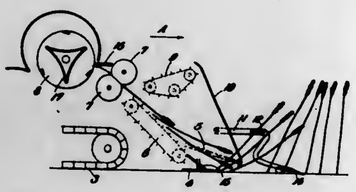
said chamber and co-operating with said perforation in the end wall of said piston valve for preventing communication of said by-pass passage and said inlet passage, when said outlet passage communicates with said inlet passage at predetermined pressures therein.

1,903,333. PLUMBING AND LEVELING INSTRUMENT. CHARLES BOTEL, New York, N. Y. Filed Jan. 24, 1931. Serial No. 511,034. 4 Claims. (Cl. 33—46.)



1. An instrument of the class described including an elongated base having a scale thereon graduated from the center to the ends thereof, means for detachably and adjustably connecting said base to either of two angularly disposed faces of an angle column or the like, a graduated bar adjustably mounted on the base, a telescope mounted for angular adjustment on the bar, and level indicating devices carried by the telescope and the bar, respectively.

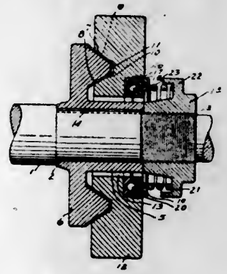
1,903,334. CABINET SHELVING. LEON E. DAMPIER, San Jose, and ROLY H. DAMPIER, San Mateo, Calif. Filed May 2, 1931. Serial No. 534,582. 2 Claims. (Cl. 211—144.)



1. In a shelf supporting frame, the combination of top and bottom supporting members having opposing flanges

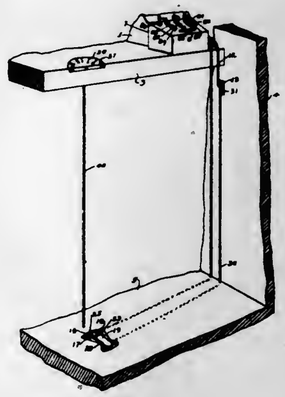
formed thereon equally distant from their centers, said flanges having opposed notches formed therein, and vertically disposed shelf supporting bars having interlocking

engagement with said flanges and notches, said bars having shelf supporting means, and shelves mounted on said means.



1,903,335. CANE HARVESTING MACHINERY. RALPH SADLEIR FALKINER, Melbourne, Australia, assignor to Falkiner Cane Harvester Corporation of America, New York, N. Y. Filed Feb. 28, 1929, Serial No. 343,516, and in Great Britain May 14, 1928. 8 Claims. (Cl. 56—60.)

1. In a cane harvesting machine, means for severing cane from the ground, mechanism for cutting the cane into pieces, conveying means to the rear of said severing means and adapted to feed the cane, with the stalks lengthwise of the machine, to the cutting mechanism, and means comprising gathering means in advance of severing means and a guiding member above and behind said severing means, said third-named means being constructed and arranged for causing the severed cane to be fed butts first to said conveying means.

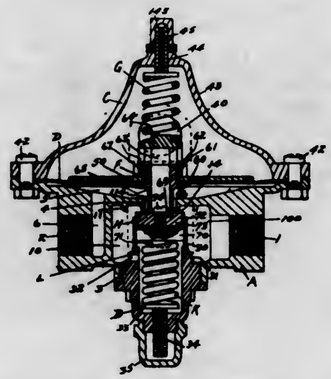


1,903,336. HARMONIC BALANCER. ALBERT F. FIFIELD, St. Catharines, Ontario, Canada. Filed Feb. 9, 1928. Serial No. 252,966. 5 Claims. (Cl. 74—6.)

1. In a vibration damper, in combination with a rotatable shaft, an annular fly wheel encircling the shaft but radially spaced therefrom, a clutch disk and a flanged collar both rigidly secured to the shaft, the clutch disk having an axially extending wedge shaped annular portion making wedging engagement with the fly wheel to dispose the fly wheel concentrically with the shaft and thrust means interposed between the collar flange and the fly wheel comprising a compression spring and a non-friction bearing adapted to resiliently hold the fly wheel and the said clutch part in wedging engagement whereby

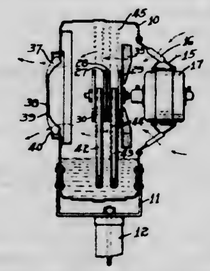
the fly wheel will be maintained concentric with the shaft and in spring pressed engagement with the clutch element.

1,903,337. MEANS FOR OPERATING ADDING MACHINES AND THE LIKE. LOUIS HAGB, San Jose, Calif. Filed June 8, 1931. Serial No. 542,902. 6 Claims. (Cl. 235—146.)



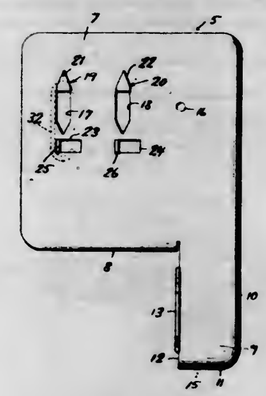
1. The combination with a machine having a bank of keys, of foot controlled mechanism adapted to selectively actuate said keys, said mechanism including a plurality of control elements, one for each key, disposed in an arc and both above and below a given horizontal plane, and a pedal element pivotally mounted at the center of the arc and swingable into engagement with each control element to render the same operative.

1,903,338. PRESSURE REGULATING AND RELIEF VALVE. BURCHARD E. HORNE, Andover, Mass. Filed Apr. 3, 1929. Serial No. 352,289. 6 Claims. (Cl. 50—23.)



1. In a pressure regulating and relief valve, the combination of a body having at its top a control valve stem chamber from which extends an outlet passage and a centrally disposed control passage to a regulating valve chamber including a strainer section and an enlarged flow section around it, a main fluid inlet, a fixed valve seat below and around the control passage and a plug hole opposite thereto; with a plug which engages and stops up the plug hole, said plug having an annular strainer recess and a tubular valve disc guide; a dome having a drain

outlet, said dome being attached to the top of said body; a diaphragm held at its rim between the dome and body; a movable tubular control valve stem centrally fixed to the diaphragm and which at one end forms a movable valve seat concentric with the fixed valve seat and extends loosely into the control passage and has at its other end



an outlet into the dome above the diaphragm; a relief pressure spring; a valve disc slidable in the disc guide and adapted to engage both valve seats; a disc seating spring adapted to cause the disc to engage the nearest one of the valve seats; means to adjust the strength of the relief pressure spring; and means to adjust the pressure of the disc seating spring.

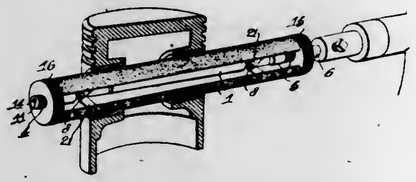
1,903,339. AIR CONDITIONER. THOMAS J. KEHOE, Perrysburg, Ohio. Filed Feb. 10, 1932. Serial No. 591,956. 2 Claims. (Cl. 261—29.)

2. An air conditioner comprising a receptacle adapted to contain liquid in the lower portion thereof and having opposed openings providing a substantially horizontal air passage through the receptacle, motor supported by said receptacle and having a shaft extending inside of said receptacle, a fan rotatable with said shaft for drawing air into said receptacle through one opening and expelling sand through the opposite opening, a pair of laterally spaced spray-forming plates rotatable with said shaft, a substantially cylindrical spacer between said plates, and an endless belt supported by said spacer and provided with a substantially flat spacer-engaging surface, the lower part of said belt extending into the liquid, the width of the belt being such that a slight space is provided between the sides of the belt and the adjacent plate so that liquid adhering to the underside of the belt is rolled laterally to the plates.

1,903,340. BRACKET. CHARLES MCCULLOUGH, Canonsburg, Pa. Filed May 4, 1932. Serial No. 609,199. 2 Claims. (Cl. 156—24.)

1. A combination bracket comprising a plate adapted to be secured to a vertical surface, curtain rod attaching means on that side of the plate nearest the position of the curtain, plate attaching means at the opposite side of the plate, and shade roller mounting means on the plate vertically alined with the securing means, said shade roller mounting means being located below the curtain rod attaching means and laterally offset with respect thereto.

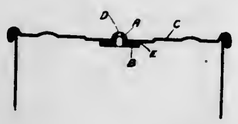
1,903,341. COMBINATION SLIDING SUBBASE AND SCRAPER FOR AUTO JACKS. WAYNE BRICE MITCHELL, Quebec, Quebec, Canada. Filed Mar. 16, 1932. Serial No. 599,267. 2 Claims. (Cl. 254—1.)



1. A device for the purpose described, comprising a platform having its front and rear ends flanged in the same direction and the said flanges being centrally notched, said plate having upstanding lugs adjacent the rear flange and having a roughened surface between the lugs and the front flange, a handle pivotally secured to the plate inward of the rear flange and swingable through the notches thereof, said handle comprising two hingedly supported sections, the outer section being formed with a lip extension to overlie the inner section, both handle sections, when swung together, designed to be received through the notch in the outer flange, and means carried by the outer handle section for latching the folded handles to the plate.

1,903,342. PROCESS FOR COATING AND SEALING RED CEDAR LUMBER TO PREVENT THE ESCAPE OF CEDAR AROMA. FRANK RABAK, Washington, D. C., dedicated to the Government and the People of the United States of America. Filed Aug. 2, 1930. Serial No. 472,742. 2 Claims. (Cl. 20—91.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

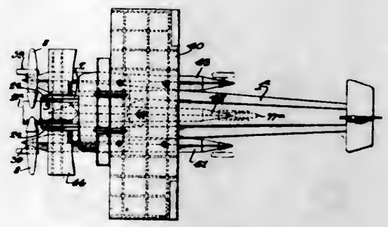
1. A lining for containers such as closets and chests consisting of cedar boards one surface of which is coated



with a transparent sealing substance comprising paraffin which substance is adapted to seal the pores of the wood against the escape of the volatile oil or aroma but at the same time leave the wood surface exposed to view, and the other surface of which is left uncoated whereby the volatile oil or aroma of the cedar may escape freely into the interior of containers lined therewith.

1,903,343. PINHOLE GRINDING OR HONING TOOL. WILLIAM PAUL ROBERTS, Greensburg, Ind. Filed Feb. 17, 1932. Serial No. 593,608. 13 Claims. (Cl. 51—184.1.)

1. A hone of the character stated comprising a mandrel having threaded portions spaced apart, a threaded abutment member on each of said threaded portions, abrasive carrier bars, sets of links and pivot pins for mounting said carrier bars on said mandrel, said threaded abutments arranged to abut the ends of said bars and adjust and secure said bars in their adjusted positions, and abrasives carried by said bars.

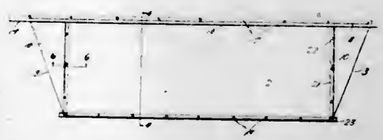


1,903,344. VALVE. LORE A. ROGERS, Washington, D. C., dedicated to the free use of the Public. Filed Oct. 10, 1931. Serial No. 568,159. 2 Claims. (Cl. 220—44.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A one-way valve comprising a dome-shaped nipple projecting through an annular opening formed in a container and consisting of pliable rubber having a V-shaped slit with its apex on the convex side of said dome, and its opposite end opening into the interior of the container, said dome-shaped nipple having an annular collar affixed to said container.

1,903,345. FLYING MACHINE. FRANK STEINMANN, Sr., De Soto, Mo. Filed Feb. 18, 1932. Serial No. 593,808. 6 Claims. (Cl. 244—14.)

1. In a flying machine in combination with the main sustaining plane and cabin, a pivoted crosshead having a lubricating housing, a pivoted motor shaft mounted on said crosshead, a main propeller of variable pitch type mounted on said motor shaft, a stabilizing wing affixed to the underside of the crosshead, an extension motor shaft located in the interior of lubricating housing, means to move the pivoted crosshead by means of cables fixed to winding drums adapted to shift the pivoted motor shaft in conjunction with main propeller in the desired direction of ascending or descending when in the air, detachable circular propeller guides adapted for inspecting power plant and the interior of lubricating and propeller shaft housing fastened to the forward end of cabin, means for shifting the guides relative to the forward end of cabin, means in the interior of lubricating housing for shifting variable propeller blades including encased therein a plunger pivoted to toothed levers for varying the pitch of propeller blades, ball bearings affixed for extension motor

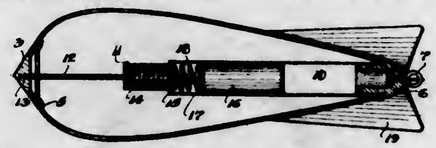


shaft in the interior of lubricating crosshead housing, adjusting rod having a threaded end connected to the plunger and extending to a pilot's operating hand wheel for manipulating the speed of machine and reversing the angle of propeller blades.

1,903,346. COMPOSITION FOR REFINISHING ENAMELED SURFACES. GOTTLEB WELSCH, Sheboygan, Wis. Filed Sept. 17, 1928. Serial No. 306,619. 2 Claims. (Cl. 51—280.)

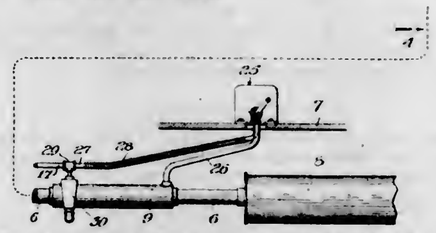
1. The process of eradicating blemishes from the surfaces of enameled metal ware comprising burnishing the surface of the blemished portion by the burnishing effect of a wet compound containing predominating portions of an abrasive substance such as quartz, and a glossing substance such as zinc flour rubbed on to the blemished portion until the mixture has become dry through heat developed incidental to burnishing.

1,903,347. MORTAR BOX. JOSEPH A. WHELAN, Greenwich, Conn. Filed Aug. 20, 1931. Serial No. 558,219. 1 Claim. (Cl. 220—1.)



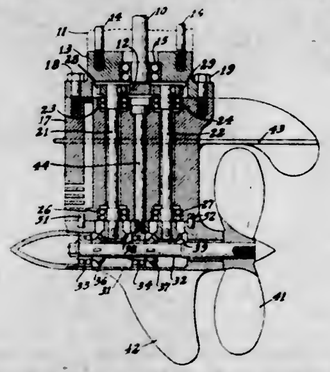
A sheet metal mortar box, the same embodying an elongated, rectangular bottom portion channeled along its lateral margins, elongated, rectangular side walls locked at their lower margins within the said channels of the bottom portion and flared outwardly from bottom to top, the upper margins of the side walls being reinforced, end walls flared from bottom to top to correspond with the flared side walls, the said end walls having laterally disposed triangular wings connected with the end margins of the side walls and having their lower margins interfolded with the extended margins of the bottom portion, and a bottom rail extended along medially from end to end beneath the bottom portion and secured at its ends to the said interfolded margins of bottom portion and end walls.

1,903,348. AERIAL BOMB. GROVER C. ANDERSON, Gateway, Mont. Filed June 18, 1932. Serial No. 617,940. 5 Claims. (Cl. 102—2.)



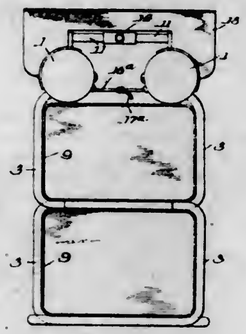
1. The combination in a bomb as described with a frangible shell having a cap, of a longitudinally extending

interior barrel having a cartridge chamber formed as an extension thereof, a spring-supported plunger in the barrel having a firing pin for contact with a cartridge in the



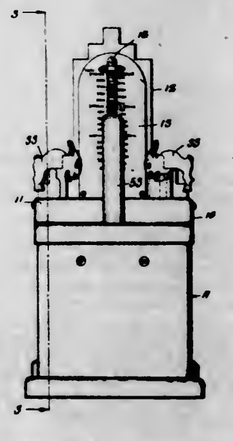
chamber, and a closure plug for the rear end of the bomb, and coacting means on the plug and barrel for joining these parts.

1,903,349. HEATING SYSTEM FOR MOTOR VEHICLES. JOHN H. GOULD, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Oct. 3, 1927. Serial No. 223,541. 1 Claim. (Cl. 237—12.3.)



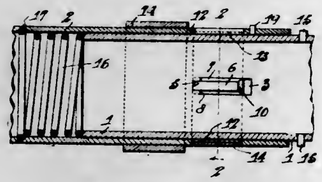
The combination with a motor vehicle of the type having a body, a liquid cooled internal combustion engine, and a liquid cooling system and exhaust pipe for the engine, of a heating system and exhaust pipe for the engine, of a heating system for the vehicle comprising a steam radiator mounted on the body and disposed to heat the interior thereof, a steam generator carried by the vehicle below the radiator and connected with the exhaust pipe to be heated by the exhaust gases of the engine passing through said pipe, means for supplying liquid to the generator from the cooling system for the engine, supply and return conduits directly connecting the radiator to the generator, the supply conduit connecting the outlet of the generator to the inlet of the radiator and the return conduit connecting the outlet of the radiator to the inlet of the generator, and a trap in the connection between the return conduit and the generator to provide a liquid seal at the inlet to the generator to cause the steam produced in the generator to flow in a direction toward the radiator.

1,903,350. TRANSMISSION FOR OUTBOARD MOTORS. JOHN P. LANDRUM, Birmingham, Ala. Filed June 20, 1932. Serial No. 618,252. 4 Claims. (Cl. 115—17.)



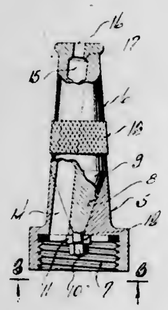
1. In an outboard motor transmission, a motor shaft, a propeller shaft, a pair of parallel vertically disposed intermediate shafts arranged one behind the other in the direction of thrust of the propeller shaft, gear means between the motor shaft and the upper end of the intermediate shafts disposed above the water line, and other gear means between the intermediate shafts and the propeller shaft.

1,903,351. EVAPORATOR. CARL E. L. LIPMAN, Chicago, Ill., assignor to Lipman Patents Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 27, 1931. Serial No. 518,745. 7 Claims. (Cl. 62—126.)



1. In an evaporator, a pair of unitary sections, each section comprising a header and a plurality of spaced refrigerant tubes extending therefrom and terminating at both ends in said header, the tubes of one section being interleaved with the tubes of the other section to form an enclosure constituting a refrigerating chamber and in such a manner that the tubes of each section bound at least two sides of said chamber.

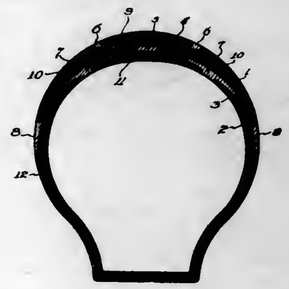
1,903,352. HANDGRIP TESTING MACHINE. GEORGE M. RAMSEY, Amarillo, Tex. Filed June 26, 1931. Serial No. 547,099. 2 Claims. (Cl. 272—68.)



1. In a machine of the character described, a runner, movable images supported for butting action and adapted to perform opposite each other, mechanism operable by the runner to automatically effect the performance of the images, means releasable by a coin to permit actuating the runner and constituting grips, and means for locking the last named mechanism when the runner is in lowermost position.

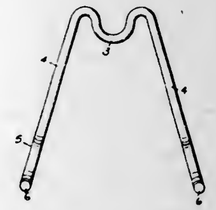
1,903,353. MEANS FOR HOLDING TOGETHER PARTS HAVING TELESCOPIC ENGAGEMENT. CHARLES LEO WINGARD, Portland, Oreg. Filed Nov. 17, 1930. Serial No. 496,268. 19 Claims. (Cl. 285—174.)

1. Means for securing the joints of male and female members together, which means comprises a spring band carried by one of said members, a locking member cooperating with said band, each said male and female member having provisions in part to receive said locking member whereby said locking member will hold said joint against separation, said members being arranged to be brought together and locked by said locking member upon insertion of the male member into the female member with rectilinear movement along the axes of the members, and means which upon relative rotation of said male and female members on their axes will cause said locking member to become released to provide for separation of said male and female members when desired.



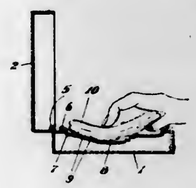
1,903,354. NOZZLE. OSCAR E. BACKUS, Milwaukee, Wis. Filed Nov. 14, 1929. Serial No. 407,162. 6 Claims. (Cl. 299—139.)

1. In a nozzle of the character described, a member having a tapered bore axial to the longitudinal axis of the nozzle as a whole, a second member having a correspondingly tapered portion receivable in said bore to be rotatable with respect to the first-mentioned member about said axis of the nozzle, each of said members having straight bores eccentric to the axis of the nozzle and adapted to be aligned when the members are in a predetermined relative position, and the second member having means for spreading liquid issuing therefrom.



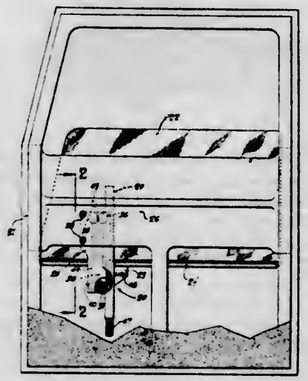
1,903,355. PUNCTURE SEALING FLUID CONTAINER. JOSEPH A. BERGER, Chicago, Ill. Filed Oct. 21, 1929. Serial No. 401,258. 2 Claims. (Cl. 152—13.)

1. A pneumatic member for wheels comprising a tubular body having concentric peripheral tread chambers, a pair of lateral chambers partly interposed edgewise between said tread chambers, each of said chambers containing plastic sealing material, said chambers being arranged to provide three concentric layers of sealing material over



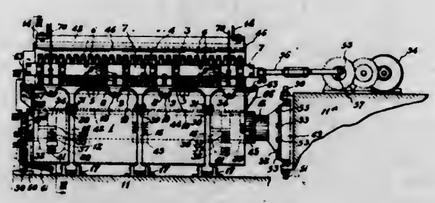
the greater part of the tread portion of said member, and two concentric layers of sealing material at the portions of said member bordering the tread portion.

1,903,356. REENFORCE CHAIR. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Jan. 31, 1931. Serial No. 512,550. 1 Claim. (Cl. 72—122.)



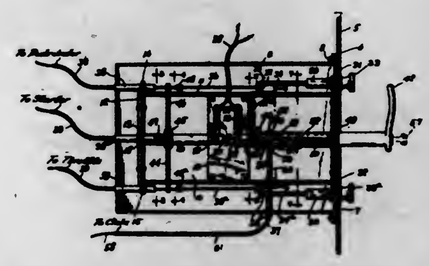
A reenforce chair comprising a U-shaped seat member having its arms extended into downwardly diverging legs, the seat member, arms and legs occupying substantially the same vertical plane, said legs terminating in similarly facing U-shaped extensions, the bottom arms of said extensions being disposed horizontally at right angles to the legs constituting feet and projecting at each side of the vertical plane of the legs.

1,903,357. CONTAINER. WILLIAM FRIEDMAN, New York, N. Y., assignor to Lupé, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 17, 1927. Serial No. 233,784. 9 Claims. (Cl. 132—82.)



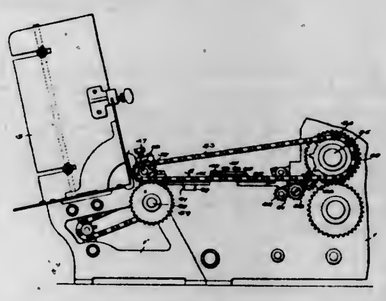
1. A container for powdered substances having a dispensing retainer, said retainer having a plurality of depressible resilient segments, the depression of which provides crevices therebetween substantially in the direction of depression for dispensing the powdered substances within the container.

1,903,358. WINDOW REGULATOR. STANLEY W. NICHOLSON, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed June 24, 1931. Serial No. 546,487. 11 Claims. (Cl. 268—126.)



1. In a device of the character described, a frame, a window mounted in said frame for movement in the plane thereof, a window regulator mounted in said frame having a part thereof adjustably connected to said window, means including a rack and a pin of spaced pinions alternatively engageable with said rack to move said window, and a link connected at the opposite ends thereof to said pinions whereby one pinion is driven from the other pinion.

1,903,359. METHOD OF AND APPARATUS FOR ELECTRIC WELDING AND HEATING OF METALS. FRANK L. SESSIONS, Lakewood, Ohio. Filed Aug. 26, 1929. Serial No. 388,548. 38 Claims. (Cl. 219—6.)

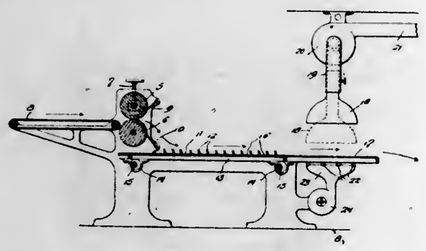


10. The method of electrically welding together an open seam in metal which consists in causing the opposite surfaces of the seam to be pressed together, causing electric currents to be induced in the metal and to flow across said seam in spaced-apart zones, simultaneously causing relative reciprocating movements of said metal and said zones and simultaneously causing progressive, relative traversing movement of said zones and said metal parallel to said reciprocating movements.

1,903,360. INTERNAL COMBUSTION ENGINE STARTER MECHANISM. HAROLD NEWTON WILL, Kettle Falls, Wash. Filed Mar. 16, 1931. Serial No. 523,086. 14 Claims. (Cl. 123—179.)

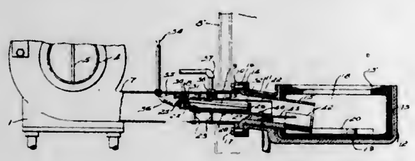
1. A structure of the type described comprising rotatable plunger means for actuating the starter, the ignition switch, the throttle and the spark distributor, simultaneously with a single axial movement of the means, said single operating means being also rotatable to actuate the carbureter choke, by a movement continuous with the movement entailed in actuating said ignition switch, said starter switch, said throttle, and said spark distributor.

1,903,361. FEEDING DEVICE. CLAUDE L. POST, Chicago, Ill. Filed Aug. 29, 1928. Serial No. 302,833. 6 Claims. (Cl. 271—49.)



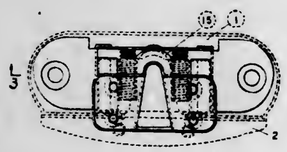
1. Envelope feeding mechanism comprising envelope advancing means, a frame providing a support for said advancing means, means for driving said advancing means, and means for supporting said frame and providing means for adjusting said advancing means relative to said drive means so as to permit any desired variation in feeding.

1,903,362. ROASTED COFFEE PRODUCT AND METHOD OF MAKING SAME. RONALD B. MCKINNIS, Pittsburgh, Pa., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed July 21, 1932. Serial No. 623,918. 12 Claims. (Cl. 99—11.)



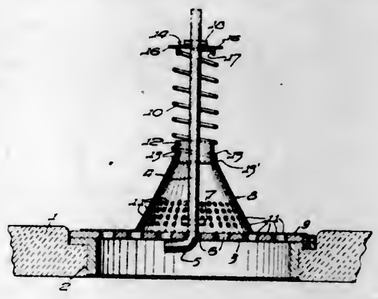
11. A method of treating roasted coffee consisting in subjecting the coffee bean after roasting to a tempering agent and subjecting the roasted coffee to pressure for breaking the bean and crushing the cells and expelling the greater portion of the gas therefrom and for reducing said coffee to the form of thin flakes of such uniform thinness as to render the components therein substantially equally accessible to an extracting liquid.

1,903,363. APPARATUS FOR UNHAIRING SKINS. ELIJAH BRAUER, Jersey City, N. J. Filed Feb. 10, 1932. Serial No. 592,097. 6 Claims. (Cl. 149—8.)



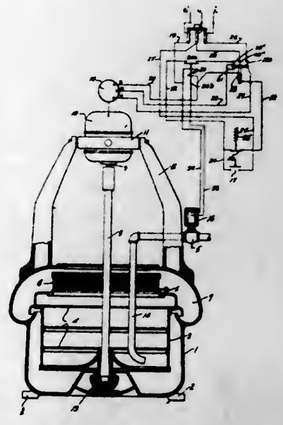
1. In an apparatus for unhairing skins, means for loosening and partially detaching the hairs, and means to subsequently subject the skins to a shaking and combing action to complete the detachment of the hairs.

1,903,364. OIL BURNER. WINFIELD S. GRANT and FRANCIS H. SHOOP, Detroit, Mich. Filed May 20, 1930. Serial No. 454,127. 10 Claims. (Cl. 158—28.)



8. An oil burner including an air supply conduit, a fire pot attached thereto having an inlet passage, a separate nozzle extending through said passage and secured to said conduit and fire pot at the junction thereof, an absorbent pad at the discharge end of said nozzle, fuel igniting apparatus in the path of said air current, a fuel inlet for feeding fuel to said apparatus, and means surrounding said apparatus for collecting fuel supplied thereto and conveying it to said pad.

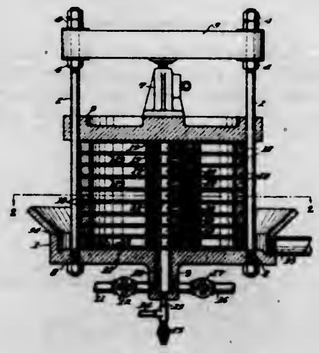
1,903,365. COMBINATION DOVETAIL AND DOOR BUMPER. HOWARD B. HASKINS, Highland Park, and EMORY GLENN SIMPSON, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 8, 1931. Serial No. 549,448. 18 Claims. (Cl. 16—86.)



1. A combined dovetail and bumper adapted for use with a vehicle door comprising in combination male and female members having correspondingly formed sides, a coil spring for yieldingly cushioning in and out movement of the said female member, parallel guide surfaces for guiding the in and out movement of said female member, and a rubber block for yieldingly cushioning up and down movement of the said female member whereby the said members are free to float in a plane normal to the plane of the door.

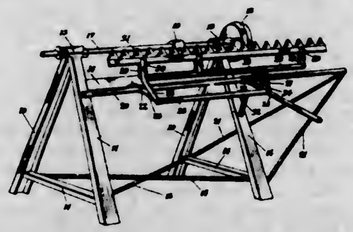
1,903,366. DETACHABLE SINK STRAINER. CLIFFORD MERCIER and FRED DIETRICH, Lowell, Mass. Filed Mar. 10, 1932. Serial No. 598,064. 7 Claims. (Cl. 4—292.)

1. An auxiliary strainer for kitchen sinks, comprising a rigid pin adapted to be mounted on a sink strainer, said pin having a smooth shank, an auxiliary strainer element slidable along said pin, and cooperating means between said auxiliary strainer and smooth shank for mounting said auxiliary strainer element on said pin and dismounting it therefrom while the pin remains in place on the sink strainer.



1,903,367. SAFETY DEVICE FOR PAPER PULP EXTRACTORS. LEMUEL V. REESE and GEORGE W. JOHNSON, Cincinnati, Ohio, assignors to The American Laundry Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 24, 1931. Serial No. 517,881. 5 Claims. (Cl. 233—45.)

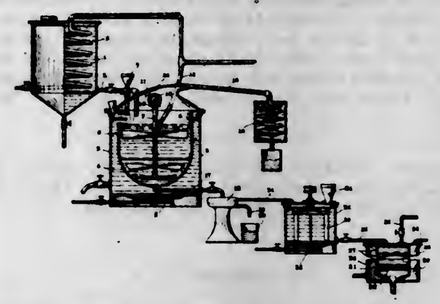
1. A centrifugal extractor for liquid materials comprising, a rotatable basket, a driving motor therefor, a normally closed valve controlling the supply of liquid material to the basket, controlling and operating means for said motor including a device sensitive to variations in motor speed during its acceleration, and connections therefrom to said valve arranged to open the same when the motor speed reaches a predetermined value.



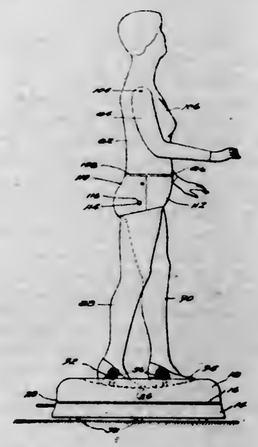
1,903,368. FILTER PRESS. FRANCIS E. SYMONS and FRANK M. COWGILL, Columbus, Ohio, assignors to Ralston Steel Car Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 17, 1932. Serial No. 599,470. 3 Claims. (Cl. 210—188.)

1. In a filter press, a plurality of juxtaposed frame members, each of said members being provided with a plurality of relatively non-communicating compartments adapted to contain a filtering medium, there being individual fluid supply ports leading to each of said compartments from a common source of fluid supply, means for

retaining said members in assembled relationship, and filtering pads disposed between said members and separating said compartments.



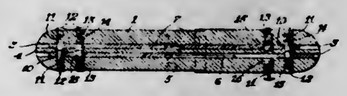
1,903,369. SICKLE GRINDER. JACK BROWN and WILLIAM F. REUTER, Otoe, Nebr. Filed Dec. 31, 1930, Serial No. 505,785. Renewed Aug. 31, 1932. 3 Claims. (Cl. 51—222.)



1. In a sickle grinder, a main frame having a grinder shaft journalled thereon, a support on said main frame positioned in parallelism with said grinder shaft, a frame pivotally and slidably secured to said support, a sickle carrying frame pivotally connected to said pivoted frame, said sickle carrying frame being provided with clamps for securing a sickle thereto, a handle projecting from said pivoted frame, stops on said main frame and on said handle for maintaining said sickle carrying frame in inoperative position, and an additional stop on said handle for engaging said sickle carrying frame when raising said handle to operatively position said sickle carrying frame.

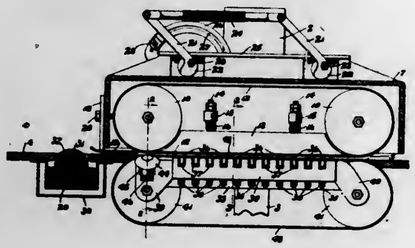
1,903,370. PROCESS FOR RECLAIMING OILS. JAMES STORMONTH, Epping, New South Wales, Australia. Filed Sept. 14, 1932, Serial No. 633,119, and in Australia Aug. 12, 1931. 4 Claims. (Cl. 196—16.)

2. A process for rejuvenating used mineral lubricating oil comprising the following steps: heating the oil and removing a part of the impurities therefrom by gravitational settling out; mixing the oil with a fluid reagent comprising castor oil blended with about 10% of mineral oil of high specific gravity at a temperature of about 160° F. with which it will not blend except at high temperature; heating the resultant mixture and subjecting it to superheated steam while being stirred to drive off diluent material of no lubricating value; adding about 3% of an element of the trimethanolamine type for the purpose of assisting subsequent separation of the oil from the re-agent; cooling the mixture to about 70° F., separating the oil from the re-agent and deleterious matters by centrifuging; adding decolorising material; and passing the resultant mixture through a straining medium to thereby clarify the oil.



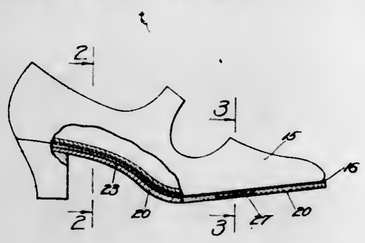
1,903,371. MECHANICAL FIGURE. JAMES G. CONNOR, Kansas City, Kans., assignor to The Animated Roboquin Display Company, a Corporation of Missouri. Filed May 18, 1931. Serial No. 538,114. 6 Claims. (Cl. 223—18.1.)

1. A mechanical figure comprising a torso; arms pivotally carried by said torso; legs pivotally mounted on said torso; a turntable having carriage adapted to serve to support said figure; means to rotate said turntable; means operable, as said turntable is rotated to oscillate said legs in opposite directions and relative to said torso; and means actuated by one of said legs to move said arms in opposite directions.



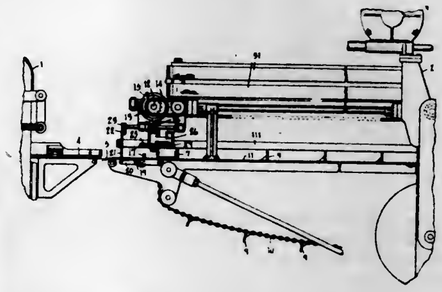
1,903,372. KEY HOLDER. DANIEL COPELL, Atlantic City, N. J. Filed Jan. 20, 1932. Serial No. 587,768. 3 Claims. (Cl. 59—96.)

1. A key holder comprising a body provided with longitudinal slots, a partition plate between the slots, a spring centrally fixed in the slots adjacent to the bottom thereof



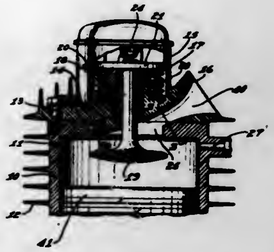
and having oppositely extending arched arms, keys designed to be received in the slots and having their head portions provided each with a pair of spaced round openings, and spring influenced dogs having their confronting ends rounded, movable through the sides and into the partition of the body to pass through the openings in the key head and to afford respectively pivots and latches for the keys, and each of said dogs having its outer end provided with a button head that normally hugs the sides of the body.

1,903,373. VENEER JOINING MACHINE. ALFRED A. DENNIS, Grand Rapids, Mich. Filed Feb. 10, 1930. Serial No. 427,407. 11 Claims. (Cl. 144—279.)



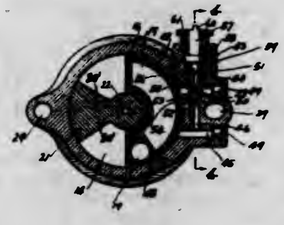
1. A machine of the class described comprising, a horizontal table having an elongated slot therein, two endless belts mounted on spaced apart rollers below said table and having the upper runs thereof located in said slot in the table so as to be flush with the upper side of the table, said belts being spaced a short distance apart, heating means extending between the rollers under the upper runs of said belts, a second pair of endless belts mounted over the table on spaced apart rollers with their lower runs spaced a short distance above the upper runs of the lower belt, said pair of upper belts being lengthwise spaced a short distance apart, heating means above the lower runs of the upper belts and extending between the rollers on which they are mounted, means located on the table in front of the belts for simultaneously gluing adjacent edges of two veneers manually moved over the table to said belts, said veneers having their glued edges contacting when engaged and carried by said belt over the table, the joint formed by said glued edges being in a vertical plane passing through the spaces between said upper and lower pairs of belts.

1,903,374. METHOD OF SHOE MAKING. THOMAS J. CUTHBERT, Weymouth, Mass., assignor to The Stetson Shoe Company, Inc., Weymouth, Mass., a Corporation of Massachusetts. Filed May 24, 1930. Serial No. 455,158. 3 Claims. (Cl. 12—142.)



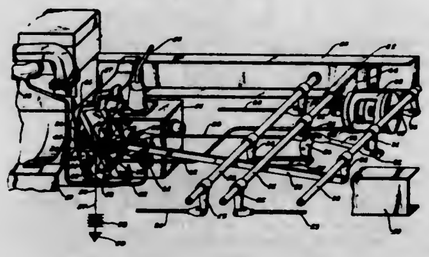
2. The method of making shoes of the Goodyear welt type, which includes lasting and welting the shoe, associating therewith an outsole having its shank portion trimmed to substantially its final outline and molded into approximately its final shape, and attaching the edges of said shank portion to the welt in close proximity to the upper solely by adhesive.

1,903,375. CONVEYER MECHANISM. CARL LITTLEFIELD, Battle Creek, Mich., assignor to Battle Creek Bread Wrapping Machine Company, Battle Creek, Mich. Filed Mar. 12, 1932. Serial No. 598,492. 19 Claims. (Cl. 198—20.)



1. In an apparatus of the class described, the combination with a conveyer way, of an endless conveyer provided with flights operatively associated with said way for propelling articles along the way, a feed table disposed at the front end of said conveyer way, a delivery table disposed to deliver to said feed table and provided with guide members for supporting and guiding the articles as they are delivered to said feed table, transfer means operatively associated with said feed table and comprising oval rotary grippers having resilient facings, rotatably mounted arms on which said gripper members are rotatively mounted disposed so that the grippers engage the ends of the articles on said feed table and deliver the same to said conveyer way, stationary gears, said grippers having pinions meshing with said gears whereby said grippers are simultaneously given a planetary and rotating movement upon the actuation of said arms, driving means for said arms including a rotatable slip friction drive member, a tappet for releasing said slip friction drive member at a predetermined point in its rotation, and trip means for said tappet controlled by the articles delivered to said table.

1,903,376. INTERNAL COMBUSTION ENGINE. HERMANN I. A. DORNER, Hanover, Germany, assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 19, 1931. Serial No. 576,122. 5 Claims. (Cl. 123—79.)

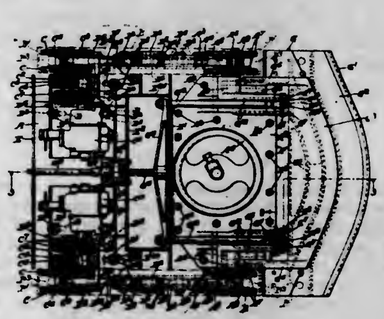


1. In an internal combustion engine, a cylinder, an inwardly opening valve in the cylinder head, and an elliptical air inlet passage through the head controlled by said valve, said elliptical passage being of Venturi form and extending tangentially of the cylinder and obliquely to the axis of said valve.

1,903,377. HYDRAULIC SHOCK ABSORBER. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 29, 1929. Serial No. 366,975. 4 Claims. (Cl. 188—89.)

1. In a hydraulic shock absorber, a casing structure having a fluid containing working chamber, a piston in the working chamber, said casing structure having a passage establishing communication between portions of the chamber on opposite sides of the piston, an adjustable valve member screwed into the casing wall forming the passage and cooperating therewith to regulate the flow of fluid therebetween, key means carried by the casing for adjusting the position of said member, and a clamping member for securing the key means in a stationary relation with the valve member and the casing.

1,903,378. COMBINATION CLUTCH AND BRAKE CONTROL MECHANISM. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 1, 1929. Serial No. 336,755. 15 Claims. (Cl. 192—13.)

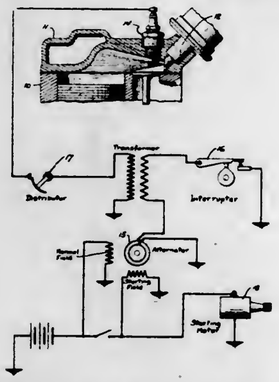


1. In a motor vehicle, the combination with a brake and a clutch, of means for operating the clutch, means for operating the brake, and means actuated by the motor for operating the clutch and brake concomitantly by movement of the clutch operating means only.

1,903,379. HANGING DOOR. BICKNELL HALL, Gloucester, Mass. Filed Dec. 10, 1929. Serial No. 415,205. 9 Claims. (Cl. 16—164.)

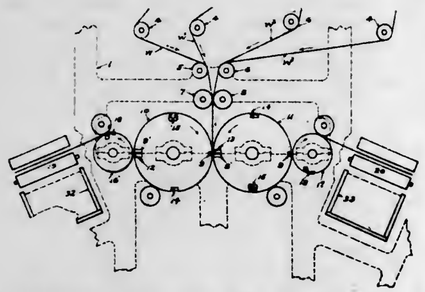
1. Means for hinging a closure to swing about an exterior axis comprising a pair of adjacent toggles, each toggle having a central pivot which produced intersects said axis and terminal pivots which revolve about said intersection, said toggles being oppositely arranged.

1,903,380. ENDLESS TRACK VEHICLE. HENRY H. TALBOTT, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Feb. 12, 1930, Serial No. 427,736. Divided and this application filed Nov. 21, 1930. Serial No. 497,087. 10 Claims. (Cl. 180—9.1.)



1. In a movable support for machinery and the like, means for moving said support across a supporting surface, including endless tracks, pulleys about which said tracks pass, a separate motor means for each track associated with one of the pulleys about which the track passes, a driving connection interposed between each said motor means and said pulley, and means for adjusting each said motor means, driving connection and pulley as a unit in relation to said movable support.

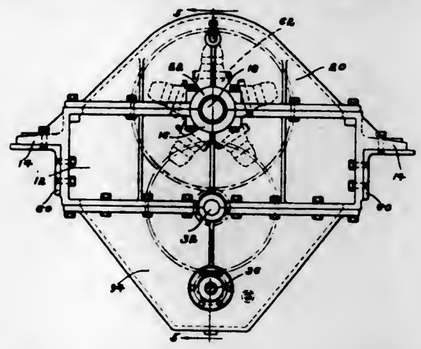
1,903,381. INTERNAL COMBUSTION ENGINE. HARRY E. KENNEDY, Berkeley, Calif. Filed Sept. 23, 1932. Serial No. 634,497. 13 Claims. (Cl. 123—32.)



1. A method of combustion used in starting and operating an internal combustion engine which comprises fully

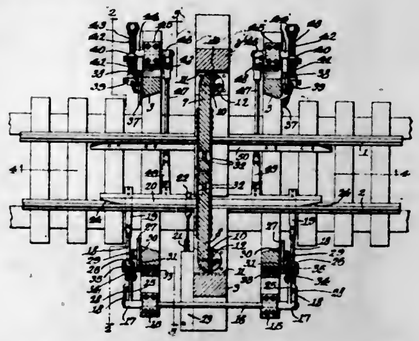
charging the cylinder thereof with air drawn from the atmosphere during the intake stroke, injecting unvaporized fuel into the cylinder, creating a high tension and high energy arc in the cylinder prior to commencement of the

injection and terminating approximately coincident therewith, said arc being of sufficient intensity to create sufficient energy in the cylinder to ignite the unvaporized fuel during the injection thereof.



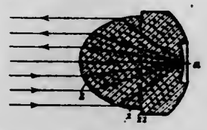
1,903,382. FOLDING MECHANISM. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 11, 1932. Serial No. 598,144. 8 Claims. (Cl. 270—63.)

8. In a folder, the combination of means for forwarding and associating a plurality of webs at press speed, a pair of folding cylinders operating at press speed and having means for severing the webs into product lengths, a pair of chopping blade folders, a pair of intermediate transfer cylinders acting alternately to transfer products from the folding cylinders to the chopping blade folders, means for driving the transfer cylinders at a lower peripheral speed than the folding cylinders, and means for registering the products for the second fold.



1,903,383. CONVEYER DRIVE MEANS. VICTOR H. WINQUIST, Seattle, Wash., assignor to Mill Engineering and Supply Company, Seattle, Wash., a Corporation of Washington. Filed June 13, 1931. Serial No. 544,276. 8 Claims. (Cl. 74—7.)

1. A log haul drive means consisting, in combination, of a central housing member, having outstanding support brackets; an upper housing member; a lower housing member; a main shaft journaled in bearings formed half in each of the central and upper housing members and disposed in the vertical axis of said members; a chain drive sprocket secured to said main shaft, having a hub, a plurality of tooth bases formed as part of said hub and having radially disposed tooth recesses and tangential key receiving openings; sprocket teeth, having chain bearing shoulders, adapted to seat in the tooth recesses; a taper key adapted to secure the teeth in the recesses; means adapted to space the teeth from the tooth bases and permit variations of the sprocket pitch diameter; a sprocket shaft gear secured to said main shaft; an intermediate shaft disposed directly below said main shaft; and secured between the central and lower housing members; a bushing pinion journaled on said intermediate shaft and adapted



to drive said sprocket shaft gear; an intermediate gear secured to said bushing pinion; a drive shaft disposed directly below the main shaft and journaled in bearings secured within the lower housing member; a drive pinion secured to the drive shaft adapted to drive the intermediate gear; a plurality of webs formed in the upper and central housing members and radially disposed from the main shaft bearings; a vertical web connecting the main shaft bearing and the intermediate shaft supports and a vertical web connecting the intermediate shaft supports and the drive shaft bearings.

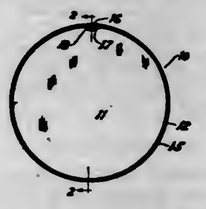
1,903,384. MINE DOOR. BEE COOKE, Davy, W. Va. Filed July 8, 1932. Serial No. 621,498. 3 Claims. (Cl. 246—299.)

1. In a device of the class described, a track, a car-operated member disposed adjacent to the track, a frame disposed adjacent to the track, a door hinged to the frame and cooperating with the track, the door being disposed in the path of a vehicle on the track, a keeper on the door, a latch movably mounted on the frame and engageable with the keeper to hold the door open, the door being freely movable with respect to the latch, whereby the door may be bunted open, to bring the keeper into engagement with the latch, by engagement with a vehicle moving along the track, and mechanism connecting the car-operated member with the latch for moving the latch into the path of the keeper, said mechanism embodying means for holding the latch yieldably in the path of the keeper, whereby the latch may yield and engage the keeper when the door is opened, means for actuating the car-operated member, to disengage the latch from the keeper when the car is clear of the car-operated member, and means for then closing the door.

1,903,385. REFLECTING UNIT. SIGGE SCHILLER, Elisabeth, N. J., assignor to Traffic Signs & Signals, Inc., Paterson, N. J., a Corporation of Delaware. Filed Sept. 19, 1930, Serial No. 483,023. Renewed Feb. 13, 1933. 4 Claims. (Cl. 88—1.)

1. A reflecting unit including, with a lens having a convex and substantially elliptical refracting surface, a reflecting medium back of said surface having a portion thereof arranged and formed to reflect rays refracted by one portion of said surface and another portion thereof set relatively back and lateral of its first portion and arranged and formed to reflect rays refracted by a portion of said surface having a greater radius than the first-named portion of said surface.

1,903,386. SUSPENDED RAILWAY SWITCH. GILBERT D. FISH, Pelham, N. Y., assignor to Frank S. Lyon, Minneapolis, Minn. Filed Feb. 17, 1931. Serial No. 516,463. 1 Claim. (Cl. 104—101.)

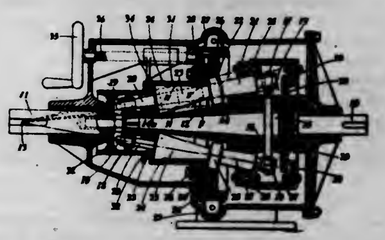


In combination, an overhead structure carrying a main track rail and two diverging track rails for a suspended car and also carrying corresponding side guide rails at a lower level for such a car, a switch structure rotatable about a longitudinal axis for said main and diverging track rails, and a similar co-acting switch structure for said guide rails.

1,903,387. AUTOMOBILE HEATER. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1930. Serial No. 476,555. 6 Claims. (Cl. 257—241.)

1. In an automobile heater, in combination, a central tube adapted to receive the motor exhaust gases, a casing surrounding said tube and forming therewith an annular air chamber, said chamber having an inlet and an outlet, and a plurality of staggered radial fins therebetween, said fins having central apertures, and retaining means extending longitudinally of said chamber and passing alternately through said apertures and between said fins.

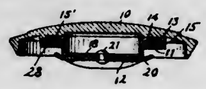
1,903,388. LID STRAIGHTENING AND SEALING TOOL. JACOB Z. HUMBERT, North Canton, Ohio. Filed Sept. 1, 1931. Serial No. 560,647. 4 Claims. (Cl. 81—15.1.)



1. A rotatable cup-shaped tool for straightening and sealing a jar lid having an outwardly flared sealing flange, said tool having a wall adapted to fit around said lid, the lower edge of said wall being adapted to ride upon the top of the sealing flange of the lid, and the wall having an inwardly tapered depending lug formed therein for engaging over the edge of the sealing flange.

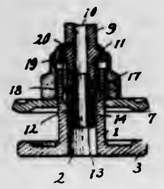
1,903,389. CLOSURE. JAMES S. REID, Cleveland, Ohio, assignor, by mesne assignments, to Eaton Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 25, 1928. Serial No. 280,543. 4 Claims. (Cl. 220—40.)

1. A closure, comprising a locking part provided with an outstanding arm and a cover part provided with a member having a slot through which said arm extends, means on the free end of said arm for preventing escape of said cover part member, said escape preventing means being provided with a threaded opening, and a threaded member carried by said cover part and threaded in said opening, whereby rotation of said threaded member causes said cover part to move without rotation toward or from said locking part.



1,903,390. GEAR. MAURICE WALTER PIERCEY, Norbury, London, England, assignor to Joan Oram Chrystal, Summit, N. J. Filed June 8, 1932, Serial No. 616,147, and in Great Britain Sept. 29, 1931. 21 Claims. (Cl. 74—34.)

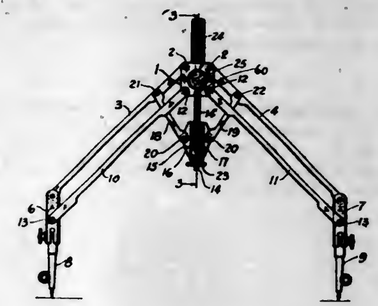
1. An infinitely variable conical friction gear comprising a driving and a driven shaft, a plurality of conical satellite friction gears carried by cage means, the latter being adapted to be rotated about an axis suitably disposed with regard to the driving and driven shafts, each conical satellite gear comprising a driven cone and a rolling cone having a common apex on the axis of the cage but having different apex angles, the said satellite gears also including a driving cone of the opposite conicity to the driven and



rolling cones, driving means in connection with the driving shaft for frictionally engaging with the driven cones to rotate the satellite gears, a fixed track upon which the rolling cones engage and roll, rotatable means in frictional engagement with the driving cones and adapted to be set into various axial positions with respect thereto, and connecting means between said last-mentioned rotatable means and the driven shaft for imparting the movements of the said rotatable means to the driven shaft, for the purposes set forth.

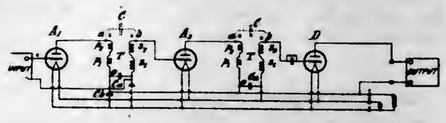
1,903,391. CLOSURE. LYLE K. SNELL, Detroit, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 17, 1930. Serial No. 468,595. 3 Claims. (Cl. 220—40.)

1. A radiator cap comprising a cast metal top, a gasket, a carrier for the gasket, said carrier comprising a sheet metal body having an imperforate central portion and a circular flange-like portion rigidly connected to the lower portion of said top, said top having a depending circular rib on the lower portion thereof against which the edge of said flange-like portion impinges and mechanical holding means on said central portion.



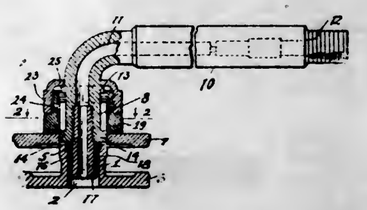
1,903,392. VALVE STEM AND ADAPTER. JOHN C. CROWLEY, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1929. Serial No. 403,996. 3 Claims. (Cl. 285—122.)

1. In combination, a valve stem having an exteriorly threaded portion at one end and a head at the other end and provided with a bore extending therethrough, said bore adjacent the exteriorly threaded end of the stem being provided with a circumferential series of inwardly projecting teeth, an adapter having a bore extending therethrough and an end portion arranged in the bore of the valve stem, and a nut cooperating with the threaded portion of the valve stem and having a swiveled connection with the adapter for moving the end of the latter into the bore of the stem and holding the stem and adapter assembled, said series of inwardly projecting teeth cutting into the end portion of the adapter and forming an interlock therewith to maintain the adapter and stem against relative rotation.



1,903,393. MEASURING INSTRUMENT. ADOLPH A. VLCEK, Cleveland, Ohio, assignor of one-half to Arthur H. Van Horn, Lakewood, Ohio. Filed Jan. 24, 1931. Serial No. 510,977. 1 Claim. (Cl. 33—151.)

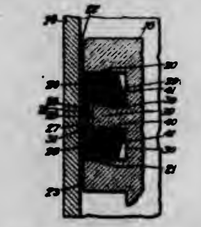
A device of the class described including a head, legs pivoted to the head, elongated instrument carrying extensions pivotally carried by the legs, means for maintaining the extensions substantially parallel throughout the movement of said legs, and means for moving the legs to a predetermined adjusted position, said last named means including a stem operable in the head and threaded throughout its major portion, a carriage threadedly engaging the threads of the stem and movable along the stem, and links pivotally connecting the carriage with the



said respective legs, and a set screw carried by the said head and engageable with the stem to lock the same in predetermined adjustment in the head.

1,903,394. RADIOFREQUENCY AMPLIFIER. FREDERICK K. VREELAND, Montclair, N. J., assignor to Vreeland Corporation, Hoboken, N. J., a Corporation of New Jersey. Original application filed Aug. 6, 1923, Serial No. 655,794, patented Sept. 4, 1928, No. 1,682,874. Divided and this application filed Aug. 9, 1928. Serial No. 298,586. 24 Claims. (Cl. 179—171.)

1. In an amplifier for high frequency currents, a plurality of amplifier tubes, a polarity reversing inductive coupling between these tubes, and a capacity shunting the polarity reversing inductive coupling.

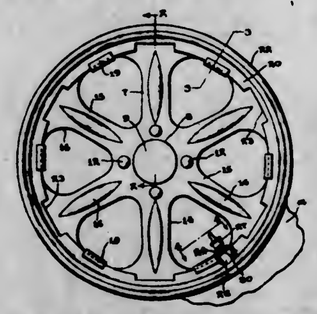


1,903,395. VALVE STEM. JOHN C. CROWLEY, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 31, 1929. Serial No. 367,313. 3 Claims. (Cl. 152—12.)

1. A two piece valve stem construction comprising, in combination, an exteriorly threaded stem part provided with a longitudinal bore and having a head at one end adapted to be arranged within a tire tube, a nut arranged on said stem part and adapted to hold a spreader plate in clamping relation with the said head and having an exteriorly threaded portion adapted to extend into the usual opening in the tire rim, a second stem part adapted to removably receive at its outer end the usual valve insides and having its inner end extending into the bore of the

first named stem part, a nut arranged on the exteriorly threaded portion of said first named nut, and cooperating means on said second named stem part and said second named nut effecting a swivel connection therebetween.

1,903,396. PISTON AND PISTON RING THEREFOR. HARRY M. BRAMBERRY, Newcastle, Ind., assignor to Piston Research Corporation, Norfolk, Va., a Corporation of Virginia. Filed July 25, 1929. Serial No. 380,952. 11 Claims. (Cl. 74—109.)

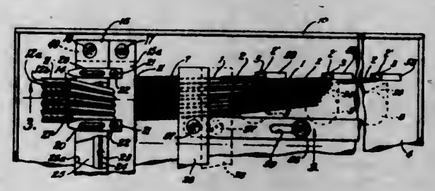


1. In an internal combustion or other compression engine having a cylinder, the combination of a piston reciprocable in said cylinder, with an annular clearance intervening between the piston and cylinder, the piston being formed with a circumscribing annular imperforate ring-receiving groove; and a resilient compression packing ring structure within the groove, said ring structure and piston having surfaces cooperating to form a lubricant receiving reservoir which is in communication with the oil film on the cylinder wall through a feathering passage having a width within the approximate range of .004 inch and .020 inch, and the reservoir being sealed from the compression space under pressure conditions.

1,903,397. METHOD OF SEPARATING FATTY CONSTITUENTS FROM OLEAGINOUS MATERIALS. BRUNO REWALD, Hamburg, Germany. Filed Apr. 24, 1931, Serial No. 532,703, and in Germany July 29, 1930. 9 Claims. (Cl. 87—6.)

1. Method of separating fatty constituents from seed material having a high content of an oleaginous constituent and a substance which is not soluble in said oleaginous constituent, and which material does not contain a large percentage of lecithin, which process comprises incorporating a small percentage of lecithin with said material and subjecting the mixture to a sufficient pressure to squeeze out oleaginous constituents therefrom.

1,903,398. VEHICLE WHEEL. HUGH B. TOWNSLEY, Spokane, Wash. Filed Jan. 30, 1931. Serial No. 512,888. 8 Claims. (Cl. 152—21.)

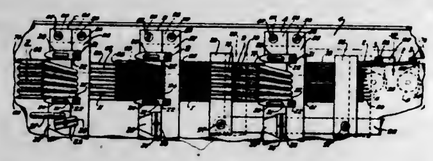


1. In a vehicle wheel for pneumatic tires, a disc provided with a rim section and a tire engaging flange, a ring having a rim section and a tire engaging flange for cooperation with the rim section and flange of the disc, the disc having hooks engageable with the ring to support the latter on the disc, the ring having notches adapted to be rotated into registration with the hooks on the disc to permit separation of the ring from the disc to release the tire from the wheel, and means including the valve casing of the tire to positively prevent accidental rotative movement of the ring on the disc and thereby prevent accidental movement of the hooks along the rim of said ring into alignment with said notches while the tire is deflated.

1,903,399. LEVEE MACHINE. CLINTON F. WAIT, Pine Bluff, Ark. Filed Nov. 9, 1931. Serial No. 573,991. 8 Claims. (Cl. 37—117.)

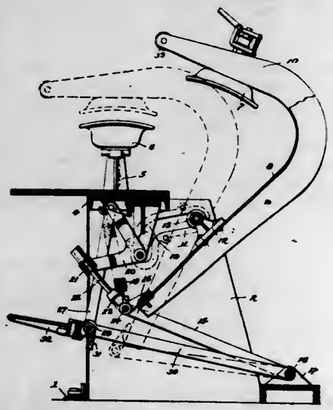
1. In an excavating apparatus, the combination of a pair of spaced apart elevated supports, a power means associated with one of the supports, a supporting line extending between the supports and operatively associated with the power means, a carriage movably carried by the supporting line, a carriage drawline connected with the carriage and operatively associated with the power means, a bucket, a suspension means for movably connecting the bucket with the carriage, draw means connected with an end of the bucket, a dragline connected with the draw means and operatively associated with the power means, and a spacing trolley connected with the draw means and operatively associated with the supporting line and carriage drawline for holding said lines in spaced apart relationship.

1,903,400. VOTING MACHINE. JOSEPH M. GARR, Calumet City, Ill., assignor to Peoples Voting Machine Corporation, Knox, Ind., a Corporation of Indiana. Filed May 2, 1930. Serial No. 449,295. 12 Claims. (Cl. 235—54.)



1. A voting machine interlocking mechanism for wedge blocks carried by superimposed straps arranged with the blocks in groups, comprising C-shaped abutments between the straps for interlocking the wedge blocks, a structure providing a channel in which said wedge blocks are interlockable, said structure being provided with slots transverse to the longitudinal extent of the channel, said abutments being laterally removable from between said straps through said slots.

1,903,401. VOTING MACHINE. JOSEPH M. GARR, Calumet City, Ill., assignor to Peoples Voting Machine Corporation, Knox, Ind., a Corporation of Indiana. Filed May 2, 1930. Serial No. 449,296. 2 Claims. (Cl. 235—54.)



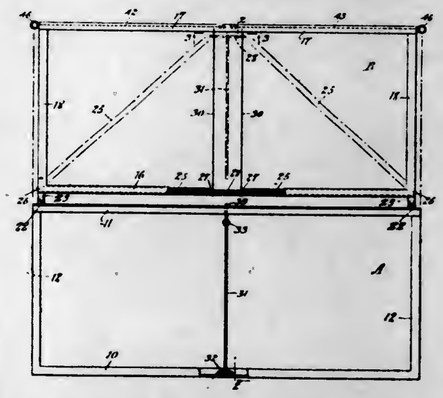
1. In a voting machine, selective interlocking mechanisms, a group of straps overlapping each other through-

out a part of their extent, wedge blocks carried by the overlapping portions of said straps, abutments removably inserted between the straps for interlocking said wedge blocks and straps within said group, sub-groups in said group each comprising alternate straps of said group, additional

wedge blocks carried by said straps of each sub-group, abutments removably inserted betweeen said straps for interlocking said second-named wedge blocks and said straps within sub-groups, and means for selectively rendering said interlocking mechanisms inoperative by removing the abutments of the respective group or sub-group.

1,903,402. GARMENT PRESS. SANFORD J. LOCKE, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed May 6, 1927. Serial No. 189,384. 6 Claims. (Cl. 68—9.)

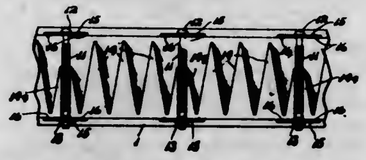
1. In a garment press the combination of a frame, a buck supported thereon; a head; a carrying member to which the head is attached, said member having a downwardly extending portion; guideways on the frame adjacent the upper portion thereof, said ways having lower portions substantially vertically disposed merging into upwardly and rearwardly inclined portions; rollers carried by the head carrying member and extending into the guideways; at least one radius link pivotally secured to the lower portion of the head carrying member, said link being pivotally secured at the rear of the frame; springs normally acting to elevate the head carrying member; and operator actuated means for forcing the head carrying frame downwardly.



1,903,403. SLIP-ON GARMENT. CHARLES B. JACOBS, Baltimore, Md. Filed Sept. 8, 1932. Serial No. 632,098. 1 Claim. (Cl. 2—74.)

A house dress having a neck portion at the top and a back and side portion formed of continuous vertical sections joined at the edges, the sections having an oppositely reducing taper from the collar portion and the bottom edge respectively, toward the waist, the garment also having a front section on each side, each front section being adapted to overlap the other front section at and below the waistline, each front section below the waistline extending substantially across the entire front of the garment and having an offset at the waist line providing a horizontal edge extending along the waistline, each front section above the offset being narrowed relatively to its lower portion by the offset and having its free edge inclined outwardly from the offset and upwardly toward the neck, said inclined edges being provided with a collar turned over the corresponding front sections, the collar extending continuously from the offset at the waistline

at each side upwardly and around the neck and tapering downwardly to a point at both ends of the collar which points meet the inclined edges at the waistline and a belt section secured to each offset, the ends of the belt being adapted to be connected at the front, the garment having an aperture at each side on the waistline through which the belt sections on the opposite sides may be passed, the aperture on the overlapping side of the garment only being utilized by passing the belt section on the side which is covered through said aperture and around the back of the wearer and joining with the other belt section at the front.

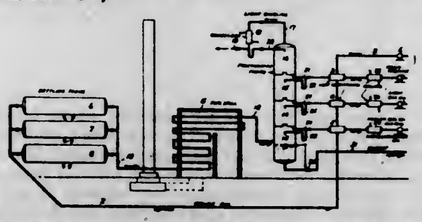


1,903,404. COMBINATION FURNITURE. THEODORE ABRAMS, Woodhaven, N. Y., assignor to Studio Couch Patents Co. Inc., a Corporation of New York. Filed June 16, 1932. Serial No. 617,622. 8 Claims. (Cl. 5—17.)

7. In a combination article of furniture of the character set forth including a pair of laterally nestable frames; interengageable means on said frames for shifting the same from a nested to an unnested or extended position comprising an elastic element extending longitudinally across one side of one frame and a rigid element extending transversely across the other frame for engaging said elastic

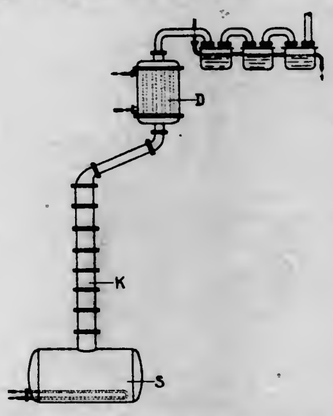
element and placing the same under tension when the frames are moved to nested relation, said elastic element comprising a pair of coiled contractile springs anchored at their outer ends to the opposite ends of the frame and an abutment plate to which the inner ends of the springs are connected and means for supporting and guiding said abutment plate for transverse movement, said transverse rigid means on the other frame consisting of a bar having a depending leg adjacent its free end for engagement with said abutment plate, means at the free end of said bar and on the other frame adapted to interengage when the frames are nested, for locking the same and means for releasing said locking means.

1,903,405. TIRE. DONALD J. CAMPBELL, Muskegon Heights, Mich. Filed Jan. 20, 1930, Serial No. 421,884. Renewed Jan. 20, 1932. 6 Claims. (Cl. 152—17.)



5. In combination, a tire casing, a separable tread located around the casing, complementary projections on the outer side of the casing and inner side of the tread interlocking with each other to hold the tread against creeping movement and a plurality of means extending alternately through the projections on the casing and those on the inner side of the tread for the purpose described.

1,903,406. SEAM FOR DRIER FELTS AND METHOD OF MAKING SAME. GEORGE F. PUTVIN, Munising, Mich. Filed Jan. 8, 1931. Serial No. 507,505. 5 Claims. (Cl. 24—38.)

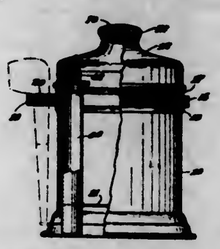


1. A seam for a fabric felt for paper machines having terminal portions adjacent each other at their edges, means for joining the portions comprising a patch having ravelled ends, and waterproof adhesive interposed between the patch and its ravelled ends and the felt, whereby the seam is rendered resistant to disintegration by moisture.

1,903,407. PROCESS FOR PREPARING CRUDE OIL FOR DISTILLATION INTO LUBRICATING OILS. ARTHUR M. PEW, Jr., Bryn Mawr, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 28, 1928. Serial No. 257,559. 7 Claims. (Cl. 196—35.)

6. The process of preparing mineral oil stock for distillation of lubricating oils which comprises establishing a flowing stream of hot liquid oil containing lubricating oil fractions, adding an alkali solution to the hot liquid oil stream and then, without substantial drop of pressure or temperature, distributing the mixture over a large area and thereby effecting evaporation of solvent introduced with the alkali and leaving a residual oil containing lubricating oil fractions and alkali.

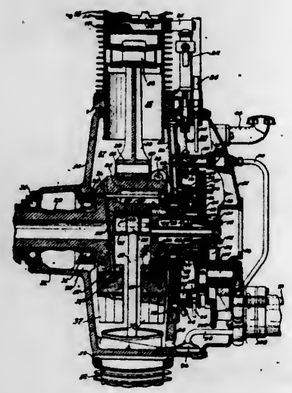
1,903,408. PROCESS OF PREPARING HYDROFLUORIC ACID. JULIUS SOLL, Frankfort-on-the-Main-Schwanheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed July 7, 1931, Serial No. 549,291, and in Germany Jan. 30, 1930. 6 Claims. (Cl. 202—41.)



1. The process of preparing hydrofluoric acid practically free from silicic acid which comprises subjecting a crude hydrofluoric acid containing silicic acid and up to 60–65 per cent of hydrogen fluoride to a fractional distillation and causing an aqueous hydrofluoric acid poor in silicic acid to act upon the vapors of hydrogen fluoride distilling over.

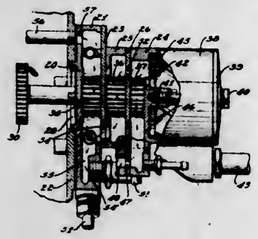
1,903,409. PROCESS OF MAKING IRON-CHROMIUM NICKEL ALLOYS. FREDERICK M. BECKET, New York, N. Y. Filed Nov. 18, 1930. Serial No. 496,569. 11 Claims. (Cl. 75—45.)

8. A process of making chrome-nickel stainless steel which comprises reacting on nickel matte with lime and an excess of carbon in the form of high-carbon ferrochrome, oxidizing at least a part of the residual carbon by Bessemerization, and adding iron to the alloy produced by the first-mentioned reaction.



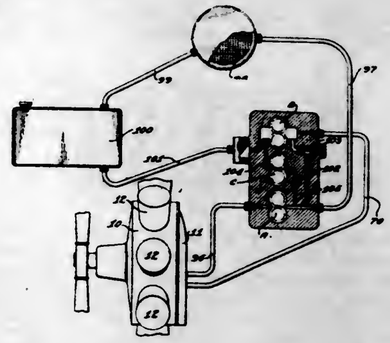
1,903,410. PIPE RACK. WILLIAM CECIL, New York, N. Y. Filed Jan. 21, 1933. Serial No. 652,889. 5 Claims. (Cl. 131—51.)

1. A pipe supporting attachment for a tobacco jar comprising a plurality of units in assembled relation, each unit comprising means adapted to secure it to the tobacco



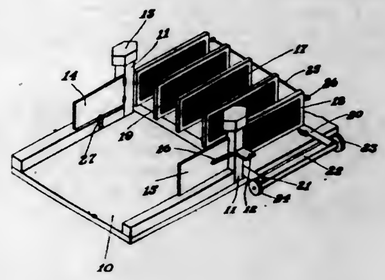
jar so that the units are capable of relative adjustment relatively to each other and to the tobacco jar, each unit comprising additionally means for supporting a pipe so devised and constructed that as the units are relatively adjusted, the pipe supporting means may be varied positionally relatively to each other and to the tobacco jar and the pipe supporting capacity of the assembly increased or decreased.

1,903,411. INTERNAL COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 3, 1930. Serial No. 441,390. 12 Claims. (Cl. 184—6.)



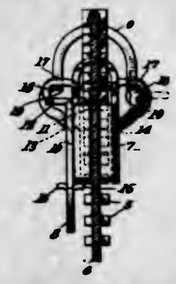
1. In an internal combustion engine, a crank case, a diaphragm in the crank case having passages therein each communicating with engine parts to be lubricated and serving as a lubricant distributer, pressure means for forcing a continuous stream of oil through the diaphragm passages to the parts to be lubricated during engine operation, and means for removing collected oil draining from the lubricated engine parts.

1,903,412. INTERNAL COMBUSTION ENGINE. LIONEL M. WOOLSON, deceased, Detroit, Mich., by Emma F. Woolson, executrix, Bloomfield Village, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 25, 1930. Serial No. 491,255. 8 Claims. (Cl. 184—6.)



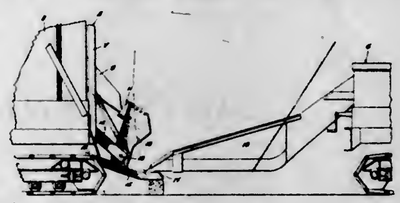
2. In a lubricating system for engines, a pump structure comprising a casing forming a feeding chamber, an outlet chamber and shunt chamber, a pair of pump gears in each chamber, means for driving a gear of each pair of gears when the engine is operating, and duct means connecting the shunt chamber with the inlet portion of the feeding chamber and the outlet portion of the outlet chamber.

1,903,413. INTERNAL COMBUSTION ENGINE. LIONEL M. WOOLSON, deceased, Detroit, Mich., by Emma F. Woolson, executrix, Bloomfield Village, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Apr. 3, 1930, Serial No. 441,390. Divided and this application filed Feb. 14, 1931. Serial No. 515,801. 7 Claims. (Cl. 184—6.)



1. In a compression-ignition internal combustion engine, a crank case having a plurality of bearings therein, a tank, a cooler, means connecting the cooler and the tank, means connecting the oil tank with the bearings including a pressure pump, return means for removing excess oil from the crank case to the cooler, and means for moving a stream of oil from the tank into the return means.

1,903,414. RACE TRACK STARTER BARRIER GATE AND STALL. WILLIAM ALBRIGHT, New York, N. Y.; Ida Albright administratrix of said William Albright, deceased. Filed July 2, 1929, Serial No. 375,511. Renewed Feb. 28, 1933. 1 Claim. (Cl. 119—15.5.)



A starting barrier comprising starting posts, normally closed gates hingedly mounted on said posts, springs secured to said posts and said gates, and a wheeled stall carriage removably positioned behind said starting posts and gates, said carriage comprising a body wheeled at one end and a plurality of spaced apart upright panels mounted on said body, said panels being surfaced by a non-injuring wire mesh.

1,903,415. SLIDE FASTENER. IRVING GREENBERG, Union City, N. J. Filed Dec. 8, 1932. Serial No. 645,505. 14 Claims. (Cl. 24—205.)

9. A slide fastener, comprising cooperating fastener elements, a slide for engaging and disengaging the same, a pull pivotally connected to and reversible over one end of the slide from one side to the opposite side of the same and means for releasably retaining said pull in position at either side of the slide, said means including members adjacent the free end of the pull and cooperable in releasable retaining engagement with opposed end portions of the slide in the positions of the pull at the opposite sides of the slide.

1,903,416. CONCRETE MIXING APPARATUS. RUDOLPH F. LINDOW, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1930. Serial No. 501,397. 4 Claims. (Cl. 83—73.)

1. In a concrete mixer, the combination with a frame, a mixing receptacle and a discharge chute, of an auxiliary chute pivotally mounted on said frame for oscillatory movement to and from a position in which it may receive concrete from said discharge chute; and a weighted arm connected with said auxiliary chute, adapted to normally urge said auxiliary chute toward its non-receiving position, said arm having an extension to which a force may be applied to move said auxiliary chute to its receiving position.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 429—No. 2 TUESDAY, APRIL 11, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.25; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Transfers of Classes

ORDER No. 3,231

U. S. PATENT OFFICE, *Washington, Jan. 16, 1933.*

The following transfers to take effect at once, are hereby ordered:

Class 294 from Division 1 to Division 4.
Class 260, Subs. 2–8, 10, 100–102, 145, 146, 148, and 152, from Division 6 to Division 50.
Class 216 from Division 17 to Division 53.
Class 237 from Division 19 to Division 46.
Class 17 from Division 25 to Division 2.
Class 123, Subs. 179 and 185, from Division 28 to Division 12.
Class 123, Subs. 143–169, from Division 28 to Division 48.
Class 94 from Division 33 to Division 38.
Class 24 from Division 35 to Division 5.
Class 132 from Division 35 to Division 53.
Class 137, Subs. 99, 112, 71, 90, 77, 75, 76, 78, 79, 73, 72, 91, 100, from Division 39 to Division 52.
Class 150 from Division 40 to Division 62.
Classes 4 and 182 from Division 43 to Division 1.
Classes 221 and 226 from Division 44 to Division 35.
Class 74, Subs. 21, 31, 32, 42, 43, 44, 49, 51, 61, 62, 63, 64, 65, 66, 67, 103, from Division 45 to Division 12.
Class 303 from Division 47 to Division 34.
Class 192, Subs. 116.5 to 150, from Division 47 to Division 12.
Class 53 from Division 49 to Division 1.
Class 134, except Subs. 17, 26, 54, and 79, from Division 50 to Division 64.
Class 106, Subs. 24–36, from Division 50 to Division 38.
Class 91, Subs. 1–67.8, from Division 50 to Division 22.
Class 197 from Division 58 to Division 41.
Classes 44 and 195 from Division 59 to Division 64.
Class 222 from Division 59 to Division 38.
Class 149 from Division 59 to Division 11.
Classes 187, 227, 228, and 304 from Division 61 to Division 4.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice

U. S. PATENT OFFICE, *Washington, Mar. 28, 1933.*

Frank L. Myers, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Edwin Archer Turner, 250 Madison Avenue, New York, N. Y., and patent granted January 12, 1932, No. 1,840,913, to Frank L. Myers, 508 Cathedral Street, Baltimore, Md., and a notice of such declaration sent by registered mail to said Myers at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Myers, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, Mar. 24, 1933.*

Lee E. Gribbens, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Simonis Company, 2101 Indiana Avenue, Chicago, Ill., to effect the cancellation of the trade-mark registration of Lee E. Gribbens, of 58 East 29th St., Chicago, Ill., No. 217,523, dated August 31, 1926, and the notice of such proceeding sent by registered mail to the said Gribbens at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Gribbens, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business March 25, 1933

(Total number of applications awaiting action, excluding Trade-Mark Division, 52,767; Trade-Mark Division, 1,014. Oldest new case, Oct. 31, 1932; oldest amended, Nov. 2, 1932. The dates given are 1932 except where † indicates 1933.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

Derby Oil Company *v.* White Star Refining Company

No. 3,955. Decided January 23, 1933

1. Trade-Marks—Appeals—Errors Not Assigned Will Not Be Considered by the Court.

"The assignments of error are silent as to this matter. No reason for appeal being averred upon this point, cognisance of it will not be taken here."

2. Same—Trade-Mark Use.

"This, in our opinion, shows a sufficient trade-mark use. It is not essential that every gallon of gasoline or quart of cylinder oil sold, shall be in a container bearing the trade-mark of the company."

3. Trade-Marks—Cancellation—Validity of Petitioner's Mark.

In a cancellation proceeding the question of the validity of the mark of the petitioner for cancellation is irrelevant.

4. Same—Similarity.

A trade-mark consisting of the representation of a road sign with a circular target surmounting the base, the target being red and having a white star in the center thereof with a monogram thereabove, *Held* confusingly similar to the trade-mark "White Star" used on the same goods.

Appeal from the Patent Office. Affirmed.

Mr. Albert J. Fihe for Derby Oil Company.

No appearance for White Star Refining Company.

Graham, *P. J.*:

The appellant, Derby Oil Company, filed its application in the United States Patent Office for registration of a trade-mark used in connection with the sale of gasoline, motor oils, and greases, on April 7, 1926, and, on October 26, 1926, the same was duly registered. In said application it was alleged that said mark had been used by appellant, continuously, since December 1, 1925. The mark consists of the

representation of a road sign having a substantially rectangular base with a circular target surmounting the base, this circular target being red and having a white star in the center thereof, and upon the white star appeared the initials "D. O. Co." in a monogram.

On the base portion of the representation of a sign appear the words "Derby Oil Co Gasoline Motor Oils & Greases." All these words, except the corporate name, are disclaimed.

The appellee, White Star Refining Company, thereafter, to wit: on April 14, 1930, filed its petition for cancellation of said mark. In its petition, it alleged that its predecessor, The Brooks Oil Company, on October 18, 1927, was granted trade-mark registration Number 234,141, and on October 25, 1927, was granted trade-mark registration 234,446, registering the trade-mark "White Star" for motor fuels, which registrations were duly assigned to the appellee and are owned by it. The petitioner further alleged that appellant's registered mark was "deceptively similar" to appellee's said mark, was applied to goods of the same descriptive character, was essentially petitioner's corporate name, and that the registration would result in confusion in trade and damage to appellee. Appellee alleged that since long prior to December 1, 1925, it and its predecessors had used this mark in interstate commerce.

The appellant answered the petition, denying confusing similarity with either corporate name or mark, requiring strict proof of prior use by appellee of the mark "White Star," and proffering a large number of prior registrations to support the contention that the use of a white star is publici juris.

The Examiner of Interferences sustained the petition for cancellation, holding that the conflicting marks are so similar as to cause at least a reasonable doubt that confusion in trade is likely to result from their use. He also held confusion would be likely to result because of petitioner's corporate name, under the name clause of section 5 of the Trade-Mark Act of February 20, 1905, namely:

Sec. 5. That no mark by which the goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade-mark on account of the nature of such mark unless such mark—

* * * * * * * *

(b) Consists of or comprises * * * *any name,* * * * *adopted by any institution, organization, club, or society which was incorporated in any State in the United States prior to the date of the adoption and use by the applicant:* * * *

The Examiner of Interferences sustained the petition for cancellation, holding that petitioner was the prior user of the mark.

The Commissioner, on appeal, reversed the decision of the Examiner of Interferences on the second ground above stated, and affirmed it upon the first, ordering cancellation of the mark.

[1] The appellant raises some preliminary questions which may be disposed of here. Counsel argues that there is no showing of a continuity of use, and transfer of appellee's trade-mark from The Brooks Oil Company to appellee. The assignments of error are silent as to this matter. No reason for appeal being averred upon this point, cognisance of it will not be taken here. *Mas* v. *Root*, 19 C. C. P. A. (Patents) 819, 54 F.(2d) 435, 416 O. G. 804; *Southgate* v. *Greene*, 19 C. C. P. A. (Patents) 1129, 57 F.(2d) 374, 420 O. G. 811; *Jantzen Knitting Mills* v. *West Coast Knitting Mills*, 18 C. C. P. A. (Patents) 1142, 47 F.(2d) 954, 406 O. G. 5-7.

It is next argued that photostatic reproductions of certain photographs were introduced in evidence by petitioner, which were improperly verified and objectionable. It does not appear that either tribunal in the Patent Office considered these photostats as evidentiary. Even if they were so considered, no reason for appeal is grounded thereon. This contention, therefore, cannot be sustained.

The record shows, by what seems to us a preponderance of the evidence, that since 1914, the appellee and its predecessor have been using the mark "White Star" in conjunction with the sale

of its products, greases, machine shop lubricants, motor oil, and, later, but before appellant's entrance into the field, on fuel oil, gasoline, and automobile accessories. This mark was placed upon its packages, cans and barrels, railroad tank cars, trucks, and filling stations. This mark was a white five pointed star, upon a blue background.

[2] This, in our opinion, shows a sufficient trade-mark use. It is not essential that every gallon of gasoline or quart of cylinder oil sold, shall be in a container bearing the trade-mark of the company. The record contains ample evidence of the interstate use of this mark by appellee. In addition, it quite plainly shows that motor fuels were retailed at filling stations from pumps bearing this mark of a white star. It would be going far afield to say that this was not a trade-mark use. In our opinion, it conforms fully to the definition of a trade-mark given by the court in *Elgin National Watch Co.* v. *Illinois Watch Co.* 179 U. S. 665, 673, 94 O. G. 755:

> The term has been in use from a very early date, and, generally speaking, means a distinctive mark of authenticity, through which the products of particular manufacturers or the vendible commodities of particular merchants may be distinguished from those of others.

It is next urged that the design of a white star is and was at the time of appellee's adoption of the same as a trade-mark, publici juris, and that, therefore, appellee can claim no exclusive right of use thereof. The petition of appellee is not based alone upon its registrations of its trade-mark consisting of a representation of a white star upon a blue field and the words "White Star." It further relies upon the provision of section 13 of the Trade-Mark Act of February 20, 1905:

> * * * whenever any person shall deem himself injured by the registration of a trade-mark in the Patent Office, he may at any time apply to the Commissioner of Patents to cancel the registration thereof.

We have held, under this provision, that a strictly trade-mark use of the words or mark by the petitioner, in cancellation proceedings, is not necessary. Injury to the business of the petitioner may be otherwise shown. *Model Brassiere Co.* v. *Bromley-Shepard Co.*, 18 C. C. P. A. (Patents) 1294, 1301, 49 F.(2d) 482, 411 O. G. 538.

The record now before us shows quite clearly that since, approximately, the year 1914, and long prior to appellant's use of the mark here sought to be cancelled, appellee made a trade-mark use of a white star, upon a blue ground, together with its corporate name, "White Star Refining Company," in conjunction with its sale of goods of the same descriptive properties as those sold by appellant under its registered trade-mark, here in issue. This use was followed by registrations in the name of The Brooks Oil Company, of October 18, 1927, and October 25, 1927.

[3] Whether, because at least a part of appellee's alleged trade-mark, the white star feature, at the time of its adoption and later registrations was invalid because the subject matter was publici juris, is an issue, in our opinion, not properly now before us. The validity of the marks will be assumed for the purposes of these proceedings. *American Cyanamid Co.* v. *Synthetic Nitrogen Prod. Corp.*, 19 C. C. P. A. (Patents) 1235, 58 F.(2d) 834, 423 O. G. 299. In the case last cited, we held that similar rules, insofar as the same may be applicable, having in mind the nature of such proceedings, are applicable in opposition and cancellation proceedings. An attack upon the validity of opposer's mark is not an issue in opposition proceedings. *Sharp & Dohme* v. *Parke, Davis & Co.*, 17 C. C. P. A. (Patents) 842, 37 F.(2d) 960, 394 O. G. 545; *Lever Bros. Co.* v. *Riodela*, 17 C. C. P. A. (Patents) 1272, 41 F.(2d) 408, 398 O. G. 356; *Leschen & Sons* v. *Amer. Steel & Wire Co.*, 19 C. C. P. A. (Patents) 851, 55 F.(2d) 455, 418 O. G. 3. No reason appears why the same rule should not be applicable to cancellation proceedings. Of course, nothing that we have said here should be construed as an expression of our opinion as to the validity or lack of validity of appellee's mark.

[4] But one inquiry remains. Are the marks of appellant and appellee confusingly similar to the extent that prospective purchasers might be led to mistake the goods of one for those of the other? This presents, as do all such cases, largely a question of the effect which the competing marks make upon the mind of the observer. We may take judicial knowledge that, in our day, the goods of appellant and appellee are retailed, almost exclusively, at service and filling stations. Modern traffic moves rapidly. The customer desiring to purchase these goods is attracted to symbols or signs on service stations and pumps, which he has associated with the goods he ordinarily buys. A white star upon the target of a pump, or upon a service station, will attract his attention, and, in our judgment, a lettered monogram upon its face, or the nature of its background, will not distinguish it sufficiently to prevent mistakes and confusion. We agree with the decision of the Commissioner that the star is the salient feature of the mark. It follows that the marks are confusingly similar, within the meaning of the statute.

In view of these considerations, the decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

DERBY OIL COMPANY *v.* WHITE STAR REFINING COMPANY

No. 3,056. Decided January 23, 1933

TRADE-MARKS—SIMILARITY.

A mark for motor fuels consisting of the representation of a white five-pointed star upon a circular red background with the initials "D. O. Co." arranged in a monogram and the word "Aeroplane" thereabove *Held* confusingly similar to a white star and the words "White Star" used on the same goods.

APPEAL from the Patent Office. Affirmed.

Mr. Albert J. Fihe for Derby Oil Company.

No appearance for White Star Refining Co.

GRAHAM, *P. J.*:

This appeal is a companion case to *Derby Oil Company* v. *White Star Refining Company*, 20 C. C. P. A. (Patents) ——, — F.(2d) —, decided concurrently herewith. The parties are the same in both cases, and the issues substantially so, this being an opposition proceeding and the case cited being a cancellation proceeding.

In this case the appellant, Derby Oil Company, filed its application for registration on August 13, 1929, and sought to register a trade-mark used by it in connection with the sale of motor fuels, said trade-mark being the representation of a white, five-pointed star upon a circular red background, with the initials "D. O. Co." in a monogram inscribed thereon, and with the word "Aeroplane" arranged in the arc of a circle above and around the upper part of the background of the star. This mark, it was claimed, had been used by the applicant since January 1, 1917. The word "Aeroplane" is disclaimed, apart from the mark.

The appellee, White Star Refining Company, opposed registration of said mark, claiming prior use of a white star and the words "White Star" as a trade-mark, long prior to the first day of January, 1917, and continuously since that time. It further alleged the registration by The Brooks Oil Company, its predecessor, of said marks, on October 18, 1927, and October 25, 1927. The opposer claimed confusion with its corporate name, and also that the registration would result in confusion in trade and as to the origin of the goods sold thereunder, to the damage of the opposer.

The appellant filed answer to said notice of opposition, denying confusion and priority of use, and pleading publici juris as to said "White Star" mark, making reference to many prior registrations of a white star by others selling petroleum products.

The Examiner sustained the opposition, which decision was affirmed by the Commissioner.

It will be unnecessary to again state what we have said in *Derby Oil Company* v. *White Star Refining Company*, supra. In our opinion there are no facts in this case which will justify any different conclusion than that arrived at in the case cited. The mark here is somewhat different, in that it bears the word "Aeroplane." This, however, in our opinion, is not enough to change the distinguishing characteristic of the mark which, to our mind, is the representation of a white star, or the use of the words "White Star." Therefore, the same reasoning is held to be applicable here as in the companion case.

For this reason the decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia

U. S. EX REL FREY *v.* ROBERTSON, COMMISSIONER OF PATENTS

No. 5,791. Decided January 30, 1933

1. MANDAMUS—APPEALABLE MATTER.

It is settled law that the writ of mandamus can not be used to perform the office of an appeal or writ of error, or granted in any case where there is another adequate remedy.

2. SAME—SAME.

The petition for mandamus asked that the Commissioner be directed to vacate an order setting a 30-day limit within which relator could appeal from a rejection of a claim copied by him from a patent *Held* that relator has an adequate remedy by appeal from the final rejection of the claim and the petition for mandamus dismissed.

APPEAL from the Supreme Court of the District of Columbia.

[*Argued January 4, 1933. Decided January 30, 1933*]

Mr. J. Howard Flint, of Washington, D. C., for appellant.

Mr. T. A. Hostetler, Solicitor of the Patent Office, for appellee.

Before MARTIN, Chief Justice, and ROBB, VAN ORSDEL, HITZ, and GRONER, Associate Justices

PER CURIAM:

Appeal from a judgment in the Supreme Court of the District dismissing appellant's petition for a writ of mandamus against the Commissioner of Patents. The cause was heard upon the petition, the rule to show cause, and the return.

On January 28, 1932, appellant filed an application for Letters Patent. The application contained certain claims, including claim 2 copied from a patent. On May 18, 1932, the Primary Examiner rejected certain of the claims, including claim 2, but ruled that, inasmuch as that claim had been copied from a patent, rule 63 was applicable and that appellant would be required to respond to the rejection of that claim within 30 days.

Rule 63 provides that where an applicant copies claims from a patent and the Examiner is of the opinion that such claims can not be made, the Examiner shall state the grounds for the rejection—

> and set a time limit, not less than twenty days, for reply. If, after response by the applicant, the rejection is made final, a similar time limit should be set for appeal. Failure to respond or appeal, as the case may be, within the time fixed will in the absence of a satisfactory showing, be deemed a disclaimer of the invention claimed.

Appellant contends that rule 63 is invalid as in conflict with section 4894, Revised Statutes (U. S. C., title 35, sec. 37), which it is insisted allows an applicant six months to respond to any action of the Patent Office with respect to the application.

It is settled law—

> that the writ of mandamus can not be used to perform the office of an appeal or writ of error, or granted in any case where there is another adequate remedy. *Moore* v. *U. S. Ex rel. Lindmark*, 33 App. D. C. 597, 602; *U. S. Ex rel. Connor* v. *District of Columbia*, No. 5786, — App. D. C. —, — F.(2d) —, 60 W. L. R. 849.

In the present case adequate remedy by way of appeal was available to appellant upon the final rejection of the claim. In the event of an adverse decision by the Board of Appeals, appellant might appeal to the United States Court of Customs and Patent Appeals or file a bill in equity under section 4915, Revised Statutes (U. S. C., title 35, sec. 63).

It follows that the judgment of the court below was right. It is, therefore, affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,173,079, Ernst F. W. Alexanderson, Selective tuning systems; 1,195,632, William C. White, Circuit connections

of electron discharge apparatus; 1,251,377, Albert W. Hull, Methods of and means for obtaining constant current potentials; 1,573,374, Paul A. Chamberlain, Radio condenser; 1,728,879, Chester W. Rice, Amplifying systems, filed Jan. 12, 1933, D. C., S. D. N. Y., Doc. E 73–378, *Radio Corp. of America et al.* v. *Model's Radio Outlets, Inc., et al.* Decree for plaintiff (notice Mar. 3, 1933).

1,185,394, Albert E. Greene, Process of melting scrap metal; 1,449,319, same, Process of melting and deoxidising steel; 1,532,052, same, Process of refining metals; 1,616,796, same, Electric furnace; 1,616,798, same, Electrode mechanism for electric furnaces; 1,639,340, same, Combination induction furnace, filed Oct. 2, 1929, D. C., N. Div. Washington (Seattle), Doc. 692, *Albert E. Greene et al.* v. *Washington Iron Works.* Dismissed without costs as to 1,616,796, 1,616,798, 1,639,340 Mar. 1, 1933.

(C. C. A. N. Y.) Suter patent, No. 1,720,801, for hair drying, claims 3 and 4 *Held* not infringed. *Eugene, Limited*, v. *Charles Arnao Co.*, 62 F.(2d) 1000.

(C. C. A. N. Y.) Suter patent, No. 1,720,802, for hair drying, claim 4 *Held* not infringed. *Id.*

(D. C. N. J.) Bocchino reissue patent, No. 17,469, for safety device for fire escapes, *Held* valid and infringed. *Safety Device Fire Escape Co.* v. *Golish*, 2 F. Supp. 386.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,739,268, Frederich Stein, Device for copying on machine tools, decided March 11, 1933, claims 1 and 2.

Pat. 1,785,274, N. E. Loomis, A. H. Tomlinson, and F. A. Howard, Art of pyrolysis, decided March 11, 1933, claims 7 and 8.

Pat. 1,791,479, H. A. Silven, Cam grinding apparatus, decided March 14, 1933, claims 1, 2, 5, 6, 7, 8, 9, and 12.

Pat. 1,837,599, S. L. Walsoe and L. J. Bets, Computing machine, decided March 10, 1933, claim 4.

Disclaimers

1,492,541.—*John C. Bergner*, Philadelphia, Pa. COOKING APPARATUS. Patent dated April 29, 1924. Disclaimer filed March 9, 1933, by the assignee, *Doughnut Machine Corporation.*

Hereby enters the following disclaimer, to wit:

The assignee, Doughnut Machine Corporation, hereby disclaims claim 51.

The assignee, Doughnut Machine Corporation, hereby disclaims from claims 7, 8, 36, 37, 38, 58, and 59 of said Letters Patent any apparatus except one for receiving raw dough and automatically forming annular doughnut forms, wherein the cutter successively cuts the annular doughnut forms free to release them and drop them in a horizontal position into the liquor, and the moving progressing means engage the doughnut forms only after the horizontally falling forms encounter or are immersed in the liquor, so as to be thereby supported and protected against deformation while cooking and acquiring stable form, whereby the doughnut forms in their soft or raw state are transferred from the cutter to the liquor and brought under the action of the progressing means without deformation by encounter with either the liquor or the progressing means, and cooked and produced as doughnuts in undeformed substantially circular formation.

1,531,668.—*Joseph W. Legg*, Wilkinsburg, Pa. ELECTRIC-ARC CONTROL. Patent dated March 31, 1925. Disclaimer filed February 28, 1933, by the assignee, *Westinghouse Electric & Manufacturing Company.*

Hereby enters the following disclaimer, to wit:

1. Your petitioner hereby disclaims the subject-matter of claim 8, except structures in which the line connecting the contact members while open is at least approximately parallel to the plane of the coil and in which the blow-out coil is disposed circumferentially of at least a portion of each terminal member for all positions of said terminal members.

2. Your petitioner hereby disclaims the subject-matter of claim 10, except structures in which the means for establishing a definite magnetic flux zone comprises a coil positioned with its plane at least approximately parallel to the line connecting the contact members while open and in which at least a part of each electrical terminal member, in all operative positions thereof, lies within the perimeter of the coil.

3. Your petitioner hereby disclaims the subject-matter of claim 13, except structures in which the line connecting the contact members while open is at least approximately parallel to the plane of the coil and in which at least a part of each contact member, in the wide open position, lies within the perimeter of the coil.

4. Your petitioner hereby disclaims the subject-matter of claim 15, except structures in which the line connecting the contact members while open is at least approximately parallel to the plane of the coil and in which at least a part of each contact member, in wide open position, lies within the perimeter of the coil and in which also the fraction of said perimeter embraced within the confines of each said contact member is small.

1,716,562.—*John Roger Oliver*, Medfield, Mass. WELT-SEWING MACHINE. Patent dated June 11, 1929. Disclaimer filed March 14, 1933, by the assignee, *Reece Shoe Machinery Company.*

Hereby enters this disclaimer to that part of the claim of said patent which is in the following words, to wit:

"1. In a welt sewing machine, a reciprocating needle, a welt guide adjacent the stitching point delivering the welt to the work, a cutter fitted to cut the welt substantially beyond the stitching point, and mechanism operable after the completion of stitching for causing the advance of the work and welt before severing, to carry the stitched part of the work and welt beyond the cutting point, and for causing the actuation of the cutter."

"9. In a welt sewing machine, a shaft, a needle operated from the shaft, a welt guide adjacent the stitching position delivering the welt to the work, and means constitut-

ing a part of the machine and adapted to be operated after the completion of a seam for bringing about a substantial advance of the work and the pulling of welt through the guide before severing."

1,770,582.—*Robert D. Pike*, Piedmont, Calif. BUSHING. Patent dated July 15, 1930. Disclaimer filed March 15, 1933, by the assignee, *Kalif Corporation*.

Hereby enters this disclaimer to that part of the claim in said specification, namely, claim 3, which is in the following words, to-wit:

"3. As an article of manufacture, a bushing comprised of a layer of relatively infusible copper-lead alloy welded to a backing of stronger supporting metal."

except when the backing of stronger supporting metal mentioned in said claim consists of an alloy of copper.

1,812,749.—*Roy H. Kienle*, Schenectady, and *William J. Scheiber*, Troy, N. Y. RESINOUS MATERIAL AND METHOD OF MAKING THE SAME. Patent dated June 30, 1931. Disclaimer filed February 28, 1933, by the assignee, *General Electric Company*.

Hereby disclaims the subject matter of claims 1, 2, 3, 4, 5, 6, 7, 9, 11, and 12 of said Patent 1,812,749 which claims read as follows:

"1. A sheet material comprising a fibrous substance which has incorporated with the fibres thereof the infusible condensation product of aniline and formaldehyde.

"2. A sheet material composed of suitably treated fibres having incorporated therewith an infusible condensation product of an aromatic amine and formaldehyde.

"3. A paper-like moldable sheet material composed of suitably treated fibres having incorporated therewith a moldable condensation product of an aromatic amine and formaldehyde.

"4. A laminated sheet material composed of superposed sheets of suitably treated fibres having incorporated therewith a condensation product of an aromatic amine and an aldehyde.

"5. A laminated sheet material composed of superposed sheets of suitably treated fibres having incorporated therewith a condensation product of aniline and formaldehyde.

"6. The method of producing a sheet material which comprises reacting an aromatic amine with an aldehyde in aqueous acid solution to form a condensation product in solution, saturating suitably hydrated pulp with this solution, precipitating with alkali from the solution the condensation product on and around the fibres of the pulp, beating the stock so obtained, and forming a sheet therefrom on a paper making machine.

"7. The method of producing a sheet material which comprises reacting aniline with formaldehyde in aqueous acid solution, to form a condensation product in solution, saturating suitably hydrated pulp with this solution, precipitating with alkali from the solution the condensation product on and around the fibers of the pulp, beating the stock so obtained and forming a sheet therefrom on a paper making machine."

"9. The method of producing a molded sheet material which comprises reacting an aromatic amine with an aldehyde in aqueous acid solution until a condensation product forms, saturating suitably hydrated pulp with said condensation product, precipitating said condensation product from solution with alkali on and around the fibers of the pulp, beating the stock so obtained, forming a sheet therefrom on a paper making machine, and heating and compressing the sheeted stock."

"11. The method of producing a molded laminated sheet material which comprises reacting an aromatic amine with an aldehyde in aqueous acid solution to form a condensation product in solution, saturating suitably hydrated pulp with this solution, precipitating the condensation product from solution with alkali on and around the fibers of the pulp, beating the stock so obtained, forming a sheet therefrom on a paper making machine, superposing a plurality of layers of said sheeted stock, and heating and compressing the same.

"12. The method of producing a molded laminated sheet material which consists in reacting aniline and formaldehyde in aqueous acid solution to form a condensation product in solution, saturating suitably hydrated pulp with this solution, precipitating the product from solution with alkali on and around the fibers of the pulp, beating the stock so obtained, forming a sheet therefrom on a paper making machine, superposing a plurality of layers of said sheeted stock, and heating and compressing same."

1,822,977.—*Ferdinand Münz*, Frankfort-on-the-Main-Fechenheim, Germany. FATTY ACID DERIVATIVES AND PROCESS OF MAKING THEM. Patent dated September 15, 1931. Disclaimer filed March 7, 1933, by the assignee, *General Aniline Works, Inc.*

Hereby enters this disclaimer to such products as are set forth in said claims 2 and 4, except when said products are produced by the processes claimed in claims 1 and 3, respectively.

1,822,979.—*Ferdinand Münz*, Frankfort-on-the-Main-Fechenheim, Germany. ESTERIFIED FATTY ACID DERIVATIVES AND PROCESS OF PREPARING SAME. Patent dated September 15, 1931. Disclaimer filed March 7, 1933, by the assignee, *General Aniline Works, Inc.*

Hereby enters this disclaimer to said claims 3 and 4.

1,828,312.—*Albert O. Buckius*, Cleveland, Ohio. JOURNAL BOX. Patent dated October 20, 1931. Disclaimer filed March 20, 1933, by the assignee, *National Malleable and Steel Castings Company*.

Hereby disclaim from the scope of claims 2, 4, and 8 of said Letters Patent any constructions other than those in which the complementary arc-shaped surfaces on the journal box and side frame are concave toward the vertical axis of the journal box.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 11, 1933

[VOL. 429. NO. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 327,885. THE NAUGATUCK CHEMICAL COMPANY, New York, N. Y. Filed June 10, 1932.

For Latex Composition.
Claims use since Mar. 21, 1932.

Ser. No. 327,886. THE NAUGATUCK CHEMICAL COMPANY, New York, N. Y. Filed June 10, 1932.

For Latex Composition.
Claims use since Mar. 21, 1932.

Ser. No. 330,611. EZL. DUNWOODIE CO., Philadelphia, Pa. Filed Sept. 23, 1932.

SUPER X

For Peat Moss for Poultry and Animal Bedding (Poultry Litter), Peat Moss for Horticultural and Floral Use, Poultry Feeding Grit, Poultry Feeding Charcoal, and Crushed Oyster Shells for Poultry Feeding.
Claims use since September, 1924.

Ser. No. 333,240. TITUS NURSERY COMPANY, Waynesboro, Va., and Baltimore, Md. Filed Dec. 20, 1932.

PLANT CRAFT

No claim being made to the word "Plant" apart from the mark as shown.
For Nursery Products—e. g., Natural Trees, Roots, Plants, Evergreens, and Perennials.
Claims use since August, 1932.

Ser. No. 334,748. JACK FORMAN & Co., New York, N. Y. Filed Feb. 8, 1933.

Patphox

For Dressed and Dyed Fur Skin Pieces Sold for Use as Apparel, Trimmings, and Scarfs.
Claims use since Feb. 2, 1933.

Ser. No. 334,793. GEISMAN, MUSLINER & BRIGHTMAN, INC., Brooklyn, N. Y. Filed Feb. 9, 1933.

GE-M-BE

For Leather.
Claims use since Mar. 28, 1914.

Ser. No. 334,915. THE GAY COAL & COKE COMPANY, Mount Gay, W. Va. Filed Feb. 13, 1933.

For Coal.
Claims use since Jan. 1, 1933.

Ser. No. 335,042. JULIUS ULLMAN'S SONS, Reading, Pa. Filed Feb. 16, 1933.

"OAK-BROOK"

The descriptive word "Oak" not being claimed apart from the mark as shown.
For Leather.
Claims use since Jan. 5, 1933.

CLASS 2

Receptacles

Ser. No. 318,874. WALTER LEE GWYNNE, doing business as The Bagwin Company, New York, N. Y. Filed Sept. 9, 1931.

BAGWIN

For Cloth, Paper, and Rubberized Fabric Bags and Similar Bags Equipped with Metal Mouth Holders and Supports.
Claims use since Aug. 10, 1931.

Ser. No. 335,200. HERZ CUP COMPANY, INCORPORATED, New York, N. Y. Filed Feb. 23, 1933.

Sunshine

For Paper Drinking Cups.
Claims use since Feb. 10, 1933.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 334,650. PARFUMERIE ROGER ET GALLET, SOCIETE ANONYME, Paris, France. Filed Feb. 4, 1933.

For Toilet Soaps.
Claims use since July 8, 1924.

Ser. No. 334,876. S. H. KRESS & Co., New York, N. Y. Filed Feb. 11, 1933.

Applicant disclaims use of the words "Shoe Polish" apart from the mark as shown on the drawing.
For Shoe Polish.
Claims use since Nov. 1, 1932.

Ser. No. 334,937. STEVENS SOAP CORPORATION, Brooklyn, N. Y. Filed Feb. 13, 1933.

PRIDE OF THE KITCHEN

For Washing Powder for General Household and Laundry Use.
Claims use since 1863.

CARNEGIE LIBRARY OF ATLANTA

Ser. No. 334,966. ERNEST JOHN MALLETT, Riverdale, Md. Filed Feb. 14, 1933.

SKYLINE

For Household Cleaning Preparation Used in Cleaning and Polishing Metal, Porcelain, Glass, Painted Surfaces, and for Cleaning the Hands, in Liquid, Cake, or Paste Form.
Claims use since Jan. 30, 1933.

Ser. No. 335,051. THE BLUE HEVEN CORPORATION, North Kansas City, Mo. Filed Feb. 17, 1933.

BLUE HEVEN

For Clarifier for Cleaning Solvent, Detergent in Liquid Form to be Mixed with Cleaning Solvent, Dry Cleaner's Spotting Solution, Medicated Soap, Laundry Soap.
Claims use since Aug. 14, 1931.

CLASS 5

Adhesives

Ser. No. 331,618. HOWE & FRENCH, INC., Boston, Mass. Filed Oct. 27, 1932.

No claim is made in this application to the words "Ever Fast" apart from the mark shown on the drawing.
For Liquid Adhesive Cement.
Claims use since Aug. 18, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 325,818. WIZARD, INC., Chicago, Ill. Filed Apr. 4, 1932.

WIZARD

For Insecticides.
Claims use since Feb. 21, 1931.

Ser. No. 325,980. COLUMBIA PLUSH & PUFF CO., INC., Brooklyn, N. Y. Filed Apr. 11, 1932.

Betty Lou

For Nail Cream, Nail Bleach, Nail Paste, Cuticle Cream, Deodorant Dentifrices, Nail Powder, Nail Liquid, Astringents, Astringent Cerates, Bleach Creams, Cold Creams, Obesity Creams, Vanishing Creams, Foundation Creams, Obesity Astringent, Face Bleaches, Face Packs Cream, Eye Brow and Eyelash Growers Cream, Eye Drops, Hand Lotion, Skin Lotion, Talcum Powder, Hair Salve, Hair Elixir, Hair Oils, Hair Shampoo, Hair Dyes, Bath Salts, Smelling Salts, Mouth Wash Lotions.
Claims use since January, 1921.

Ser. No. 331,855. DOVEDOWN HOSIERY MILLS, Griffin, Ga. Filed Nov. 3, 1932.

DOVEDOWN
Stop-O-Run

No claim is made to the words "Stop" and "Run" apart from the mark as shown.
For Liquid Substance to Cement Runs in Silk Hosiery.
Claims use since Oct. 17, 1932.

Ser. No. 332,261. WALTER MILDNER, Buenos Aires, Argentina. Filed November 18, 1932.

VINDOBONA

For Hair Tonics, Cream for the Hair, Pomade for Fixing the Hair, Hair Lotions, Eau de Cologne, Rouge for Lips and Face, Lipsticks, Colouring Liquids and Pomades for Eyebrows and Eyelashes, Pencils for Painting Eyebrows, Face Creams, Face Lotions, Astringent Lotion, Antisudorific, Shampoos, Enamel for Painting Finger Nails, Pomade for Chapped Hands, Pomade to Eliminate Sunburn, Perfumes, Milk to be Used for Beautifying the Skin, Face Powders, Perfumed Talcum Powder, Perfumed Salts for Bath, Salts Recommended for Preventing Overweight, Pomades Recommended for Preventing Obesity, Depilatory Preparation in Liquid, Cream and Powdered Form.
Claims use since Feb. 10, 1925.

Ser. No. 332,918. HERBERT M. COULTER, doing business as Sal Rheumatica Company, South Pasadena, Calif. Filed Dec. 9, 1932.

No claim is made to the exclusive use of the word "Sal" apart from the mark as shown.
For Medicinal Preparation Consisting of a Pure Granular Crystalline Sulphur Salt Used in the Treatment of Gout, Rheumatism, Neuralgia, Neuritis, Arthritis and the like.
Claims use since June 28, 1932.

Ser. No. 333,831. JOSEPH S. HOULE, Manchester, N. H. Filed Jan. 11, 1933.

MEG-LO-SHUN

No claim is made to the exclusive use of the word "Lo-Shun" apart from the mark as shown.
For Hand Lotions, Face Lotions, and Skin Lotions.
Claims use since Sept. 7, 1932.

Ser. No. 334,038. GUY W. ALBERTY, doing business as Alberty Drug Co., Batavia, N. Y. Filed Jan. 18, 1933.

KREMAG
"THE CREAM OF MILK OF MAGNESIAS"

No claim is made to the words "The Cream of Milk of Magnesias" for registration purposes apart from the mark shown in the drawing.
For Milk Magnesia.
Claims use since Jan. 24, 1925.

Ser. No. 334,289. THE PERFUMER AND COSMETIC GUILD CORPORATION, West Haven, Conn. Filed Jan. 24, 1933.

For Cold Cream, Vanishing Cream, Face Cream, Massage Cream, Bleaching Cream and/or Lotions, Wrinkle Remover in the Form of a Massage Cream for the Removal of Wrinkles, Deodorants, Depilatories, Nail Polish and Polish Remover in the Form of a Chemical Fluid for Dissolving and Removing Nail Polishes and Enamels, Face Powder, Toilet Water, Perfumes, Emollients, Antiseptic Solutions, Cuticle Remover in the Form of a Chemical Fluid for Dissolving and Removing the Cuticle, Camphor Ice, Lip and Face Rouge and Eye Brow Pencil.
Claims use since June 1, 1926.

Ser. No. 334,294. VIVINY PERFUMERS, INC., West Haven, Conn. Filed Jan. 24, 1933.

Septol
No. 6X

For Cold Cream, Vanishing Cream, Face Cream, Massage Cream, Bleaching Cream and/or Lotions, Wrinkle Remover, Deodorants, Depilatories, Nail Polish and Polish Remover, Face Powder, Toilet Water, Perfumes, Emollients in the Form of Creams and Liquids for the Treatment of the Skin, Antiseptic Solutions, Cuticle Remover in the Form of a Chemical Fluid for Dissolving and Removing the Cuticle, Camphor Ice, Lip and Face Rouge, Eye Brow Pencil.
Claims use since Feb. 3, 1932.

Ser. No. 334,468. THE PEPSODENT CO., Chicago, Ill. Filed Jan. 30, 1933.

Ingis

For Facial Cream.
Claims use since July 1, 1932.

Ser. No. 334,683. JOHN LECROY & SON, Camden, N. J. Filed Feb. 6, 1933.

Kit-a-Fly

For Insecticides.
Claims use since Dec. 27, 1932.

Ser. No. 334,716. JOHN J. NORTON, doing business as First Aid Medicine Co. Inc., Laurel, Md. Filed Feb. 7, 1933.

For Medicinal Oil for the Treatment of Cuts, Bruises, Burns, Sprains, and as a Rub Down After Exercise.
Claims use since May 1, 1932.

Ser. No. 334,723. FRANK J. WELICKA, doing business as Welco Laboratories, Jamaica, N. Y. Filed Feb. 7, 1933.

WELCO

For Liniment Used in the Treatment of Aches, Sprains, Bruises, Rheumatism, and Neuralgia.
Claims use since January, 1929.

Ser. No. 334,783. WORTHALL, LTD., New York, N. Y. Filed Feb. 8, 1933.

EFFEX

For Antacid Salt for the Relief of Stomach Disorders.
Claims use since Jan. 30, 1933.

Ser. No. 334,861. H. TH. BÖHME AKTIENGESELLSCHAFT, Chemnitz, Germany. Filed Feb. 11, 1933.

Defindol

For Chemical Dye Aids—Namely, Moistening, Protecting, Penetrating, Smoothing, and Tanning Preparations for Thread and Fibre.
Claims use since Jan. 20, 1933.

Ser. No. 334,862. H. TH. BÖHME AKTIENGESELLSCHAFT, Chemnitz, Germany. Filed Feb. 11, 1933.

Plibol

For Chemical Dye Aids—Namely, Moistening, Protecting, Penetrating, Smoothing, and Tanning Preparations for Thread and Fibre.
Claims use since Jan. 20, 1933.

Ser. No. 334,863. H. TH. BÖHME AKTIENGESELLSCHAFT, Chemnitz, Germany. Filed Feb. 11, 1933.

Lorikal

For Chemical Dye Aids—Namely, Moistening, Protecting, Penetrating, Smoothing, and Tanning Preparations for Thread and Fibre.
Claims use since Jan. 20, 1933.

Ser. No. 334,864. H. TH. BÖHME AKTIENGESELLSCHAFT, Chemnitz, Germany. Filed Feb. 11, 1933.

Bensola

For Chemical Dye Aids—Namely, Moistening, Protecting, Penetrating, Smoothing, and Tanning Preparations for Thread and Fibre.
Claims use since Jan. 20, 1933.

Ser. No. 334,879. MANUEL S. LEHRFELD, Philadelphia, Pa. Filed Feb. 11, 1933.

VERNALIN

For Medicinal Preparation for the Treatment of Hay Fever.
Claims use since Sept. 1, 1932.

Ser. No. 335,110. CHAPPEL BROS., INC., Rockford, Ill. Filed Feb. 20, 1933.

GLUCUROSE

For Composition Used for Medical Treatment Where There Are Certain Cephalgias and Hepatic Insufficiencies.
Claims use since Feb. 2, 1933.

Ser. No. 335,120. GEORGE W. FILLAUER, doing business as Red Star Drug and Surgical Co., Chattanooga, Tenn. Filed Feb. 20, 1933.

FEDROLATE

For Nasal Cream for the Relief of Head Colds, Nasal Catarrh, and Hay Fever.
Claims use since Oct. 1, 1929.

CLASS 11

Inks and Inking Materials

Ser. No. 334,761. THE RANDALL COMPANY, Cincinnati, Ohio. Filed Feb. 8, 1933.

KODYE

For Typewriter Ribbons.
Claims use since Dec. 20, 1932.

CLASS 12

Construction Materials

Ser. No. 334,885. REILLY TAR & CHEMICAL CORPORATION, Indianapolis, Ind. Filed Feb. 11, 1933.

TARODE

For Bituminous Road-Surfacing and Road-Resurfacing Materials.
Claims use since Jan. 19, 1933.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 333,024. THE BRITISH MANNESMANN TUBE COMPANY LIMITED, London, England. Filed Dec. 13, 1932.

For Metal Pipe and Tubing and Metal Tubular Poles and Posts.
Claims use since July 16, 1932.

Ser. No. 334,292. W. A. STILLWAGGON, INC., Jamaica and Richmond Hill, N. Y. Filed Jan. 24, 1933.

THE 20-MINUTE PLUMBER

For Metal Pipe and Tubing, Pipe Clamps, Metal Bath and Shower Fittings, Metal Drainage Fittings, Metal Tank Fittings, Metal Urinal Fittings, Traps, Cocks, Faucets, and Valves.
Claims use since July 2, 1926.

CLASS 15

Oils and Greases

Ser. No. 334,655. THE SUNFLOWER REFINING CORPORATION, Abilene, Kans. Filed Feb. 4, 1933.

For Motor Fuel Oil, Fuel Oil for Burner and Furnace Use, Lubricating Oil and Petroleum Products—Namely, Gasoline and Kerosene.
Claims use since Jan. 7, 1933.

Ser. No. 334,830. COL-TEX REFINING COMPANY, Oklahoma City, Okla. Filed Feb. 10, 1933.

OILOGAS

For Gasoline.
Claims use since Dec. 7, 1932.

Ser. No. 335,009. STANDARD OIL COMPANY OF NEW JERSEY, Wilmington, Del. Filed Feb. 15, 1933.

SAFE-T-ESSO

For Motor Fuel Oils.
Claims use since Jan. 5, 1933.

Ser. No. 335,023. THE FREEDOM OIL WORKS COMPANY, Freedom, Pa. Filed Feb. 16, 1933.

FORT PITT

For Lubricating Oils and Lubricating Greases.
Claims use since Oct. 7, 1931.

CLASS 16

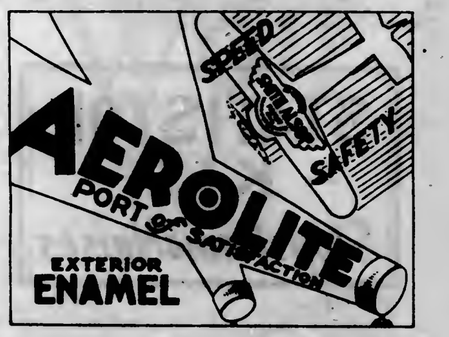
Paints and Painters' Materials

Ser. No. 333,406. PRESERVE SURFACE CO., INC., Detroit, Mich. Filed Dec. 27, 1932.

DURAKO

For Synthetic Varnish.
Claims use since Feb. 1, 1932.

Ser. No. 334,605. HARRY HAMRICK KIRK, doing business as The Hamrick Tank and Barrel Hard Shell Enameling Company, Philadelphia, Pa. Filed Feb. 8, 1933.



The words "Enamel" and "Trade Mark Registered" are hereby disclaimed apart from the mark shown.
For Paint Enamel for Coating the Interiors and Exteriors of Barrels, Casks, Tanks, Etc.
Claims use since December, 1889.

Ser. No. 334,692. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 6, 1933.

For Touch-Up Paint Enamel, Automobile Cleaner, and Polish.
Claims use since Oct. 7, 1932, on touch-up paint enamel, and Nov. 22, 1932, on automobile cleaner and polish.

Ser. No. 335,007. THE SMITH-ALSOP PAINT & VARNISH COMPANY, INC., Terre Haute, Ind. Filed Feb. 15, 1933.

No claim being made to the words "Exterior", "Enamel", "Speed", "Safety", "Hi-Grade", "Paint", "Varnish", and "Products", apart from the mark shown in the drawing.
For Paint Enamel for Exterior Use.
Claims use since Feb. 1, 1933.

Ser. No. 335,021. DURALITH CORPORATION, New York, N. Y. Filed Feb. 16, 1933.

For Glazing Compound Acting as a Vehicle for Color, Suitable for Glazing Painted or Unpainted Surfaces.
Claims use since August, 1929.

CLASS 17

Tobacco Products

Ser. No. 335,195. THE FORTUNE TOBACCO COMPANY, New York, N. Y. Filed Feb. 28, 1933.

TAR-BABY

For Cigarettes.
Claims use since Feb. 20, 1933.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 331,296. TOBE DEUTSCHMANN CORPORATION, Canton, Mass. Filed Oct. 15, 1932.

STATISTOP
- KIT -
StopsRadioNoises

The applicant corporation disclaims the word "Kit" and the slogan "Stops Radio Noises" apart from the mark shown in the drawing.

For Electrical Filters and Other Electrical Units Made Up of Condensers, Resistors, Inductances, or Impedances Electrically Connected Together as a Unit, and Kits Containing Electrical Resistance, Inductances, and/or Impedances to be Used Together or Individually in Radio Receiving Sets and Telephone Apparatus, in Electric Generators, Motors, and Other Electric Apparatus Where Electrical Circuits are Made and Broken, the Parts Being More Specifically Used for the Elimination of Static, Extraneous Noises, and Electrical Disturbances Created in the Making and Breaking of Electric Circuits.

Claims use since Aug. 9, 1932.

Ser. No. 333,957. WESTINGHOUSE ELECTRIC AND MANUFACTURING CO., East Pittsburgh, Pa. Filed Jan. 14, 1933.

PHOTO-TROLLER

For Electronic Tube Controllers for Package Conveying Apparatus, Door Operating Mechanism, Counting Mechanism, and Similar Mechanism.

Claims use since Sept. 15, 1932.

Ser. No. 334,305. FADA RADIO AND ELECTRIC CORPORATION, Long Island City, N. Y. Filed Jan. 25, 1933.

MOTOSET

For Radio Receiving Sets and Loud Speakers.

Claims use since Jan. 7, 1933.

Ser. No. 334,679. THE A. C. GILBERT COMPANY, New Haven, Conn. Filed Feb. 6, 1933.

Kitchen-ETTA

For Portable Electrically Driven Devices for Mixing, Beating, Grinding, and Extracting Edible Products.

Claims use since Oct. 1, 1932.

Ser. No. 335,107. CARSON PIRIE SCOTT AND COMPANY, Chicago, Ill. Filed Feb. 20, 1933.

Black Hawk

For Radio Receiving Sets.

Claims use since 1926.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 334,390. ESSEM PRODUCTS COMPANY, Milwaukee, Wis. Filed Jan. 27, 1933.

ESSEM
PRODUCTS CO
MILWAUKEE WIS

The drawing is lined for red. No claim is made to the words "Milwaukee, Wis."

For Poker Chips.

Claims use since Jan. 14, 1933.

Ser. No. 334,464. HOWARD B. JONES, Chicago, Ill. Filed Jan. 30, 1933.

HOOT-NANNY

For Toy Drawing Outfits.

Claims use since Dec. 8, 1932.

Ser. No. 334,526. FINLAYSON, BOUSFIELD & CO., LTD., Johnstone, Scotland. Filed Feb. 1, 1933.

FINLAYSON'S
FOUR SQUARE
JOHNSTONE, SCOTLAND.

No claim is made to the words "Johnstone, Scotland."

For Fishing Lines.

Claims May 20, 1932.

Ser. No. 334,833. W. A. HERRINGTON, Green City, Mo. Filed Feb. 10, 1933.

BAG-O-MAD

For Fish Lure or Artificial Bait.

Claims use since July 1, 1932.

Ser. No. 335,194. FORT WAYNE PAPER BOX COMPANY, Fort Wayne, Ind. Filed Feb. 23, 1933.

WAYNE
JIG-A-JIG

For Jig Saw Puzzles and Jig Saw Puzzle Work Boards.

Claims use since Feb. 11, 1933.

Ser. No. 335,231. WILLIAM ROBERT CLUFF, New York, N. Y. Filed Feb. 24, 1933.

FOXAGRAMS

For Puzzles.

Claims use since Jan. 5, 1933.

Ser. No. 335,274. DAVEGA-CITY RADIO STORES, INC., New York, N. Y. Filed Feb. 25, 1933.

Leedall

For Golf Balls.

Claims use since Feb. 1, 1933.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

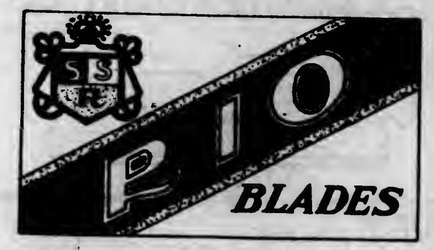
Ser. No. 333,281. THE CUNO ENGINEERING CORPORATION, Meriden, Conn. Filed Dec. 22, 1932.

CUNO *Lifetime* FILTER

No claim is made to the word "Filter" apart from the mark shown.

For Mechanical Fluid Straining and Filtering Apparatus and Parts Thereof for Cleaning the Oil, Gasoline, and Water Supply for Internal Combustion Engines and the Oil Supply for Fuel Oil Burners and the Like.

Claims use since Dec. 10, 1932.



Ser. No. 334,455. AUGUST WOLF, EISENWARENFABRIK GEB. M. BESCHR. HAFTUNG, Betsdorf, Germany. Filed Jan. 28, 1933.

Wolf

For Wooden Tool Handles for Garden and Agricultural Implements.

Claims use since July 19, 1928.

Ser. No. 334,541. STANDARD SAFETY RAZOR CORPORATION, Wilmington, Del., and East Norwalk, Conn. Filed Feb. 1, 1933.

No claim is made to the words "Blades" apart from the mark as shown.

For Razor and Razor Blades.

Claims use since June 2, 1930.

Ser. No. 334,542. STANDARD SAFETY RAZOR CORPORATION, Wilmington, Del., and East Norwalk, Conn. Filed Feb. 1, 1933.

No claim is made to the words "Finest Blades" apart from the mark as shown.

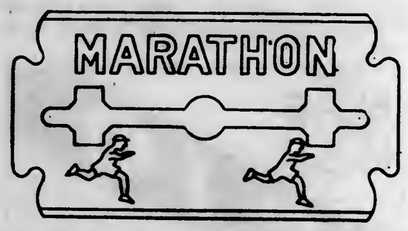
For Razor and Razor Blades.

Claims use since June 2, 1930.

Ser. No. 334,543. STANDARD SAFETY RAZOR CORPORATION, Wilmington, Del., and East Norwalk, Conn. Filed Feb. 1, 1933.

No claim is made to the words "Blades" apart from the mark as shown.

For Razor and Razor Blades.



Claims use since Jan. 10, 1931.

Ser. No. 334,643. THE LARVEX CORPORATION, New York, N. Y. Filed Feb. 4, 1933.

LARVEX

For Atomizers for Spraying Insecticides, Mothproofing Compositions, Etc.
Claims use since 1922.

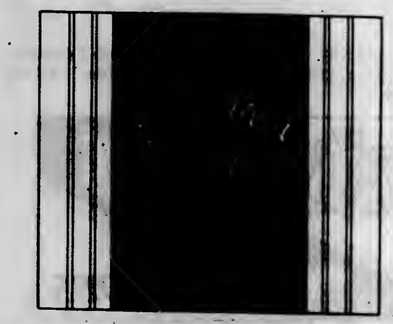
Ser. No. 334,758. MARATHON RAZOR BLADE CO., INC., Irvington, N. J. Filed Feb. 8, 1933.

No claim is made to the representation of the razor blade per se.
For Safety Razor Blades.
Claims use since Aug. 24, 1931.

CLASS 24

Laundry Appliances and Machines

Ser. No. 334,787. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Feb. 9, 1933.



RAYTEX

For Laundry Washing Machines.
Claims use since Apr. 15, 1930.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 333,347. CONTINENTAL OPTICAL COMPANY, Indianapolis, Ind. Filed Dec. 23, 1932.

The descriptive words "Demi Gold" are hereby disclaimed apart from the mark as shown.
For Ophthalmic Frames and Mountings.
Claims use since July 1, 1932.

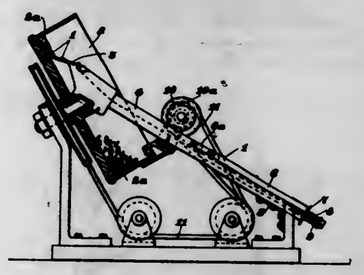
REISSUES

APRIL 11, 1933

18,791. RECIPROCATING PUMP. ALBERT F. RUTHVEN, Amarillo, Tex., assignor to Leatherless Plunger Pump Corporation, Amarillo, Tex., a Corporation of Texas. Original No. 1,730,297, dated Oct. 1, 1929, Serial No. 167,709, filed Feb. 12, 1927. Application for reissue filed Feb. 19, 1931. Serial No. 517,085. 6 Claims. (Cl. 103—204.)



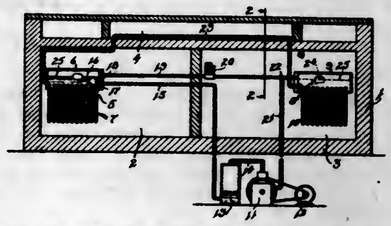
2. A pump of the character described comprising a barrel, a plunger operatively mounted therein and having a passageway therethrough, and cooperating grooves formed in the opposing surfaces of the plunger and barrel to resist the flow of liquid therebetween, each of said grooves having a lower side thereof at right angles to the axis of the plunger and an upper side thereof at an acute angle to said axis.

18,792. CONTAINER. HAROLD M. WARREN, St. Petersburg, Fla., assignor to Steel-Bound Container Corporation, St. Petersburg, Fla., a Corporation. Original No. 1,846,291, dated Feb. 23, 1932, Serial No. 486,751, filed Oct. 6, 1930. Application for reissue filed Mar. 24, 1932. Serial No. 601,064. 6 Claims. (Cl. 217—44.)

1. A flat comprising a fiber wall member, a thin flat metal binding strip located at one face and along one edge of said wall member, means holding said strip to said wall member, and a relatively shallow anchoring means adjacent the holding means presenting a relatively broad resistance surface substantially parallel to the longitudinal axis of the strip.

18,793. METHOD OF MANIPULATING MULTIPLE FASTENERS. JOSEPH B. PERRAULT, Watertown, Mass., assignor, by mesne assignments, to Heckless Fastener Company, a Corporation of Pennsylvania. Original No. 1,679,626, dated Aug. 7, 1928, Serial No. 185,634, filed Sept. 15, 1926. Application for reissue filed Jan. 20, 1932. Serial No. 587,880. 10 Claims. (Cl. 29—148.)

1. The herein described method of manipulating multiple fastener elements of the type described which consists in cutting through the bases of the elements to form slots, widening the slots by a spreading action, inserting a carrier tape, and thereafter compressing the walls of the slots upon said tape.

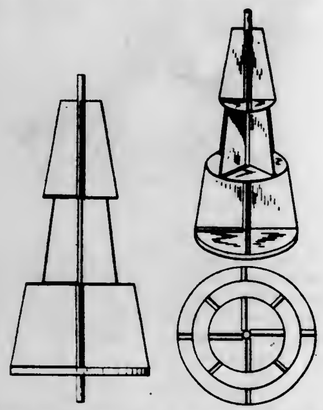


18,794. SPLICE BAR. EMANUEL WOODINGS, Oakmont, Pa., assignor to Woodings-Verona Tool Works, Verona, Pa., a Corporation of Pennsylvania. Original No. 1,547,854, dated July 28, 1925, Serial No. 1,552, filed Jan. 10, 1925. Application for reissue filed Feb. 16, 1933. Serial No. 657,070. 3 Claims. (Cl. 238—138.)

1. A reclaimed splice bar for railway rails having straight end portions with parallel top and bottom rail engaging surfaces which respectively have a flat engagement with the undersides of the rail heads and with the upper sides of the rail flanges, and having only its medial portion above the bolt holes re-shaped to form a crown local to the central portion of the bar and projecting above the contiguous straight top surfaces thereof, the said bar also having its bottom surface straight and flat throughout for flatly engaging the upper surfaces of adjacent rail flanges.

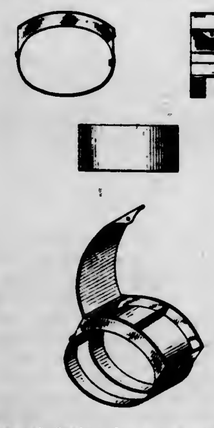
18,795. REFRIGERATING SYSTEM. FRANKLIN B. HUNT, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Original No. 1,746,896, dated Feb. 11, 1930, Serial No. 162,601, filed Jan. 21, 1927. Application for reissue filed June 27, 1930. Serial No. 464,411. 13 Claims. (Cl. 62—3.)

1. In combination with compartments, evaporators positioned within said compartments, means for supplying liquid refrigerant to said evaporators in series comprising a compressor and condenser, a liquid supply line connecting said condenser and the first of said evaporators, a second liquid supply line connecting said first evaporator and the second evaporator, means for conducting vaporized refrigerant from said evaporators to said compressor comprising a common return conduit and branch conduits connecting said evaporators with said common return conduit, and means independent of the rate of refrigerant



supply for limiting the maximum level of liquid refrigerant in each evaporator.

DESIGNS

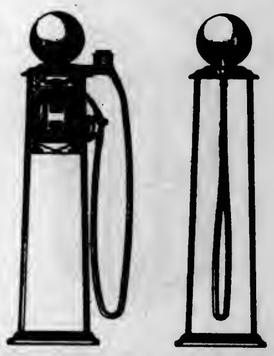


APRIL 11, 1933

89,585. DISPLAY RACK. FERDINAND F. DUGAN and WILLIAM S. CAMPBELL, Akron, Ohio. Filed Aug. 1, 1932. Serial No. 44,508. Term of patent 3½ years.

The ornamental design for a display rack as shown.

89,586. BRACELET. LEO GLASS, Brooklyn, N. Y. Filed Sept. 16, 1932. Serial No. 44,866. Term of patent 3½ years.

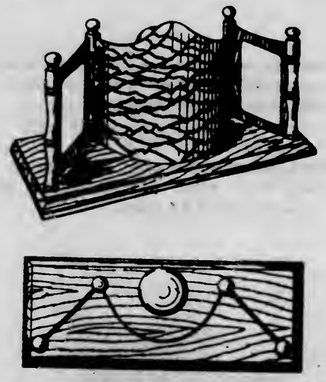


The ornamental design for a bracelet, as shown.

89,587. CLOCK CASE. JOSEPH GOTTLIEB, Jersey City, N. J. Filed Feb. 11, 1933. Serial No. 47,184. Term of patent 3½ years.

The ornamental design for a clock case, as shown.

89,588. FLUID DISPENSING APPARATUS. WILLIAM M. GRIFFIN, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 21, 1933. Serial No. 46,920. Term of patent 7 years.



The ornamental design for a fluid dispensing apparatus as shown and described.

89,589. COMBINED CHARGING AND TESTING APPARATUS AND STOCK STAND. BENJAMIN F. W. HEYER, Belleville, N. J. Filed Dec. 1, 1932. Serial No. 46,276. Term of patent 3½ years.

The ornamental design for a combined charging and testing apparatus and stock stand, as shown.

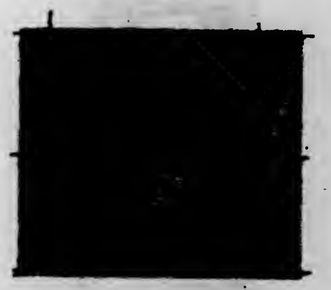
89,590. COMBINED ELECTRIC LAMP AND PICTURE FRAME. HERBERT H. HOWLAND, Jeffersonville, Ind. Filed Oct. 3, 1932. Serial No. 45,197. Term of patent 14 years.

The ornamental design for a combined electric lamp and picture frame, substantially as shown and described.

89,591. KITCHEN CABINET. LEO L. MILLER, Frankfort, Ind., assignor to McDougall Company, Frankfort, Ind., a Corporation. Filed Feb. 25, 1932. Serial No. 42,997. Term of patent 3½ years.

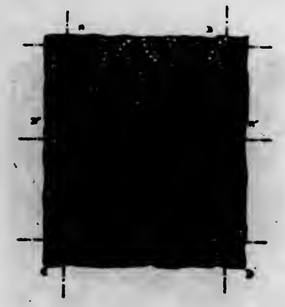
The ornamental design for a kitchen cabinet, as shown and described.

89,592. TEXTILE FABRIC OR THE LIKE. HANS J. NEEGER, New York, N. Y., assignor to The Schwarzenbach Huber Co., New York, N. Y., a Corporation of New Jersey. Filed Jan. 18, 1933. Serial No. 46,870. Term of patent 3½ years.



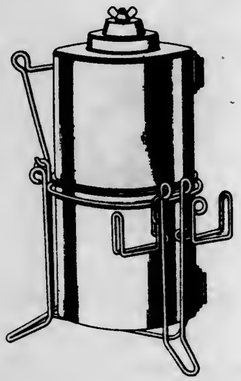
The ornamental design for a textile fabric or the like as shown.

89,593. WATCHCASE. CHARLES OPPENHEIM, Chicago, Ill. Filed Jan. 4, 1933. Serial No. 46,729. Term of patent 3½ years.

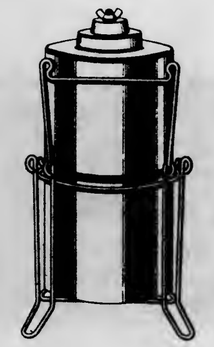


The ornamental design for a watchcase as shown and described.

89,594. TEXTILE FABRIC OR THE LIKE. WILLARD D. ROBERSON, New York, N. Y. Filed Feb. 3, 1933. Serial No. 47,094. Term of patent 3½ years.

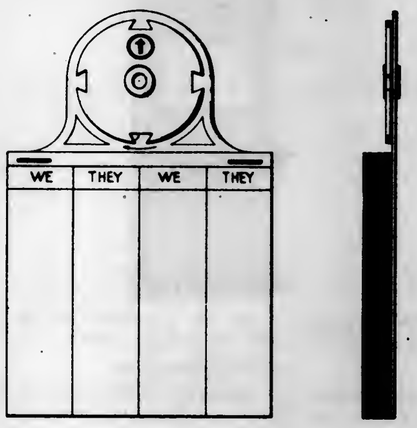


The ornamental design for a textile fabric or the like as shown and described.

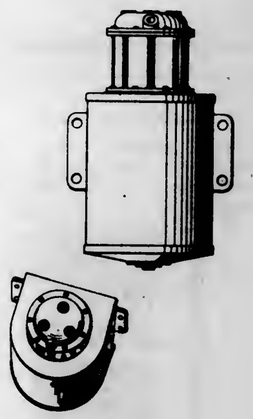


89,595. TEXTILE FABRIC OR SIMILAR ARTICLE. JACK SCHWEIZER, New York, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Jan. 4, 1933. Serial No. 46,719. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown and described.



89,596. PORTABLE WATER SOFTENER. EDGAR M. SORENG, Chicago, Ill., assignor to Soreng-Manegold Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1932. Serial No. 44,530. Term of patent 3½ years.



The ornamental design for a portable water softener, as shown.

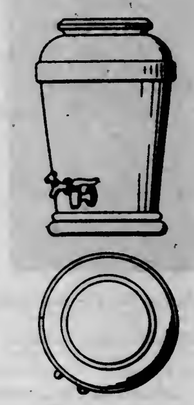
89,597. COMBINATION INDICATOR AND SCORE KEEPING DEVICE FOR BRIDGE GAMES OR SIMILAR ARTICLE OF MANUFACTURE. MAX J. STRASBERGER, Brooklyn, N. Y. Filed Feb. 2, 1933. Serial No. 47,089. Term of patent 3½ years.

The ornamental design for a combination indicator and score keeping device for bridge games or similar article of manufacture substantially as shown.

89,598. FUEL FEEDING TANK. HORACE A. STUKES, San Antonio, Tex. Filed May 21, 1932. Serial No. 43,862. Term of patent 14 years.

The ornamental design for a fuel feeding tank as shown.

89,599. RADIOCABINET. JOSEPH TAYLOR, Chicago, Ill., assignor to Grigsby-Grunow Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1933. Serial No. 47,057. Term of patent 7 years.



The ornamental design for a radio cabinet as shown.

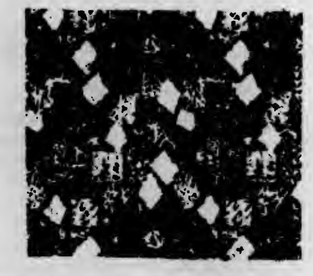
89,600. EMBROIDERED TEXTILE FABRIC TRIMMING. EMIL G. ZULLIG, Bergenfield, N. J., assignor to Samuel Ellen, New York, N. Y. Filed Feb. 10, 1933. Serial No. 47,177. Term of patent 3½ years.

The ornamental design for an embroidered textile fabric trimming substantially as shown and described.

89,601. DISPENSING CONTAINER. ERNEST L. BYFIELD, Chicago, Ill., assignor to College Inn Food Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1932. Serial No. 45,438. Term of patent 3½ years.

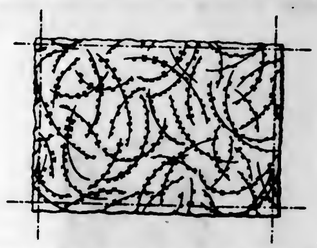
The ornamental design for a dispensing container, as shown.

89,602. HAND MIRROR. CECIL H. LAWRENCE, Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1933. Serial No. 46,860. Term of patent 3½ years.



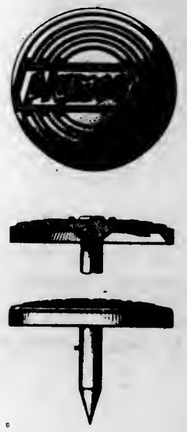
The ornamental design for a hand mirror, as shown and described.

89,603. TEXTILE FABRIC. PAUL MOUTON, deceased, Paris, France, by Jacques Mouton, administrator, Paris, France, assignor to Cheney Brothers, New York, N. Y., a Corporation of Connecticut. Filed Feb. 1, 1933. Serial No. 47,069. Term of patent 3½ years.



The ornamental design for a textile fabric, substantially as shown.

89,604. TEXTILE FABRIC. PAUL MOUTON, deceased, Paris, France, by Jacques Mouton, administrator, Paris, France, assignor to Cheney Brothers, New York, N. Y., a Corporation of Connecticut. Filed Feb. 1, 1933. Serial No. 47,070. Term of patent 3½ years.

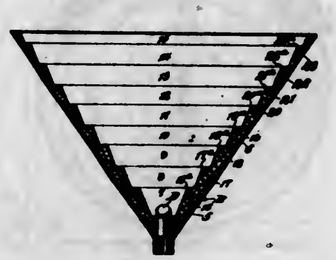


The ornamental design for a textile fabric, substantially as shown.

89,605. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Jan. 4, 1933. Serial No. 46,707. Term of patent 3½ years.

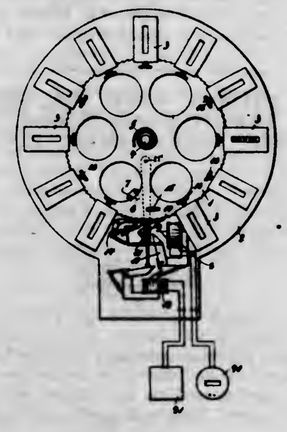
The ornamental design for a textile fabric or similar article as shown and described.

89,606. TRAFFIC MARKER. WILLIAM P. FAVORITE and HARRY A. MOLER, Detroit, Mich. Filed Dec. 9, 1932. Serial No. 46,404. Term of patent 14 years.



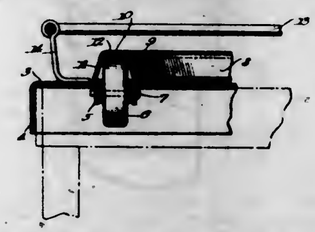
The ornamental design for a traffic marker substantially as shown and described.

PATENTS



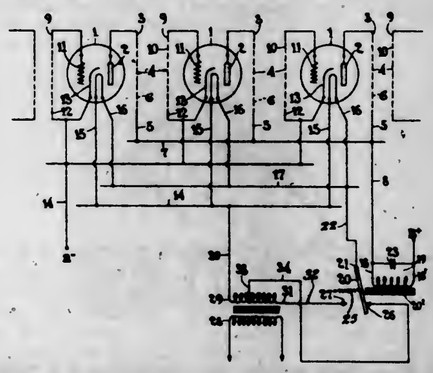
GRANTED APRIL 11, 1933

1,903,417. HEADLIGHT. JOHN AUDLEY GRANT, Atlanta, Ga. Filed May 25, 1931. Serial No. 539,939. 5 Claims. (Cl. 240—41.36.)



1. The combination with a pair of non-glaring headlights arranged side by side, each headlight comprising a conical reflector unit having its inner surface formed with a plurality of ring-shaped frustum surfaces disposed to form a series of annular continuous alternately arranged reflecting and nonreflecting surfaces, the ring-shaped frustum surfaces of one unit being respectively disposed in advance of the corresponding surfaces and shoulders of the other unit whereby the surfaces and shoulders of the respective reflector units will be arranged intermediately abreast.

1,903,418. INTEGRATING METER FOR GRADED MEASUREMENTS. FRITZ MAURITZ JACOBSSON, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed Oct. 8, 1927, Serial No. 223,764, and in Sweden Oct. 9, 1926. 5 Claims. (Cl. 235—92.)

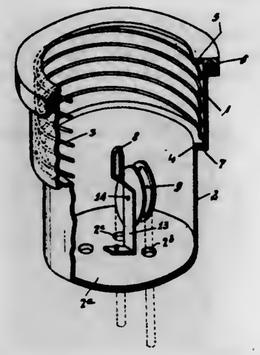


1. An apparatus for graded measurements of a fluctuating quantity comprising an integrating meter, a number of counters, means for the individual actuation of the said counters in accordance with the advancement of said meter, timed means for the automatic and periodical restoration of said actuation means to starting position at even fixed time intervals.

1,903,419. COMBINATION TABLE TOP AND ROTATABLE TRAY. ADOLPH KELLER, St. Louis, Mo. Filed Sept. 29, 1930. Serial No. 485,194. 13 Claims. (Cl. 45—26.)

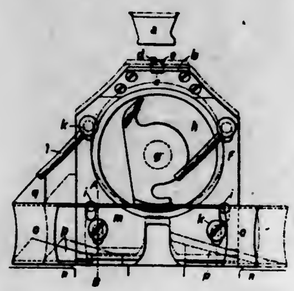
1. In a device of the class described, a base member having depending flanges, rollers mounted on said base members, and a tray member having an annular flange rotatably supported by said rollers, said annular flange cooperating with said rollers to guide said tray member in rotation.

1,903,420. RADIO RECEIVING SYSTEM. ALEX BADMA, Buffalo, N. Y. Filed Jan. 23, 1931. Serial No. 510,816. 4 Claims. (Cl. 250—20.)



1. In a radio receiving system including an audion having a cathode and an anode coupled respectively to an input and an output circuit, a heater filament for heating the cathode thereof, a source of filament potential and a filament circuit connecting the filament to its source of potential, the combination of a source of reduced filament potential, a switch operable to connect either of the sources of potential to the filament, and electro-magnetic means interposed in the anode circuit and operative upon energization of the anode circuit to move switch means to connect the source of reduced filament potential to the filament circuit, and said means when said anode circuit is deenergized moving said switch means to connect the first named source of potential to the filament.

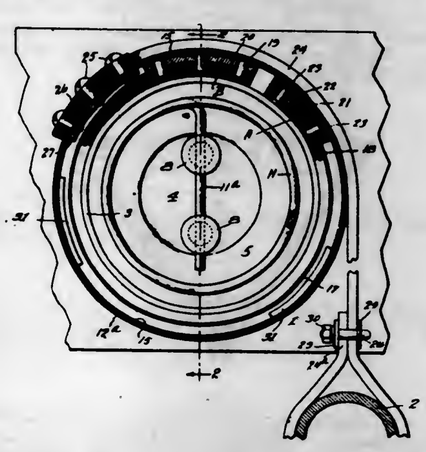
1,903,421. TOP MEMBER FOR FASTENING ILLUMINATING BODIES TO CEILINGS. OTTO BRENHARDT, Cassel-Wilhelmshohe, and ERNST VORMANN, Cassel, Germany. Filed Feb. 16, 1931, Serial No. 516,200, and in Germany Oct. 16, 1930. 1 Claim. (Cl. 240—67.)



A support for suspending illuminating bodies from ceilings, comprising, in combination, two tubular members arranged telescopically with respect to one another in ver-

tical position; a compressive helical spring inserted between said members and being located at the inner circumferential surface of the upper tubular member, and supporting the upper member elastically upon the lower mem-

ber, thus permitting movement of the upper member down upon and over the lower member; and means for connecting the lower member with a ceiling hook, substantially as set forth.



1,903,422. SOLING MACHINE. ADAM EHRESMANN and LUDWIG STREIBEL, Karlsruhe, Germany. Filed Apr. 16, 1931, Serial No. 530,610, and in Germany Apr. 28, 1930. 2 Claims. (Cl. 112—45.)

1. In a soling machine the combination of a machine frame having a bed plate, a presser foot, a stitch plate disposed below said presser foot and provided with a slot, a lever arm, the free end of said arm being disposed below said stitch plate, a knife forming both a feeding and a channeling tool, said knife being secured to the free end of said arm and projecting upwardly through said slot, a slider carrying said stitch plate and being disposed on the front of said frame and adapted to be moved thereon up and down, a second slider disposed in front of said frame and on said bed plate and adapted to be moved horisontally and to effect the vertical movement of the first said slider, and means for fixing the latter.

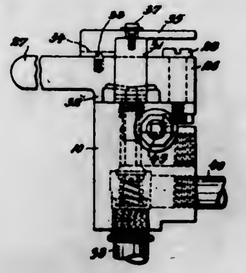
1,903,423. SHOCK ABSORBER. CLAUD H. FOSTER, Wickliffe, Ohio. Filed June 16, 1928. Serial No. 285,910. 13 Claims. (Cl. 267—10.)

1. A shock absorber comprising a brake drum adapted to be secured to one of two relatively movable vehicle members, a housing surrounding the said drum and spaced therefrom, a strap connected at one end to the exterior of said housing and adapted to be connected at its other end to the other vehicle member and arranged to engage the outer surface of the housing, a spring having one end anchored with respect to the housing and its other end connected to said housing, and a brake band on the said drum having one end secured to the housing and having its opposite end in proximity to such first-mentioned end, the second mentioned end of the brake band

substantially filling the space between the brake drum and the housing and the first mentioned end of the brake band being spaced from the brake drum, the said housing being mounted so as to be movable toward the brake drum through the pull of said strap upon said housing.

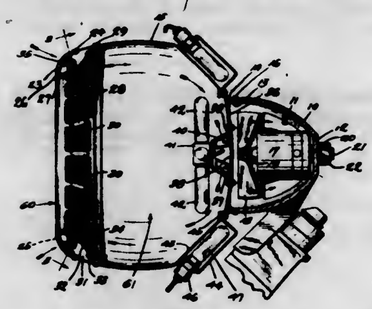
1,903,424. UPHOLSTERY PAD. LE-ROY V. GORDON, Cleveland, and LEO L. WILLIAMS, Cleveland Heights, Ohio. Filed June 26, 1930. Serial No. 463,966. 5 Claims. (Cl. 154—54.)

1. Upholstery padding comprising a backing sheet, a sheet of batting, bats between said sheets, and lines of stitching connecting said sheets between said bats.



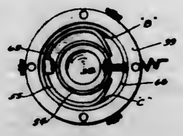
1,903,425. PADDING GUIDE FOR SEWING MACHINES. LE-ROY V. GORDON, Cleveland, Ohio. Filed Aug. 18, 1930. Serial No. 475,907. 11 Claims. (Cl. 112—151.)

1. A padding guide comprising a body having a parting portion at the front end thereof, a needle aperture to the rear of said parting portion, and flanges flared upwardly and outwardly away from said needle aperture.



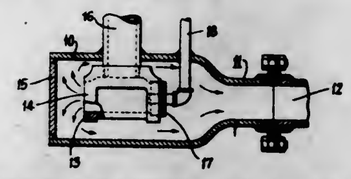
1,903,426. VALVE. WALTER HINS, East Cleveland, Ohio, assignor to The Ferro Machine & Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1930. Serial No. 462,680. 2 Claims. (Cl. 251—163.)

1. In apparatus of the character described the combination of a body having a fluid passage, a valve seat associated with said passage, a valve for cooperation with said seat and having an actuating stem reciprocable in said body, an operating member pivoted on said body and having means adapted to engage said stem, and means for indicating a position of said operating member which corre-



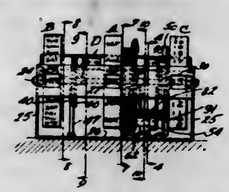
sponds with a desired valve opening, the last mentioned means including a member adjustably mounted with respect to said body, and a spring pressed detent movably mounted on one of said members for releasable engagement in a recess on the other of said members.

1,903,427. DRIER. WENDELL L. MARTIN, Cleveland, Ohio, assignor to The Martin Brothers Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 25, 1930. Serial No. 463,646. 10 Claims. (Cl. 34—26.)



1. A drier, comprising: a casing having an opening therein disposed in the front of the casing into which an object to be treated is adapted at least partially to project; air inlet means disposed in the front of said casing and spaced laterally from said opening for establishing direct communication between the outer atmosphere and the interior of said casing; air outlet means; and means disposed within said casing for causing a current of air from the outer atmosphere in a zone adjacent said object to flow inwardly through said inlet means, rearwardly through said casing and outwardly through said outlet means.

1,903,428. ELECTRIC SWITCH. PATRICK J. MCMANAMAN, Cleveland, Ohio. Filed Nov. 3, 1931. Serial No. 572,780. 2 Claims. (Cl. 200—1.)

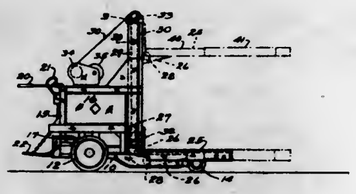


1. A switch comprising a casing, a pivoted pedal and its stem having tilting movements in said casing in various directions, a contact spring extending around in the casing and arranged to close contacts at different places around the outer wall of the casing, said spring having at one point a bent finger contact cooperating with one of the contacts around the outer wall, and means actuated by the tilting of the pedal to selectively close said contacts.

1,903,429. MIXING DEVICE. PAUL W. MERCHANT, Port Arthur, Tex. Filed Aug. 8, 1929. Serial No. 384,425. 2 Claims. (Cl. 261—75.)

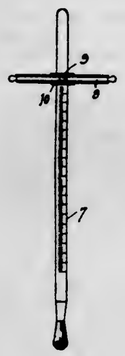
1. A mixing device comprising an outer chamber having an outlet port, an inner chamber positioned within the outer chamber and having an outlet port disposed oppositely to the outlet port of the outer chamber, pipes extending thru the outer chamber to the inner chamber to form means for admitting fluids to the inner chamber, whereby fluids admitted to the inner chamber are commingled therein, discharged into the outer chamber in one direction and passed to the outlet port of the outer chamber in the opposite direction.

1,903,430. CALENDAR MECHANISM. MAURICE N. RICHTER and FRANK LOWITZ, New York, N. Y. Filed Mar. 26, 1932. Serial No. 601,439. 14 Claims. (Cl. 40—112.)



1. In a calendar mechanism, a rotatable date element, a rotatable month element which is advanced at the termination of each month by the movement of said date element, an oscillatory operating member for rotating said date element, means for controlling the stroke of said member to normally effect daily step by step movements of said date element, means for permitting a greater stroke of said member at the end of certain months to move said date element a greater than normal distance, and mechanism including a yielding connection between said date element and said month element which permits said date element to move through said abnormal distance without rotation of the month element until the termination of said greater stroke of said operating member, whereby said month element is prevented from premature advance and registration of the next month.

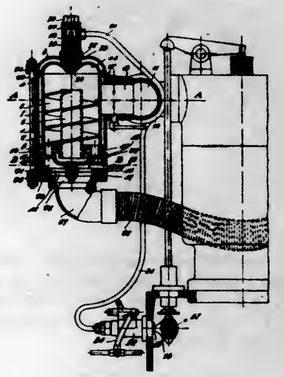
1,903,431. INDUSTRIAL TRUCK. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 5, 1931. Serial No. 520,257. 3 Claims. (Cl. 187—9.)



1. In an industrial truck, a main frame, wheels dirigibly arranged to support said frame, a vertical guideway mounted on said frame, a carriage slidably arranged for vertical movement in said guideway and having a forwardly extending member, means adapted to raise and lower said carriage, a load supporting platform rigidly secured to the upper surface of the forwardly extending member and having downwardly extending flanges embracing the sides

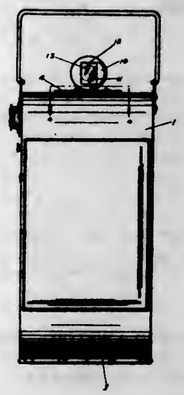
of the carriage member and the frame, a supplemental platform carried by the first named platform, the two platforms being arranged so that they may be slid one relative to the other to increase or decrease the overall

length of the combined platforms, and wherein the length of said platform may be increased or decreased, regardless of the position of the carriage and platform relative to the truck supporting surface.



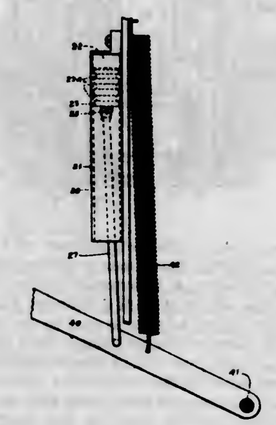
1,903,432. SURGICAL THERMOMETER. KAORU AKASHI, Los Angeles, Calif. Filed Jan. 3, 1931. Serial No. 506,408. 4 Claims. (Cl. 73—52.)

2. A surgical thermometer, comprising a thermometer body, a clamp member in frictional engagement with the thermometer body, a pivot shaft projecting from the clamp member, a handle operatively mounted on the pivot shaft, a rubber liner for the clamp, and projections on the clamp engaging with the handle in its operative position.



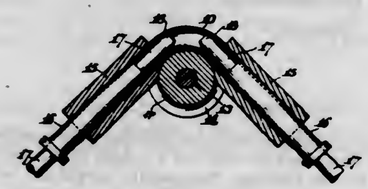
1,903,433. CARBURETOR. HELGE BJERING, Buenos Aires, Argentina. Filed June 24, 1931. Serial No. 546,590. 3 Claims. (Cl. 261—24.)

1. A carburetor for heavy oils comprising essentially a fuel pulveriser, a chamber connected to the intake tube of the engine and provided with an air entrance, in which chamber the fuel is pulverized and mixed with the air proceeding from said entrance, means for heating said chamber and consequently the mixture circulating therein, and an entrance for additional fresh air that adds the necessary air to the mixture leaving the chamber and entering the intake tube of the engine, said pulveriser being adapted to work at high pressure (approximately 3000 lbs.), and consisting in a conical headed valve which opens towards the mixing chamber by the pressure of the liquid, overcoming an opposing spring, so that the liquid enters the chamber by the space between the valve and its seat, thus forming a divergent conical jet, a crown being provided in the form of a conical comb placed in the passage of this jet in such a manner that a part of same is diverted



towards the center of the chamber by the teeth of the comb, the origin of the pulverization being situated in a somewhat projecting position in the chamber with respect to that part of the bottom surrounding the pulveriser.

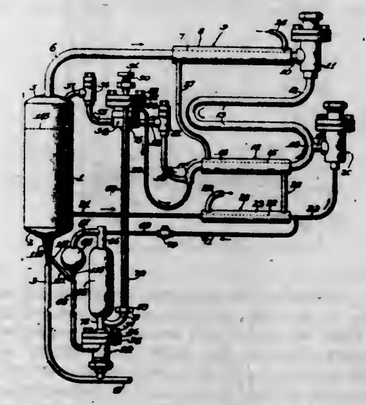
1,903,434. COMBINED VIEW FINDER AND CATCH FOR CAMERAS. CARL A. BORNMANN, Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y. Filed Mar. 22, 1928. Serial No. 263,923. 1 Claim. (Cl. 95—32.)



In combination, a camera comprising a body, a back therefor, a movable locking member on said back cooperating with fixed pins on said body for securing the same thereto in closed position, and a direct view finder on said locking member for operating the same, said finder comprising a tubular housing providing with aligned openings in each end and being in operative position when said back is closed and locked to said body.

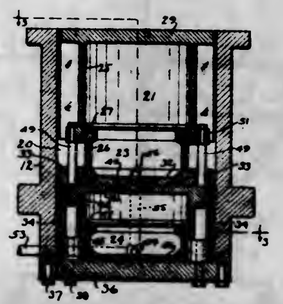
1,903,435. AIR DASHPOT. FREDERICK G. L. BOYER, Dayton, Ohio. Original application filed Feb. 2, 1923, Serial No. 616,509. Divided and this application filed Jan. 23, 1925. Serial No. 4,847. 4 Claims. (Cl. 188—96.)

1. In combination with manually operated mechanism: an air dash pot comprising a cylinder having a gradually enlarging internal diameter towards the closed end thereof.



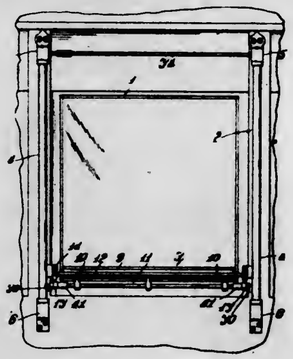
1,903,436. METHOD OF AND MEANS FOR THE MANUFACTURE OF PIPE FITTINGS. EDMUND BROWN, Palmyra, N. J. Filed July 3, 1931. Serial No. 548,519. 14 Claims. (Cl. 153—32.)

2. The method of making pipe fittings which consists in taking a section of metal tube having oblique ends, bending the same over an external curved form, and imparting pressure to both ends of the tube during the bending operation.



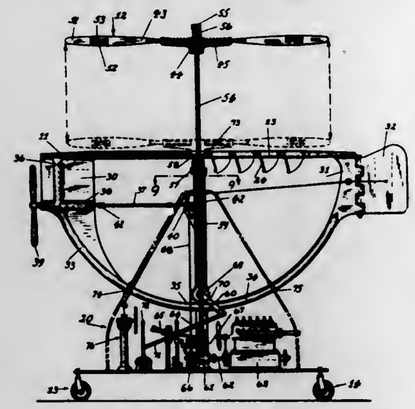
8. Means for forming pipe fittings from tubes comprising a curved form over which a section of tube is adapted to be bent, movable sleeves for engaging the ends of the tube during the bending operation, and bushings slidably mounted in said sleeves adapted to impart pressure to the ends of the tube during the bending operation.

1,903,437. REFRIGERATING DEVICE. JULES BUCHEL, New Orleans, La., assignor of one-half to the estate of Charles Louque, one-twentieth to Lester H. Rayner and one-twentieth to Joseph Frederick Dupuy, New Orleans, La. Filed Aug. 29, 1928. Serial No. 302,760. 21 Claims. (Cl. 62—5.)



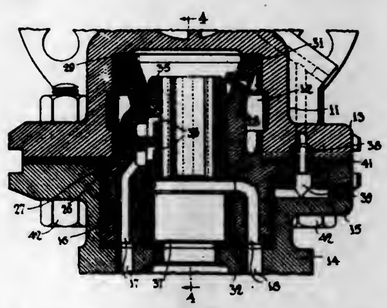
1. A refrigerating device comprising a generator, a freezer, an absorber, means for receiving absorbed material, and heat exchange means for forcing received material to the generator.

1,903,438. PRESS. ARTHUR A. BYRELEIN, Detroit, Mich., assignor to General Machinery Corporation, Hamilton, Ohio, a Corporation of Delaware. Filed Feb. 1, 1932. Serial No. 590,059. 6 Claims. (Cl. 267—1.)



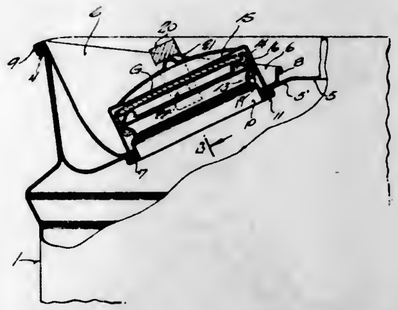
1. A yielding pressure cushion of the character described comprising cooperating fixed and movable elements forming a top fluid pressure chamber of variable capacity, additional fixed and movable elements forming a lower fluid pressure chamber of variable capacity, a fixed element of one of said pressure chambers being located adjacent a movable element of the other chamber, and a connection between the movable elements of said cushion provided externally of said chambers.

1,903,439. WINDOW WIPER. JOHN W. CAIN, Chicago, Ill. Filed Dec. 7, 1929. Serial No. 412,370. 7 Claims. (Cl. 15—251.)



1. In a device of the character described, the combination of a window wiper structure comprising a squeegee, a rock shaft on which said squeegee is supported, bearing brackets for said rock shaft, slides rigidly connected with said bearing brackets, guiding means on the outside of the window for said slides, rods extending through said slides and carrying enlargements spaced from said slides, means connected to said rods and operable from the inner side of the window for imparting movements to said rods, and enlargements relatively to said slides, and means on one of said enlargements for positively rocking said shaft upon movement of the respective enlargement in a predetermined direction.

1,903,440. HELICOPTER DEVICE. WALTER R. CAMBRIDGE, Fort Bidwell, Calif. Filed Dec. 30, 1931. Serial No. 583,882. 4 Claims. (Cl. 244—19.)

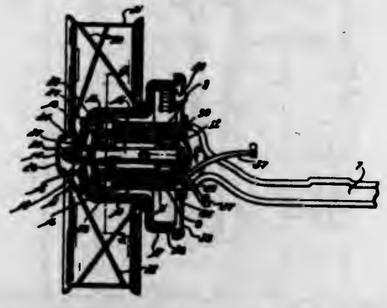


1. In a helicopter device of the class described, a body section, a shaft extending from said body section, a helicopter propeller slidably mounted on said shaft and embodying a splined hub having a plurality of blades radiating therefrom, means for normally holding said blades in flat positions, means for causing the same to change their pitch angle when in operation, including elements in the form of springs surrounding the shanks of the blades and cooperating therewith to cause the blades to normally lie flat when in inoperative positions and to assume a pitch angle of substantially thirty degrees when in operative positions.

1,903,441. AIR BRAKE VALVE HOUSING. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Sept. 2, 1931. Serial No. 560,805. 7 Claims. (Cl. 303—1.)

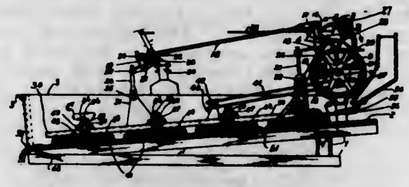
1. In a triple valve, the combination of a triple valve body having a bolting face from which extends an emergency piston chamber; a lower case having a companion bolting face from which extends a chamber alined with the chamber in the body, and counterbored to form a shoulder; an insert having a flange which seats on said shoulder and forms a continuation of the second-named bolting face; a compressible gasket interposed between the first-named bolting face on the one hand, and said flange and the second-named bolting face on the other hand; and compressible gaskets, one interposed between the end of the insert and the end of one chamber, and the other interposed between the other end of the insert and the end of the other chamber.

1,903,442. DISPENSING CONTAINER. ALFRED J. CHAMBERLAIN, Milwaukee, Wis. Filed Apr. 27, 1932. Serial No. 607,699. 6 Claims. (Cl. 221—11.)



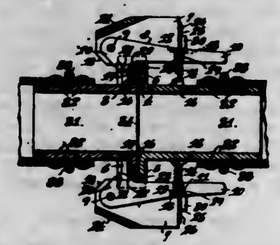
1. A dispensing container of the character described having the usual body portion and provided with a top formed with a portion inclining downwardly toward the periphery of the container, said inclined portion having an outlet opening, a separate spout formation interconnected with the container adjacent the outlet opening, an outlet fitting for the outlet opening, and a closure cooperable with the outlet fitting, said separate spout formation surrounding said outlet fitting.

1,903,443. VEHICLE WHEEL AND MOUNTING THEREFOR. JOSEPH DRZEWIECKI, Detroit, Mich. Filed Feb. 20, 1930. Serial No. 429,899. 4 Claims. (Cl. 280—96.3.)



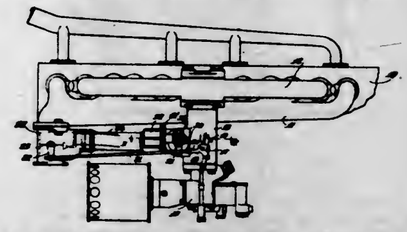
1. A wheel and axle unit of the class described comprising, a wheel assembly having brake mechanism of the internal expanding type including a brake drum formed with an axially extending reduced hub portion, a backing plate

cooperating with the drum to enclose portions of the brake mechanism, an axle having a forked end projecting through elongated slots in the backing plate and extending into the reduced hub portion aforesaid of the drum, a spindle extending axially of the wheel assembly intermediate the furcations of the forked end of the axle and having the



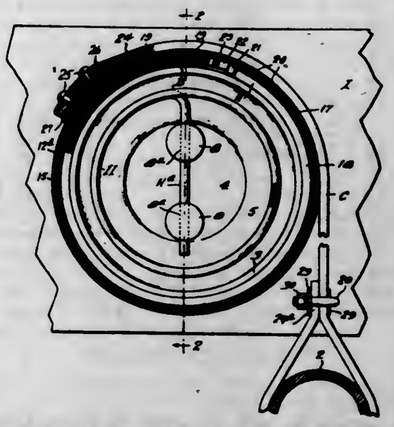
outer end secured to the wheel assembly, means for swivelly connecting the wheel assembly to the forked end of the axle including a sleeve journaled upon said spindle between the furcations aforesaid, and means for pivotally connecting the ends of the furcations to the forward end of the sleeve.

1,903,444. MILLING MACHINE. THEODOSE EARLE, Denver, Colo. Filed May 8, 1928. Serial No. 276,015. 6 Claims. (Cl. 209—6.)



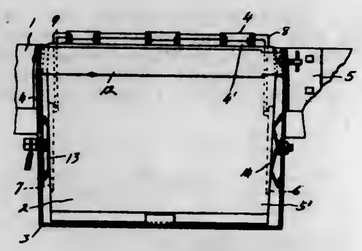
1. In a device for the disassociation of the separable constituents of a substance, including a stationary surface, a movable surface adapted to be reciprocated upon an outward and a return stroke and to rest upon the stationary surface during substantially one of said strokes, a frame adapted to be reciprocated and to raise and lower during such reciprocation, cushion means carried by the frame, and means carried by the movable surface and adapted to be engaged by said cushion means after a predetermined upward movement of the frame from its limit of travel.

1,903,445. HOSE AND PIPE COUPLING. CLEMENS JOSEPH ERNST, Minster, Ohio. Filed Oct. 11, 1930. Serial No. 488,108. 19 Claims. (Cl. 285—170.)



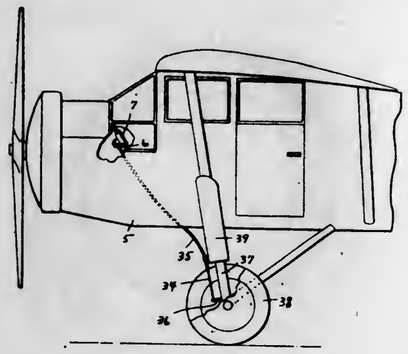
1. In a joint of the character described, a pair of opposed coupling heads each having an annular abutment flange, and a pivoted joint securing lever carried by one head and adapted to engage the abutment flange of the other head to hold the abutment flanges in engagement, the flange engaging portion of said lever being struck on an arc eccentric to the lever pivot and lying in a radial plane.

1,903,446. AUTOMATIC CONTROL OF EXHAUST GASES FOR MIXTURE HEATING. DAVID FIRTH, Flint, Mich., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Illinois. Filed Apr. 6, 1931. Serial No. 528,217. 9 Claims. (Cl. 123—122.)



1. In a device to divert products of combustion from the exhaust conduit of an automobile engine to heat the combustible mixture, a heating chamber in heat exchanging relationship to the mixture conduit, said heating chamber having an entrance and an exit, passages connecting said entrance and said exit to said exhaust conduit, a bypass passage between said entrance and exit passages, a valve in said bypass passage, and a thermo sensitive element to operate said valve, a valve in said exhaust conduit, a throttle valve in said mixture conduit, and means inter-connecting said last mentioned valves for coincident operation.

1,903,447. SHOCK ABSORBER. CLAUD H. FOSTER, Wickliffe, Ohio. Filed June 7, 1929. Serial No. 369,038. 8 Claims. (Cl. 267—10.)

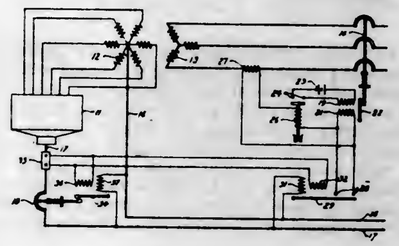


1. A shock absorber comprising an inner brake drum, a housing surrounding and spaced from said drum and radially movable with respect to the said drum, a brake band interposed between the housing and the drum, the said band comprising an inner friction band and an outer spring metal band, one end of the spring metal band pressing the adjacent end of the friction band against the drum, means connecting the opposite end of the friction band and spring band to the housing, there being a space normally provided between such attached ends of the said bands and the brake drum, a strap connected to the said housing, a spring connected to the housing and tending to resist turning of the housing by the strap, and anti-friction means interposed between the housing and the free end of the spring metal band.

1,903,448. BATTERY. JOHN E. FURTNEY, Detroit, Mich. Filed Mar. 5, 1929. Serial No. 344,404. 2 Claims. (Cl. 136—171.)

1. In combination, a battery casing of insulating material having substantially parallel top and bottom walls and having end walls extending between said top and bottom walls, the outer faces of said end walls inclining inwardly from points adjacent the top wall to the bottom wall, terminal plugs on the top wall, electrical contact plates wholly embedded in said side walls with their outer faces flush with the inwardly inclined outer faces of said end walls, and connections between said plates and plugs including straps embedded in the end walls and rising above the top wall, the connections between said straps and plates being embedded within said end walls.

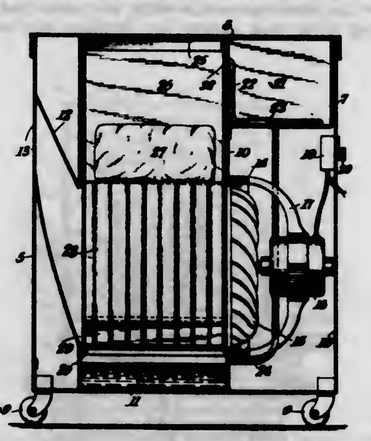
1,903,449. FLIGHT INDICATOR. KENNETH EARL GATH, Harrisburg, Pa. Filed Dec. 14, 1929, Serial No. 414,112. Renewed Sept. 20, 1932. 1 Claim. (Cl. 161—15.)



In combination with an aeroplane having a resilient landing gear, and a time recording mechanism carried by the aeroplane, a lever pivoted to the recording mechanism and having a part adapted to engage a part of the recording mechanism to atop the same, a spring for normally holding the lever out of engagement with said part, said lever having an inclined face on its tail end, a flexible member connected to a part of the movable portion of the landing gear and having its upper end arranged adjacent the inclined face of the lever whereby when the said movable part of the gear is moved upwardly the flexible member is moved upwardly so that its upper end will engage the inclined face of the lever and move the lever into engagement with a part of the recording mechanism to stop the same, and a flexible casing enclosing the flexible member.

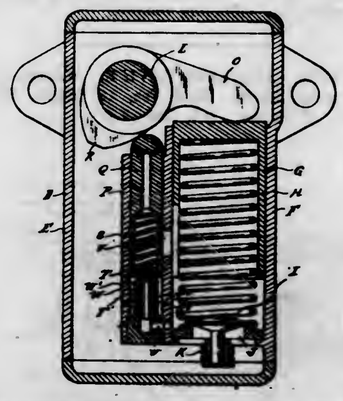
1,903,450. CIGARETTE CONTAINER. LESLIE BEN GOODMAN, Port Arthur, Tex. Filed Sept. 2, 1931. Serial No. 560,835. 3 Claims. (Cl. 312—33.)

1. In a device of the class described, the combination of a casing provided in its back with a plurality of longitudinally extending elongated slots, flat spring separators fastened at their inner ends to the back of said casing and having their outer ends bowed in said elongated slots, a hinged door on said casing and provided with rearwardly and upwardly extending fingers corresponding in number to said flat spring separators, and said fingers engaging the bowed ends of said spring separators, substantially as shown and described.



1,903,451. PROTECTIVE SYSTEM FOR ELECTRIC CURRENT RECTIFIERS. ALFREDO GRECO Zurich, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Dec. 3, 1929, Serial No. 411,380, and in Germany Dec. 3, 1928. 6 Claims. (Cl. 175—363.)

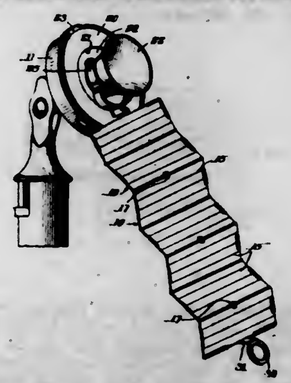
1. In a system of the character described, current-rectifying apparatus of the metallic vapor type, an alternating-current supply line therefor, a direct-current supply line, a circuit breaker for placing said apparatus into and out of effective relationship with respect to said alternating current supply line, a circuit breaker for placing said apparatus into and out of effective relationship with respect to said direct-current line; and means responsive selectively to a short-circuit condition in said system and operable upon occurrence of such condition to effect opening of said first-named breaker with a time-delay action, and to a backfire condition in said apparatus and operable upon occurrence of such condition to effect opening of both breakers substantially instantaneously.



1,903,452. AIR CONDITIONING DEVICE. JOSEPH GRISON, New York, N. Y. Filed Sept. 6, 1932. Serial No. 631,787. 5 Claims. (Cl. 62—91.5.)

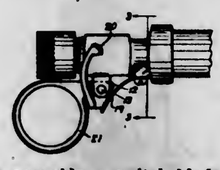
4. In an air conditioning device, a cabinet having apertures in the front wall thereof, a casing mounted in the cabinet, an upwardly directed air duct attached to and communicating with the casing and having its mouth in register with the apertures in the cabinet, a plurality

of spaced vanes mounted in the casing, means for chilling said vanes to a low temperature, and means for blowing a draft of air over the vanes.



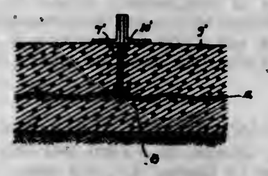
1,903,453. SHOCK ABSORBER. EARL G. GUNN, Racine, Wis. Filed Oct. 26, 1925. Serial No. 64,948. 18 Claims. (Cl. 267—8.)

1. The combination with a stationary member and an oscillatory member movable with negligible resistance in either of opposite directions from a neutral position with respect to said stationary member, of means reacting between said members but independent of any movement of said stationary member for resisting the return movement of said oscillating member from one side of its neutral position with an undiminishing force jointly determined by the amplitude and velocity of the free movement.



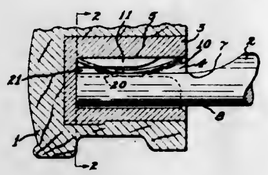
1,903,454. RECORD CARRYING OR MEMORANDUM DEVICE. DE WITT C. HARRIS, Lakeland, Fla. Filed June 20, 1930. Serial No. 462,586. 8 Claims. (Cl. 40—10.5.)

1. A device of the character described comprising a plurality of plates pivotally connected at their edges to form an extensible series movable from a compacted face to face relation, wherein the faces of the intermediate plates are concealed, to an extended relation wherein the corresponding faces of all of said plates may be seen from the same general direction, means on the plate at one end of the series to mount the device on a support, means on the plate at the other end of the series for grasping



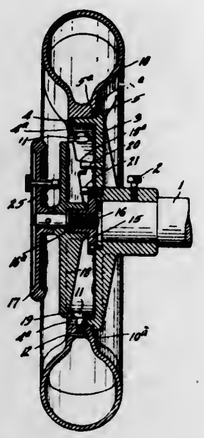
that plate to move the plates to their extended relation, and spring means acting between the adjacent plates to draw said plates toward their compacted relation.

1,903,455. ELECTRIC SWITCH. WALTER A. HEINRICH, St. Louis, Mo. Original application filed May 16, 1929, Serial No. 360,781. Divided and this application filed Aug. 4, 1930. Serial No. 473,000. 3 Claims. (Cl. 200—169.)



3. In a switch assembly, a switch blade, a contact portion near one end of the switch blade provided with opposite, lateral contact surfaces, a pair of spaced, parallel fixed contacts adapted to engage the contact surfaces on the blade, a blade-latching device including a pair of pivot arms disposed between the planes of said blade contact surfaces, and at one side of the blade contact portion, a pivot journalled in said arms, a one-piece bifurcate latch carried by said pivot and having its legs extended into overlying, spaced relation to said blade contact surfaces, terminal locking lugs on said legs, a latch-actuating lever extending between the legs of the latch and mounted for a limited rotation on the latch pivot, a latch spring carried at one side of the contact portion of the blade, and bearing against the central portion of the latch, and a keeper formed by a lateral projection on each of the fixed contacts, the projections adapted for releasable latching engagement by said locking lugs.

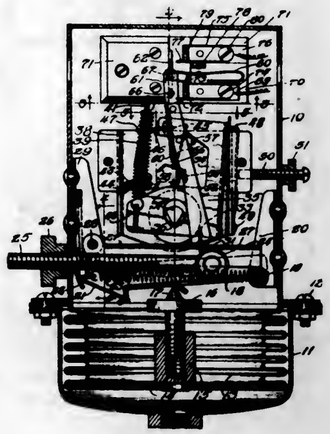
1,903,456. CONCRETE JOINT. JOHN N. HELTZEL, Warren, Ohio. Filed Nov. 19, 1926. Serial No. 149,442. 7 Claims. (Cl. 94—18.)



1. A concrete surfacing structure having reinforcement embedded therein below its upper surface, and a foraminous strip embedded in the concrete between said reinforcement and upper surface of the concrete to define the line of break of the concrete.

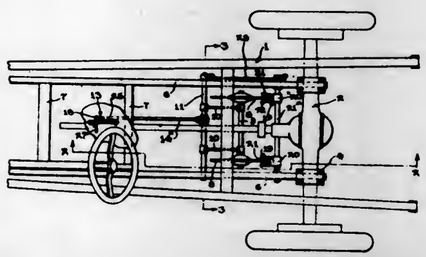
1,903,457. MEANS FOR FRICTIONALLY SECURING TWO PARTS TOGETHER. ADOLPH M. HOLSTEIN, Syracuse, N. Y. Filed Apr. 4, 1931. Serial No. 527,776. 8 Claims. (Cl. 287—53.)

6. The combination of a member having a socket for receiving a shaft, and a bowed spring in the socket, said spring having its ends engaged with one of the sides of the socket, and its intermediate portion arranged to engage the shaft, the socket being formed with shoulders extending toward the intermediate portion of the bowed part of the spring for limiting the compressing movement thereof.



1,903,458. COLLAPSIBLE CORE. FRANK L. JOHNSON, Akron, Ohio. Filed Jan. 11, 1930. Serial No. 420,041. 12 Claims. (Cl. 154—9.)

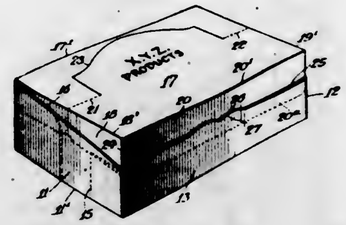
1. A collapsible tire building form comprising a member adapted to be received on the driving shaft of a tire building machine, said member having an annular peripheral portion, a plurality of mating form sections received on the annular portion of said member, a spider journaled axially of said member, means for moving said spider circumferentially to and from engagement with the form sections, and means for moving said spider axially to clamp said form sections on the annular portion of said member.



1,903,459. CONTROLLING APPARATUS. EMIL T. JOHNSSON, Chicago, Ill. Filed May 28, 1931. Serial No. 540,709. 9 Claims. (Cl. 200—83.)

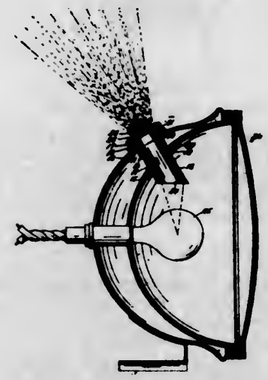
1. In an apparatus of the character set forth, the combination of an actuating member having a bearing thereon, a bell crank lever engaging with said bearing and a fulcrum adjacent thereto, a spring tending to swing the bell crank lever around on its fulcrum, a vibrating tongue pivoted on said bearing, a swinging lever pivoted to the bell crank lever and having spaced apart tappets adapted to engage with the vibrating tongue, a spring connecting the upper end of the vibrating tongue with the lower end of the swinging lever and means for limiting the swinging

movement of the upper end of the vibrating tongue, the arrangement being such that when the bearing is raised it will swing the bell crank lever and cause the last named spring to swing the swinging lever and to cooperate therewith to swing the vibrating tongue.



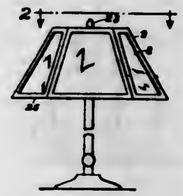
1,903,460. ANTISKID DEVICE. WALTER L. JONES, East Tawas, Mich. Filed Feb. 13, 1931. Serial No. 515,611. 6 Claims. (Cl. 188—5.)

1. In combination with an automobile, an anti-skid device, comprising anti-skid members for engagement with the road surface, arms for supporting said anti-skid members, an oscillatory shaft mounting said arms, a crank-arm on said shaft, a link pivoted to said crank arm, and a hand-lever operatively connected to said link for moving said discs into and out of engagement with the road surface at will, the connection between said hand-lever and said link being resilient.



1,903,461. SHIPPING AND DISPLAY BOX. IRA C. KELLER, Winnetka, Ill., assignor, by mesne assignments, to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed May 10, 1928. Serial No. 276,529. 5 Claims. (Cl. 229—51.)

1. In a paper carton, a plurality of side walls, a cover supported by one of said side walls, a fastening flap along the unsupported edge of said cover, said flap having a cut-out in its mid-portion, said flap on the opposite sides of said cut-out being adapted for attachment to the inner surface of another of said side walls, said latter side wall having an extension projecting from its upper edge



and adapted to cover said cut-out when the cover is closed, leaving a free space between said latter extension and flap for the insertion of an object to break the fastening connection between said flap and the side wall to which it is attached.

1,903,462. HEADLIGHT ATTACHMENT FOR AUTOMOBILES. WILLIAM A. KNOX, Los Angeles, Calif. Filed Dec. 26, 1931. Serial No. 583,307. 2 Claims. (Cl. 240—8.4.)

1. In an automobile headlight having an outer casing, an inner reflector and a lamp, a rearwardly directed cylindrical attachment extending through both the reflector and casing so that its inner end is in close proximity to said lamp and its outer end directed so that the light therefrom will illuminate the side of an automobile, said attachment being composed of an inner member extended through said reflector and having a shoulder integral therewith arranged to engage the inner wall of said reflector and also an outer member extended through said casing that is adapted to be screwed on the outer end of said inner member and having a head with an integral shoulder arranged to engage said casing to limit the inward movement of said outer member, and a colored crystal lens in said head.

1,903,463. LIGHTING FIXTURE. WILLIAM C. KOCH, Cheviot, Ohio. Filed Apr. 28, 1932. Serial No. 608,044. 10 Claims. (Cl. 240—108.)

1. A lighting fixture having in combination a lamp shade frame and panels therefor, means on the frame for supporting the shade panels, and self-latching means adapted to operate upon application of the panels to the frame for securing the panels in position thereon.

1,903,464. COLLAPSIBLE TUBE. HERMAN J. KONANZ, Grantwood, N. J. Filed Dec. 1, 1931. Serial No. 578,263. 2 Claims. (Cl. 221—60.)

1. A collapsible tube comprising a body provided at one end with a neck having an opening in its side wall and which neck has a cylindrical outer surface at the base of which is provided an annular seat and in which outer surface is formed a bayonet channel having an upstanding portion terminating short of the upper end of the neck and at the lower end of which upstanding portion is formed a circumferential downwardly inclined bayonet channel portion, a cap provided with a cylindrical interior to have a sliding fit with the neck, and a projection formed on the interior of the cap, there being formed in the cylindrical surface of the neck a branch channel extending from the upper end of the neck to the upright portion of the bayonet channel, whereby the projection on the cap may be passed through the branch channel into the bayonet channel during the assembly of the cap on the neck, the lower edge of the cap being beveled to cooperate with the seat at the base of the neck.

1,903,465. INK FOUNTAIN OR DIP WELL. CHARLES L. KUBISTA, Le Sueur, Minn. Filed Mar. 12, 1932. Serial No. 598,419. 8 Claims. (Cl. 120—68.)

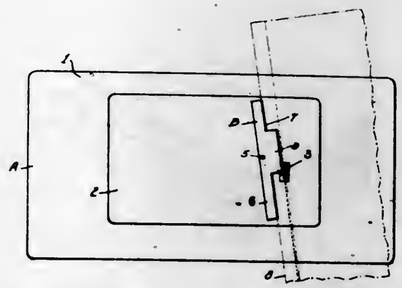
1. In combination with an ink container, a well formed integrally from compressible material, the upper end of said well being open and sealed about its periphery to the upper portion of said container, the lower end of said

well being spaced above the bottom of the container substantially the distance to which it is ordinarily desirable to dip a pen and being provided with intersecting grooves

extending partly through the material, said grooves being adapted to form slits defining flexible flaps when breakage has been effected therealong.

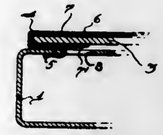
1,903,466. PROCESS OF PURIFYING SULPHONIC ACIDS. HYMAN LIMBURG, Amsterdam, Netherlands, assignor, by mesne assignments, to The Flintkote Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1928, Serial No. 313,385, and in the Netherlands Nov. 11, 1927. 8 Claims. (Cl. 260—159.)

1. In a process for the purification of oil soluble sulphonic acids containing inorganic impurities the steps which comprise treating the material to be purified to convert the sulphonic acids into soaps, mixing the soap with water, treating the mixture with a volatile distillable basic substance to flocculate the soaps, removing the aqueous liquid containing said impurities and freeing the product of said volatile substance.



1,903,467. PROTECTOR FOR DRILL PIPE AND THE LIKE. JOHN W. MACCLATCHIE, Compton, Calif. Filed May 27, 1929. Serial No. 366,264. 7 Claims. (Cl. 308—4.)

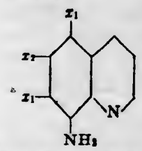
1. A protector comprising a sleeve adapted to encircle a drill pipe, retaining means encircling the sleeve, and a wedge adapted for insertion beneath the retaining means for tightening the same so as to radially contract the sleeve for gripping engagement on the pipe.



1,903,468. SHADE SEWING DEVICE. PETER P. MATT, St. Louis, Mo. Filed July 9, 1931. Serial No. 549,654. 1 Claim. (Cl. 112—153.)

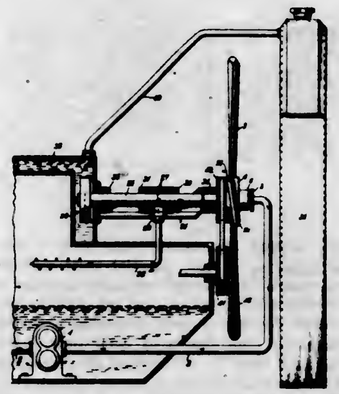
In a sewing machine for stitching relatively stiff shade cloth and having a bed plate with cloth-feeding points and a needle cooperatively positioned thereon; means for guiding said shade cloth past said needle and holding it folded while so guided and comprising a plate having a cloth guiding edge adapted to receive and engage the folded edge of the shade during its travel through the machine and extending from a point in advance of said needle to a point beyond said needle, said guiding edge being at an angle to the path of movement of the cloth-feeding points so that the latter presses the folded edge of the shade

against said guiding edge, and an overhanging portion extending onto said folded shade from a point well in advance of said needle to adjacent the needle and spaced sufficiently above the bed plate to permit the folded cloth to pass thereunder and be held folded over a substantial area.



1,903,469. UPHOLSTERY ATTACHING DEVICE. ALBERT W. MEADER, Detroit, Mich., assignor of one-half to Robert Mitchell, Detroit, Mich. Filed May 31, 1930. Serial No. 458,861. 9 Claims. (Cl. 45—138.)

4. An upholstery pad having binding strips applied to selected edges thereof, integral members formed on said strips, and directed substantially parallel to the plane of said pad, in combination with a body member having slots for receiving said hook members.

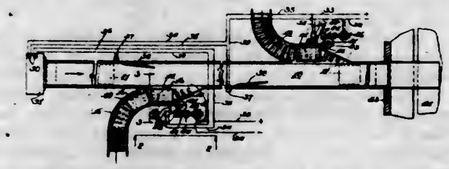


1,903,470. PROCESS OF MAKING 8-HYDROXYQUINOLINE COMPOUNDS. FRITZ MIETZSCH and HEINRICH KLÖS, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1928, Serial No. 292,015, and in Germany Sept. 18, 1926. 5 Claims. (Cl. 260—38.)

1. The process which comprises heating an 8-amino-quinoline of the general formula

wherein the ω_1 means H, alkyl, halogen, and ω_2 means H, alkyl, halogen, hydroxyl, alkoxy, and wherein at least two of the symbols ω_1, ω_1, ω_2 represent hydrogen, in an aqueous solution in the presence of an acid reacting agent of the group consisting of dilute non-sulfonating sulfuric acid, hydrochloric acid, hydrobromic acid and zinc chloride in an autoclave to a temperature above 150° C.

1,903,471. FLUID HEAT EXCHANGE SYSTEM. MORTIMER T. MURPHY, Imlay, Nev. Filed Sept. 16, 1930. Serial No. 482,313. 14 Claims. (Cl. 257—260.)

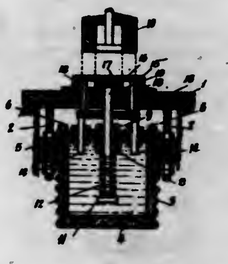


1. In a heat exchange system for fluids, in combination, a shaft mounted for rotation upon a suitable support, a fan having its hub portion mounted on the shaft and secured for rotation therewith, the fan being provided with a series of blades formed with hollow interior portions, the first blade only of said series being provided with an entrance opening through which fluid is admitted to its hollow portion, said blade having an opening in its wall adjacent the base thereof connected to an opening in the wall of an adjacent blade, to provide a conduit connecting the hollow portion of the blade with the hollow portion of an adjacent blade, the succeeding blades in the series having their hollow portions similarly connected to the hollow portions of the preceding blades, the last blade only in the series being provided with a passage at its base through which the fluid circulating through the fan blades is withdrawn.

1,903,472. PROCESS FOR THE EXTRACTION OF ETHYLENE GLYCOL OR ITS HOMOLOGUES. HERMANN OEHME, Cologne, Germany, assignor to Chemische Fabrik Kalk Gesellschaft mit beschränkter Haftung, Cologne-Kalk, Germany. Filed June 17, 1930, Serial No. 461,759, and in Germany Apr. 30, 1930. 4 Claims. (Cl. 260—156.5.)

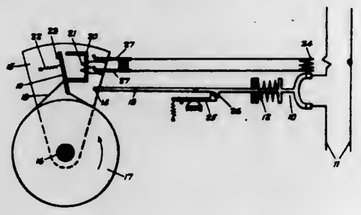
1. A process for the extraction of ethylene glycol from an aqueous solution containing a metal chloride comprising agitating the solution in vacuum at temperatures between 250–400° C.

1,903,473. REMOTE CONTROL CONVEYER SWITCHING SYSTEM. SAMUEL OLSON, Oak Park, Ill., assignor to Samuel Olson & Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 8, 1931. Serial No. 507,329. 5 Claims. (Cl. 198—20.)



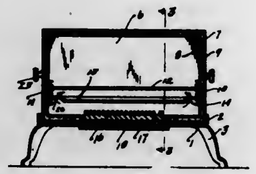
1. In combination with a main conveyer, a plurality of branch feeding runways adjacent the main conveyer and arranged to serve as storage for a plurality of load units, means adjacent each feeding runway for discharging load units one at a time onto the main conveyer; selective control means for actuating any of said load-discharging means of the respective feeding runways, and means extending into the path of travel of loads on the main conveyer, forwardly of the junction of the main conveyer with a corresponding branch feeding runway, adapted when engaged by a load on said conveyer for rendering the said discharging means temporarily inoperative.

1,903,474. ERASER ATTACHMENT FOR LEAD PENCILS. LOUIS J. RECKFORD, New York, N. Y.; Louise King Reckford, John King Reckford, and Louis J. Grumbach, executors and trustees of said Louis J. Reckford, deceased, assignors to American Lead Pencil Company, Hoboken, N. J., a Corporation of New York. Filed June 19, 1926. Serial No. 117,014. 1 Claim. (Cl. 120—38.)



An article of manufacture consisting of an integrally formed ferrule whose wall is approximately concentric throughout to a common axis and which comprises an annular shoulder at the middle portion thereof, a pencil receiving portion of relatively small diameter extending from said shoulder in one direction and an eraser receiving portion of substantially larger diameter extending from said shoulder in the opposite direction; a pencil one extremity of which fits within said pencil receiving portion of said ferrule, being closely embraced by the wall thereof and permanently and immovably secured therein; and an eraser of substantially larger diameter than said pencil secured within and closely embraced by the wall of said eraser receiving portion of said ferrule and extending substantially beyond the outer extremity thereof.

1,903,475. PRESS FOR DRAWING SHEET METAL. CHARLES JOSEPH RHODES, Wakefield, England. Filed May 24, 1930, Serial No. 455,251, and in Great Britain Nov. 4, 1929. 13 Claims. (Cl. 113—46.)

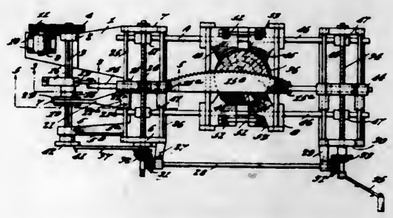


1. In a press for drawing sheet metal, a fixed die, a movable block in said fixed die, a closed chamber containing a liquid, a plunger connected to the movable block and passing into said chamber, a spring opposing the movement of said plunger in one direction, a drawring, a table supporting said drawring, and plungers passing into said chamber and supporting said table.

1,903,476. CIRCUIT-BREAKING APPARATUS. LUDWIG ROEBEL, Mannheim, Germany, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Mar. 9, 1928, Serial No. 260,408, and in Germany Mar. 12, 1927. 6 Claims. (Cl. 200—92.)

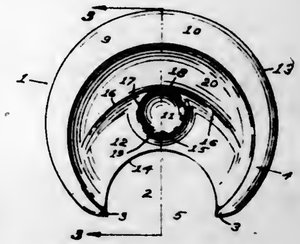
1. In electrical circuit control apparatus comprising a circuit breaker, constantly-operating motive means for actuating said circuit breaker, and means responsive to a predetermined condition of the electrical circuit and operable upon occurrence of such condition to effect mechanical connection between said circuit breaker and said motive means.

1,903,477. ELECTRIC OVEN. MAUDE M. ROLFSON, Portland, Oreg. Filed Mar. 29, 1932. Serial No. 601,794. 4 Claims. (Cl. 219—35.)



3. In a device of the class described, the combination of a leg-supported base, a superstructure adapted for being placed upon the base and for being supported thereby, either at its top, or bottom side, an oven comprising the primary portion of the superstructure, a hinged door adapted to one side of the superstructure, a hot plate adapted to one side of the superstructure, independent electric heating elements for supplying heat to the oven and for heating the hot plate, and an electric switch adapted for conducting electric current into each of the heating elements.

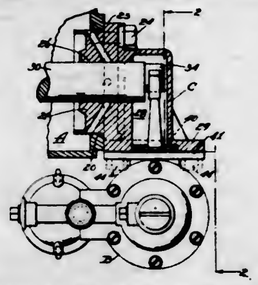
1,903,478. ADJUSTABLE MAIN CONVEYER. FREDERICK N. ROSS, Detroit, Mich., assignor, by mesne assignments, to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 20, 1930. Serial No. 462,620. 4 Claims. (Cl. 45—138.)



1. In a structure of the character described, a conveyer comprising a plurality of slats, a plurality of longitudinally spaced forming blocks secured to each slat, said forming blocks cooperating to form substantially continuous longitudinal ribs in the upper flight of said conveyer.

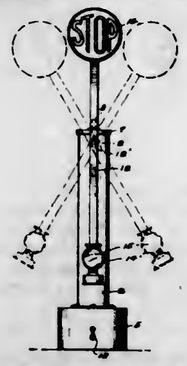
1,903,479. TREE SAWING DEVICE. ERNEST C. RUMOHR, Seattle, Wash. Filed Oct. 21, 1931. Serial No. 570,203. 2 Claims. (Cl. 143—63.)

1. A tree sawing apparatus comprising a pair of jaw blocks for engaging a tree, parallel rods carried by said jaw blocks, pairs of bearings on said parallel rods and carried on opposite sides of the jaw blocks, a pair of parallel shafts carried by said bearings by means of end blocks connecting the shafts of each pair together supported from said bearing, a threaded shaft associated with each pair of parallel shafts, a block threadedly mounted on each of said threaded shafts, a saw reciprocally carried by said threadedly mounted blocks, a motor for reciprocating said saw, and a ratchet mechanism connected with the motor for turning the threaded shafts and advancing the saw during the sawing operation.



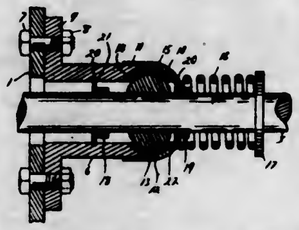
1,903,480. GAME APPARATUS. HERBERT E. RYAN, Clayton, Mo. Filed Nov. 9, 1929. Serial No. 405,890. 8 Claims. (Cl. 273—36.)

1. A portable golf putting cup having a substantially crescent-shaped upper face that inclines from the edge of the recess formed between the extremities of the crescent, said face having a golf hole defined by an inclosing circular ridge behind said recess, and an upwardly presented flange that is co-extensive with the outer margin of said upper face, the extremities of the crescent being equidistance from a line passing through the center of the golf hole.



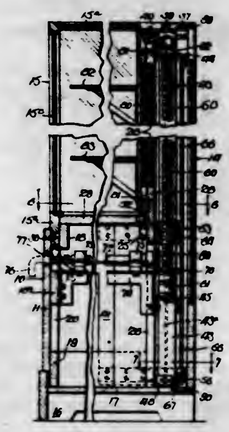
1,903,481. ENGINE-OPERATED PUMP. FRED G. SCHWEISTHAL, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 17, 1929. Serial No. 371,681. 6 Claims. (Cl. 103—218.)

1. In combination with an internal combustion engine having an aperture in its casing at which an essential operating member of the engine mounted for support within the engine casing is exposed for communicating motion, a pumping apparatus comprising a pumper actuator, and a casing in which said actuator is mounted, said casing being formed with an aperture at which said actuator is exposed for being actuated, a coupling casing having a cavity extending through it from an opening in said casing at one side thereof to an opening at another side thereof, said casing being arranged to be secured to the pump casing and to the engine casing with its said openings respectively mated to the openings of the pump casing and engine casing, said engine member and said pumper actuator, exposed at the engine casing and pump casing



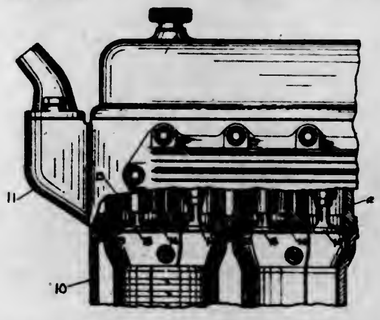
apertures respectively being arranged for direct operative engagement with each other when the coupling casing is thus secured to the pump and engine casing.

1,903,482. PORTABLE ROAD SIGN. HARVEY G. SENSENEY, Jr., Florence, S. C. Filed Dec. 5, 1932. Serial No. 645,816. 8 Claims. (Cl. 116—63.)



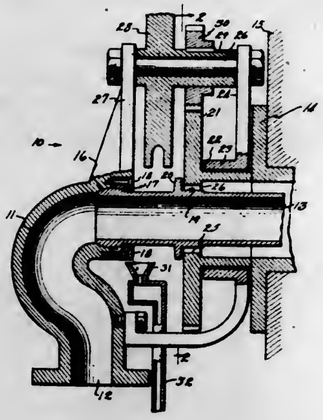
1. A portable signal device for use on roadways, comprising an upstanding casing having a base, a handle connected with the upper end of the casing, a transverse rock shaft carried by the casing, a motor mounted within the base, a longitudinal shaft extending through the casing and connected with the motor to be driven thereby, driving connecting means between the driving shaft and the rock shaft so that the rotation of the drive shaft is employed to rock the rock shaft, and a signal arm mounted upon the rock shaft to be oscillated thereby.

1,903,483. SHAFT MOUNTING. NEWTON SKILLMAN, Highland Park, Mich., assignor to O. & S. Bearing Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1926. Serial No. 126,522. 7 Claims. (Cl. 308—72.)



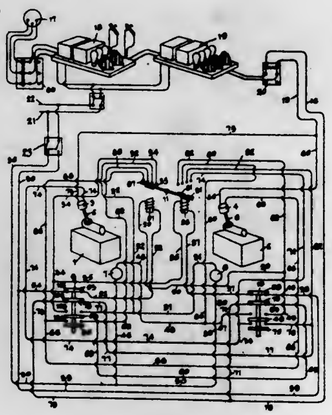
1. The combination with a rotatable shaft, of a mounting for said shaft comprising a supporting base and cap having complemental spherical surfaces, a frusto-spherical member fixed upon said shaft and universally movable relative to said base and cap, an initially compressed and shaped lubricant impregnated bushing of fibrous material comprising cooperating annular sections respectively compressed into and rigidly mounted in said base and cap and together forming a frusto-spherical bearing surface for direct engagement with said frusto-spherical member, an abutment upon said shaft and a coil spring between said abutment and cap for yieldably forcing said cap toward said base.

1,903,484. DISPLAY CABINET. MICHAEL SMETKO, Cicero, Ill., assignor to The Art Institute of Chicago, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1932. Serial No. 609,380. 12 Claims. (Cl. 312—139.)



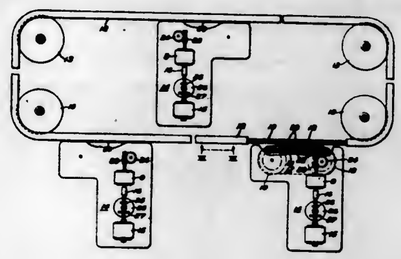
11. A display cabinet comprising a base having an upstanding back member, an open-bottom cover member slidably mounted on the back member, the back member including vertical guiding means for the cover, and means for raising and lowering the cover member on and relatively to the back member.

1,903,485. INTERNAL COMBUSTION ENGINE. GEORGE W. SMITH, Jr., Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 10, 1930. Serial No. 494,556. 11 Claims. (Cl. 123—188.)



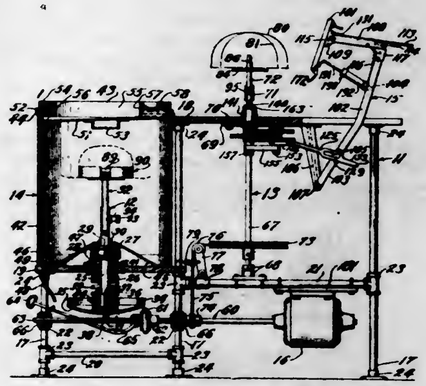
1. A valve seat unit for an internal combustion engine comprising an inner portion of metal having a coefficient of thermal expansion materially different than the metal of the part to which the unit is to be attached, and an external portion of metal having a coefficient of thermal expansion similar to the coefficient of expansion of the metal of the aforesaid part.

1,903,486. BOILER CLEANER. NORMAN L. SNOW, Detroit, Mich., assignor to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 30, 1924. Serial No. 746,904. 18 Claims. (Cl. 122—392.)



1. In a boiler cleaner, a blower head, a rotatable cleaner element, a gear mounted on the cleaner element for rotating the same, a driving worm meshing with the gear, and means for mounting said cleaner element, worm and gear for floating movement with respect to the blower head.

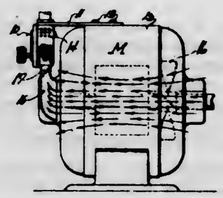
1,903,487. SOUND RECORDING AND REPRODUCING APPARATUS. JAY C. SNYDER, Toledo, Ohio. Filed July 7, 1930. Serial No. 466,099. 5 Claims. (Cl. 179—100.4.)



1. In a sound recording and reproducing system in combination with amplifying speaking circuit, a pair of phonographs, a source of supply of electric current for operating the motors of the phonographs, a pair of switches operated by the said phonographs, the switch operated by one phonograph for controlling the motor of the other phonograph to complete the circuit of the motor of the other phonograph, a second switch having fixed contacts in circuits in parallel to the contacts of the first named switches, means for operating the second named switch for completing circuits that by-pass the said first named switches, and means for causing the operation of the second named switches subsequent to the operations of the first named switches to permit opening of the first named switches and to alternately connect the phonographs to the amplifying speaking circuit.

1,903,488. CONVEYER SYSTEM. HARRY STIBBS, Philadelphia, Pa. Filed Dec. 28, 1931. Serial No. 583,479. 2 Claims. (Cl. 104—172.)

1. In a conveyer system, a conveyer chain, a driving mechanism engaging said chain, a motor, and a transmission unit connecting said driving mechanism and said motor, said transmission unit comprising a plurality of friction discs and means for changing the relative positions of said discs in response to a change in load on said motor.

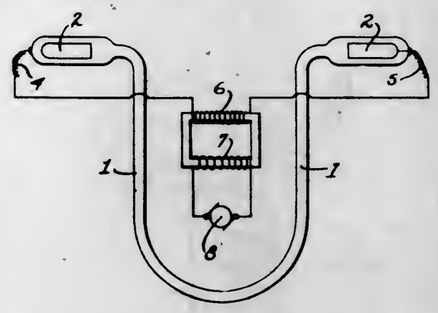


1,903,489. HAT CLEANING MACHINE. MORRIS A. WEITZMAN, Chicago, Ill. Filed Sept. 29, 1930. Serial No. 484,977. 6 Claims. (Cl. 223—26.)

1. Mechanism for ironing hats and the like comprising, a hat block, a spindle for supporting said block, means for rotating the spindle, an ironing plate arranged for movement about the hat block, a pivoted carrier for said ironing plate, transmission devices associated with said spindle, and a reciprocating link yieldingly connecting said carrier and said transmission devices, said link being longitudinally yieldable and constructed and arranged to provide a latch for holding the ironing plate in an inoperative position.

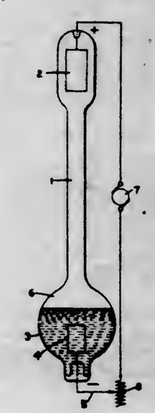
1,903,490. [WITHDRAWN.]

1,903,491. MOTOR PROTECTIVE APPARATUS. GUSTAV O. WILMS, Milwaukee, Wis., assignor, by mesne assignments, to Allen-Bradley Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 14, 1928. Serial No. 277,446. 11 Claims. (Cl. 175—294.)



1. The combination with a dynamo electric machine having an enclosing housing, and a circuit for supplying electric current thereto, of means active upon operation of the machine for creating a draft of ventilating air within the housing, a thermally actuated protective device for interrupting the supply circuit and including a resistance heating element electrically connected with the supply circuit to receive current therefrom, and means mounting the protective device on the dynamo electric machine so that the draft of ventilating air after being influenced by the thermal condition of the motor contacts directly with the heating element, whereby the temperature of the heating element produced by the passage of electric current therethrough is rapidly effected by the presence and absence of ventilating air and also by the temperature of the ventilating air.

1,903,492. LUMINESCENT TUBE. GEORGES CLAUDE, Boulogne sur Seine, France, assignor to Claude Neon Lights, Inc., New York, N. Y., a Corporation of New York. Filed June 8, 1929, Serial No. 369,534, and in France Aug. 30, 1928. 6 Claims. (Cl. 176—122.)

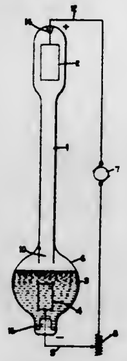


6. The method of obtaining a blended neon-helium light in which the spectra of both gases are blended which comprises blending neon with helium in the ratio of not over 15 per cent neon and discharging an electric current through the mixture.

1,903,493. GAS DISCHARGE LIGHT.. LEO L. BECK, Westfield, N. J., and AUBREY B. NOBLE, Lynbrook, N. Y., assignors, by mesne assignments, to General Tube Lights Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1929. Serial No. 410,679. 4 Claims. (Cl. 176—122.)

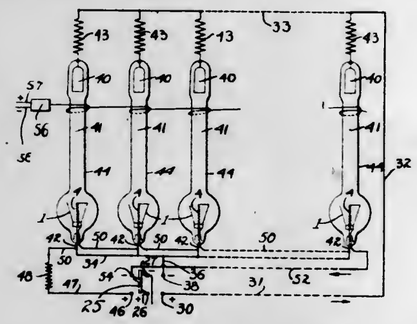
1. A cold cathode gaseous discharge luminous tube device comprising in combination an envelope, an anode and a cathode therein, a helium-neon gaseous mixture adapted to emit positive column white light containing neon in the proportion of 0.1 to 3 per cent, the said cathode comprising an active oxide.

1,903,494. WHITE LIGHT TUBE. LEO L. BECK, Westfield, N. J., assignor, by mesne assignments, to General Tube Lights Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1929. Serial No. 413,471. 8 Claims. (Cl. 176—122.)



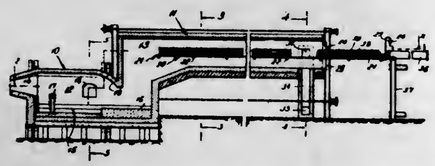
1. A positive column tube for emitting a light which does not distort the natural colors comprising a transparent envelope, electrodes within the envelope, and a mixture of helium, neon, and a gas selected from the group consisting of krypton and xenon within the envelope, said helium comprising from about 92.00 to 98.00 per cent of the gaseous contents of the tube.

1,903,495. WHITE LIGHT. LEO L. BECK, Westfield, N. J., assignor, by mesne assignments, to General Tube Lights Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1929, Serial No. 414,629. Renewed Nov. 28, 1932. 5 Claims. (Cl. 176—13.)



1. A gaseous discharge luminous tube device comprising in combination an envelope, an anode, a cathode com-

prising a pool of alkali metal, a gas mixture comprising helium and neon, the said device being adapted to operate

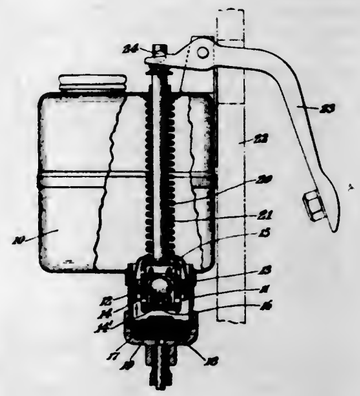


at a current density of 0.15 to 0.60 amperes per square centimeter of tube cross-section and the gas mixture containing neon in proportion of 3 to 9 per cent.

1,903,496. LIGHTING SYSTEM. LEO L. BECK, Westfield, N. J., assignor, by mesne assignments, to General Tube Lights Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1930, Serial No. 431,674. Renewed June 22, 1932. 7 Claims. (Cl. 176—124.)

1. In combination, a plurality of luminescent tubes, a plurality of cathodes and heating elements for said cathodes, and a series circuit comprising the said plurality of heating elements and a source of current of predetermined potential.

1,903,497. METALLURGY OF COPPER. HARRY H. ALEXANDER, Westfield, and ALEXANDER W. CARROLL, Elizabeth, N. J.; Henry L. Wheeler, jr., Elizabeth, N. J., executor of said Alexander W. Carroll, deceased, assignor to said Harry H. Alexander. Filed Feb. 5, 1931. Serial No. 513,488. 6 Claims. (Cl. 75—62.)



1. In a process for refining copper, the step of preheating a plurality of copper cathodes as they are progressively advanced to a refining furnace, and then depositing the preheated copper cathodes on a draining shelf above the level of a pool of molten copper maintained in the refining furnace.

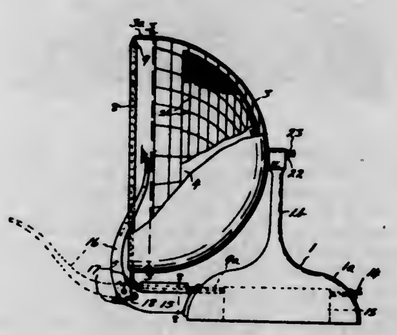
1,903,498. METHOD OF MAKING WELTING. WALTER G. BARBOUR, Quincy, Mass., assignor to Perley E. Barbour, Quincy, Mass., doing business as Barbour Welting Company, Brockton, Mass. Filed Aug. 2, 1930. Serial No. 472,722. 4 Claims. (Cl. 12—146.)

1. The method of making composite welding fillets and strips which comprises removing an unlimited long thin grain ribbon from the face of an unlimited long grain fillet and then securing this ribbon as a progressive process to one face of an unlimited long ungrained fillet.

1,903,499. LUBRICATING INSTALLATION AND APPARATUS. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed Dec. 20, 1926. Serial No. 155,810. 27 Claims. (Cl. 184—7.)

1. A distributing installation for viscous liquids and more especially for conveying lubricant concurrently to the bearings to be supplied through a piping system having a plurality of outlet branches connected in multiple for concurrent emission, said system having near the inlet thereof a filter through which the lubricant or other liquid is forced under pressure exerted by a pump or other source of pressure, each of the branches having a controlling outlet including a strainer of texture so close as to intercept any solid particles picked up and entrained by the lubricant in the pipe line, yet sufficiently loose to pass with the oil any greasy constituent thereof that has been forced through the filter.

1,903,500. SYNTHETIC RUBBER AND PROCESS OF ITS MANUFACTURE. WILLIAM S. CALCOTT, Penns Grove, FREDERICK B. DOWNING, Carneys Point, and DONALD H. POWERS, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 12, 1927. Serial No. 212,605. 41 Claims. (Cl. 260—6.)



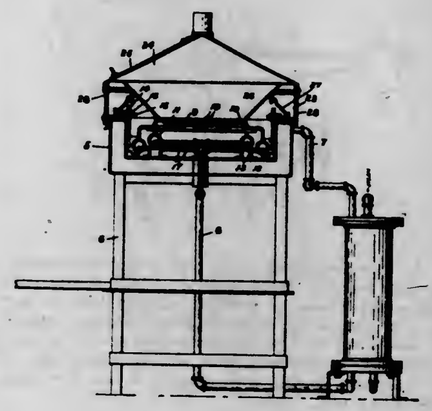
1. The process of making a synthetic rubber-like material from a polymerizable hydrocarbon which comprises coagulating an emulsion of a polymerizable hydrocarbon, said emulsion containing a resinous constituent.

25. A rubber-like product comprising a 2-phase emulsoid system, the disperse phase comprising particles of polymerized hydrocarbon, the degree of polymerization decreasing toward the center of said particles, and the external phase comprising a viscous liquid or plastic solid, said system showing, under the X-ray, a diffraction pattern of the type ordinarily considered characteristic of a crystalline body.

1,903,501. HYDROGENATION OF HYDROCARBONS. WILLIAM S. CALCOTT, Penns Grove, N. J., ALBERT S. CARTER, Wilmington, Del., and FREDERICK B. DOWNING, Carneys Point, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 24, 1930. Serial No. 438,658. 19 Claims. (Cl. 260—169.)

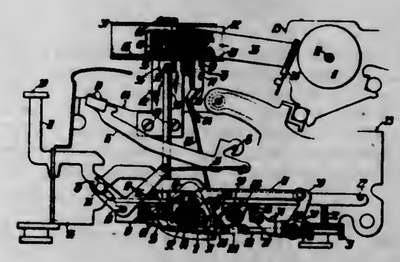
1. The process which comprises reacting under non-oxidizing conditions, a polymerizable nonbenzenoid acetylene polymer, in the presence of a hydrogenation catalyst, with hydrogen.

1,903,502. OPTICAL PERIMETER. MALCOLM D. CAMPBELL, Detroit, Mich. Filed June 23, 1930. Serial No. 462,953. 22 Claims. (Cl. 88—20.)



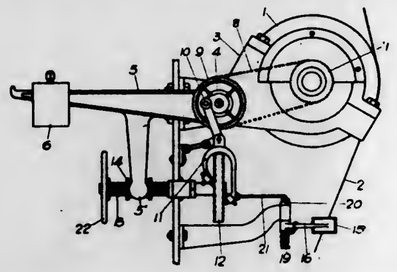
1. A spherically curved, dished shell for perimetric use, having upon its interior face a pattern comprising a plurality of small spaces alternately differing in color.

1,903,503. METHOD AND PROCESS OF EXTRACTING OIL AND MOISTURE FROM "FISH PRESS CAKE." WALLACE T. CONN, Washington, D. C., assignor to The Government of the United States. Filed Aug. 8, 1929. Serial No. 384,504. 4 Claims. (Cl. 99—11.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



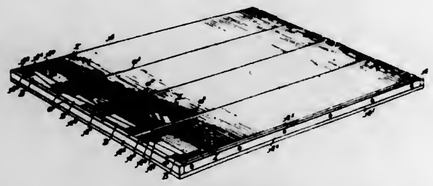
1. The process which comprises forming "fish press cake", upsetting at least a portion of the material in the fish cake so as to expose the oil particle and facilitate the penetration of a solvent, subjecting the same to a volatile solvent, removing the moisture, volatile solvent and oil, and converting the remainder into meal or the like.

1,903,504. APPARATUS FOR MELTING EXPLOSIVES. HOWARD S. DECK, Dover, N. J. Filed Oct. 1, 1929. Serial No. 396,467. 8 Claims. (Cl. 126—343.5.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



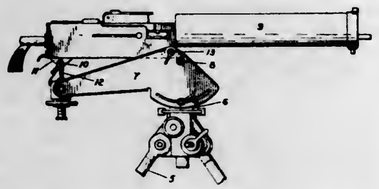
1. Apparatus for melting explosives comprising a double walled pan, means for circulating a heating medium between the walls of the pan, a fixed coil in the pan, a movable coil nested with respect to the fixed coil and means for heating the coils.

1,903,505. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 26, 1930. Serial No. 455,580. 9 Claims. (Cl. 197—165.)



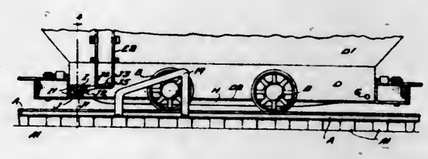
1. In a typewriting machine, the combination of type-operating keys, ribbon-spools, a gear-wheel connected to each spool, a worm connectible to each of said gear-wheels, a single drive shaft carrying one of said worms on each end, a swiveled mounting for said drive shaft, whereby, upon engagement of one of said worms with its associated gear-wheel, the other worm is swung out of engagement with its associated gear-wheel, crowding instrumentalities dependent upon the rotation of the drive shaft for engaging either worm with its associated gear-wheel, said instrumentalities including a ratchet-wheel on each end of said shaft and a normally idle crowding pawl for each ratchet-wheel, and means operable by unwinding movement of said ribbon for moving either of said pawls into engagement with its associated ratchet-wheel, to co-operate therewith to enable the shaft by its rotation to crowd itself to make a swinging movement upon its swiveled mounting, to cause the ribbon to become rewound upon the empty spool.

1,903,506. WIRE GUIDE. HILAND R. FARNSWORTH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio. Filed Nov. 22, 1928. Serial No. 321,170. 9 Claims. (Cl. 74—51.)



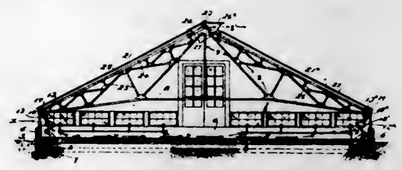
1. A wire guide for paper machines comprising an adjustably movable guide roll over which a wire travels, a stationary frame, a movable support for an end of said roll comprising a lever arm pivotally supported upon said stationary frame, and means driven by the roll for pivotally moving said lever arm to change the axial inclination of the roll with respect to the direction of travel of the wire.

1,903,507. PRINTING UNIT. FRANK C. FROLANDER, Elisabeth, N. J., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Oct. 21, 1930. Serial No. 490,141. 21 Claims. (Cl. 276—43.)



1. A galley adapted to be placed in a printing press, said galley containing printing slugs of substantially less than standard type height and presenting means rigidly secured to and forming a permanent part of the galley and adapted to anchor the individual slugs against vertical displacement, in combination with a chase adapted to support the galley at the standard type-high level.

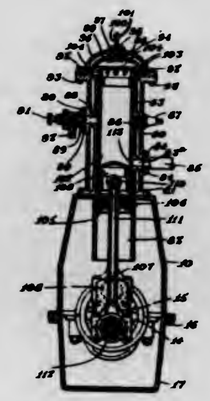
1,903,508. MOUNTING FOR MACHINE GUNS. THOMAS J. HEAVEY, U. S. Army, Fort Riley, Kans. Filed Mar. 28, 1932. Serial No. 601,688. 2 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



2. A gun including side plates, a trunnion block at the forward end of the side plates and having an aperture, the bottom of the trunnion block in rear of the aperture formed with a recess, and the side plates formed with aligned apertures on an axis passing transversely across the recess of the trunnion block.

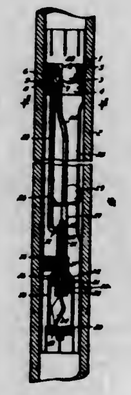
1,903,509. RAILWAY CAR. HARRY W. JONES, Webster Groves, Mo., assignor to Sanford Investment Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 25, 1930. Serial No. 431,152. 16 Claims. (Cl. 105—253.)

1. In a car of the kind described, the combination with side walls, of a door located between said walls and having its forward end hinged on an axis which is horizontal and transverse to said walls, bearings on an axis which is horizontal and transverse to said walls and rearward of and below the rear end of the door when the door is closed, a door supporting rock-shaft resting in said bearings and having an upward extension adapted to be rocked under and against a part of the door when the door is closed, and means supported by said shaft outside the car and adapted to be engaged for rocking said shaft.



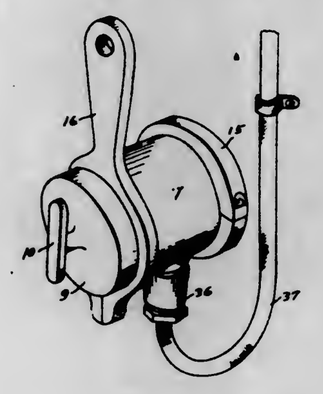
1,903,510. PLANT CONSTRUCTION. JOHN F. LABOON, Pittsburgh, Pa., and FREDERICK B. BARNS, New York, N. Y.; said Barns assignor to Donald Campbell, New York, N. Y. Filed Mar. 10, 1930. Serial No. 434,804. 1 Claim. (Cl. 34—41.)

In a sewage drying plant the combination of the lateral walls and roof enclosing the working space, such walls having a base section standing above the ground level and thereabove a substantially continuous horizontal series of sash openings in a location elevated substantially above the ground level, an enclosed base adapted to hold a bed of sewage sludge to be dried by evaporation, at a level substantially below said sash openings, and a series of air deflecting sashes in said openings set at an inward-downward incline and with the lower inner edges of such sashes spaced inwardly of the wall; whereby at the windward side natural air currents entering said openings are diverted by the sashes to flow at a descending slant on to the sludge bed and thence across the working space adjacent to the sludge bed and thence ascendingly for continuous discharge of vapors beneath the sashes at the lee side of the plant.



1,903,511. ENGINE. JOHN J. MCCARTHY, Malden, Mass. Filed Nov. 16, 1929. Serial No. 407,631. 6 Claims. (Cl. 123—50.)

1. In an internal combustion engine, in combination, a working cylinder, a compression chamber formed at the upper end thereof, means for admitting air to said chamber, a fuel inlet port formed in the wall of said working cylinder, means to inject fuel through said fuel inlet port at predetermined intervals, a hollow cylindrical piston slidably mounted in the working cylinder, an inlet port formed in the head of said piston and alternately communicating at predetermined times with the inlet port in the working cylinder and with said chamber, a combustion chamber arranged in the hollow piston below the head thereof, a spark plug extending through the wall of the working cylinder and a port formed in the head of said

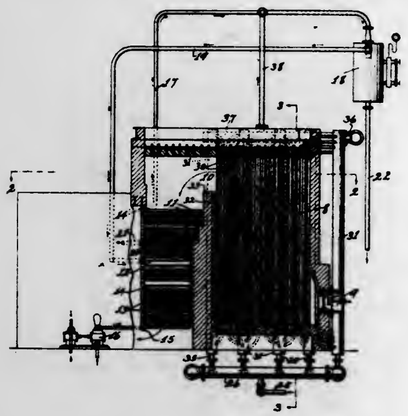


piston and registering at predetermined times with the spark plug to expedite ignition of the explosive material in the combustion chamber.

1,903,512. INSTRUMENT FOR RECORDING INCLINATION. WILLIAM I. MCLAUGHLIN, Piedmont, and RUPERT G. WEDEMEYER, Palo Alto, Calif.; said Wedemeyer assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Nov. 3, 1930. Serial No. 493,057. 7 Claims. (Cl. 234—1.)

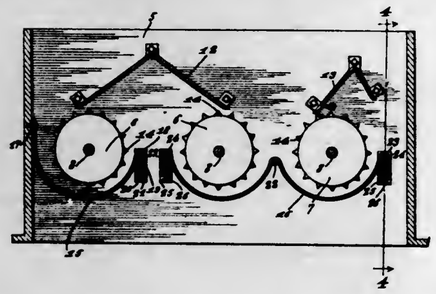
1. An instrument for recording inclination including the combination of a plumb-bob and disc recording means, an actuating ball, means operable by said ball to actuate said bob and disc into recording engagement, and automatic means operable thereafter to actuate said bob and disc out of recording engagement.

1,903,513. MERCURY CONTACT SWITCH. JAMES N. MCTWIGGAN, U. S. Navy. Filed Dec. 7, 1931. Serial No. 579,550. 8 Claims. (Cl. 200—152.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



8. In an electric switch, a rotatably mounted body having space therein to contain an electrically conducting fluid, insulating means to divide said fluid into two masses in one rotational stage of said body, said means having through it a relatively small tortuous passage adapted to cause making and breaking of the contact between the two masses within said passage when said body is rotated to the proper position therefor, and means to make connection between said fluid and the exterior of said body.

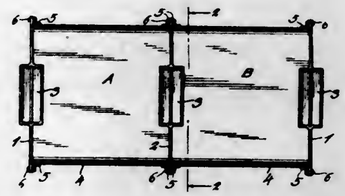
1,903,514. WRENCH. HENRY H. MERRIMAN, Kalamazoo, and FRANK W. PICHE, Detroit, Mich. Filed Apr. 11, 1932. Serial No. 604,434. 5 Claims. (Cl. 81—60.)



1. A wrench consisting of a hollow apertured handle, a spindle extending therethrough, a ratchet wheel on said spindle and rotatable therewith, a member rotatable around said spindle, said ratchet wheel and member being within the hollow handle, a spring actuated pawl engaging said ratchet wheel, a cord wound around said member and attached thereto, an element arranged exteriorly of said handle to which said cord is connected so that when the element is pulled the member is rotated, spring means for turning said member and rewinding said cord thereabout, and means carried by said member and cooperating with the ratchet wheel for rotating the latter as the cord is unwound, said means permitting rotation of the member independently of the ratchet wheel when said cord is being rewound.

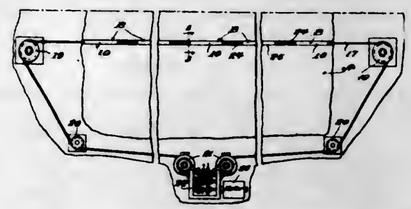
1,903,515. BOILER. WILLIAM S. MONROE, Chicago, Ill. Filed Jan. 19, 1928, Serial No. 247,762. Renewed June 23, 1932. 11 Claims. (Cl. 122—235.)

1. In a boiler, a furnace, upright furnace wall tubes, upright containers located outside of said furnace with the ends of said tubes connected thereto, connections from the upper ends of said containers to a steam and water separator, and connections from said separator to the lower ends of said containers.



1,903,516. CORN SHELLER. SOLOMON N. REVIS, Ashland, Nebr., assignor to Vernon Elmer Revis, Ashland, Nebr. Filed June 1, 1931. Serial No. 541,433. 1 Claim. (Cl. 130—6.)

In a corn sheller, a body open at its top and bottom, a plurality of rolls journaled transversely in the body in spaced relation to each other in a horizontal row, foraminous concaves disposed below the rolls, one of the concaves being fixed intermediate thereof between two of said rolls with its ends yieldably supported, the other concave having one fixed end and a yieldably supported other end, feeder plates above the rolls forming a hopper and disposed for directing materials toward the fixed points of the concaves, and connections between the rolls for operating the same in unison.

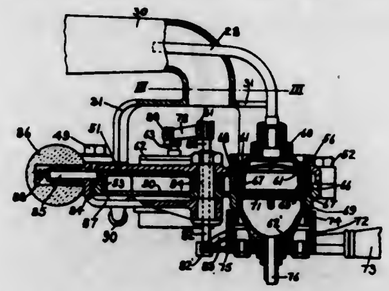


1,903,517. CELL CONSTRUCTION FOR FLOTATION MACHINES. JOSEPH P. RUTH, Jr., Denver, Colo., assignor to The Ruth Company, Denver, Colo., a Corporation of Colorado. Filed Sept. 14, 1931. Serial No. 562,748. 8 Claims. (Cl. 209—168.)

1. In a flotation machine comprising a number of cells separated by partitions that form a common wall for two cells, each partition comprising a substantially rectangular plate having a portion of its area formed from two spaced walls whose sides and lower ends are joined to the plate whereby a compartment is formed that is open at the top, the inside surfaces of the end walls of the compartment having grooves for the reception of remov-

able separator plates that divide the compartment into two parts, the side walls having openings near their lower ends whereby liquid may flow from one cell to the next by flowing through one of the openings into the compartment and then over the separator plates and out through the opening in the other compartment wall.

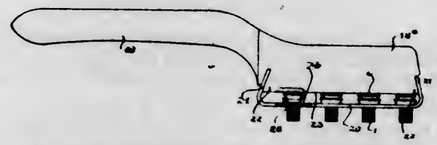
1,903,518. STONE SAW. JOSEPH W. SIMMONS and JOHN A. SIMMONS, Salisbury, N. C. Filed Oct. 16, 1931. Serial No. 569,283. 2 Claims. (Cl. 125—12.)



1. In a rigging of the character described, a flexible cable movably mounted with a stretch thereof for travel in a straight path, a plurality of cutting elements, each having a wedge-shaped groove in one side for receiving the cable and also having in its working face distributing channels disposed lateral to the direction of travel of said elements, a securing wedge engaged in the groove in each element to make fast the latter upon the cable without creeping of said element thereon, and spherical members movably confined in the grooves in the elements for cutting action upon a foundation.

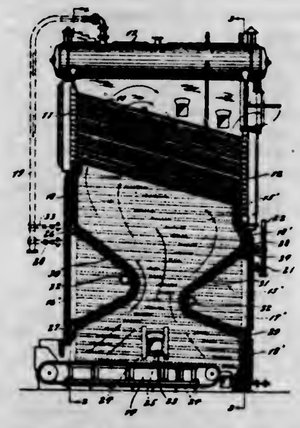
1,903,519. APPARATUS FOR THE COMMERCIAL PREPARATION OF COFFEE BEVERAGES. GUIDO SNIDER, Milan, Italy. Filed Sept. 22, 1928. Serial No. 307,701. 1 Claim. (Cl. 53—3.)

An apparatus for the preparation of a beverage comprising a pair of fixed horizontal plates in spaced relation, a feed plate positioned between said fixed plates having a series of apertures therein, bushings located in said apertures, the upper fixed plate having a series of apertures therein with which the apertures in said feed plate are adapted to be aligned, a supply station connected with one of said apertures in said upper fixed plate, hot water and steam conducting means connected with another of said apertures in said upper plate defining a brewing station, discharge mechanism associated with another aperture in said upper plate defining a discharge station, the lower fixed plate having an aperture therein aligned with the aperture in said upper fixed plate above which is located the supply means, a percolator located in said last mentioned aperture, means for detachably securing said



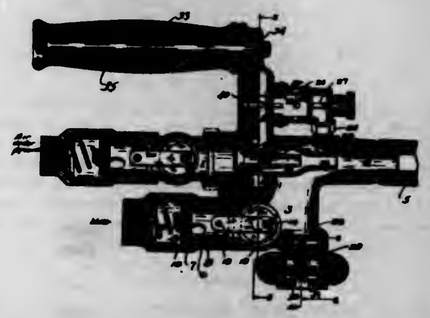
CARNEGIE LIBRARY OF ATLANTA

percolator in position, a cam track upon said means for securing said percolator in position, said lower plate having another aperture therein in alignment with the



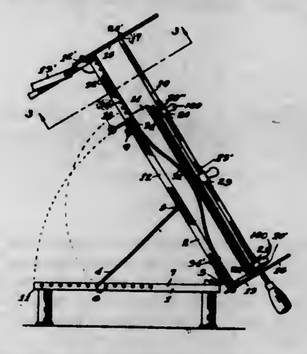
aperture in said upper fixed plate above which said discharging means are located and means operated by said cam track for operating said discharging means.

1,903,520. ABRADING BRUSH. CHARLES E. STURGIS, Rochester, N. Y., assignor of one-half to Waddel P. Andrus, Rochester, N. Y. Filed Aug. 13, 1930. Serial No. 474,908. 13 Claims. (Cl. 15—200.)



1. The combination with a tuft of coiled bristles, of a holding device surrounding the tuft and in the form of a cap forming a band exteriorly compressed around the tuft of bristles to clamp the same, said cap having a marginal expanded portion adjacent the top wall of the cap into which the ends of the coils are laterally deflected to spread the same, said top wall holding the ends of the coils under compression.

1,903,521. FURNACE. JAMES M. TAGGART, Port Washington, N. Y. Filed Mar. 6, 1926, Serial No. 92,675. Renewed June 23, 1932. 8 Claims. (Cl. 122—481.)

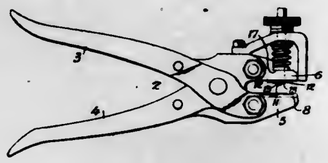


1. A furnace having a combustion chamber with a substantially rectangular cross section, horizontally disposed tubes in the side walls of the furnace, vertically disposed headers connected to the ends of said horizontally disposed tubes, vertically disposed bent tubes at the front and back of the furnace with their ends in the furnace wall and with at least a portion of the body portions of said bent tubes extending into the furnace space, a steam inlet and a steam outlet connected to all said tubes, and a source of steam supply connected to said inlet.

1,903,522. APPARATUS FOR PRODUCING A STREAM OF ATOMIZED LIQUID. WILLIAM C. UHRI, Jr., St. Louis, Mo., assignor, by mesne assignments, to Central Engineering & Sales Company, St. Louis, Mo., a Corporation of Missouri. Filed May 2, 1928. Serial No. 274,548. 5 Claims. (Cl. 299—84.)

2. In a tool of the class described, a receptacle for air under pressure, a nozzle leading therefrom, a passage having separately operable elements for alternately admitting atmospheric air and another fluid, a nozzle leading from said passage and surrounding said first mentioned nozzle and receiving the discharge from the latter, a chamber having an inlet for water and a port open to atmospheric air, and a nozzle leading from said chamber and surrounding said second mentioned nozzle.

1,903,523. COPY AND BOOK HOLDER. BONNIE E. VAN ALSTINE, San Francisco, Calif. Filed Dec. 8, 1930. Serial No. 500,896. 8 Claims. (Cl. 45—86.)

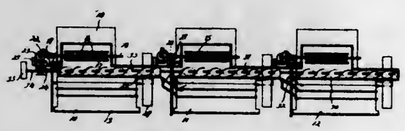


1. In a copy and book holder, a frame for supporting a sidewise-opening book thereon in reading position, a rod adapted for placing over the book hinge, and a transverse member slidable on the rod and having a depending flange for supporting the uppermost leaves of the book and preventing them from sagging.

6. In a copy and book holder, a substantially rectangular-shaped frame for supporting a book in reading position, leaf springs anchored to the frame and extending along the opposite sides thereof, and means for flexing the springs and holding them in flexed position whereby the

sections of the book may be raised into the same plane, said springs when in inoperative position providing a trimming for the frame.

1,903,524. HARDNESS TESTING DEVICE. ROBERT A. WEBSTER, Santa Monica, Calif. Filed Apr. 17, 1929. Serial No. 355,769. 10 Claims. (Cl. 265—12.)



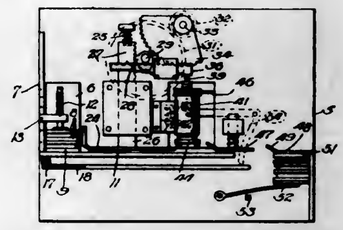
8. A hardness testing device comprising a support for the work, a support for an impression plunger, an impression plunger carried by the latter-named support and provided with a plurality of impression teeth of different effective lengths projecting therefrom, a spring for backing said plunger, means for regulating the resistance of the spring to recession of the plunger, and means for moving said supports toward or from each other.

1,903,525. BLEACHING COMPOUND. CYRUS B. WOOD, Takoma Park, D. C. Filed Feb. 12, 1932. Serial No. 592,662. 6 Claims. (Cl. 8—2.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A method of bleaching textile materials which comprises subjecting the materials to the action of an aqueous solution of succinchlorimide.

4. A composition for bleaching textile material consisting of aqueous solutions of succinchlorimide.

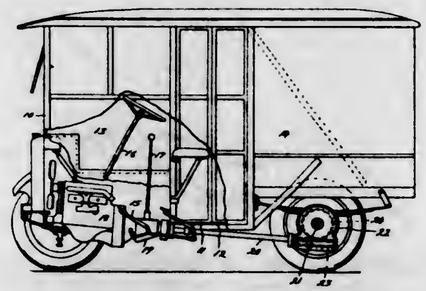
1,903,526. APPARATUS FOR REDUCING PAPER STOCK. HENRY J. ANDREWS, Fort Wayne, Ind., assignor, by mesne assignments, to Black Clawson Company, Hamilton, Ohio, a Corporation of Ohio. Filed Apr. 11, 1927. Serial No. 182,862. 4 Claims. (Cl. 92—28.)



1. In an apparatus for reducing paper stock, a plurality of tub beaters having aligned screen elements, the screen elements having a continuous chute common to all the beaters, said chute having outlets for the pulp screened from one beater leading into an adjacent beater.

1,903,527. STRAINING AND PULP MAKING MACHINE. WALTER B. BARNHISEL, Los Angeles, Calif. Filed May 21, 1928. Serial No. 279,526. 2 Claims. (Cl. 146—175.)

1. The combination in a straining and pulp making machine comprising a conical strainer receptacle having the apex portion only perforated and a positively rotated conical pressing and stirring member, unconnected with the receptacle, said conical stirring member having a plurality of spiral grooves in the face thereof so constructed and arranged as to terminate at the lower end at right angles to each other adjacent the apex of the conical member and each groove having a surface facing downwardly and outwardly whereby the material in the receptacle is forced downwardly and outwardly through the strainer apertures.

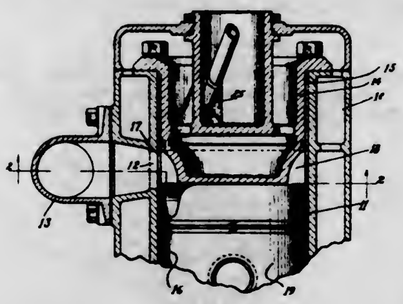


1,903,528. COMBINED SLUG GAUGE AND THICKNESS TRIMMER. CHARLES W. CURLE, San Francisco, Calif. Filed May 26, 1930. Serial No. 455,664. 2 Claims. (Cl. 90—19.)

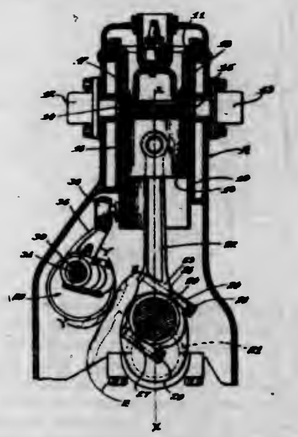
1. In a slug trimming device, a support, a stationary guide positioned on said support, a movable guide positioned on said support and arranged parallel to said first mentioned guide, means for moving a slug between said guides, a slider secured to said movable guide, said slider having teeth formed thereon, a stepped gauge movably mounted on said support, teeth formed on said gauge, gearing interposed between the teeth on said slider and the teeth on said gauge, a cutter mounted on said support, a stop carried by said cutter, said stop being in alignment with one of the steps of said gauge, and means for retaining said stop in engagement with its step while said cutter is being actuated.

1,903,529. DROP CENTER DELIVERY VEHICLE. EDWIN R. MAURER, Detroit, and DONALD M. FERGUSON, Highland Park, Mich., assignors, by mesne assignments, to Continental-Divco Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 1, 1929. Serial No. 382,819. 9 Claims. (Cl. 180—54.)

1. A motor delivery vehicle having in combination, a body formed with an unobstructed transversely extending passage depressed to substantially curb level, driving means for the vehicle including, an axle connected to the body in rear of the passage and having its axis approximately at the floor level of the passage, a motor carried by the body in advance of the passage and having its crank shaft arranged above the level of the passage floor, and a propeller shaft in substantial alignment with said crank shaft and axle passing beneath the floor of the passage and operatively connecting the motor shaft and axle.

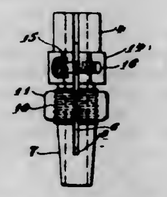


1,903,530. METHOD OF AND MEANS FOR MAKING ARTICLES FROM CELLULOID AND THE LIKE. WILLIAM MENDEL, Beverly, N. J. Filed Nov. 14, 1928. Serial No. 319,280. 7 Claims. (Cl. 18—51.)



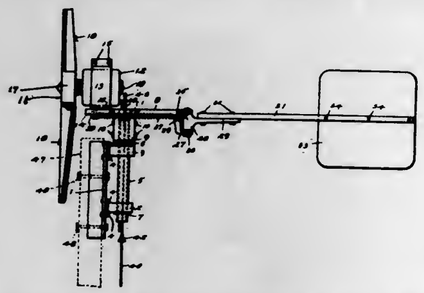
1. The method of softening celluloid, which consists in subjecting it to the action of a composition including acetone which has the capacity to penetrate and soften the celluloid, and an anhydrous diluent of the acetone which is miscible therewith but has no such effect upon the celluloid; continuing such action until the celluloid is softened, and terminating such action before the celluloid is dissolved in said composition.

1,903,531. INTERNAL COMBUSTION ENGINE. ANDRE J. MEYER, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed May 30, 1930, Serial No. 457,626. Renewed Apr. 6, 1931. 20 Claims. (Cl. 123—75.)



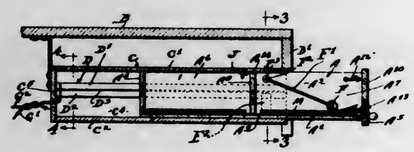
1. In a sleeve valve Diesel engine, a cylinder structure provided with an air intake port, sleeve valve means for said cylinder having a port cooperating with the cylinder port, a cylinder head structure having a portion depending within said cylinder and spaced from the walls thereof to form a sleeve pocket for receiving the upper end of the sleeve valve means, and means for deflecting the incoming air to impart directional forces to the air for causing the same to flow in a predetermined direction.

1,903,532. ENGINE. ANDRE J. MEYER, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed June 8, 1931. Serial No. 542,728. 9 Claims. (Cl. 123—81.)



1. In an internal combustion engine, the combination of a cylinder, a piston, sleeve valve means arranged to have both axial reciprocation and circumferential oscillation, a crankshaft, a connecting rod intermediate the piston and crankshaft, a bearing cap for the connecting rod at its connection with the crankshaft, a valve operating shaft parallel to the crank-shaft, said valve operating shaft having a wobble crank, an operating connection between the wobble crank and said sleeve valve means, said bearing cap being offset for the most part to that side of the plane extending longitudinally of the engine containing the connecting rod axis opposite to the valve operating shaft, said valve operating shaft being closer to the cylinder axis than it could be save for such offset.

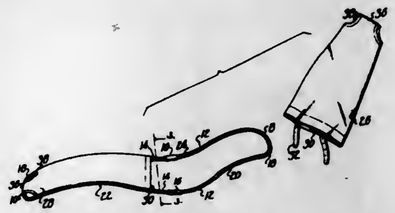
1,903,533. VALVE SEAT REAMER SLEEVE. HENRY C. PRESTON, Baltimore County, Md., assignor to The Black & Decker Manufacturing Company, Towson, Md., a Corporation of Maryland. Filed June 16, 1931. Serial No. 544,808. 1 Claim. (Cl. 279—1.)



A valve seat reamer sleeve adapted to carry a reamer, the same being tapered at its lower end to form an arbor for the reamer, the central aperture of the sleeve being adapted to engage a valve seat surfacing pilot, the sleeve immediately above the taper being threaded and provided with a nut for backing the reamer off the seat, the sleeve being slotted in the direction of the axis for substantially its entire length downwardly to a point approaching the lower end of the taper, the slot extending upwardly to and through the upper end of the sleeve, the sleeve being provided immediately above the backing off thread with an angular slotted collar for engagement with a handle or wrench, said collar being bored in a direction which is substantially tangential to the pilot, and threaded to receive a screw which engages the sleeve on both sides of the slot and a screw in said bore for adjusting the diameter of the sleeve to the pilot.

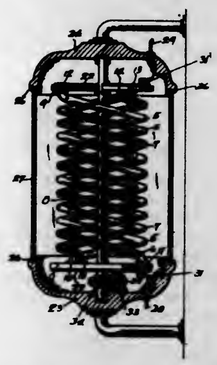
1,903,534. WIND DRIVEN ELECTRIC POWER PLANT. GILBERT A. RIME, Northwood, N. Dak. Filed July 15, 1930. Serial No. 468,121. 1 Claim. (Cl. 170—48.)

A power plant comprising a standard, a shaft rotatably supported in vertical position in said standard, a horizontally disposed head secured to the upper end of said shaft, a vane fixed to said head, a second vane pivoted to said head and disposed at right angles to the first vane, a pair of laterally extending arms secured to said second vane, a spring engaging one of said arms and said head, a split clamp upstanding from said head in substantial alinement with said second vane, a propeller, and means disposed in the clamp for rotatably supporting the propeller on the head, said clamp comprising a base portion, means for securing the base portion to the head, complementary clamping arms extending upwardly from the base portion and engaging about said latter means and terminating thereabove in vertical ears, and means for drawing the ears together to tighten the said latter means in the arms.



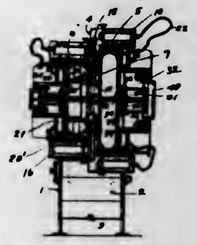
1,903,535. CASH DRAWER ALARM DEVICE. GEORGE T. SCOTT, Los Angeles, Calif. Filed Apr. 15, 1929. Serial No. 355,256. 1 Claim. (Cl. 200—52.)

In a cash drawer, a bottom forming an electrical contact, conductor guides, conductor rails on the drawer slidable in said guides, whereby the drawer is slidably mounted, a conductor rod extending across the drawer and secured at one end to one of said rails but not to the other rail, a conductor connecting said other rail and said bottom contact, and a second contact hingedly mounted on said rod for resting upon money placed within the drawer and for resting upon said bottom contact when money is removed from the drawer.



1,903,536. STRETCHER. FRED B. SKINNER, Coffeyville, Kans. Filed Sept. 19, 1931. Serial No. 563,697. 1 Claim. (Cl. 5—82.)

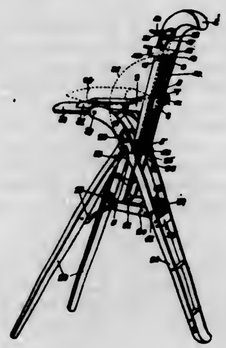
A stretcher including a tubular frame comprising a pair of U-shaped separable members, each having arms bent upwardly and then downwardly from each end of the frame, one of said members having sleeves on the ends of its arms and adapted to slidably receive the ends of the arms of the remaining member, a pair of sack-like covers having open inner ends whereby the covers may be sleeved over opposite ends of the frame to bring the inner end edges of said covers into abutment at the middle of the frame, and closed outer ends to engage the end members of the frame, each of said covers having corner portions at the outer ends of said covers cut away to permit a portion of the frame members to protrude from the covers, and cooperating means at the inner



end edges of the covers for securing said covers together on the frame, said means also preventing the separation of the frame members.

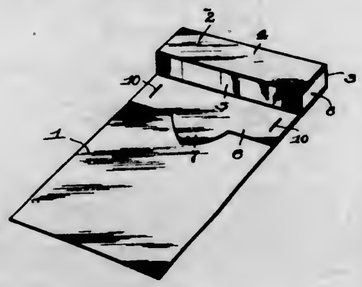
1,903,537. ILLUMINATED SIGN. FRANK C. SUTLIFFE, San Francisco, Calif. Filed June 12, 1929. Serial No. 370,284. 10 Claims. (Cl. 40—126.)

1. An illuminated sign comprising a plurality of illuminating elements disposed in parallel windings and connected in series with each other; rotating means to carry said illuminating elements as a unit; means to rotatably support said rotating means; and means outside the space surrounded by the tubes to connect said elements to a source of electricity.



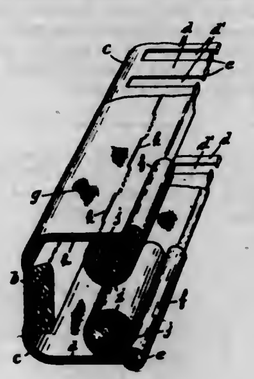
1,903,538. TIRE VULCANIZING MACHINE. KARL K. A. THORSEN, San Francisco, Calif. Filed Oct. 29, 1928. Serial No. 315,628. 14 Claims. (Cl. 18—18.)

5. A vulcanizing machine comprising a body member having walls therein defining a tire receiving recess therein and having a heating jacket in the walls defining



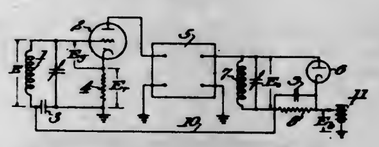
said recess, a mold member hingedly and bodily slidably connected with said body member and arranged to extend into said recess, which mold member is provided with a heating jacket, a screw threaded member secured to said body member, a screw threaded collar movable on said threaded member, and being rotatably secured to said mold member, a hand wheel connected with and for turning said collar, locking blocks carried by said mold members, means for moving said blocks into and out of locking relation to said body members, a sectional matrix removably mounted in said mold space, and removable fastening elements for said matrix carried by said body member and said mold members.

1,903,539. IMPLEMENT FOR PLAYING THE GAME OF CAT. EDWARD WARNER, Union City, N. J. Filed Apr. 1, 1930. Serial No. 440,683. 7 Claims. (Cl. 273—95.)



1. A portable platform for the purpose described comprising a rest for a cat, a plane before the said rest on which the forward point of a cat may glance on being struck with a bat, rising above the platform a handle with an open way therein to guide the rearward end of a cat in its upward ascent, and underpinning to raise the whole above the ground.

1,903,540. PACKAGE MAILING CARD. HENRY L. WEBSTER, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, Chicago, Ill., a Corporation of Delaware. Filed May 27, 1931. Serial No. 540,232. 3 Claims. (Cl. 229—87.5.)



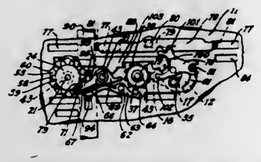
1. A mailing card for the purpose described, comprising a card having a portion along one edge folded inwardly and over upon the body of the card to form therewith an integral container consisting of connected walls adapted to surround three sides of the contents and a flap adapted to bear flatwise against the body of the card, a band adapted to extend around the contents at right angles to said walls, and means for fastening said band and flap to the body of the card.

1,903,541. WINDOW GLASS CHANNEL. DAVID C. BAILEY, Amesbury, Mass., assignor to Bailey Company, Inc., Amesbury, Mass., a Corporation of Massachusetts. Filed June 7, 1932. Serial No. 615,826. 8 Claims. (Cl. 296—44.5.)

1. A window glass guide comprising a U-form channel of bendable metal having a series of notches extending inwardly from the edges of both sides thereof and a metal bead mounted on the edge portion of each side and arranged to permit a slight relative movement therebetween when the base portion of the channel is bent.

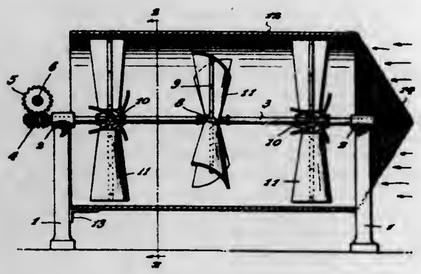
1,903,542. AUDION AMPLIFIER. ALFRED W. BARBER, Boonton, N. J. Filed Feb. 12, 1931. Serial No. 515,847. 12 Claims. (Cl. 250—20.)

1. In the operation of an electrical wave amplifier working into a rectifier and subject to signals of varying magnitude, the method of automatically controlling the gain of said amplifier, which comprises impressing upon the amplifier input circuit two discrete direct current potentials which vary automatically and according to different functions of the magnitude of the incoming electrical wave, one of said potentials being predominately effective for weak signals and the other predominately effective for strong signals.



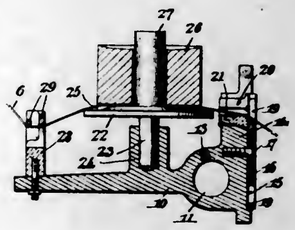
1,903,543. ROOF DECK. ALBERT LINDSAY DOERING, Germantown, Pa., assignor to J. S. Thorn Company, Germantown, Pa., a Corporation of Pennsylvania. Filed July 22, 1931. Serial No. 552,357. 9 Claims. (Cl. 189—35.)

1. In a roof deck; the combination with a plate corrugated to form a rib therein, projecting from one face thereof, the opposite walls of the rib being in spaced re-



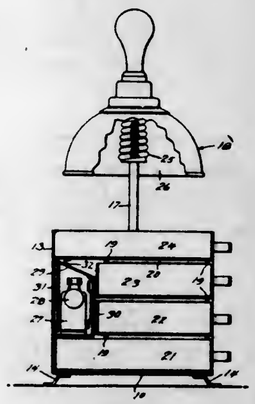
lation; of another similar plate having one edge overlapping said first plate and with a similar rib entered in said rib of the first plate; and means for detachably rigidly holding said plates in such engaged relation, including a clip having a coupling member inserted in one of the ribs of said first plate, between that rib and the rib of the second plate engaged therewith; said coupling member extending above the top of the interengaged plates and having flanges parallel with said top and engaged with the respective plates.

1,903,544. VOTING MACHINE. JOSEPH M. GARR, Calumet City, Ill., assignor to Peoples Voting Machine Corporation, Knox, Ind., a Corporation of Indiana. Filed May 3, 1930. Serial No. 449,624. 2 Claims. (Cl. 235—54.)



1. In a voting machine registering mechanism, intermeshing counting units, tens and hundreds gears, a ratchet rotatable with the units gear, a tongue projecting from the hundreds gear, a pivotal spring-urged latching dog for the units gear and a pivotal latching dog for the hundreds gear, the latching dog for the hundreds gear being provided with a notch for the reception of said tongue, a slidable member, and spaced elements on said slidable member engageable with and for pivoting said dogs.

1,903,545. CURRENT MOTOR. ALVAH T. HAMPTON, Coulee, Wash. Filed Mar. 3, 1931. Serial No. 519,817. 1 Claim. (Cl. 170—133.)



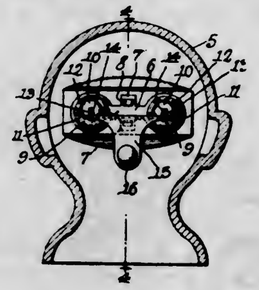
A current motor comprising spaced standards having their upper ends provided with horizontally alined bearings, a horisontal shaft mounted for rotation in said bearings, gearing for taking off power from one end of the shaft, spaced hubs rigidly secured to the shaft, spokes radiating from the hubs, anchoring collars disposed on opposite sides of the hubs, substantially segmental shaped concavo-convex blades secured to the spokes and having their inner ends disposed at substantially right angles to the longitudinal axes of the spokes and spaced from the hubs, stay rods secured to the anchoring collars and connected with the spokes between the inner ends of the blades and said hubs, the convex faces of the blades being presented to the inflowing stream, a cylindrical housing secured to the standards and encircling the shaft and blades, and a reticulated conical screen forming a closure for the housing at the upstream end of said housing.

1,903,546. COMBINED CLEARER, WAXER, AND TENSION DEVICE. JOSEPH KAUFMANN, Cleveland, Ohio. Filed Dec. 5, 1930. Serial No. 500,369. 2 Claims. (Cl. 28—70.)

1. In a device of the class described, a bracket, an enlarged head at one end of said bracket and providing an annular forward face, said face having a recess therein, a clearer disc rotatably supported within said recess, said disc having kerfs in its edges, said head having a guide slot for registration with one of said kerfs, a post rotatably carried by said bracket immediately in the rear of said head, a table supported upon said post and disposed above said guide openings, and a waxing block carried by said post and resting upon said table.

1,903,547. TOASTING AND STORAGE CABINET. WILLIAM W. KELLY, Cleveland Heights, Ohio, assignor to The Nut Products Company. Filed June 5, 1931. Serial No. 542,359. 5 Claims. (Cl. 34—21.)

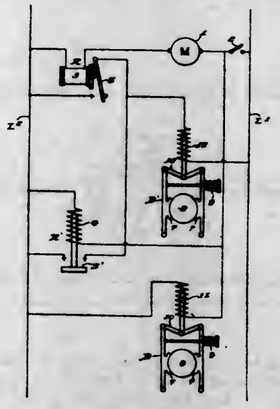
1. In a device of the class described, a cabinet having an open top, means for supporting a roasting pan within said cabinet adjacent said open top, means for supporting a drawer below said first means, a drawer supported thereon, said first means comprising openwork whereby material may be dumped from said roasting pan into said drawer and a heating means positioned above said cabinet and said roasting pan for directing heat upon the material in said pan.



1,903,548. SLIDE HAMMER. HARRY GAIL KREIS, Cleveland, Ohio. Filed Jan. 26, 1932. Serial No. 589,022. 8 Claims. (Cl. 29—85.)

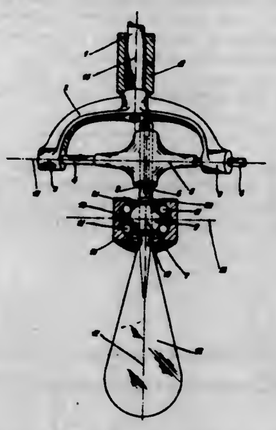
1. In slide hammer construction, the combination of a rod having a stop to receive a hammer blow, and a hammer slidingly mounted on the rod to deliver such hammer blow, the hammer being free to move angularly or

rotate relative to the rod, and the sliding engagement between the hammer and rod being limited to spaced lines of contact.



1,903,549. EYE MOUNTING FOR DOLLS. JOSEPH ALEXANDER MANNING, Pawtucket, R. I. Filed Jan. 6, 1932. Serial No. 585,100. 2 Claims. (Cl. 46—40.)

1. The combination with a doll head having eye sockets, of an eye mounting comprising a plate fitted over the eye sockets and having socket portions registering with the eye sockets, eye balls fitted within the sockets and held in place by the plate, said socket portions of the plate having cut out portions defining elongated flat lower edges and curved upper edges, rods extending from the eye balls and passing through the cut out portions of the plate, said rods resting on the flat lower edges of the cut out portions, and weights connected to the free ends of the rods for moving the eye balls within their sockets.

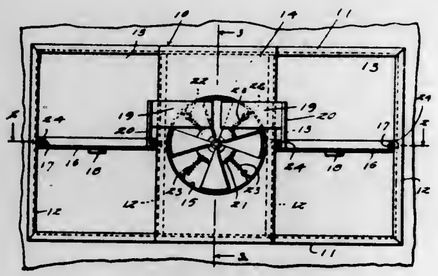


1,903,550. ELEVATOR BRAKING SYSTEM AND METHOD OF ACTUATING THE SAME. WILLIAM H. MECHLING, Whitemarsh, Pa., assignor to Atlantic Elevator Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1929. Serial No. 334,150. 9 Claims. (Cl. 188—172.)

1. The combination with an electric motor, of braking means therefor normally effective to prevent rotation of the motor while the motor is de-energized, and a current relay in series with the motor adapted to effect the release of the braking means upon the passage of a current through the motor and adapted to maintain the

braking means in released position for a predetermined period after interruption of the passage of the current through the motor.

1,903,551. FIN PROPELLER. WIGGER MEINDERSMA, Wassenaar, Netherlands. Filed Nov. 25, 1931, Serial No. 577,331, and in the Netherlands Dec. 1, 1930. 2 Claims. (Cl. 170—94.)

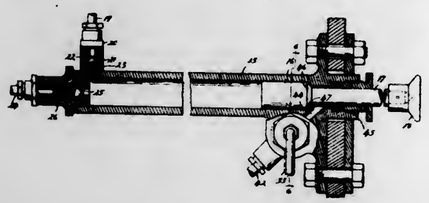


1. In a fin propeller the combination of a shaft, a bearing to suspend the said shaft rotatably, a propeller blade, a spherical bearing to suspend said propeller blade in a universally rotatable manner, said spherical bearing being displaced with regard to the axis of the said shaft, two coupling members to couple the said blade to the said shaft, said coupling members being mutually coupled to slide hingedly along each other in a sense perpendicular to the axis of the said shaft, one of the said members being fixed to the said shaft, the other being slidably connected to the said blade.

1,903,552. AIR FORCING APPARATUS FOR AIR FURNACES. WILLIAM N. MUELLER, Fredericksburg, Iowa. Filed June 17, 1930. Serial No. 461,817. 2 Claims. (Cl. 126—110.)

1. An air circulating device of the character described comprising a frame adapted to be positioned in an air duct, a fan carried by the frame, an air duct positioned about

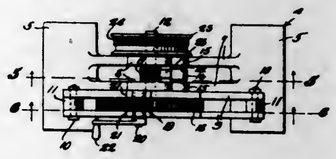
the fan, a rockable damper mounted in the frame and positioned on one side of the air duct and normally disposed in horizontal open position, an arm fixedly carried by said damper, an outstanding fin carried by said arm



and extending into said air duct, said fin upon operation of the fan being adapted to be forced into alignment with the draft of air and coactively swing the damper into vertical closed position.

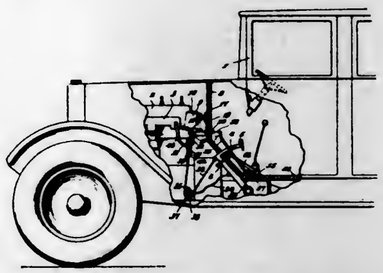
1,903,553. PROCESS FOR SHREDDING PALMETTO AND PRODUCT PRODUCED THEREBY. MARION H. PARTRICK and KATHERYN B. CURTIS, Tampa, Fla. Filed Sept. 30, 1930. Serial No. 485,561. 1 Claim. (Cl. 19—5.)

The process of producing a stuffing of the class described consisting of, first stripping the bark and skin from the green foliage of the American grown palm, second shredding the remaining fibrous material in its green state, third subjecting the shredded fibrous material to a natural drying process for approximately three hours, and fourth impregnating the dried shredded fibrous material with a cedar oil.



1,903,554. LUBRICATING SYSTEM. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed June 13, 1927. Serial No. 198,476. 6 Claims. (Cl. 184—7.)

1. In a lubricating system, the combination with a motor driven pump, of a system of conduits extending to the parts to be lubricated, a manually operated pump having a plunger for forcing lubricant under pressure through said conduits and means connecting said manual pump to the pressure side of said motor driven pump for supplying lubricant to the former and for moving said plunger in one direction.

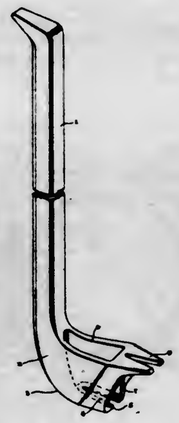


1,903,555. PUMP. IVY B. ROBERTSON, Charlotte, N. C., assignor of one-half to F. M. Gresham, Charlotte, N. C. Filed May 22, 1931. Serial No. 539,348. 1 Claim. (Cl. 103—205.)

Actuating mechanism for a pump, comprising transversely-spaced foot plates having upstanding lugs, there being a space between the foot plates, cross bars joined integrally at their ends to the foot plates and affording a permanent connection between the foot plates, the cross bars having upwardly projecting posts disposed between the foot plates, upwardly extended inner and outer brackets located on opposite sides of the lugs, the inner bracket having lateral contacting support on one of the posts, securing elements connecting the ends of the brackets with the lugs, a main shaft journaled in the posts, a drum on one end of the main shaft, outwardly of the other post and located above said space, a flexible

element wound about the drum and extended downwardly through said space, a pinion secured to the main shaft, between the posts, a rack bar between the posts and extended downwardly through said space, the rack bar meshing with the pinion, a roller supported by and between the posts and engaging the outer edge of the rack bar, a gear wheel secured to the main shaft and located between the brackets, an operating shaft journaled in the brackets, means for rotating the operating shaft, and a pinion secured to the operating shaft, between the brackets, and meshing with the gear wheel.

1,903,556. VACUUM CONTROLLED CLUTCH AND BRAKE OPERATING MECHANISM. ELWYNE O. SHREFFLER and AARON D. LESAGE, Manteno, Ill. Filed Mar. 2, 1931. Serial No. 519,555. 16 Claims. (Cl. 192—.01.)



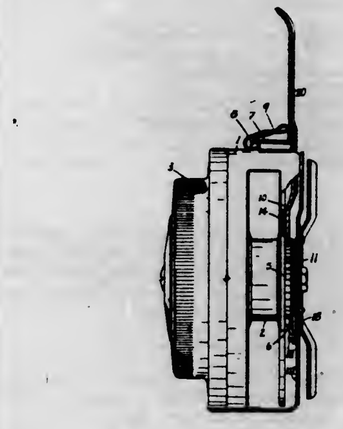
1. In a motor vehicle, an engine having a manifold, a clutch pedal, a brake pedal, an accelerator plunger, and control means for said pedals comprising a cylinder, a piston in said cylinder having a piston rod extending through the lower head of the cylinder, means connecting said pedals with the piston rod, a tube having communication with the cylinder and manifold whereby a vacuum may be created in the cylinder to raise the piston and actuate the pedals, a valve to control passage of air into and out of said cylinder carried by said piston rod, a treadle in operative relation to said plunger, and means to actuate said valve when the treadle is moved.

1,903,557. SPIKE AND NAIL EXTRACTOR. FRED SWOYER, Silver Grove, Ky. Filed Nov. 6, 1931. Serial No. 573,460. 7 Claims. (Cl. 254—25.)

1. An implement of the character specified comprising a bar having an end portion curved laterally to provide

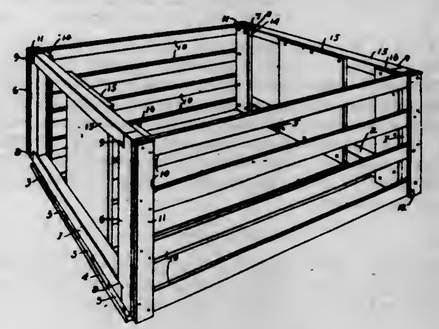
a rolling fulcrum, spaced side walls adjacent the fulcrum end of the bar, an inner claw connecting the outer ends

of the side walls, and an outer claw in line with the outer edges of the side walls and the face of the rolling fulcrum.



1,903,558. ARTIFICIAL BAIT. ROLLAND W. TAYLOR, Remus, Mich. Filed Mar. 13, 1931. Serial No. 522,864. 1 Claim. (Cl. 43—45.)

An artificial bait of the type described comprising a pear-shaped spoon having in its broad end a longitudinally centrally aligned hole for attaching a hook assembly and in its narrow end a longitudinally and centrally aligned hole for attaching a line coupling, the longitudinal marginal parts of the spoon being oppositely and angularly bent on lines removed from but parallel to the central longitudinal axis of the spoon, said parts being cupped for a portion of their longitudinal extent.

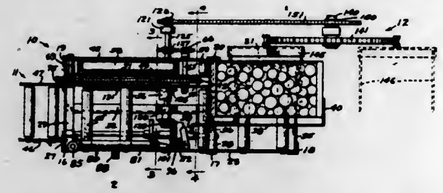


1,903,559. FISHING REEL. WILLIAM SHAKESPEARE, Jr., Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Oct. 1, 1928. Serial No. 309,579. 21 Claims. (Cl. 242—84.3.)

1. The combination in a spring winding reel, of a casing, a spool staff, a spool on said staff, a driving spring operatively associated with said spool, a brake lever of spring material mounted in said casing to project therefrom, a latch for holding said brake lever in released position, a brake shoe mounted on the side of said lever facing said spool for oscillating movement in coacting relation to said spool, said brake lever being provided with stops limiting the movement of said brake shoe, coacting cam members on said brake lever and brake shoe

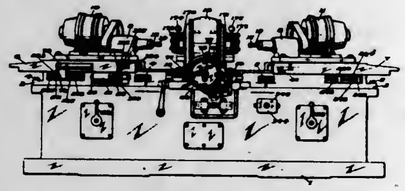
for actuating the brake on the winding movement of the spool, and a spring acting to move said brake shoe to cam engaging position.

1,903,560. CRATE. FRANCIS V. BIRBECK, Aromas, Calif. Filed Jan. 21, 1930. Serial No. 422,336. 2 Claims. (Cl. 217—36.)



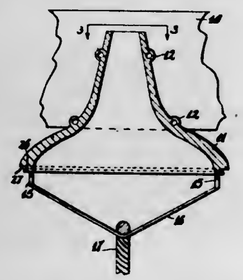
1. A crate comprising, a bottom section including a plurality of slats having end bars mounted thereon and end cleats mounted thereon opposite the bars, two side sections, each section including a plurality of slats having end bars mounted thereon and end cleats mounted thereon opposite the bars, the end bars of the side sections being mounted upon and secured to the ends of the end bars of the bottom section, and a pair of end sections including top bars mounted upon the upper ends of the end bars of the side sections and slats overlapping and secured to the end bars of the bottom and side section.

1,903,561. BOX DELIVERY DEVICE. EARL G. GRIFFITH, Huntington Park, Calif. Filed Dec. 26, 1931. Serial No. 583,199. 1 Claim. (Cl. 198—21.)



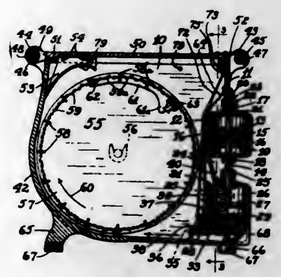
In combination: means forming a delivery station; means for removing boxes from said delivery station one by one; a continuously operating feed means for deliver-

ing boxes positively to said delivery station, said feed means operating in timely relation with said box removing means; means for conveying a series of boxes one by one to a timing station which is outside the path of said positive feed means; and means responsive to the



arrival of a box at said timing station to shift said box into the path of said feed means, said shifting means operating in timely relation with said feed means and being normally inoperative until rendered operative by said box arriving at said timing station.

1,903,562. GRINDING MACHINE. ROGER N. HEALD and EDWARD M. TAYLOR, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1929. Serial No. 407,248. 18 Claims. (Cl. 51—50.)



1. In a grinding machine, a table or carriage by the reciprocation of which a grinding traverse is produced, adjustment means to vary the path of reciprocation of said carriage, fluid pressure operating means for procuring the movements of said carriage beyond and outside of its reciprocatory grinding traverse, and mechanical means, against which the carriage is urged by the pressure fluid, for imparting to said carriage its reciprocatory grinding traverse.

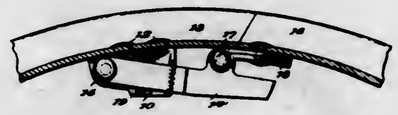
1,903,563. PARACHUTE. HENRY HOJDA, Moravska-Ostrava, Czechoslovakia. Filed June 2, 1932. Serial No. 614,943. 6 Claims. (Cl. 244—21.)

1. A parachute, comprising a cup-shaped container for attachment upon one's back and having bottom apertures, means for attaching said container upon one's back, rings upon the periphery of said cup-shaped container and extending outwards and inwards, a parachute sail, funnels attached upon the edge of said sail and seatable selectively upon said rings, ropes attached upon said funnels and extending through said rings and through the bottom of said container, and means upon the bottom of the container for storing said ropes in a wound condition to constitute the inoperative condition of the parachute.

1,903,564. WASHING MACHINE. SAMUEL C. SHAFFNER, Chicago, Ill. Filed Dec. 23, 1929. Serial No. 415,944. 9 Claims. (Cl. 68—37.)

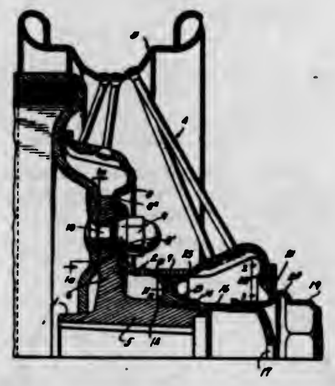
1. In a machine of the class described, the combination of a casing having side and bottom walls, a motor comprising a rotor and a field magnet, a shaft extending from said motor, an impeller carried by said shaft, there being passageways for directing liquid in said casing to said impeller and from the latter into the casing in a circulatory path, one of said side walls having a recess constituting said side wall a support for said field magnet, a first cap member detachably connected with said side wall and enclosing said motor and clamping said field magnet on its said support, and a second cap member detachably connected with said side wall and enclosing said impeller.

1,903,565. SUPPORT FOR TELEPHONE HEAD-SETS. FRANK D. VARTANIAN, Portland, Me. Filed Mar. 25, 1932. Serial No. 601,260. 2 Claims. (Cl. 179—157.)



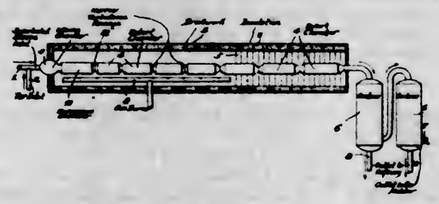
1. A support for telephone head-sets comprising in combination with a receiver and a transmitter, a frame, including an inclined portion telescopically connected to said receiver and a horizontal portion revolubly connected to said transmitter, means to prevent outward displacement of the receiver from the user's ear, a standard jointedly connected to and depending from said frame, and means adjustable to different positions on said standard adapted to engage portions of the user's clothing and partially support said head-set.

1,903,566. RIM END CONNECTING DEVICE. JAMES H. WAGENHORST, Detroit, Mich. Filed Nov. 7, 1929. Serial No. 405,428. 3 Claims. (Cl. 301—33.)



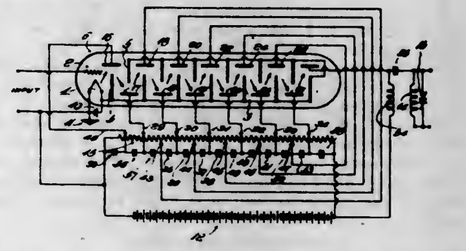
1. The combination of a transversely split wheel rim, a link pivotally connected to both ends of said rim, said

link having a slot therein, a lug attached to one rim end having a notch therein, said lug being adapted to engage said link to position the rim ends in lateral alinement, and



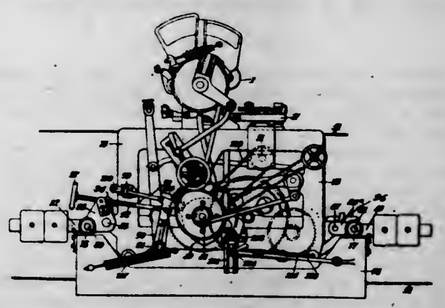
a pin extending through the slot in said link and shiftable therein into engagement with the notch in said lug to hold the link against movement radially of said lug.

1,903,567. VEHICLE WHEEL. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Jan. 21, 1927. Serial No. 162,653. 2 Claims. (Cl. 301—9.)



1. In a vehicle wheel, the combination with a hub having a barrel, of a hub shell having a barrel spaced from said hub barrel and provided with an inwardly extending shoulder and an abutment member secured to an end of said barrel, a spacer between said barrels for supporting the one from the other, means threadedly engaging said hub barrel and abutting said spacer to hold said spacer and hub shell in fixed relation to said hub, and means threadedly engaging said first mentioned means and frictionally engaging said abutment member to lock said first mentioned means upon said hub.

1,903,568. PRODUCTION OF BENZINES, BENZENES, AND OTHER HYDROCARBONS FROM COAL TARS AND OILS. ROBERT EDWIN GOLDSBROUGH, Slough, England. Filed Mar. 21, 1932, Serial No. 600,363, and in Great Britain Oct. 21, 1930. 2 Claims. (Cl. 196—52.)

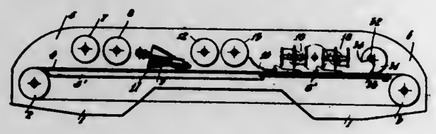


1. In a process for the production of benzines, benzenes and other hydrocarbons from coal-tars and oils, the steps of injecting the primary material together with steam into a heating zone, the temperature of which is from 450° C. to below 700° C. and being provided with metal surfaces made of about 90% nickel-chromium alloy containing definite small proportions of silicon, zinc, aluminium and iron, vaporising the oil and allowing the reaction material to expand, subjecting the expanded material to turbulence and pressure changes while gradually reducing the temperature of the reaction mixture.

1,903,569. ELECTRON TUBE. KENNETH W. JARVIS, Cincinnati, and RUSSELL M. BLAIR, Norwood, Ohio. Filed Sept. 15, 1926. Serial No. 135,604. 12 Claims. (Cl. 250—27.5.)

1. An electron tube device comprising an evacuated vessel, a plurality of electrodes within said vessel one of said electrodes comprising an electron emitting body, a grid electrode mounted adjacent said electron emitting body, a pair of plate electrodes adapted to be charged to different positive potentials mounted adjacent said grid electrode, and a shield connected inside of said vessel with said electron emitting body and having a solid portion thereof physically interposed between said electron emitting body and the plate electrode of largest positive potential for substantially eliminating the effects of capacity coupling between said grid electrode and the plate electrode of largest positive potential.

1,903,570. APPARATUS FOR DEPOSITING PLASTIC OR SEMIFLUID SUBSTANCES. ARIBERT KREMMLING, Hamersleben near Oschersleben, Germany. Filed Sept. 15, 1932, Serial No. 633,354, and in Germany July 19, 1930. 5 Claims. (Cl. 107—27.)

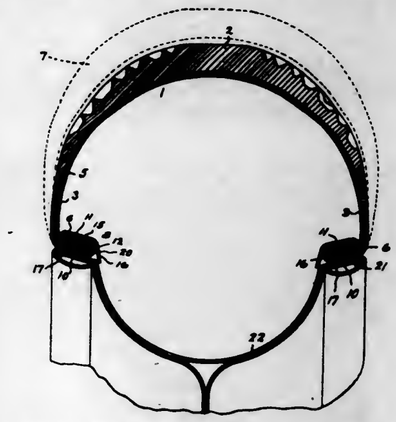


1. A machine for depositing confectionery shapes upon a travelling surface, comprising a depositing machine having a nozzle or nozzles, means for intermittently extruding material from the nozzles, cam controlled means for moving the nozzles according to the shape of the deposited articles, a carriage supporting the depositing machine, counterweight levers pivoted to and supporting the carriage, cam controlled means for adjusting the angle of the counterweight levers with respect to the carriage for moving the carriage vertically relative to the receiving surface and cam controlled means for moving the carriage in accordance with the travel of the receiving surface.

1,903,571. CHAIN GUIDING DEVICE FOR PORTABLE MOTOR TREE SAWS. FRIEDRICH WILHELM MEYER, Vienna, Austria. Filed Jan. 8, 1932, Serial No. 585,624, and in Austria Jan. 13, 1931. 4 Claims. (Cl. 143—32.)

4. In portable motor tree saws, in combination a guiding device for the saw chain consisting of a guide rail, two chain wheels connected therewith, one of these chain wheels having means for engaging with the corresponding part of the motor shaft, further a shield placed on one side of the wheel and corresponding to a flange on the motor, this shield having a bearing for this wheel and being connected to the rail and adapted to be fastened to and above said flange for the purpose of rendering possible a quick fit of the unit composed of chain wheels and guide to the motor as well as a rapid exchange of such units.

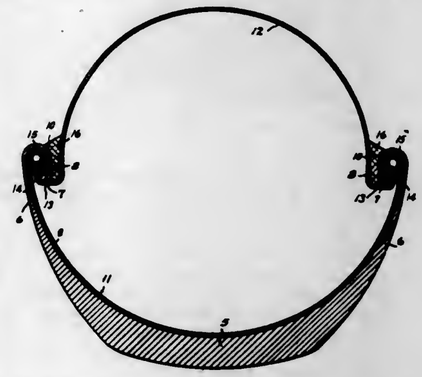
1,903,572. MACHINE FOR WORKING, MOLDING AND SHAPING DOUGH. JOHANNES NUMAN SCHRÖDER, Leeuwarden, Netherlands. Filed Nov. 10, 1930, Serial No. 494,724, and in the Netherlands Apr. 11, 1930. 18 Claims. (Cl. 107—9.)



3. A device for closing the seam of an entirely or almost entirely rolled up sheet of dough in a machine for working, molding and shaping dough in which the scroll of dough is advanced by a conveyor, comprising a concave member rotatably suspended above the conveyor, which member in the position of rest faces with its concavity the arriving scroll of dough ready to receive the latter.

1,903,573. DISTILLATION PROCESS. WILLI SCHULTZE, Halle-on-the-Saale, Germany. Filed Oct. 23, 1929, Serial No. 401,956, and in Germany Oct. 10, 1928. 2 Claims. (Cl. 202—52.)

1. A continuous distillation process of organic evaporable substances of the wood rosin type at a pressure of less than 1 mm. of mercury; which process consists of preheating a suitable quantity of the substance to a temperature between 180° and 255° C., then spreading the thus liquefied substance in a thin stream to form a layer 3 to 4 mm. thick on a surface having substantially the same temperature, while maintaining the stated pressure, then after 7 to 10 minutes time collecting the evaporated portion of the substance and condensing the same and simultaneously collecting the non-vaporizable portion of said substance in suitable vessels, thus obtaining a yield of about 83% bright resin and 16% hard resin.



1,903,574. AUTOMOBILE TIRE. ALVIN H. SHOEMAKER, Seattle, Wash. Refiling of abandoned application Serial No. 258,178, filed Mar. 1, 1928. This application filed Apr. 24, 1929. Serial No. 357,875. 4 Claims. (Cl. 152—20.)

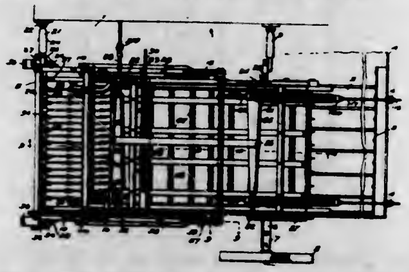
3. In a tire of the character described, a one-piece pneumatic tire having its transverse curvature on an arc of approximately 180°, cord reinforcing means extending radially of the tire, said tire being constructed oversize and means engaging the lateral edges of the tire and adapted

when engaged therewith to hold the periphery of the tire in a circumferentially compressed condition with the tire reduced to normal size.

1,903,575. RADIAL CORD PNEUMATIC TIRE. ALVIN H. SHOEMAKER, Seattle, Wash. Filed Feb. 24, 1932. Serial No. 594,844. 5 Claims. (Cl. 152—13.)

1. In a radial cord tire structure adapted for mounting on a rim having reversely bent side edges defining tire bead receiving channels, a tire member having its transverse curvature on an arc of approximately 180° and having bead portions, relatively firm longitudinally elastic bead fillers embedded in said bead portions, and reinforcing cords embedded in said tire in radial planes and anchored to said bead fillers, said bead portions adapted to be extended over the reversely bent portions of the rim for reception in the channel to occupy positions opposite adjacent portions of the side walls of the tire with the reversely bent portions of the rim therebetween.

1,903,576. FLOATING TOOL. LEWIS SKEEL and JOHN ARTHUR SPOHR, Meadville, Pa. Filed Mar. 13, 1930. Serial No. 435,529. 5 Claims. (Cl. 279—16.)

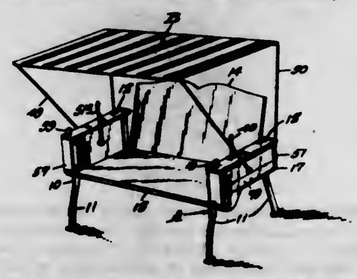


5. In a cutter, a tool having a shank, said shank being provided with a transversely extending opening having parallel side walls, a pin extending through said opening, there being means providing for oscillation of the shank about a line extending transversely of the longitudinal axis of said pin, and a driving sleeve receiving

a portion of said shank and having driving connection with the end portion of said pin, said shank being formed with a circumferential rib in the plane of the axis of

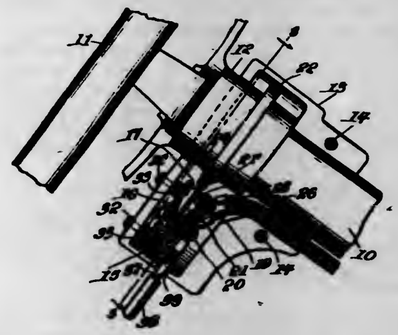
said opening and being intersected by the ends of said opening, said driving sleeve being engaged by said circumferential rib.

1,903,577. PICK UP FOR COMBINE HARVESTERS. HENRY STRUEVER, Faulkton, S. Dak. Filed Dec. 6, 1930. Serial No. 500,645. 27 Claims. (Cl. 56—364.)



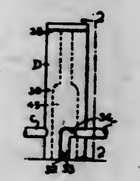
1. In a device of the class described, a towing vehicle, a pick-up connected to the towing vehicle and comprising a main frame mounted for vertical swinging movement, cooperating collecting and conveying mechanisms, one of which is carried by the main frame, and a spring connection between the towing vehicle and the main frame and forming a counterpoise for the frame and said cooperating mechanisms.

1,903,578. MAKING OF RUBBER COLORING MATERIAL. THEODORE G. SULLIVAN, Rutherford, N. J. Filed Mar. 26, 1931. Serial No. 525,628. 2 Claims. (Cl. 18—50.)



1. That process of producing a coloring compound for rubber manufactures which consists in mixing a color intermediate with rubber in equal parts until the color intermediate is in a state of colloidal dispersion, mixing a color intermediate complementary to the first with an equal quantity of rubber until the complementary color intermediate is in a state of colloidal dispersion, mixing the two batches thus prepared together and drying and sheeting the final mixture.

1,903,579. COIN CONTROLLED CHAIR AND CANOPY. WILLIAM F. TAYLOR, Norfolk, Va. Filed Sept. 25, 1931. Serial No. 565,175. 7 Claims. (Cl. 194—61.)

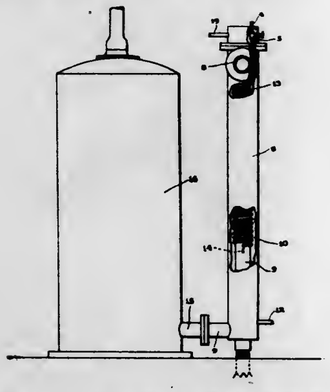


6. In a chair, a depressible seat, a swinging back, mechanism operable to move the back forwardly to overhang the seat, latching means for holding the back in forward position, coin controlled means for releasing the latching means and moving the back rearwardly, and latching means for holding the back in its rearward position controlled by the depression of the seat.

1,903,580. AUTOMATIC SWITCH. THOMAS WILLIAM THIELWELL, St. Albans, W. Va. Filed Aug. 30, 1929. Serial No. 389,498. 1 Claim. (Cl. 200—59.)

In combination with a steering wheel having a collar, a rib mounted upon the collar and partially circumscribing the same, said rib having spaced ends with beveled surfaces, a casing located opposite the rib, an insulated supported member in said casing and having a recess disposed opposite the rib, means adjustably securing the insulated member to the casing, oppositely disposed contacts located in the recess, a switch arm movably mounted in the recess to control electric circuits, said switch arm having an end portion adapted to be engaged by the surfaces of the rib and said switch arm adapted to pass through the space between the ends of the rib.

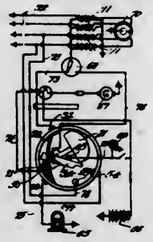
1,903,581. VALVE LOCK AND HOUSING. BARRY F. TURNER, Holdenville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla., a Corporation. Filed June 14, 1932. Serial No. 617,197. 17 Claims. (Cl. 70—123.)



6. In a protector for valves, a main housing including a closure therefor, a minor housing within the main housing and spaced from the walls thereof, and locking means carried by the closure and minor housing to close the main housing.

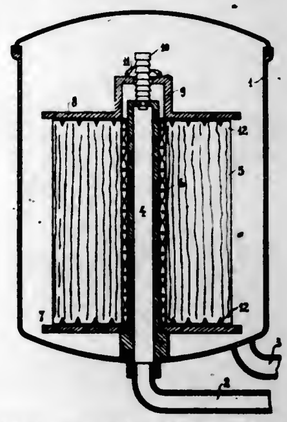
1,903,582. PROCESS FOR THE PRODUCTION OF ALKALI PHOSPHATES FROM METAL PHOSPHORUS COMPOUNDS. CONWAY, BARON VON GERSDORFF, HANS WEIDMANN, and GERHARD ROSENHEIM, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1931, Serial No. 510,830, and in Germany Jan. 27, 1930. 9 Claims. (Cl. 23—106.)

1. A process for the production of alkali phosphates which comprises decomposing at elevated temperatures



in the presence of a reducing agent an alkali sulphate with a metal phosphorus alloy, the metal content of which is not sufficient as such to combine with all the sulphur of the alkali sulphate, the reducing agent being present in an amount sufficient to protect practically all the sulphur from oxidation to SO_2.

1,903,583. METHOD AND APPARATUS FOR PRODUCING FIXED CARBURETED AIR GAS. WALTER G. WATKINS, Eldorado, Kans., assignor to Skelly Oil Company, Eldorado, Kans. Filed Dec. 8, 1930. Serial No. 500,961. 14 Claims. (Cl. 48—219.)



1. The method of producing fixed carbureted air gas for heating purposes which consists in passing heated air through a conduit under a pressure above atmospheric, utilizing the heat of said air by indirect contact to partially vaporize a liquid hydrocarbon fuel, introducing said partially vaporized fuel directly into said air and mixing the same.

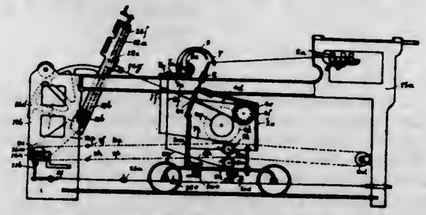
1,903,584. AUTOMOBILE THEFT DEVICE. GEORGE A. WETTENGEL, St. Louis, Mo. Filed June 1, 1927. Serial No. 195,837. 2 Claims. (Cl. 177—314.)

1. The combination with an automobile having a high tension ignition circuit and a signal, a weighted member, means for pivotally supporting said weighted member for movement from a normal upper to a lower operative position and for allowing the same to vibrate at right angles to the plane of the first movement when away from its normal position, latch means for retaining said weighted member in its upper normal position, means for releasing said latch as an incident to the operation of some member involved in the conditioning of the automobile for movement, means whereby the primary of the ignition circuit of the automobile will be broken when said weighted member is released, a circuit including the signal means whereby the signal circuit may be intermittently established upon the lateral vibration of said weighted member, and means whereby the secondary of the ignition circuit will be grounded after the primary circuit has been opened and as the weighted member moves toward its lower position, and means for restoring said weighted member to an initial position.

1,903,585. DEVICE FOR TREATING FABRICS BY MEANS OF A CIRCULATING BATH. JOSEPH ANNICQ, Renaix, Belgium. Filed June 19, 1931, Serial No. 545,538, and in Belgium May 2, 1931. 2 Claims. (Cl. 8—18.)

1. In a device for dyeing, bleaching, sizing and similarly treating fabric wound in the shape of a spool, the combination of a vat, a central perforated tube within said vat, a conduit connected to said central tube, a second conduit issuing laterally into said vat, a lower stationary supporting plate for the spool of fabric within the vat, a movable upper pressure plate engaging the top of the spool of fabric under treatment, a hub member formed on the top of said upper plate, a central hole in the top wall of said hub member, a vertical rod formed with rack teeth extending from the top of the central perforated tube through the central hole in the top wall of the hub member, series of pawls pivoted on said hub member and engaging the rack teeth on said rod, said pawls being arranged in such a way that in any position of the hub member at least one pawl will engage the rack, whereby the upper plate will be enabled to be moved downwardly and prevented from being moved upwardly, and circular concentric ribs formed on the upper side of the lower supporting plate and the lower side of the upper pressure plate respectively, substantially as and for the purpose set forth.

1,903,586. SWITCH CONTROL MEANS FOR VEHICLE LAMPS. HEINRICH ARNOLD, Waiblingen, and EUGEN LUTSCHER, Ravensburg, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Apr. 24, 1931, Serial No. 532,582, and in Germany May 1, 1930. 8 Claims. (Cl. 200—42.)



1. Switch control means for vehicle lamps comprising a casing, a rotatable switch member mounted in said casing and adapted to assume a plurality of positions corresponding to different conditions of illumination of said lamps, a key adapted to be inserted in said casing to engage and operate said switch member, and means within said casing

cooperating with said key to permit free rotation of said switch member in one direction to all the switch positions without longitudinal displacement of said key, but limiting rotation of said switch member in the other direction unless said key is first longitudinally displaced.

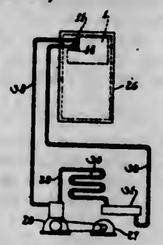
1,903,587. PROCESS FOR THE MANUFACTURE OF HALOGEN ALCOHOLS. JÜRGEN CALLSEN, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 16, 1932, Serial No. 599,330, and in Germany Mar. 21, 1931. 21 Claims. (Cl. 260—156.)

1. The process which comprises reacting upon an aliphatic halogen aldehyde with a halogen magnesium alcoholate and decomposing the condensation product formed by means of water.

1,903,588. REGULATOR FOR WINDING ON INSTALLATIONS. JOSEPH DETHIER, Brussels, Belgium. Filed July 8, 1930, Serial No. 466,570, and in France July 10, 1929. 15 Claims. (Cl. 118—28.)

1. In a self-acting mule composed of a carriage having an outward run and an inward run relative to a fixed part of the mule, spindles mounted on the carriage and on which threads may be wound, means for producing by the displacement of the carriage the rotation of the spindles when the said carriage is displaced in the direction of the inward run, a faller for guiding the threads on to the spindles during the inward run, a counter faller tending to tension the threads during the said inward run, a sector pivoted on a fixed part of the mule, a screw moving along an arm of said sector and acting, during its displacement on the means for rotating the spindles, to vary the speed of the latter, means for registering the variations of the length of reserve, a clutch device acting between the means for registering the variations on the length of reserve and the screw of the sector, and means for determining the commencement of the action of the said clutch device in order to realise a partial transformation of the registered displacements in accordance with the fineness of the thread.

1,903,589. TIRE PRESSURE RESPONSIVE SWITCH. WILLIAM C. EDWARDS, Battle Creek, Mich. Filed Oct. 10, 1930. Serial No. 487,824. 1 Claim. (Cl. 200—58.)



A pneumatic pressure responsive switch comprising a housing, an expansible elastic cylinder in the housing having a closed movable end and a fixed open end adapted for communication with a source of pneumatic pressure adapted to distend the cylinder, a piston attached to the closed movable end of the cylinder, a coil spring arranged about said cylinder having one end attached to said piston and having its other end fixed at the closed end of the cylinder so as to tend to contract the cylinder against said pressure, a stop element on the inner wall of the housing, and a circuit closing element adjustably mounted in said piston having a portion for engagement with said stop element.

1,903,590. STITCH FORMING MECHANISM FOR SEWING MACHINES. HORACE F. GRUMAN, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Original application filed Jan. 31, 1931, Serial No. 512,661. Divided and this application filed Sept. 19, 1931. Serial No. 563,842. 5 Claims. (Cl. 112—154.)

1. In a sewing machine, the combination with an oscillatory shaft; of a radially extending arm fixed to said shaft; a curved needle fixed to said arm for oscillation in a plane at right angles to the longitudinal axis of the shaft; a 4-motion threaded looper independent of the shaft and cooperating with the needle, driving connections between the shaft and the looper for imparting loop-taking and loop-shedding movements to the looper, and means separate from the shaft for imparting needle-avoiding movements to the looper.

1,903,591. FLOODED TYPE REFRIGERATION UNIT. RAYMOND C. HAIMBAUGH and ANTHONY F. HOSSEL, Chicago, Ill., assignors to Peerless Ice Machine Company, Chicago, Ill. Filed Mar. 5, 1929. Serial No. 344,418. 2 Claims. (Cl. 62—95.)

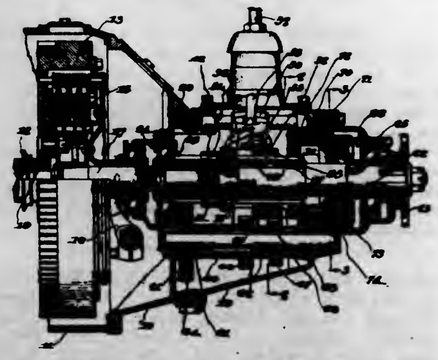
1. A refrigeration unit comprising a hollow one-piece casting having a short portion provided with an opening, a cover for closing the opening, an outlet shut-off valve secured to the cover and communicating with the interior of said casting, an inlet shut-off valve secured to the cover and communicating with the interior of the casting, a straining element disposed between the inlet shut-off valve and the cover for straining a refrigerant fluid, and means for securing the inlet shut-off valve to the cover and for holding the straining element between said valve and the cover.

1,903,592. PROCESS FOR THE DEHYDRATION OF MAGNESIUM CHLORIDE. HAROLD GEORGE LACELL, deceased, Finchley, London, England, by Irma Lacell, executrix, Finchley, London, England. Filed Mar. 31, 1930, Serial No. 440,637, and in Germany Apr. 5, 1929. 11 Claims. (Cl. 23—91.)

1. A process for the dehydration of magnesium chloride, which comprises gradually adding, to a relatively large

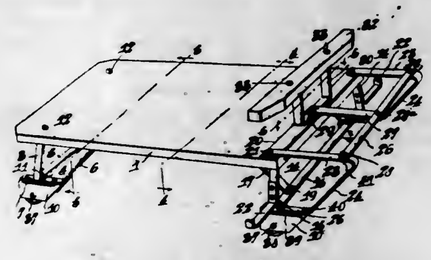
mass of molten anhydrous magnesium chloride, relatively small quantities of hydrated magnesium chloride, thus causing a rapid vaporization of the water of hydration and thereby preventing the formation of magnesium oxide.

1,903,588. EYEGLASSES. KARL MARTIN, Rathenow, Germany. Filed Nov. 27, 1928, Serial No. 322,259, and in Germany Mar. 24, 1928. 1 Claim. (Cl. 49—82.1.)



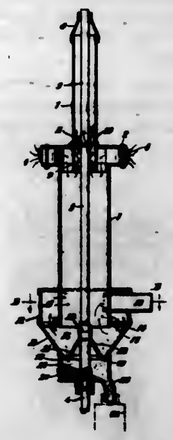
The process for the manufacture of a multiple focus lens consisting of a distance portion and a reading portion formed of a fractional part of a lens having a spherically-shaped surface and a plane lateral surface, which comprises preparing only the spherically-shaped and lateral surfaces of said reading portion, formed of a fractional part of a lens, which are designed to be joined to the distance portion, heating the non-recessed distance portion to a point above the softening point thereof and below the softening point of said reading portion, superimposing the spherically-shaped surface of said reading portion with said distance portion in its heated condition, joining said distance portion of the spherically-shaped and lateral surfaces of said reading portion by applying a pressure to the former in addition to normally existing pressures without affecting the prepared surfaces upon said reading portion, and finishing the composite lens thus formed.

1,903,594. PROCESS FOR PREPARING EXPLOSIVE CHARGES. OSKAR MATTER, Cologne-Marienburg, Germany. Filed Apr. 20, 1931, Serial No. 531,623, and in Germany May 21, 1930. 4 Claims. (Cl. 102—1.)



1. A process for preparing explosive charges in which the explosive to be worked is first dissolved in a solvent, the solution then added to a liquid in motion which is miscible with the solvent in any proportions but which does not dissolve the explosive, the precipitated explosive after washing and drying partially melted to form a fluid mass containing unmelted granules in suspension, and the broth-like mass thus obtained cast in moulds.

1,903,595. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 19, 1925. Serial No. 69,973. 21 Claims. (Cl. 74—57.)

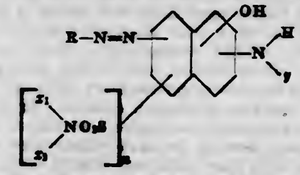


1. In a motor vehicle, the combination of a supporting casing, a shaft mounted in bearings therein, an aligned shaft supported at one end in a bearing in said casing and at the other end in a bearing in the first said shaft, a shaft of uniform diameter mounted in bearings on said aligned shaft, and means adapted to directly connect the first named shaft with either the aligned shaft or the shaft mounted on the aligned shaft for the transmission of power through either one or the other shafts.

1,903,596. CONVERTIBLE SLED AND WHEELED COASTER. CURTIS H. RICHARDS, San Francisco, Calif. Filed Apr. 29, 1931, Serial No. 533,819. Renewed Sept. 22, 1932. 14 Claims. (Cl. 280—12.)

1. In a convertible sled and wheeled coaster, a platform, a front standard and a rear standard secured to and beneath the platform, each standard comprising a transverse cross cleat bar, having downwardly extended legs terminating in inwardly extended feet, a lower cross bar brace connecting said feet, diagonal brace bars connected to said platform and to said cross bar brace, an inverted U-shaped stirrup at each side of said frame which constitutes runner carriers, axle bolts carried by said stirrup, runners pivotally held in said stirrup on said axle bolts, means rigidly securing the rear pair of stirrups to the rear framework, means pivotally securing the forward pair of stirrups to the front framework, and a suitable steering mechanism secured to said platform and to said forward pair of stirrups.

1,903,597. AIR CLEANER FOR INTERNAL COMBUSTION ENGINES. JOHANN ALBERT LUDWIG RUWOLDT, Kewell, Victoria, Australia. Filed Dec. 26, 1929, Serial No. 416,703, and in Australia July 9, 1929. 5 Claims. (Cl. 183—85.)

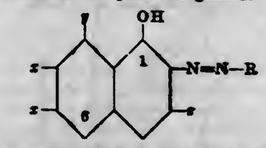


1. An improved air cleaner and concentrator for internal combustion engines comprising in combination, a main vertically disposed casing having air inlet openings, a plurality of inclined and curved vanes in said air inlet openings to cause the air to have a whirling action while passing downwardly through said casing, a dust separating chamber at the lower end of said casing formed with inner and outer inclined walls and having openings in its bottom for the passage of accumulated dust, a horizontal partition above the inclined walls dividing said chamber into upper and lower compartments, an outlet in the upper compartment connected to the engine intake, and openings in the horizontal partition allowing the cleaned conditioned air to pass to the upper compartment, the bottom walls of said openings being upwardly inclined.

1,903,598. SHELLAC SUBSTITUTE. JOHANNES SCHNIBER, Leipzig, Germany, assignor to Walter DUX, Hanover, Germany. Filed Nov. 15, 1928, Serial No. 319,717, and in Germany Nov. 21, 1927. 12 Claims. (Cl. 260—2.)

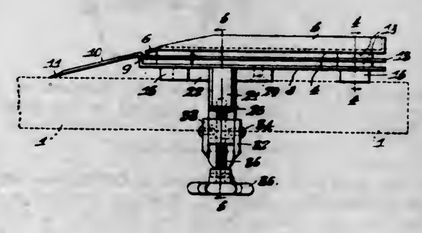
1. A process for the manufacture of shellac substitutes which comprises combining hydroxy-carboxylic acids of an aliphatic nature and the products which are obtained by addition of halogen to resinolic acids by subjecting the mixture to the action of heat.

1,903,599. MONOAZODYESTUFFS. HUGO SCHWEITZER, Leverkusen-Wiesdorf, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1931, Serial No. 506,309, and in Germany Jan. 4, 1930. 8 Claims. (Cl. 260—92.)



1. Monoazo dyestuffs of the probable general formula:

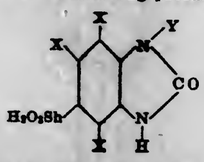
wherein R stands for the residue of an aromatic diazo-compound of the benzene or naphthalene series, a_1 and a_2 stand for hydrogen, alkyl, hydrophenyl, phenyl or benzyl, y stands for hydrogen, an acyl, alkyl or phenyl group, "n" stands for one of the numbers one and two, the components of the dyestuffs being selected in such a manner that at least one of them contains a sulfonic acid group, and wherein the nuclei may be further substituted by substituents selected from the group consisting of the sulfonic acid group, an arylsulfone group, the carboxylic acid group, the sulfoneamide group, halogen, the nitro group, the alkyl group, the alkoxy group, the hydroxy group, a substituted amino group, being generally red to black powders, dyeing wool clear red to black shades fast to light.



1,903,600. AZO DYESTUFFS. HUGO SCHWEITZER, Leverkusen-Wiesdorf, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed May 11, 1931, Serial No. 536,664, and in Germany May 24, 1930. 5 Claims. (Cl. 260—94.)

1. Azodyestuffs of the probable general formula:

wherein s and one s stand for a sulfonamide group, the hydrogen atoms of which may be substituted by alkyl or a radical of the benzene series, the other s stands for hydrogen, y stands for hydrogen which in case the s in the 6-position of the naphthalene nucleus stands for a sulfonamide group may be substituted by halogen or a sulfonamide group the hydrogen atoms of which may be substituted by alkyl or a radical of the benzene series, and R stands for a benzene or naphthalene nucleus, containing at least one sulfonic acid group and which nucleus may be otherwise substituted by substituents of the group consisting of alkyl, alkoxy, halogen, an acylamino group, the hydroxy-group and the nitro group, being in form of their alkali metal salts generally water soluble dark substances, soluble in concentrated sulfuric acid with a red to bluish-violet coloration and dyeing wool from an acid bath clear red to blue shades which are distinguished by a good fastness to light, washing and fulling.

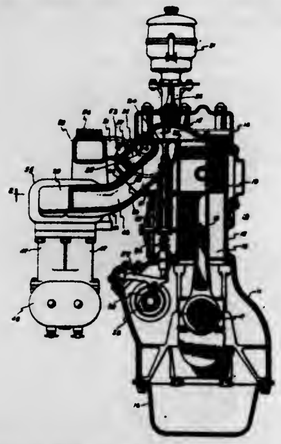


1,903,601. IRON STAND. MATTHEW SMOLKO, Chicago, Ill. Filed May 2, 1932. Serial No. 608,772. 9 Claims. (Cl. 68—27.)

1. In an iron holder, a top plate having a downwardly inclined lip along one edge, a bottom plate having an upstanding wall adjacent said lip and a downwardly inclined extension, means holding said plates spaced apart with said lip having its lower edge flush with the inclined extension, and a clamp secured to the lower plate and spacing it from an ironing table to which it may be attached, with the lower edge of the extension in contact with the ironing table.

1,903,602. BENZIMIDAZOLONE-STIBONIC ACIDS. KARL STREITWOLF, Frankfort-on-the-Main, ALFRED FEHRLE, Bad Soden on Taunus, and WALTER HERRMANN, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 25, 1929, Serial No. 402,540, and in Germany Nov. 7, 1928. 5 Claims. (Cl. 260—11.)

1. A compound of the following probable formula:

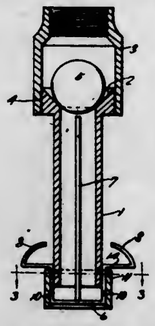


wherein one X stands for chlorine, the other X's stand for hydrogen and Y stands for hydrogen or alkyl.

1,903,603. INTERNAL COMBUSTION ENGINE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 30, 1929. Serial No. 417,261. 26 Claims. (Cl. 123—32.)

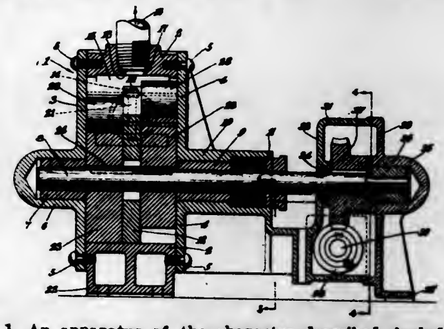
1. The combination in an internal combustion engine of a cylinder block having valve ports communicating with

the cylinders, said block being formed on one side with adjacent faces diagonally disposed and provided with



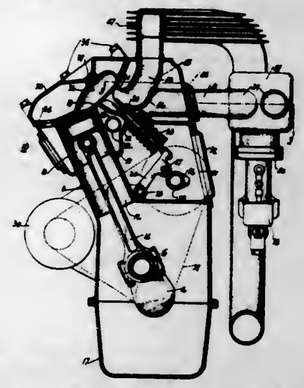
ports, passages in said block connecting the ports to said valve ports, and a manifold connected to the ports in each face.

1,903,604. METHOD OF FORMING ELECTRICAL HEATING ELEMENTS. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Dec. 31, 1928. Serial No. 329,630. 3 Claims. (Cl. 201—67.)



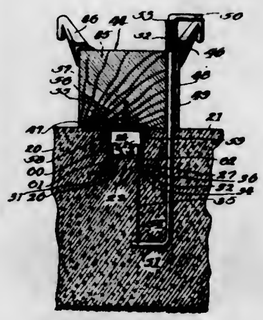
1. The method of making resistor heating elements of the character described in which the resistor is in the form of a thin ribbon of considerable width with respect to its thickness, which consists in holding the resistor against displacement and pouring insulating material over and about the resistor then compacting the insulating material about the resistor until the same is enveloped, then enclosing the mass with resistor therein within a sheath.

1,903,605. AUTOMATIC NOZZLE OR FAUCET. WILLIAM D. ALLEN, Kosse, Tex. Filed Aug. 12, 1931. Serial No. 556,560. 1 Claim. (Cl. 251—116.)



In combination with a faucet tube having a valve seated at one end, an operating bracket having arms mounted at the opposite end and adapted for both longitudinal and rotative movement relative to the tube, a push rod extended from the bracket thru the tube to the valve and adapted to open the latter on the inward movement of the former, cooperating means upon tube and bracket for locking the latter in its inmost position upon its rotation, and an open cap seated over the bracket, the said cap having an inturned flange for engaging the tube, the said flange being recessed to provide passages for the bracket arms.

1,903,606. ROTARY PUMP. CARL E. ANDERSON, Brooklyn, N. Y. Filed June 6, 1928. Serial No. 283,150. 2 Claims. (Cl. 103—122.)

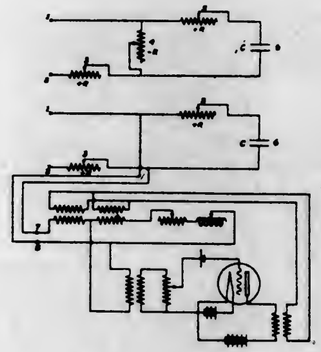


1. An apparatus of the character described, including, in combination, a casing having a circular pump chamber and a common abutment and outlet chamber therein, a partition dividing said chambers into a plurality of compartments to provide a duplex pump, said partition being inserted and fixedly secured in said casing, a shaft journaled in said casing, a rotor mounted eccentrically on said shaft in each of said compartments, each rotor having an extended cut-off surface, said casing having an inlet and an outlet adapted to communicate with said compartments, said partition having an extension fixedly secured thereto extending into said outlet chamber, a cylindrical rotary abutment member for each compartment positioned between said inlet and outlet and bearing upon the upper surface of its rotor, said rotary abutments being separated by said extension and also having a side and end bearing or contact with part of the casing.

1,903,607. INTERNAL COMBUSTION ENGINE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed May 10, 1928, Serial No. 276,563, now Patent No. 1,878,165. Divided and this application filed June 24, 1929. Serial No. 373,279. 9 Claims. (Cl. 123—75.)

1. In a multi-cylinder internal combustion engine, in combination, a pair of cylinders each having an exhaust port, an exhaust manifold, an intake manifold, a passage communicating with the exhaust port of each cylinder, a passage for each cylinder connecting the first mentioned passage and the exhaust manifold, the second mentioned passage having a restricted portion, and a conduit enclosing a portion of the intake manifold connecting the first mentioned passages.

1,903,608. EXPANSION JOINT, METHOD AND APPARATUS FOR THE INSTALLATION OF THE SAME. CLIFFORD OLDER, Wilmette, Ill. Filed Aug. 7, 1931. Serial No. 555,726. 16 Claims. (Cl. 94—51.)

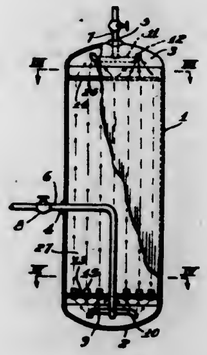


1. A template for installing expansion strips comprising the combination of a flexible body adapted to conform to the surface of the concrete pavement, with means for engaging an expansion strip in predetermined position with respect to said template, and detachable fastening devices for releasably holding said expansion strip and said template whereby said expansion strip may be released from said template after it has been located in the concrete by means of said template.

1,903,609. GLIDER FOR FURNITURE LEGS. CLEMENT R. UHL, Toledo, Ohio, assignor to The Toledo Metal Furniture Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 18, 1931. Serial No. 574,708. 3 Claims. (Cl. 16—42.)

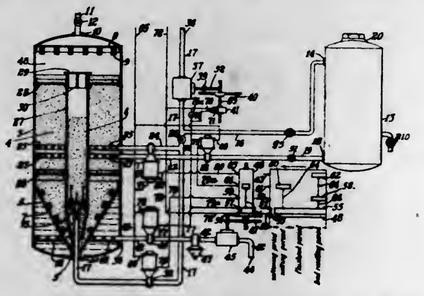
1. A device of the class described, comprising a cup member of soft vulcanized rubber having the side wall of its cavity portion thinned and inwardly directed to form a restricted mouth, a glider plate anchored in the base portion of the cup member with its bottom surface exposed and forming a portion of the bottom surface of the cup member, said cup member having a portion surrounding the edge of the plate which is heavier than the side wall portion of the cavity to provide the cup member with a side buffer portion between the plate and the relatively thin side wall portion of the cup cavity.

1,903,610. NEGATIVE INDUCTANCE. MIHRAN M. DOLMAGE, Washington, D. C. Filed Oct. 4, 1928. Serial No. 310,395. 6 Claims. (Cl. 178—44.)



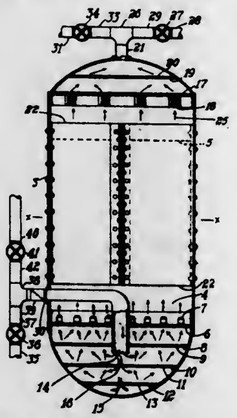
1. An automatic device having reactance characteristics of opposite sign to that of an inductance, such reactance varying in direct proportion with frequency, in accordance with the formula:

$$\text{Reactance} = -2\pi f(L)$$



where (f) is the frequency and (L) is a constant.

1,903,611. WATER SOFTENING APPARATUS. ANDREW J. DOTTSWEICH, Pittsburgh, Pa., assignor to Automatic Water Softener Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 27, 1927. Serial No. 242,612. 3 Claims. (Cl. 210—24.)

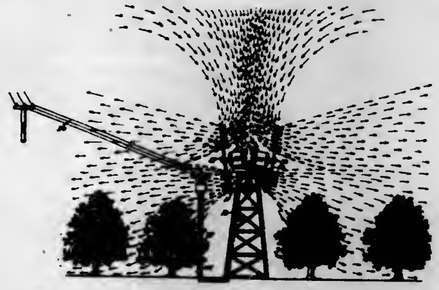


1. In a water softening apparatus comprising a tank, partition member for supporting a softening material within the tank, and a plurality of strainer nozzles for distributing the flow of fluid through said tank, each of said nozzles comprising a cup shape member, and a bolt for fastening said cup shape member, said bolt having a central bore opening on one side of the partition and a communicating transverse bore opening inside of said cup member, and said cup member having a serrated face for engaging said partition member.

1,903,612. WATER SOFTENING APPARATUS. ANDREW J. DOTTERWEICH, Pittsburgh, Pa., assignor to Automatic Water Softener Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 25, 1929. Serial No. 395,018. 2 Claims. (Cl. 210—24.)

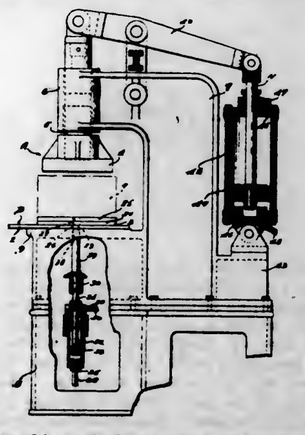
1. A water softener comprising a container for a bed of water-softening material, means for introducing water into the bed between its upper and lower parts, an outlet pipe in connection with the upper part of the container, valve-controlled means for introducing regenerating material into the bed between its upper and lower parts and below the point where the water is introduced, a valve-controlled drain pipe in connection with the lower part of the container, a transfer tube establishing communication between the lower portion of the bed and the upper part of the container, valve-controlled means for directing a stream of water up through said tube for a bed-rearranging operation, and means for shutting off the supply of water to the first mentioned means during such bed-rearranging operation.

1,903,613. WATER SOFTENING APPARATUS. ANDREW J. DOTTERWEICH, Pittsburgh, Pa., assignor to Automatic Water Softener Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 6, 1929. Serial No. 405,109. 4 Claims. (Cl. 210—24.)



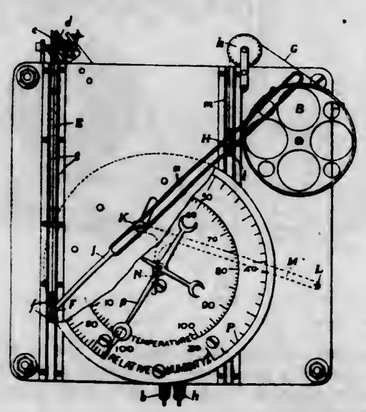
1. An apparatus for softening water comprising a tank adapted to contain a softening material and having inlet and outlet connections and a means within the tank for controlling the flow of fluids from the inlet connection to the softening material, said means consisting of a series of baffle plates adjacent the discharge of the inlet connection in the tank and provided with openings in the path of flow towards the bottom of the tank which decrease in area in each succeeding plate and provided with openings in the path of flow from the bottom of the tank towards the water softening material which increase in area in each succeeding plate.

1,903,614. DISINFECTING SOLUTION. GEORGE M. KARNS and LEONARD H. CRETCHER, Pittsburgh, Pa., assignors to Iodine Educational Bureau, Inc., a Corporation of New York. Filed Dec. 15, 1930. Serial No. 502,620. 3 Claims. (Cl. 167—72.)



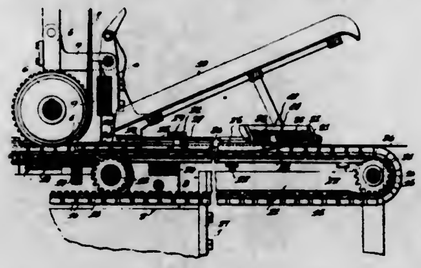
2. A disinfecting solution of free iodine in a solvent which itself is an aqueous solution of sodium iodide, potassium iodide, and calcium iodide, in substantially the ratio of 1104 : 48 : 32.

1,903,615. APPARATUS FOR PREVENTING FROST DAMAGE TO VEGETATION. CHARLES WARREN TOWT, Lindsay, Calif., assignor to Charles Warren Towt and Donald Gale Towt, as trustees of the Charles Warren Towt Holding Company, a Common-Law Trust of California. Filed Mar. 9, 1932. Serial No. 597,718. 7 Claims. (Cl. 47—2.)



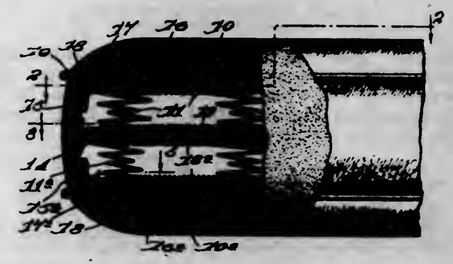
1. Apparatus for preventing frost damages to orchards and like vegetation, including a tower, a pair of oppositely arranged rotary propellers mounted at substantially the same elevation on the upper part of said tower, and similarly inclined with reference to a vertical line between them so that the ends of their propeller blades when in an upper position of rotation will be further from each other than when in the lower position of rotation, and when actuated they will draw the air from above the tower downward in a funnel-shaped course and discharge it outwardly and downwardly into the trees of said orchard, substantially as set forth.

1,903,616. SPRUE FORMING AND TABLE LOCKING MECHANISM. GEORGE F. YAGER and OLIVER J. HEATH, Toledo, Ohio, assignors to The Bunting Brass & Bronze Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Aug. 31, 1931, Serial No. 560,455. Divided and this application filed May 31, 1932. Serial No. 614,578. 9 Claims. (Cl. 22—21.)



1. In a machine of the character described, a mold forming machine including a platform, a dial movable over the platform and adapted to carry a flask, and means associated with the platform for forming a sprue in the flask and for holding the dial from movement relative to the platform.

1,903,617. HYGROMETER. RICHARD GORDON BATESON, Princes Risborough, Bucks, England. Filed Sept. 16, 1931, Serial No. 563,076, and in Great Britain Sept. 17, 1930. 4 Claims. (Cl. 73—24.)

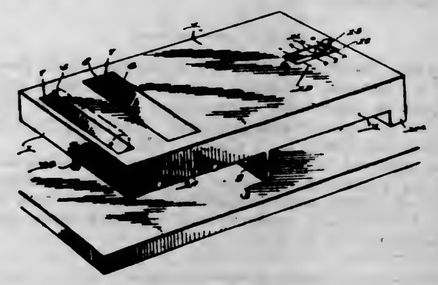


4. A direct reading hygrometer having a dry bulb thermometer, a straight guide, a slide moving in said guide, means to cause said slide to move by amounts which are functions of the dry bulb temperature, a wet bulb thermometer, a straight guide parallel to said first guide, a slide moving in said second guide, means for causing said second slide to move by amounts which are functions of the wet bulb temperature and in a direction opposite to that in which said first slide is caused to move for a temperature change of the same sign, a pivoted arm, a humidity scale, a pointer moving over said humidity scale and connected to said pivoted arm, and a link connecting said moving slides and pivoted at an intermediate point to said pivoted arm.

1,903,618. PLAIT FORMING APPARATUS. FRANK W. BRINTNALL, Detroit, Mich., assignor, by mesne assignments, to National Automotive Fibres, Inc., Wilmington, Del., a Corporation of Delaware. Filed May 16, 1928. Serial No. 278,234. 13 Claims. (Cl. 45—113.)

1. In plait forming apparatus, the combination of means to feed the material-to-be-formed longitudinally, means to form the material into plaits in progressive sequence laterally as it is being fed, and a rotatable body to engage at least one edge of the material to hold the material relatively taut while being formed, said body comprising a rotating brush arranged to impart an outward and forwardly directed drag to the said material edge.

1,903,619. MATTRESS. LEO D. CANFIELD, Chicago, Ill., assignor to Superior Felt & Bedding Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1931. Serial No. 582,819. 1 Claim. (Cl. 5—351.)



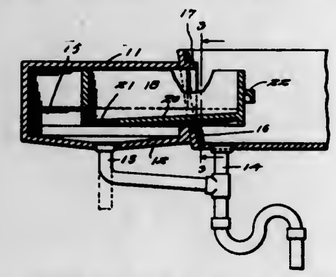
A reversible mattress, including; a double layer of spiral springs, one superimposed upon the other; a flexible insulating pad between the layers of springs; means attaching the periphery of the pad to the lower coils of the outer springs of the upper layer and to the upper coils of the outer springs of the lower layer; outer padding covering the top and bottom of the mattress and the sides thereof, said padding at the sides being in contact with the edges of the insulating pad to confine separate air spaces both above and below said insulating pad; and a casing outside of the outer padding.

1,903,620. WELDROD COATING. FREDERICK JULIUS ESSLINGER, Petroleum, Hubbard Township, Trumbull County, Ohio, assignor to The Petroleum Iron Works Co. of Ohio, Sharon, Pa., a Corporation of Ohio. Filed June 14, 1930. Serial No. 461,265. 2 Claims. (Cl. 219—8.)

2. A weldrod having a coating formed from a plastic composition comprising the following components in substantially the proportions stated, kaolin 7., sodium silicate 41., glass 22., ferro-manganese 22., soda ash 6. and sufficient moisture to effect a mixture.

1,903,621. COUNT CHECKING DEVICE FOR PACKAGED COINS. FRED H. FISCH, Reading, Pa. Filed May 17, 1930. Serial No. 453,335. 11 Claims. (Cl. 265—50.)

1. A device for checking the full count of standard packages of coins by weight comprising a plate balance scale having a coin package seat thereon having a coin column end abutment, gauge means associated with said seat to initially measure the length of said column, said gauge means having associated calibrations in terms of degrees of permissible loss of column length through wear in a full count of coins of the said selected denomination up to the maximum permissible length wear for full count, and a weight on said plate opposed to said package seat normally positioned therein to counter balance the weight of a full count package of new coins of the selected de-

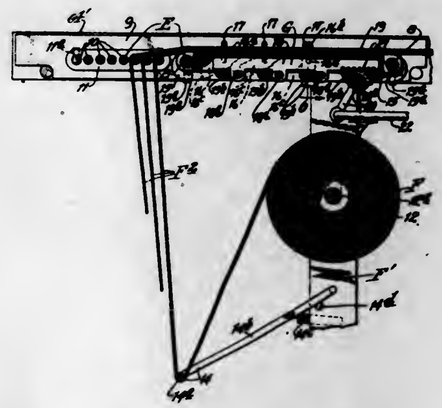


nomination on said seat, and arranged for adjustment from said normal position to calibration-indicated positions coordinating and counterbalancing proportionate weight loss to the coin column length loss by wear indicated by a gauge calibration.

1,903,622. METHOD OF PRODUCING CELLULOSE ARTICLES. WILLIAM F. HENDERSON, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 26, 1930. Serial No. 498,467. 3 Claims. (Cl. 18—57.)

1. The method of forming a cellulose product, which method comprises extruding viscose and regenerating it and subjecting the regenerated viscose to several baths of heated water of increasing temperature.

1,903,623. GARBAGE HOLDER FOR SINKS. WALTER S. HOWE, Ontario, Calif. Filed June 9, 1932. Serial No. 616,297. 6 Claims. (Cl. 4—190.)



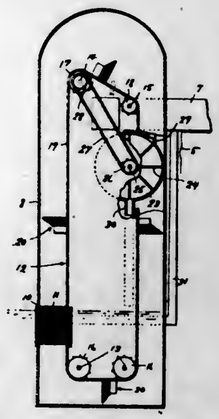
1. The combination with a sink, of a compartment having a drain opening, the compartment having an opening through which a drawer may be inserted and a drawer insertible into said opening and adapted to receive garbage and having an opening permitting the discharge of the liquid portion of the garbage on to the bottom of the compartment.

1,903,624. MOTOR FUEL. ROY T. HURLEY, Dobbs Ferry, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 16, 1928. Serial No. 293,316. 1 Claim. (Cl. 44—9.)

An improved motor fuel comprising a low compression fuel, an anti-knock substance comprising iron carbonyl, and a corrective agent comprising a tetraethyl lead, the ratio of anti-knock substance and corrective agent being substantially ten to one.

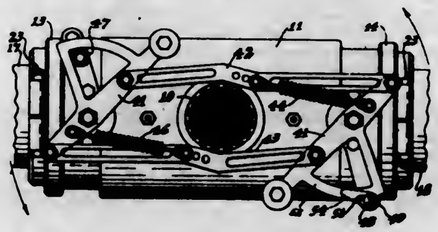
1,903,625. DUPLICATING MACHINE. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a Corporation of Illinois. Filed July 2, 1928. Serial No. 289,820. 8 Claims. (Cl. 197—133.)

1. In means of the character set forth, a bed equipped with strip supporting and guiding means over which strips provided with punch-holes may be drawn, pins fixed to the front end of said bed for holding the advance ends of the strips, a strip-supply source, strip-tensioning means tending to retract the strips, a safety-catch mounted on said bed beneath the path of the strips and serving as a feeler and adapted to automatically engage a punch-hole in the strips in case of accidental release of the strips, said safety-catch being automatically released by the strips when they are drawn forwardly, means above



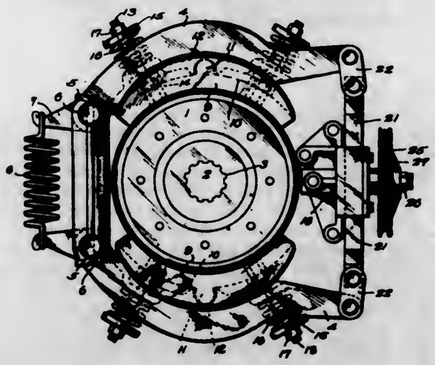
the strip for limiting displacement of the safety-catch when it engages a punch-hole, and means normally accessible to the operator for locking said safety-catch in inoperative position.

1,903,626. REMEDY FOR COMBATING PLANT DISEASES AND FOR THE PROTECTION OF PLANTS AGAINST ATTACKS FROM FUNGI AND INSECTS. FINN JOHNSEN, Fuur, Denmark. Filed Sept. 8, 1928, Serial No. 304,840, and in Germany Sept. 12, 1927. 6 Claims. (Cl. 167—14.)



1. A remedy for abating plant diseases and for protecting plants against attacks from fungi and insects, comprising a mixture of moler and inorganic metal salts.

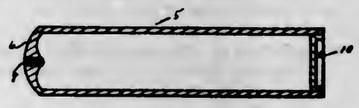
1,903,627. FISH ELEVATOR. FRANK KOCH, Sebewaing, Mich. Filed Sept. 1, 1932. Serial No. 631,418. 3 Claims. (Cl. 61—21.)



1. In a fish elevator of the class described, a casing, an endless elevator operating within said casing, and including spaced receptacles, and means for driving said elevator comprising a casing disposed laterally in the first named casing, a water wheel arranged in the second named casing, driving connection between said water wheel and said elevator, and means for directing water through the second named casing for rotating said water wheel.

1,903,628. AIRPLANE PROPELLER. JOHN P. LANDRUM, Birmingham, Ala., assignor of one-half to Perry R. McCormack, Birmingham, Ala. Filed May 16, 1930, Serial No. 452,956. Renewed May 20, 1932. 14 Claims. (Cl. 170—162.)

1. In an airplane propeller, a pair of propeller blades, a housing in which the blades are mounted, means movable responsive to angular velocity of the propeller for changing the pitch of the propeller blades from a predetermined minimum to a predetermined maximum, a positive latch means carried by the housing and adapted to hold said blades against movement in a predetermined position, and manually operable means for disengaging said latch means while the propeller is turning.



1,903,629. VEHICLE BRAKE. HOLMAN HARRY LINN, Morris, N. Y., assignor to The Linn Manufacturing Corporation, Morris, N. Y., a Corporation of New York. Filed Apr. 2, 1928. Serial No. 266,823. 4 Claims. (Cl. 188—75.)

1. A braking system including a brake drum, arms, brake shoes having a self centering connection with said arms, and means for operating said arms including a cable-operated sheave rotatively adjustable to compensate for ineffectiveness of the cable due to wear of the braking parts.

1,903,630. MANUFACTURE OF GAS CYLINDERS. JOHN C. MINOR, New Canaan, Conn., assignor to William Wharton, Jr., & Company, Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1930. Serial No. 447,818. 1 Claim. (Cl. 29—148.2.)

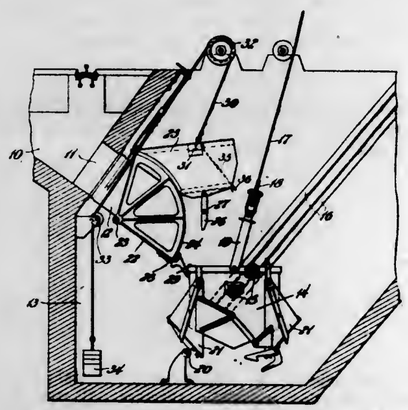
The method of forming seamless drawn metal cylinders, which consists in forming from a billet by piercing and drawing a cylinder having a closed head portion characterized by its thickness with relation to the side wall section and by an inwardly directed axial boss, the other end of the cylinder being open its full diameter, boring

and tapping said closed head portion, including its co-extensive boss, for the reception of a valve, and ultimately closing the open end of the cylinder.

1,903,631. COLLAPSIBLE TABLE. ALFRED J. MORRISON, Denver, Colo. Filed Jan. 26, 1932. Serial No. 588,929. 5 Claims. (Cl. 45—31.)

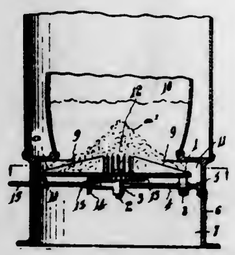
1. A collapsible table comprising: a pedestal; top brace members extending oppositely outward adjacent the top of said pedestal and provided with horizontal slots extending inwardly into the extremities of said top brace members; a table top; and flange members formed in said top and arranged to extend downwardly and inwardly into said slots so as to hold said top in place.

1,903,632. PAPER CONTAINER. RUTH OLIVER, New York, N. Y., assignor to Lydia B. Koch, New York, N. Y. Filed July 21, 1931. Serial No. 552,236. 2 Claims. (Cl. 225—5.5.)



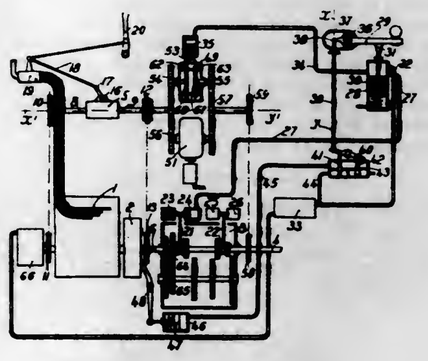
1. The combination with a container formed of sheet paper stock, of a band wrapped about and affixed to one end portion of the container, said band being formed of sheet paper stock having slots adapted to register to form grooves opening through one edge of the band, said grooves being closed at their inner sides and held against spreading by the container wall to which the band is affixed, and an over-all cap for embracing the container and band and having inwardly extended nodes for insertion in the grooves.

1,903,633. GATE. FRANK B. PRESLAR, Hudson, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed Dec. 9, 1930. Serial No. 501,115. 1 Claim. (Cl. 198—21.)



In combination with a fixed chute and a chute-like gate pivoted upon the fixed chute to swing vertically to stop

and to permit flow of loose, fluent materials out of the fixed chute, a gravity-operated gate pivoted within the chute-like gate near the mouth thereof and at the top of said gate; said gravity-operated gate being as long as the chute-like gate is wide and being of such width as to close the lower part of the mouth of the chute-like gate; the location of the pivot axis of said gravity-operated gate being such, and the center of gravity of said gravity-operated

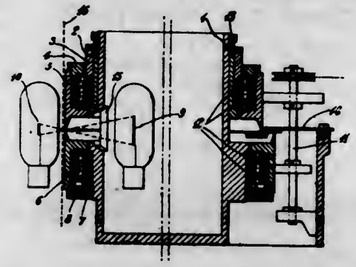


gate being so disposed relative to the lower edge of the mouth of the chute-like gate, that whenever the chute-like gate is elevated to a point a few degrees below the horizontal, said gravity-operated gate will tend to engage said lower edge to close the lower part of said mouth, and said gravity-operated gate will remain in said chute-closing position during further elevation of the chute-like gate.

1,903,634. GRATE. ROBERT T. ROBINSON, Penetanguishene, Ontario, Canada. Filed Apr. 19, 1930, Serial No. 445,604, and in Canada May 31, 1929. 1 Claim. (Cl. 126—182.)

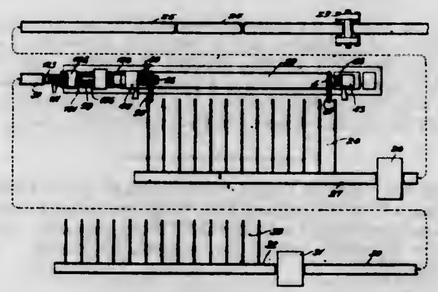
In an apparatus for effecting the combustion of solid fuel of any degree of fineness, in combination, an imperforate-walled approximately cylindrical fire pot, a cylindrical ash pit disposed thereunder, means providing a single circular opening between said fire pot and said ash pit of less diameter than that of said ash pit at a point immediately beneath said opening, a rotary horizontal grate disposed beneath said opening and comprising a substantially flat imperforate circular disc of a diameter greater than that of said opening by an amount sufficient to afford a support for the burnt fuel at its natural angle of repose between said opening and the rim of said grate when supported on its horizontal surface, the continuous circular rim of said grate being spaced from the vertical wall of said ash pit to provide the sole passage for air through the fuel thereon whereby the initial combustion and the highest temperatures will occur at the margins of the fuel bed, and raised radiating ribs formed upon the upper surface of said grate, extending from points near the center of said grate substantially to the rim thereof and decreasing in height from the inner to their outer ends where they merge with the surface of said grate, said ribs adapted to move said burnt fuel toward the rim of said grate for discharge over the entire periphery thereof upon periodic rotation of said grate, supporting means for said grate, and means for rotating said grate.

1,903,635. METHOD OF OPERATING LOCOMOTIVES HAVING INTERNAL COMBUSTION ENGINES. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Mar. 12, 1932, Serial No. 598,524, and in France Apr. 17, 1931. 4 Claims. (Cl. 74—107.)



1. Control mechanisms for locomotives or tractors, comprising a motor and its shaft, a clutch, a second shaft driven by said motor shaft through said clutch, a transmission shaft, a change-speed box carrying movable gears adapted to transmit motion from said driven shaft to said transmission shaft, means acting upon the fuel supply of said motor and adapted to equalise, at each instant, the speeds of said motor shaft and of said driven shaft, means for connecting said driven shaft and said transmission shaft with a motion reduction corresponding to the gear to be engaged in said change-speed box, a control lever adapted for movement to as many operative positions as the change-speed box has speeds, means for simultaneously transmitting the control of said lever, for each of its positions with respect to said clutch, to said movable gears of the change-speed box, and to said means for connecting together said driven shaft and said transmission shaft, with a suitable motion reduction.

1,903,636. PRODUCTION OF SOLID CALCIUM NITRATE. CHRISTOPHER CAIGER SMITH, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, London, England, a British Company. Filed Jan. 15, 1930, Serial No. 421,075, and in Great Britain Jan. 28, 1929. 7 Claims. (Cl. 23—102.)

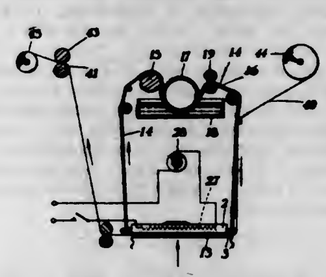


1. Process for the production of solid calcium nitrate which consists in forming said calcium nitrate in a solution saturated with respect to calcium nitrate and containing about 50% nitric acid.

1,903,637. REPRODUCTION OF SOUNDS. HARRY BENWELL STOCKS, South Tottenham, England, assignor to Alfred James Munro and Theodore Darch Parkin, London, England. Filed Mar. 28, 1931, Serial No. 526,668, and in Great Britain Mar. 28, 1930. 4 Claims. (Cl. 179—100.8.)

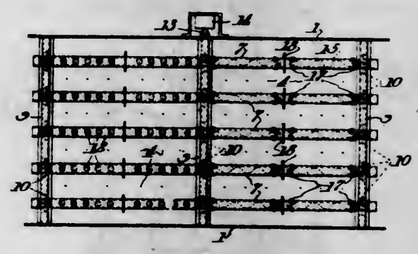
1. In sound-reproducing apparatus, the combination of elements having opposed edges forming a light-transmitting slit, means for moving said elements in the planes of their respective opposed edges, and cleaners continuously engaging said edges whereby movement of the elements will effect removal of deposits.

1,903,638. STRETCHING MACHINE. WILFRED SYKES, Chicago, Ill., assignor to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed July 8, 1931. Serial No. 548,675. 19 Claims. (Cl. 153—35.)



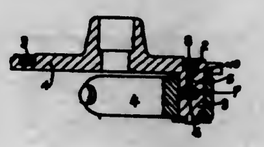
1. A stretching machine comprising spaced apart members for engaging the ends of the work, said members being relatively movable to perform the stretching operation, said members having openings therethrough for lengthwise movement of the work into, and out of, the machine and means for moving the work lengthwise in the machine.

1,903,639. TRANSFER PRESS. HAROLD JOHN TAPLIN, Wembley, London, England. Filed Feb. 12, 1931, Serial No. 515,881, and in Great Britain Feb. 13, 1930. 4 Claims. (Cl. 41—1.)



1. In a press, a pair of press plates, means to apply heat to one of said plates, an endless band of porous material located principally above said plates and having a bight extending between said plates, means to apply moisture to said band, means to support a transfer web with its bight extending between said plates below the bight of said band, and means to simultaneously feed forward said band and said web intermittently.

4. The combination claimed in claim 1 in which the web is supported from rollers arranged on opposite sides of the machine, one of said rollers being driven by a chain and sprocket gear, the rollers being carried by a yoke adjust-

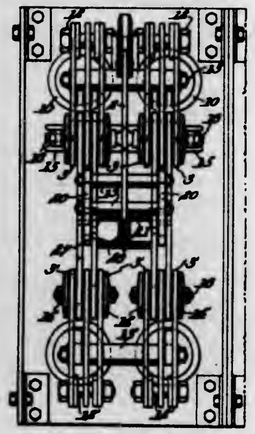


able in the direction of feed of said web within tthe limit allowed by the amount of slack permissible in the chain of said gear.

1,903,640. ELECTRICAL PRECIPITATOR. HARRY A. WINTERMUTE, Plainfield, N. J., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1931. Serial No. 558,809. 19 Claims. (Cl. 183—7.)

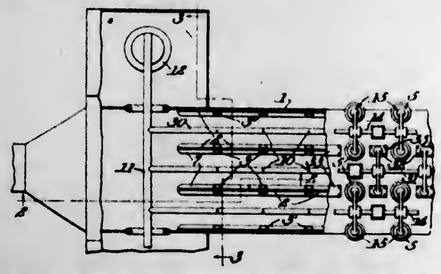
1. In an electrical precipitator, a casing having inlet and outlet openings, a plurality of collecting electrodes dividing the space within said casing into a plurality of parallel gas passages, and discharge electrodes in each of said gas passages, the portions of said collecting electrodes adjacent the inlet opening of said casing being apertured to permit equalization of gas flow in the several gas passages, and the remaining portions of said electrodes being substantially imperforate.

1,903,641. INTERRUPTER FOR IGNITION DEVICES. FRITZ ALLENDORFF, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Aug. 20, 1931, Serial No. 558,408, and in Germany Aug. 29, 1930. 4 Claims. (Cl. 200—19.)



1. A circuit interrupter for ignition devices comprising a base plate, an interrupter arm, a pivotal support for said interrupter arm, a felt ring eccentrically positioned on one side of said base plate, a wick connected to said felt ring at its innermost part and adapted to supply lubricant to the said pivotal support.

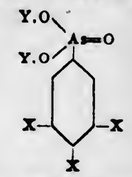
1,903,642. PRESERVATION OF ETHYL ETHER. HENRY L. COX, South Charleston, and PAUL S. GREER, Charleston, W. Va., assignors to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed Feb. 26, 1932. Serial No. 595,420. 8 Claims. (Cl. 23—250.)



1. The improvement in the preservation of ethyl ether, which ether tends to deteriorate under ordinary storage conditions even in glass containers, which consists in subjecting the ethyl ether to the action of a metallic substance selected from the group composed of metallic chromium, metallic nickel, and iron alloys containing both chromium and nickel whereby to diminish the content of detrimental impurities.

1,903,643. ELECTRIC SWITCH. CARL G. KOPPITZ and HEMSLEY B. MASSEY, Greensburg, Pa., assignors to Railway and Industrial Engineering Company, Greensburg, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1931. Serial No. 532,298. 25 Claims. (Cl. 200—170.)

1. In a switch of the knife blade type, a blade, means providing a pivotal support for said blade, a switch jaw comprising members having opposed faces between which said blade may be moved, and bosses projecting respectively from the opposed faces of said members and from said blade to restrict the contact area when said switch is closed.

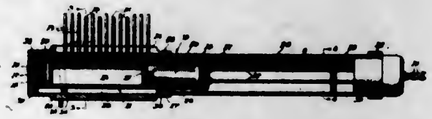


1,903,644. CONCENTRATED FIELD PRECIPITATOR. ARCHIBALD F. MESTON, Middlesex, N. J., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1932. Serial No. 584,684. 10 Claims. (Cl. 183—7.)

1. A method of operating an electrical precipitator of the type having discharge and collecting electrode systems which comprises establishing successive fields of high and low concentration and maintaining the field of high concentration in substantially a uniform condition.

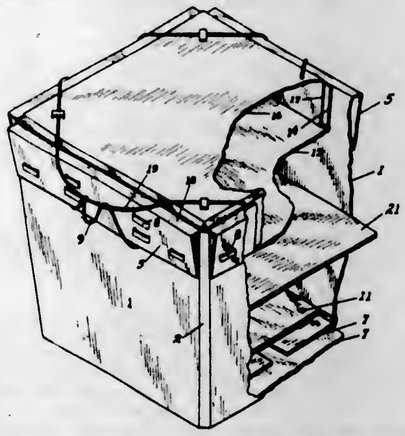
1,903,645. CROTONYL-AMINOBENZENE-ARSONIC ACIDS AND SALTS THEREOF. KARL STEINITWOLF, Frankfort-on-the-Main, ALFRED FEHRLE, Bad Soden on Taunus, and WALTER HERRMANN, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 29, 1930, Serial No. 424,488, and in Germany Sept. 8, 1928. 4 Claims. (Cl. 260—14.)

1. Compounds of the following formula:



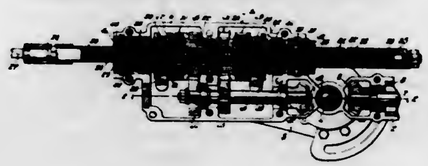
wherein one of the X's stands for the group

$$-NH.CO.CH=CH.CH_3,$$



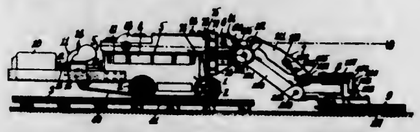
the other X's for hydrogen, chlorine or the hydroxy group and Y for hydrogen, an alkali metal, or NH_4 wherein three of the hydrogen atoms may be substituted by two ethyl groups and one hydroxyethyl group being products of therapeutically valuable properties.

1,903,646. SCALP TREATING DEVICE. CHARLES V. JAMESON, Chicago, Ill. Filed Oct. 5, 1931. Serial No. 566,848. 10 Claims. (Cl. 132—13.)



1. In a device for applying liquids to the scalp, the combination of a tubular barrel having a transversely extending partition therein dividing the barrel into two axially alined compartments, a plurality of liquid conducting members leading from one of said compartments, and a heating element disposed in the other compartment.

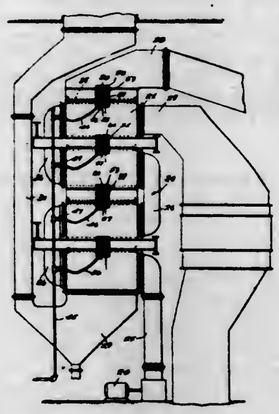
1,903,647. FRUIT AND VEGETABLE CONTAINER. DAVID T. USHER, Mount Airy, N. C.; Geraldine B. Usher administratrix of said David T. Usher, deceased. Filed Oct. 31, 1929. Serial No. 403,864. 3 Claims. (Cl. 229—15.)



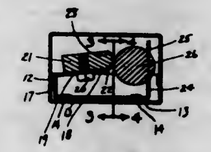
1. A container for fruits or vegetables comprising a formed cut and scored blank having reinforcing flaps at the upper ends of the side walls folded over and attached to the side walls, a compartment lid for receiving display samples comprising a bottom having upwardly extending reinforcing flaps, pressing out against the side walls to hold the lid in position, and a cover for both the container and the compartment, and means for securing same to the container walls.

1,903,648. DRILLING MECHANISM. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed June 23, 1927, Serial No. 200,826. Divided and this application filed Apr. 20, 1931. Serial No. 531,424. 40 Claims. (Cl. 255—47.)

1. In a drilling mechanism, tool rotating and feeding mechanism comprising a plurality of coaxial driving elements, a tubular tool driving member operatively connected to one of said driving elements, a rotatable tool feeding member operatively connected to another of said driving elements and extending within said tubular driving member, means for simultaneously rotating said driving elements for effecting axial movement of said driving member relative to said feeding member in one direction, and means for alternatively driving said driving elements for effecting movement of said driving member at different speeds in opposite directions.



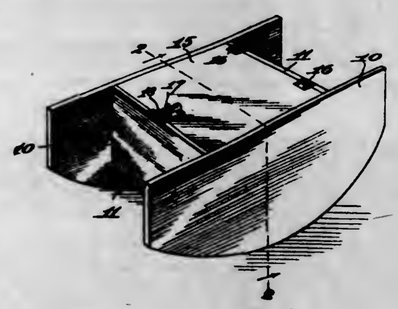
1,903,649. MINING APPARATUS. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 31, 1930, Serial No. 440,310. Renewed June 11, 1931. 82 Claims. (Cl. 262—28.)



1. In a mining apparatus, a wheeled truck adapted to run along a mine trackway, and kerf cutting mechanism on said truck including a kerf cutter, adjustable supporting means for said kerf cutter whereby the latter may be positioned wholly outside the trackway and in horizontal planes below the top of the trackway to cut a horizontal kerf at the level of the mine bottom outside and below the level of the mine trackway, or to cut a vertical kerf extending in the direction of the trackway and midway between the sides of the apparatus, and motor operated devices for adjusting said kerf cutter into aforesaid positions.

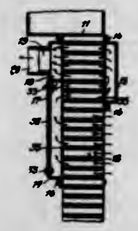
1,903,650. BLOWER FOR AIR HEATERS. NORMAN L. SNOW, New Canaan, Conn., and WILLIS P. THOMAS, Detroit, Mich., assignors to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1928. Serial No. 293,934. 26 Claims. (Cl. 257—1.)

1. In combination, an air heater having a plurality of air boxes, the said air boxes being spaced from each other by gas passages, a blower element for discharging a cleaning fluid through the said gas passages, means for moving the said blower element, and means cooperating with said last mentioned means for effecting a rapid movement of said blower element past each of said air boxes and for compelling a stopping of the movement of said blower element in alignment with each of said gas passages.



1,903,651. BLADE SHARPENER. ALBERT M. WHEELER, Catlettsburg, Ky. Filed June 2, 1932. Serial No. 614,928. 7 Claims. (Cl. 51—204.)

1. A sharpener including in combination a steel block having a flat face, a steel ball tangentially contacting the face, and means for causing yielding engagement therebetween.



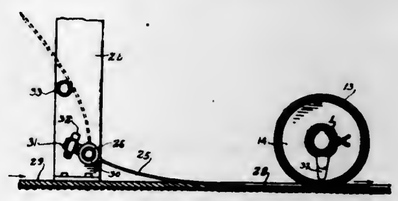
1,903,652. ICE CREAM FREEZER. SAMANTHA A. WILSON, Bell, Calif. Filed June 20, 1931. Serial No. 545,815. 1 Claim. (Cl. 259—78.)

An ice cream freezer comprising a pair of side panels provided with curved lower edges that are adapted to rock on a flat surface, end walls arranged between said side panels, which end walls are inset from the ends of

said side panels, a bottom wall arranged between the lower portions of said end walls and extending from one side panel to the other, ledges secured to the inner faces of the side panels and end walls a short distance below the upper edges thereof, a cover adapted to close the space between the upper portions of the side panels and end walls, which cover when closed rests snugly upon the ledges, hinges connecting one end of the cover to the upper edge of one of the end walls and a readily releasable latch for securing the free edge of the cover to the upper portion of the other one of the end walls.

1,903,653. AUTOMOBILE HEATER. JACK F. BROCK, Scio, Oreg. Filed Feb. 11, 1931. Serial No. 515,113. 3 Claims. (Cl. 257—241.)

1. In a heater of the class described, the combination of a radiator having air passages extending therethrough, and boxes closing front and rear sections of said radiator to cause air to circulate upwardly and forwardly and then upwardly and rearwardly and said rear box having a removable rear wall to allow air to flow through the radiator in the usual way when said wall is removed.

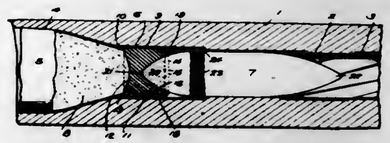


1,903,654. VOLTAGE AMPLIFIER. HENRY G. OBATRICHER, Los Angeles, Calif. Filed Oct. 11, 1932. Serial No. 637,315. 1 Claim. (Cl. 123—148.)

A spark voltage amplifier including a cup formed of insulative material, a plug closing the top of the cup and having a socket for a circuit terminal, a contact in said socket, a contact in the bottom of the cup, top and bottom discs in the cup, and means for constantly pressing said discs against the respective contacts; said discs having an electric gap forming medium on each side.

1,903,655. MEANS FOR MAKING PAPER. LESTER C. PERKINS, Holyoke, Mass., assignor to Parsons Paper Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1932. Serial No. 595,351. 7 Claims. (Cl. 92—44.)

1. In paper making apparatus, the combination with a supporting frame, of a member movable therethrough to carry a web of pulp, standards adjustable on said frame, a rod supported by said standards and extending transversely of the direction of movement of said member, of a tracker pivoted on said rod and adjustable lengthwise thereof, said tracker being normally held by gravity in contact with the moving web to form a track therein, means for varying part of the force of gravity operating on that part of said tracker member in contact with said web, a second support on said frame parallel to the first named support, and means adjustable on said second support in advance of the tracker and rotatable by contact

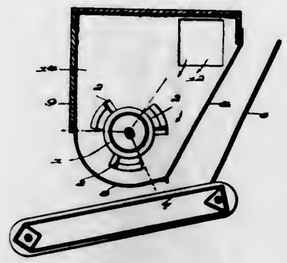


with said web to convert the track to a flat bottomed channel, said standards being adjustable toward and from the last named means to vary the distance of the tracker therefrom.

1,903,656. NONDRYING OIL AND PRODUCT THEREOF. FLOYD M. REECE, South Bend, Ind., assignor to O'Brien Varnish Company, South Bend, Ind., a Corporation of Indiana. Filed Nov. 26, 1930. Serial No. 498,509. 5 Claims. (Cl. 134—26.)

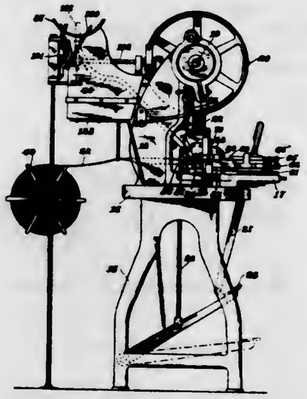
1. A coating composition comprising a soluble lacquer base and a non-drying liquid oil product having the characteristics of China-wood oil which has been heated as high as 625° F. in the absence of gelatinization inhibiting substances in so short a time as to avoid gelatinization while reducing the index of refraction to a point below 1.499.

1,903,657. CARTRIDGE. WILLIAM L. REED, Miami, Fla. Filed Feb. 23, 1932. Serial No. 594,664. 2 Claims. (Cl. 102—12.)



1. A cartridge including a shell having a powder holding portion and a bullet receiving portion, a pusher in the bullet holding portion, the shell including means for seating the pusher, the pusher including a concaved recess and a surrounding annular face, the front of the pusher including a conical recess having a surface of alternate ribs and grooves, a cupped portion surrounding the conical recess and an outer tapered portion, a bullet having a conical rear end to be received in the conical recess in the pusher and to be engaged by the ribs therein, an annularly grooved portion on the bullet, the shell having a crimped end for engaging the grooved portion of the bullet.

1,903,658. PEA THRESHING MACHINE. FRANK PITTIS RYDER, Niagara Falls, N. Y. Filed July 28, 1930. Serial No. 470,151. 4 Claims. (Cl. 130—30.)



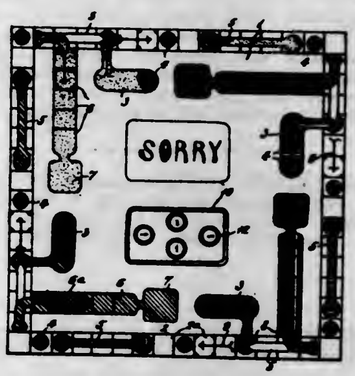
1. In a machine for threshing green peas or beans a beater cylinder, a series of beater arms carried by the beater cylinder having their faces inclined rearward from a radius, a stationary screen arranged opposite one side of the beater cylinder having its lower edge below the lowest point in the path of movement of the beater arms, a shoe extending beneath the beater cylinder with its

forward edge connected to the lower edge of the screen, the screen and shoe being so arranged with reference to the beater cylinder that a substantial space is left between

their inner faces and the ends of the beater arms of such extent as to permit vines carrying pods to pass without rubbing action on the pods.

1,903,659. MACHINE AND METHOD FOR APPLYING FASTENER ELEMENTS. ROSCOE J. SMITH, Glen Ridge, N. J., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Jan. 30, 1932, Serial No. 589,918, and in Great Britain Aug. 10, 1931. 52 Claims. (Cl. 153—1.)

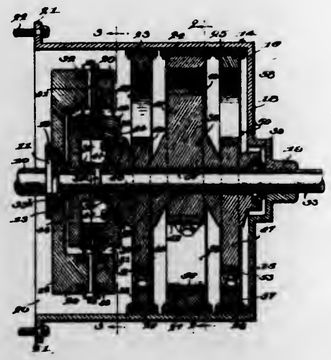
1. A machine for permanently applying a series of fastening elements to a mounting member in the manufacture of slide fasteners including means for moving said mounting member, means for disposing fastening elements adjacent one edge of said mounting member and applying the same thereto, and means periodically interrupting the operation of such last named means whereby said fastening elements will be disposed in groups along one edge of said mounting member.



49. The method of making stringers for slide fasteners of the type having a mounting member and a plurality of interlocking elements each having at one end a pair of jaws clamped to the edge of the mounting member and an interlocking head projecting from the mounting member, which consists in manipulating a loose mass of fastener elements to arrange elements from the mass with all the jaws extending in the same direction and all the heads facing in the same direction, and then feeding said elements one by one to the edge of an intermittently moving mounting member, and clamping them to the mounting member while the latter is stationary.

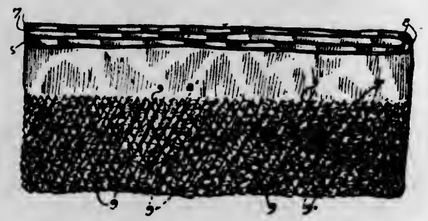
1,903,660. WRENCH. JOSEPH B. SMITH and JAMES HATHAWAY SMITH, Emporium, Pa. Filed Mar. 24, 1932. Serial No. 600,986. 2 Claims. (Cl. 81—177.)

1. A tool of the character described comprising a flexible tubular housing, a handle connected at one end with said housing and having a passage therethrough, a portion of said passage being of relatively large diameter and opening through the end of the handle remote from the housing, a rigid shaft extending through said handle and having a pair of collars thereabout located in the enlarged portion thereof, a sleeve nut removably engaged in the handle at the outer end thereof and engaging one of said collars, the end of said shaft adjacent said sleeve nut being formed to facilitate the attachment of an operating implement therewith, a flexible shaft extending through said housing and having one end connected with the rigid shaft, a sleeve connected with the housing at its other end, and a head member having a reduced stem portion rotatably mounted in said sleeve and coupled with the adjacent end of the flexible shaft.



1,903,661. APPLIANCE FOR PLAYING GAMES. WILLIAM HENRY STOREY, Southend-on-Sea, England. Filed Aug. 4, 1930, Serial No. 473,018, and in Great Britain Sept. 12, 1929. 2 Claims. (Cl. 273—134.)

1. A game apparatus including a game board having the marginal edge marked to define a track, with such track divided transversely to indicate squares, each side of the board adjacent the track being formed with a marked outline to receive a number of playing units, and serve as a starting point for each unit, each side of the board adjacent the track being further provided with an additional track extending parallel to one side trackway and at right angles to the adjacent side trackway, such additional track having plain communication with the right angle portion of the trackway and being transversely divided to form squares and terminating in an enlarged space, the trackway at each edge of the board being further provided with a supplemental trackway of relatively narrow width and extending throughout a pre-

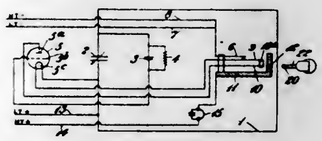


determined number of squares of such trackway, said supplemental trackway serving to provide for a particular playing function in connection with the units reaching such supplemental trackway.

1,903,662. TRANSMISSION MECHANISM. JOHN B. WHITLOW, Lexington, Ky. Filed Apr. 7, 1932. Serial No. 603,865. 3 Claims. (Cl. 74—34.)

1. The combination of a rotatable driving member having a fly wheel, a shaft to be driven, a casing enclosing said fly wheel and revolubly supporting said driven shaft, pinion gears carried by said fly wheel, a ring gear fixed to said driven shaft and in mesh with said pinion gears, a hollow crank shaft revolubly mounted upon said driven shaft, said crank shaft having eccentric members, guide ways carried by said casing, weight members slidably supported within respective guide ways, the guideways having a fixed position in the housing, connecting rods associated with respective eccentrics and weight members, and a ring gear carried by said crank shaft and in mesh with said pinion gears whereby to rotate said crank shaft to oscillate said weight members.

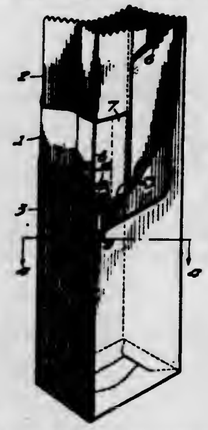
1,903,663. FABRIC DUSTER. RALPH YUTTS, Miami, Fla. Original application filed Aug. 3, 1931, Serial No. 554,847. Divided and this application filed Oct. 29, 1931. Serial No. 571,927. 5 Claims. (Cl. 15—225.)



1. A duster of the character described, comprising a sheet of material folded upon itself to provide a handle portion, and a bristle portion including a plurality of wisps, said wisps being formed by diagonal slits in the sheet material so that the wisps will extend the length of the bristle portion and flare outwardly at their free ends in a helical fashion.

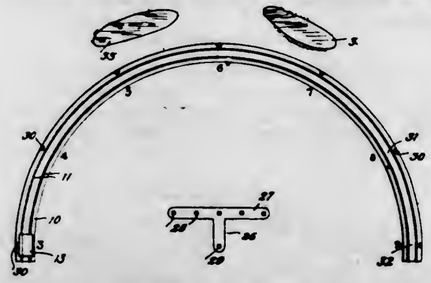
1,903,664. DUSTER AND HANDLE. RALPH YUTTS, Miami, Fla. Filed Oct. 29, 1931. Serial No. 571,928. 2 Claims. (Cl. 15—226.)

1. The combination with a duster having a flared duster portion and a cylindrical handle shank portion, of a tubular handle on the cylindrical handle shank portion including a rolled sheet carrying a projecting gummed strip at one side edge for retaining the handle in tubular formation on the cylindrical handle shank portion.



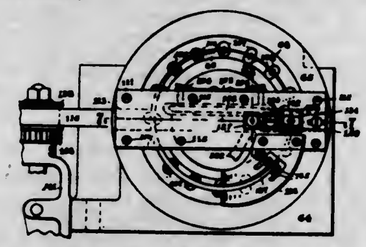
1,903,665. RADIO RECEIVING AND TRANSMITTING APPARATUS. HORACE WILLIAM ADEY, London, England. Filed Oct. 3, 1929, Serial No. 397,092, and in Great Britain Oct. 24, 1928. 3 Claims. (Cl. 250—14.)

3. A radio receiving apparatus, comprising a detector valve having a plate, a filament and a grid, a frame aerial and a variable condenser in an oscillatory circuit in series with the grid of the valve, an output circuit that includes the plate and filament of the valve, circuits for energizing said valve, leaf springs arranged in the said output and energizing circuits, a jack arranged adjacent said leaf springs, a jack plug that actuates said leaf springs to close the output and energizing circuits upon its insertion into the jack, a coil mounted on said jack plug and rotatable therewith that is inserted into the output circuit by insertion of the jack plug into the jack and is in inductive relationship with the frame aerial, and a sound reproducing means associated with the output circuit.



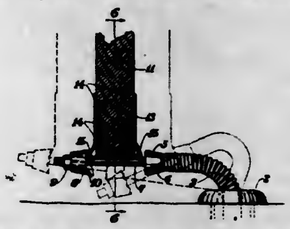
1,903,666. MOISTURE-PROOF COVERED BAG. TRUE M. AVERY, Glens Falls, N. Y., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed June 6, 1932. Serial No. 615,715. 3 Claims. (Cl. 229—55.)

1. A bag having a longitudinal seam, and a moisture proof outer covering therefor also having a longitudinal seam, an edge of the seam of the covering being turned under an edge of the seam of the bag for a portion of the width of the bag seam and being directly united to



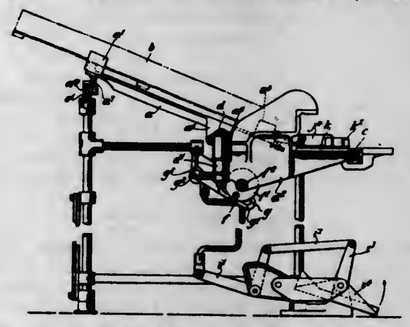
the other edge of the seam of the covering, and the edges of the bag seam being directly united for another portion of the width of the bag seam.

1,903,667. TRAP-SHOOTING APPARATUS OR LAYOUT. CHARLES EDWARD BAND, Los Angeles, Calif. Filed May 18, 1932. Serial No. 612,122. 7 Claims. (Cl. 124—8.)



1. An apparatus of the character described comprising a trap-shooters' area having series of electric switches, a trench disposed about said area, a movable trap in said trench, a track arranged in the trench and traversed by the trap, a target thrower on the movable trap, and electrically operated means for controlling the thrower and having its electric circuit including said switches.

1,903,668. MACHINE FOR MAKING CHAPLETS AND THE LIKE. EUGENE H. FONTAINE, Pittsburgh, Pa. Filed Jan. 17, 1931. Serial No. 509,868. 14 Claims. (Cl. 10—156.)

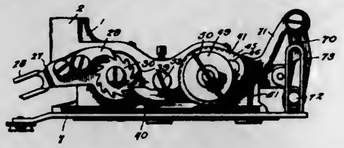


1. In a machine for forming chaplets and other articles, the combination with a tool and means for reciprocating the tool, of a pair of carriers arranged in nested relation and mounted for rotation on parallel axes and in a plane angular to that of the movement of the tool, the adjacent surfaces of the carriers being provided with coacting work-clamping means which are caused to converge and diverge by the rotation of the carriers, means for adjusting the relative eccentricity of the carriers, means for imparting an intermittent rotary movement to the carriers, and mechanism for feeding the material to the carriers in a line of feed parallel to the path of movement of the tool.

1,903,669. YIELDABLE DOOR STOP AND CATCH. CURTIS GREENE, San Diego, Calif. Filed Aug. 18, 1930. Serial No. 475,869. 5 Claims. (Cl. 292—87.)

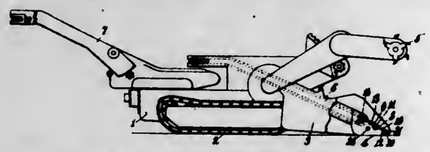
1. In a device of the class described, a support, a coil spring secured at one end thereto and extended with its opposite end therefrom, a frusto-conical catch having its small end of substantially the diameter of the spring and secured with said end to the free end of the spring, a reduced stem secured to and extending outwardly and coaxially from the large end of the catch, and a second frusto-conical catch secured with its large diameter end coaxially with and to the extended end of the stem.

1,903,670. MECHANISM FOR WRAPPING MACHINES. FREDERICK GROVER, Leeds, England, assignor to The Forgrove Machinery Company Limited, Leeds, England, and John Mackintosh & Sons Limited, Halifax, England. Filed Feb. 5, 1932, Serial No. 591,137, and in Great Britain Apr. 24, 1931. 10 Claims. (Cl. 93—2.)



1. In wrapping machines, the combination of a tray support adapted to receive and support in an inclined position a tray for the tablets to be fed to said machine, a vertical pivot carrying said tray support, rollers on said tray support and horizontal bearing surfaces for said rollers whereby the tray support can be vibrated in a horizontal plane, mechanism for vibrating said tray support and controlling means for said mechanism adapted to permit the amplitude of vibrations imparted to said tray to be varied from stationary up to a predetermined maximum.

1,903,671. ATTACHMENT FOR SEWING MACHINES. RALPH P. HACKET, Allentown, Pa. Filed June 8, 1932. Serial No. 615,191. 2 Claims. (Cl. 112—77.)

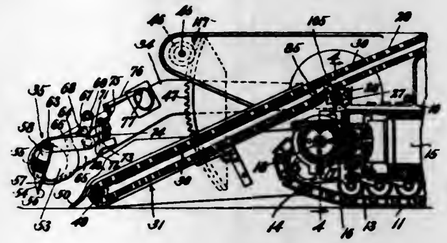


1. Button sewing and button hole stitching attachment for sewing machines comprising a body adapted to be

fixedly attached to a sewing machine, and a carriage reciprocably and oscillatably mounted at the bottom of said body, a button holding element detachably connected to said carriage, means carried by said body for imparting step by step reciprocatory movement to said carriage throughout a range of movement first in one direction and then the other, means for imparting oscillations of major amplitude to said carriage at the end of the range of its reciprocatory movements whereby the latter movements take place in opposite directions in displaced parallel paths, means for imparting a plurality of oscillations of minor amplitude to said carriage throughout its

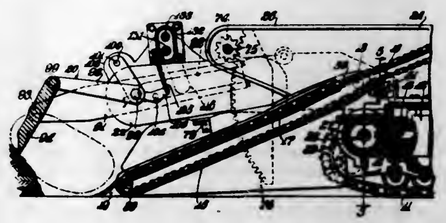
reciprocatory movement, the means for imparting reciprocatory movement, the major oscillations and the minor oscillations functioning for the button-hole stitching operation, needle bar operated means for actuating said minor oscillations imparting means, a connection between said last named means, and said means for imparting major oscillations and said means for imparting reciprocatory movements, and adjustable means for moving said connection out of operative relation to said major oscillation imparting means and said reciprocatory movement imparting means for inhibiting the last two named movements during the button sewing operation.

1,903,672. LOADING MACHINE. ANDREW HAUGE, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 18, 1929. Serial No. 340,815. 18 Claims. (Cl. 198—7.)



1. In a loading machine, material penetrating means comprising a frame portion, and a pair of angularly movable plates hinged together and mounted on and extending transversely of said frame portion, and mechanism for actuating said plates to cause the same to impart an agitating movement to the material penetrated thereby.

1,903,673. LOADING MACHINE. ANDREW HAUGE, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 9, 1929. Serial No. 376,948. 8 Claims. (Cl. 198—9.)

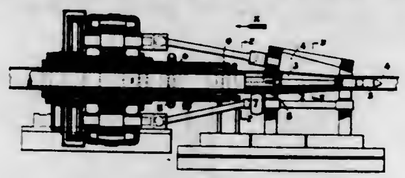


1. In a loading machine, a gathering mechanism including a plurality of shovel-like blades disposed in parallel relation for rotation on parallel horizontal axes spaced materially less than the maximum dimension of said blades transverse to their said axes and for orbital movement, and mechanism for simultaneously positively rotating said blades unidirectionally about their own axes and orbitally moving said blades to cause said blades to penetrate, elevate and discharge rearwardly the material to be loaded.

1,903,674. COAL LOADER. ANDREW HAUGE, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 7, 1929. Serial No. 412,469. 13 Claims. (Cl. 198—10.)

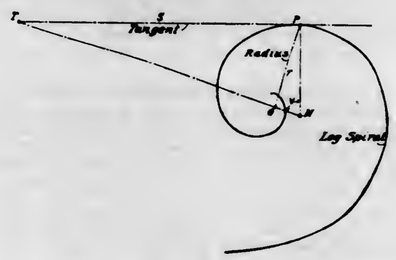
1. In loading apparatus of the character described, the combination with conveying means, of a broad long gathering member pivoted on a horizontal transverse axis and having a digging edge, said axis extending lengthwise of said member, means for bodily moving said member to carry said axis through an orbit, and means for positively oscillating said member about its axis of pivoting during the bodily movement of said member including a link pivotally connected adjacent one of its ends to said gathering member at a point remote from the digging edge of said member and between the points of pivotal support of said member, and means cooperating with the other end of the link for supporting said end, guiding the same for movement in a relatively flat path, and imparting to said end longitudinal thrusts and retractions.

1,903,675. LOADING MACHINE. ANDREW HAUGE, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 16, 1929. Serial No. 414,612. 22 Claims. (Cl. 198—10.)



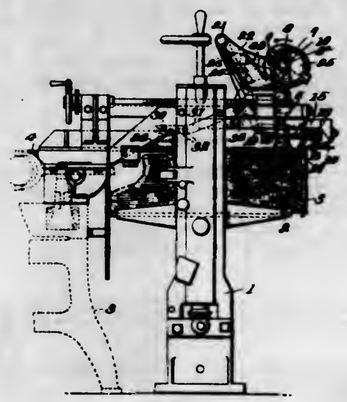
1. In a loading mechanism, the combination of a support, a pair of rotatable members carried by said support for rotation on a common axis, means for rotating said members, gathering means, supporting members for said gathering means supported by said rotatable members, supplemental means cooperating with said supporting members for controlling the movement thereof during actuation by said rotatable members, said gathering means being pivoted to each of said gathering means supporting members on a second axis parallel to but offset from the first mentioned axis, and a guiding element pivotally connected to said gathering means and normally pivotally connected to said support.

1,903,676. ROLLING MILL FOR WIDENING OUT TUBES. HEINRICH HEUTKAMP, Duisburg, Germany, assignor to Demag Aktiengesellschaft, Duisburg, Germany. Filed May 27, 1931, Serial No. 540,428, and in Germany June 11, 1930. 3 Claims. (Cl. 80—13.)



1. A tube widening mill provided with a mandrel with conical head, externally disposed inclined rollers co-

operating with said conical mandrel head, smoothing rolls behind said inclined rollers, means within the tube

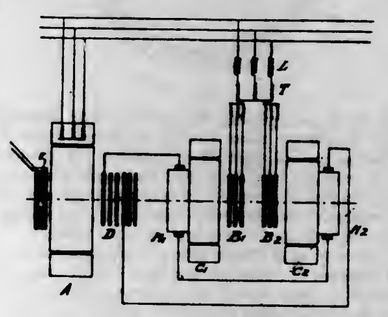


for its support against the smoothing rolls, and a former bush following the smoothing rolls, which bush is rotated around the tube with a relative speed.

1,903,677. LOGARITHMIC GEARING. MILLER R. HUTCHISON, Jr., East Orange, N. J., assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 30, 1929. Serial No. 359,306. 10 Claims. (Cl. 74—41.)

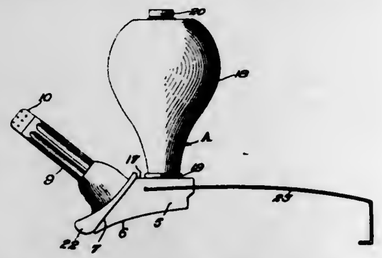
1. A logarithmic gear train, comprising in combination helical and logarithmic spiral gearing elements arranged on curves, whose tangents coincide at the point of contact.

1,903,678. SHEET FEEDING DEVICE. HENRY KRATZ, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1931. Serial No. 570,692. 7 Claims. (Cl. 271—30.)



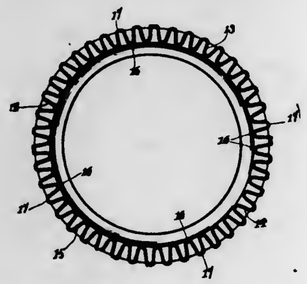
1. A sheet feeding mechanism comprising a support for the stacked sheets, a reciprocating feeding device engaging the rear edge of the sheet for feeding the same from the stack, means for lifting the rear portion of the topmost sheet from the stack for permitting the engagements of the feeding device therewith, and means adapted to engage the topmost sheet adjacent the forward edge thereof for retracting and lifting the forward edge portion of said sheet for freeing the same from the stacked sheets prior to the engagement of the feeding device with the sheet for the movement of the same from the stack.

1,903,679. BED SPRING. DAVID KURKCHEE, Schenectady, N. Y. Filed Mar. 31, 1932. Serial No. 602,334. 1 Claim. (Cl. 5—202.)



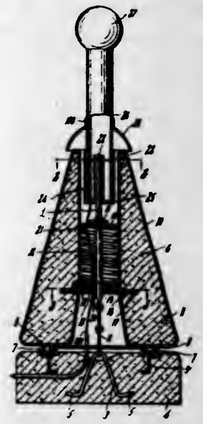
A bed spring structure comprising a pair of sections, one section including a pair of side members and a pair of channel end members having their flanges horizontally arranged and the other section including a single side member and a pair of angle end members, one limb of each angle member being horizontally arranged and its other limb depending vertically from said horizontal limb, a vertically arranged strip having its lower edge connected to the outer edge of the lower flange of each channel member, a horizontally arranged strip connected to the upper edge of said vertical strip with the lower edge of the vertical limb of the end member of the second section sliding in the space which is formed by the bight of the channel member and said vertical strip, and screws carried by the bight parts of the channel members for pressing the vertical limbs of the angle end members of the second section against the said vertical strips, the spring assembly of the first section being connected to the said horizontal strips and the spring assembly of the second section being connected to the horizontal limbs of the angle end members.

1,903,680. ALTERNATING CURRENT GENERATOR. PIERRE LETRILLIART, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Paris, France, a French Société Anonyme. Filed June 15, 1928, Serial No. 285,681, and in France June 18, 1927. 8 Claims. (Cl. 172—281.)



1. A variable speed alternating current generator, comprising an induction machine and two separate but complementary commutator machines coupled mechanically thereto, said commutator machines being directly connected by their commutator brushes with the rotor slip rings of said induction machine, means for feeding alternating current to the rotors of said commutator machines, said commutator machines providing unequal voltages, and means for modifying symmetrically the relative position of the two sets of commutator brushes for varying the resultant of said unequal voltages.

1,903,681. SYRINGE. REUBEN MERLISS, Detroit, Mich. Filed May 23, 1932. Serial No. 613,115. 1 Claim. (Cl. 128—232.)

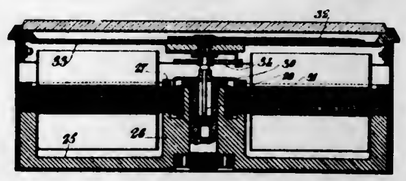


A syringe of the character described comprising a base formed with a lower curved face conforming to the curvature of an upper surface of a lavatory collar and an inclined side provided with an externally threaded nipple, a nozzle threaded with said nipple and having a perforated head at its outer end, said nozzle being formed with a chamber next to the head and merging into a central bore, a valve seat located at the merger of the chamber and bore, a ball check valve engageable with said seat to prevent back flow of fluid through the bore, said base being formed with a passage opening through the top thereof and an inclined side to meet the bore in the nozzle, a compressible bulb container supported by the base and communicating with the passage therein, and a wire clamp hinged to the base and having a jaw to detachably engage the collar for the mounting of the base at rest thereon.

1,903,682. PIE SEALER. EMMA E. MOORE, Warren, Ohio. Filed Mar. 3, 1931. Serial No. 519,875. 1 Claim. (Cl. 53—6.)

A pie sealer comprising an annular body formed from a single length of wire having stretches thereof bent upon themselves to provide a plurality of groups of a series of radially disposed, flat U-shaped straight sealing portions and a plurality of resilient U-shaped latching parts angularly disposed with respect to, depending from and corresponding in number to the number of said groups, each of said groups being of arcuate contour, said groups disposed in the same arc, each end of one group being separated from an end of a pair of adjacent groups by radially disposed endless spaces, the sealing portions of each group being oppositely disposed with respect to each other whereby the open end of one sealing portion will align with the closed end of an adjacent sealing portion, the closed ends of the sealing portions at the outer edge of a group being arranged in an arcuate row, the closed ends of the sealing portions at the inner edge of a group being disposed in an arcuate row and concentric to the arc in which is disposed the closed ends of the sealing portions at the outer edge of the group, and each latching part having the arms thereof merging into the outer ends of the opposed ends of a pair of opposed groups of sealing portions.

1,903,683. PEDESTAL FOR TRAFFIC SIGNALS OR THE LIKE. GEORGE A. NUTE, Somerville, Mass., assignor of one-half to David H. Young, Willimansett, Mass. Filed Jan. 14, 1932. Serial No. 586,488. 2 Claims. (Cl. 40—145.)



1. In a pedestal for a traffic signal or the like, a post in a normally upright position for supporting the signal element, a base to which the lower end of said post is anchored, a bumper column surrounding said post and revolvable about said post, and bearing means on said base on which said column is free to ride, said bearing means including a circular race-way fixed to said base and rotatable bearings within said race-way and on which the lower end of said column bears.

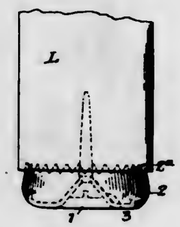
1,903,684. PROCESS FOR THE SIMULTANEOUS PRODUCTION OF PRECIPITATED DICALCIUM PHOSPHATE AND NITRATES. FRANCESCO CARLO PALAZZO and FORTUNATO PALAZZO, Florence, Italy. Filed Mar. 21, 1929, Serial No. 348,985, and in Italy Aug. 1, 1928. 3 Claims. (Cl. 71—7.)

1. Process for the production of dicalcium phosphate and nitrate comprising in combination: attacking phosphatic raw material with nitric acid in an amount in excess of that necessary to form calcum nitrate from the total CaO content of the phosphatic material, admixing alkali metal hydrates to the resulting acid solution to precipitate dicalcium phosphate and neutralise the solution and then treating the resulting solution of alkali nitrate and calcium nitrate obtained from the precipitation to produce nitrate mixtures.

1,903,685. SPEED INDICATOR. RENÉ JACQUES HENRI PLANIOL, Paris, France, assignor to Etablissements Ed. Jaeger, Levallois-Perret, France, a Joint-Stock Company of France. Filed July 8, 1929, Serial No. 376,774, and in France July 20, 1928. 2 Claims. (Cl. 175—183.)

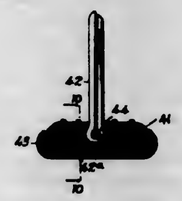
1. In a speed indicator, a casing having two pairs of opposed polar pieces and cores, with windings thereon, each opposing pair adapted to be energized at the same time by an electric current, said cores being of reduced cross section whereby they are maintained saturated regardless of variations in the current supply, an inverted metal bell having a pintle pivotally mounted in the magnetic field created by the polar pieces, resilient resisting means acting in opposition to the rotation of the metal bell, a dial on the casing, and an indicating pointer on the end of the metal bell pintle for registering the revolution of the metal bell on the dial, when the windings and cores are energized from a source of electrical energy.

1,903,686. TREATMENT OF CHINA WOOD OIL TO PRODUCE A LIQUID UNGELLED OIL AND PRODUCT THEREOF. FLOYD M. REECE, South Bend, Ind., assignor to O'Brien Varnish Company, South Bend, Ind., a Corporation of Indiana. Filed Oct. 6, 1930. Serial No. 486,865. 6 Claims. (Cl. 87—12.)



1. The method of treating China-wood oil to produce a liquid, ungelled oil wherein the oil is forced rapidly through a restricted conduit of such cross-sectional area as to permit of rapid input of heat, said conduit being heated to bring the oil to a temperature of at least 625° F. in a period of time sufficient to secure substantial reduction of the refractive index of the oil and so short as not to permit gell formation, said period being suitably in the order of fifteen seconds for a temperature of 675° F. for a product having drying properties, and rapidly cooling the oil.

1,903,687. SLIDING CASTER. CLIFFORD A. SCHACHT, Huntington, Ind. Filed Sept. 28, 1931. Serial No. 565,621. 6 Claims. (Cl. 16—42.)

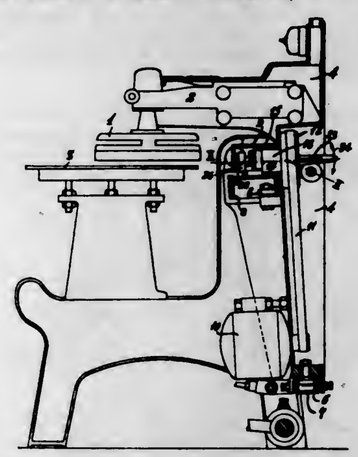


1. A sliding caster comprising a resilient body having a bore extending therethrough; a pintle in the bore; a shell having its edges rolled inwardly around the resilient body to hold the body in the shell; and means in the body for preventing radial compression of the body and separation from the shell after assembly.

1,903,688. SLIDING CASTER. CLIFFORD A. SCHACHT, Huntington, Ind. Filed Oct. 28, 1931. Serial No. 571,633. 5 Claims. (Cl. 16—42.)

1. A slider comprising a shell having a central recess on its underside and spring tongues at the upper end of the recess, and an attaching member extending through the recess and having a head seated in the recess and a groove engaged by said tongues.

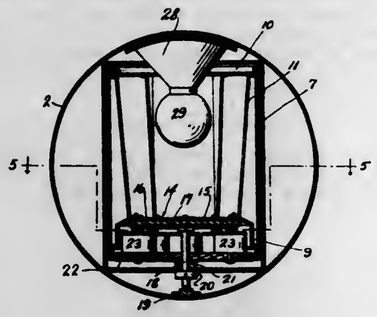
1,903,689. SLIDING CASTER. CLIFFORD A. SCHACHT, Huntington, Ind. Filed Nov. 25, 1931. Serial No. 577,846. 3 Claims. (Cl. 16—42.)



1. A sliding caster comprising a relatively flat resilient body of substantial thickness, a pintle molded in the body and adapted to pivot universally of the body, and a slidable shell for the body having its edges rolled around the body, said pintle comprising a cotter pin having its head molded in the body.

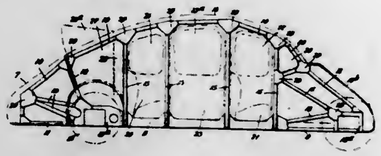
1,903,690. SLIDING CASTER CUP. CLIFFORD A. SCHACHT, Huntington, Ind. Filed Apr. 30, 1932. Serial No. 608,519. 14 Claims. (Cl. 45—137.)

1. A caster cup comprising a relatively flat rubber body having a relatively shallow recess in its top for loosely receiving a furniture leg and having a recess in its bottom; and a glide of hard material below the cap having portions removably engaged with the bottom recess and retained therein by the resiliency of the rubber.



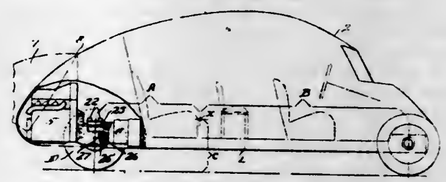
1,903,691. IRONING MACHINE. HERMANUS FRANCISCUS TOL, The Hague, Netherlands, assignor to Naamloose Vennootschap: Vennootschap tot Exploitatie van Strijk- en Persmachine Octrooien (V. E. S. P. O.), The Hague, Netherlands, a Corporation of the Netherlands. Filed Mar. 3, 1931, Serial No. 519,807, and in Great Britain Mar. 14, 1930. 1 Claim. (Cl. 68—9.)

An ironing machine comprising an iron, a table, a pair of tracks fixed adjacent thereto, a frame supporting the iron and having a shaft fixed therein parallel with said



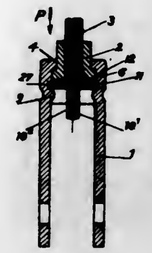
tracks, arms fixed to the shaft, a crosshead journalled in the arms, a second shaft fixed to the crosshead in a plane perpendicular to said tracks, a pulley on said second shaft, means for rotating the pulley, a wheel in the plane of and between the tracks and fixed to the pulley, means for rotating the crosshead to alternatively move the wheel into engagement with either of the tracks for moving the frame, and thus the iron with respect to the table during rotation of the pulley and wheel.

1,903,692. DIRECTION SIGNAL. SAMUEL N. WEBB, Johnstown, Pa., assignor to Roy Withers. Filed May 3, 1929. Serial No. 360,079. 1 Claim. (Cl. 177—327.)



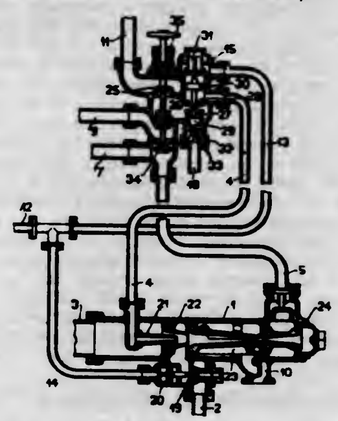
A signal of the class described comprising a horizontal casing having windows in its front and rear ends, a rectangular shell in the casing, having two opposing sides contacting the walls of said casing, and said sides of the shell having openings therein registering with the windows, the bottom of the shell being spaced from the casing and having a hole therein, a cylinder in the shell and comprising a base portion, a centrally arranged pivot member carried by the base portion and extending through the hole in the bottom of the shell and rotatably supported on the bottom part of the casing, spaced uprights having their lower ends attached to the base portion, a ring connected to the upper ends of said uprights, and transparent panes connected at their ends to the ring and base and forming a cylindrical part, said panes having indicating data thereon for appearing at the windows when the cylinder formed of the panes and their supporting means is rotated, electric means for rotating the cylinder located in the lower part of the shell and a lamp supported from the top of the casing and extending into the top portion of the cylinder, the panes which are diametrically opposite each other carrying similar data.

1,903,693. MOTOR ROAD VEHICLE. CHARLES DENNISTON BURNEY, Westminster, England. Filed Aug. 10, 1929, Serial No. 384,946, and in Great Britain Sept. 6, 1928. 7 Claims. (Cl. 296—28.)



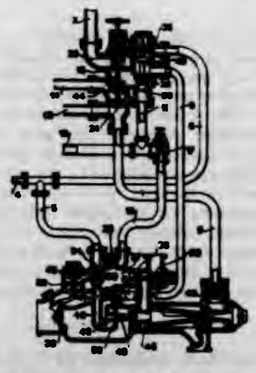
3. In a motor road vehicle of the enclosed type having an engine, a frame, front and rear pairs of wheels supporting said frame, the frame being extended rearwardly beyond the axis of the rear wheels and supporting the engine, an enclosure mounted on said frame and extending forwardly and rearwardly beyond the respective wheel axes, the rear portion of said enclosure housing the engine, said enclosure having substantially the shape of the upper half of a streamlined body, the front wheels having a relatively wide gauge and being positioned a substantial distance from the sides of the enclosure, the rear wheels having a relatively narrow gauge and being positioned so that their leading portions are substantially within the plan projection of the enclosure, and passenger or load-receiving accommodations within the enclosure entirely forward of the leading portions of the rear wheels.

1,903,694. MOTOR ROAD VEHICLE. CHARLES DENNISTON BURNEY, Westminster, England. Filed Jan. 10, 1933, Serial No. 651,063, and in Great Britain Sept. 6, 1928. 30 Claims. (Cl. 180—54.)



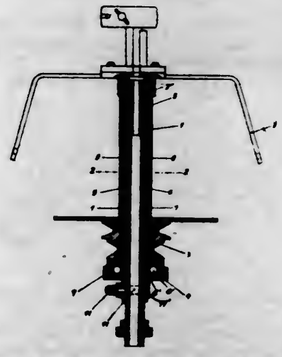
1. A motor road vehicle of the kind set forth, said vehicle comprising a body frame, front and rear pairs of wheels, spring means interposed between the frame and wheels for supporting the frame on the wheels, the frame having a rearward extension beyond the axis of the rear wheels, an engine supported by said frame extension entirely behind the axis of the rear wheels; and means for transmitting power from the engine to the rear wheels comprising a clutch, speed change gearing, and differential gearing all supported by the frame with the differential gearing substantially in the axis of the rear wheels; the engine and power transmitting means being closely associated to form a compact group extending longitudinally of the vehicle, the center of gravity of the said group being to the rear of the axis of the rear wheels but closely adjacent thereto so as to favorably affect the attainment of a center of gravity for the vehicle as a whole a substantial distance in advance of said axis, said power transmitting means also including universally jointed drive shafts connecting the differential gearing and rear wheels and operative in all springing relations of the frame to the wheels.

1,903,695. ADJUSTABLE TURNBUCKLE. JACQUES FRANCOIS GABRIEL CHOBERT, St.-Etienne, France. Filed Apr. 17, 1930, Serial No. 445,149, and in France Apr. 29, 1929. 6 Claims. (Cl. 287—59.)



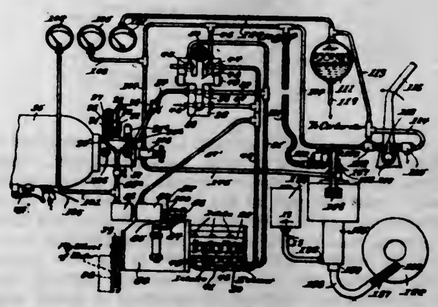
1. A turn buckle comprising a body, an adjustable member mounted in one end thereof, said body having crimps formed therein, and means between the crimps and adjusting member to prevent sliding movement of the adjusting member with respect to the body.

1,903,696. PREHEATER OR ECONOMIZER FOR LOCOMOTIVES. HANS DEUTSCH, Vienna, Austria, assignor to the Firm Alex Friedmann, Vienna, Austria. Filed Feb. 28, 1929, Serial No. 343,420, and in Austria Mar. 10, 1928. 6 Claims. (Cl. 122—458.)



1. An arrangement for supplying feed water to locomotive boilers, comprising a hot water storage tank, a cold water tank, a distinct and separate feeding path leading respectively from each of said tanks to the boiler, a feeding device which when supplied with live steam feeds the water from the hot water storage tank over one of the said feeding paths into the boiler, a second feeding device which when supplied with live steam feeds the water from the cold water tank over the second of said feeding paths into the boiler, and members controlled automatically by the pressure in the valve chest of the engine which depends from the position of the locomotive regulator, said members controlling the admission of live steam to said feeding devices, live steam being admitted to the first named feeding device only when the locomotive regulator is closed and live steam being admitted to the last named feeding device only when the locomotive regulator is open.

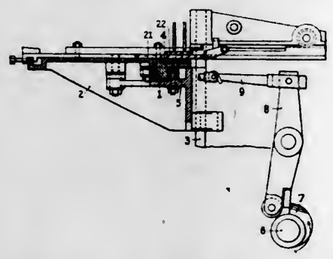
1,903,697. BOILER FEED APPARATUS WITH EXHAUST STEAM PREHEATER. HANS DEUTSCH, Vienna, Austria, assignor to Firm: Alex Friedmann, Vienna, Austria. Filed Jan. 6, 1930, Serial No. 418,909, and in Austria Jan. 8, 1929. 14 Claims. (Cl. 122—458.)



1. In a boiler feed apparatus particularly for locomotives provided with working cylinders and a regulator controlling the supply of steam to the same, a cold water tank and a feeding device cooperating therewith capable of feeding water from said cold water tank into the boiler, means adapted to start and stop said feeding device and controlled by said locomotive regulator in such a manner that the feeding device can deliver only when the regulator is open, a hot water tank to collect water heated by exhaust steam from the cylinders, a feeding device capable of feeding said hot water from the hot water tank into the boiler, means adapted to start and stop the last named feeding device and controlled by the locomotive regulator in such a manner that starting of this feeding device is possible only when said regulator is closed, and further means comprising a hand operated valve controlling the steam flow along a path to which steam is admitted only when the locomotive regulator is closed, said steam operating the feeding device which feeds water from the cold water tank into the boiler.

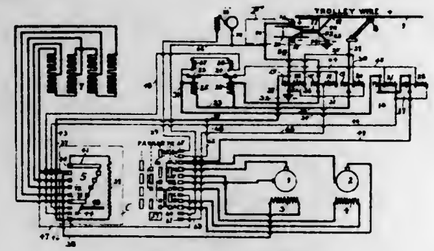
1,903,698. SPINDLE FOR WIRE COVERING MACHINES. EUGEN DOWALD, Wuppertal-Elberfeld, Germany. Filed June 24, 1930, Serial No. 463,408, and in Germany Feb. 7, 1930. 2 Claims. (Cl. 308—169.)

1. In a spindle for wire covering machines, a stationary supporting shaft having a peripheral channel adjacent its lower end and provided with longitudinal grooves extending upwardly from the channel to the top of the shaft, a short sleeve on said shaft covering the channel and the lower portions of the grooves, an oil connection carried by the short sleeve and communicating with said channel, a ball bearing on said shaft immediately above said short sleeve and having an inner race fitting the shaft and forming an outer wall for said grooves immediately above the short sleeve, a long sleeve fitted on the shaft and extending from the ball bearing to the top of the shaft, an extension on the upper end of the shaft, a second ball bearing engaged on the extension, and a hollow spindle adapted to support a bobbin and supported on said bearings in spaced relation to said sleeves and extension.



1,903,699. AIR OPERATED VEHICLE CONTROL. CARL A. JOHANSSON, Gottenborg, Sweden. Filed May 15, 1929. Serial No. 363,153. 2 Claims. (Cl. 60—18.)

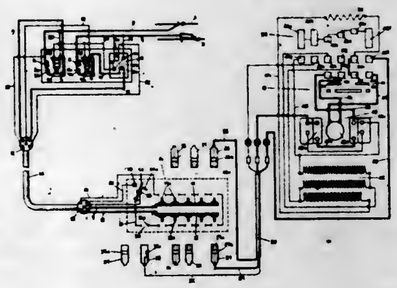
1. In combination with an engine and a combined compressor and starting motor and an air storage tank, a clutch between the engine and combined compressor and



starting motor, an air inlet pipe establishing communication between the atmosphere and the intake manifold of said compressor and starting motor, an air outlet pipe leading from the exhaust manifold thereof, a branch pipe extending from said air outlet pipe and communicating with said storage tank, a check valve in said branch pipe, clutch operating means including a pair of aligned cylinders, pistons operating therein, a piston rod connecting said pistons, valve controlled communication between the storage tank and one of said cylinders, and an exhaust pipe leading from the other of said cylinders and communicating with said air inlet pipe.

1,903,700. NAILING MACHINE. HERMANN KRUSE, Bremen-Sebaldsbruck, Germany. Filed July 8, 1930, Serial No. 466,548, and in Germany July 22, 1929. 2 Claims. (Cl. 1—15.)

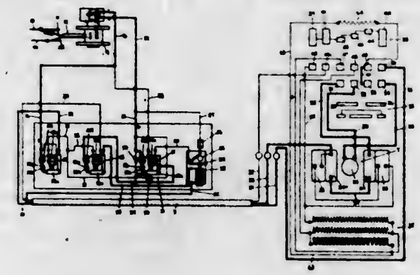
1. The combination with a nailing machine provided with means for placing wood to be nailed thereon, of mechanism for bending the end of a nail driven through a board comprising an anvil adapted to engage the ends of the nails driven through the wood and to bend the same, means for moving said anvil in a direction parallel to the length of the board, and means for slightly moving the anvil transversely of the said direction.



1,903,701. ELECTRIC EQUIPMENT FOR MINING MACHINES. NILS D. LEVIN and JOHN S. BELTZ, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 18, 1928. Serial No. 313,323. 9 Claims. (Cl. 172—179.)

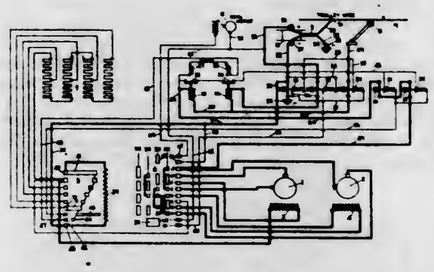
1. In a motor control system, a motor, a controller including a commutating cylinder, a resistance unit, contact portions on said cylinder cooperable with associated stationary contact fingers to cut in or out sections of said resistance unit to vary the currents applied to said motor, the extreme ones of said contact portions being in contact with their associated contact fingers in the zero position of the cylinder and all of said contact portions being interconnected and disposed to maintain a closed resistance circuit at the controller in all positions of the cylinder, a main line switch remote from the controller, and means operated in dependence upon movement of the cylinder from zero position and prior to the initiation of commutating action to close said line switch and maintain it closed as the cylinder is moved in either direction throughout its commutating positions.

3. In a motor control system, a motor, a controller including a commutating cylinder, a resistance unit, contact segments on said cylinder cooperable with associated stationary contact fingers to cut in or out sections of said resistance unit to vary the current supplied to said motor, a contact segment on the cylinder adapted to engage a main line contact finger in all positions of the cylinder, all of said segments being interconnected and so disposed as to maintain a closed resistance circuit at the controller in all positions of the cylinder, a main line switch, electro-magnetic means for closing said switch, a circuit for energizing said electromagnetic means, an overload relay including a coil interposed in the main line and a switch member in said energizing circuit, an electro-magnetic reset device for said relay, a contact segment on said cylinder and a fixed contact finger brought into contacting relation upon initial movement of said cylinder from zero position to complete a circuit to said reset device, and a contact segment on said cylinder and a fixed contact finger brought into contacting relation upon further movement of said cylinder to complete said energizing circuit before the cylinder reaches its first commutating position.



1,903,702. ELECTRICAL CONTROL SYSTEM FOR MINING MACHINERY. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 3, 1929. Serial No. 411,334. 5 Claims. (Cl. 175—298.)

1. In apparatus of the class described, a junction box comprising a pair of bus bars, plugs engageable with said bars; each of said plugs comprising a body of insulating material, a conductor extending longitudinally of the body for connection with a bar, and a conductive strip extending between external points of the body and insulated thereby from the conductor; a second conductor having a plurality of gaps therein bridged by the conductive strips when the plugs are engaged with the bars, and dummy plugs each comprising an insulating body and a conductive strip extending between external points of the body, said dummy plugs being disposable in any of said second conductor gaps not filled by the first-described plugs to bridge such gaps by means of their conductive strips.

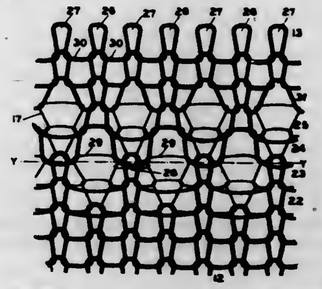


1,903,703. ELECTRIC EQUIPMENT FOR MINING MACHINES. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 3, 1929. Serial No. 411,335. 12 Claims. (Cl. 172—179.)

1. In apparatus of the class described, an electric motor mounted on a grounded movable metallic support, a base in the vicinity of which the support is movable, an electrical supply line leading to the base, a flexible supply cable for the motor extending between the base and support, a controller on the support having contacts inter-

posed in the negative lead of said supply cable, and a circuit breaker at the base interposed in the positive side of the line.

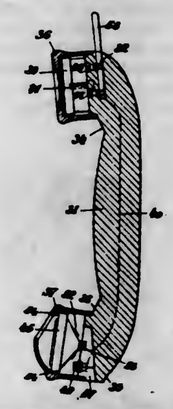
1,903,704. ELECTRIC EQUIPMENT FOR MINING MACHINES. NILS D. LEVIN and JOHN S. BELTZ, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Oct. 18, 1928, Serial No. 313,323. Divided and this application filed Dec. 4, 1929, Serial No. 411,654. Renewed Mar. 19, 1932. 16 Claims. (Cl. 191—8.)



1. In an apparatus of the class described, the combination with a metallic frame normally connected with one side of an electric supply circuit, of a motor mounted thereon, a trolley mounted on said frame and adapted to contact with a conductor of the opposite side of said electric supply circuit, means to connect one side of said motor with said trolley, means to connect the other side of said motor with said frame, means connected between said motor and said frame to control the actuation of said motor, means connected between said motor and said trolley and controlled by said controlling means to interrupt the flow of current to said motor, a pair of conductors adapted respectively to be connected with the opposite sides of said electric supply circuit, and means to transfer the connections of said connecting means from said trolley and said frame to said conductors as and for the purpose set forth.

1,903,705. PRODUCTION OF CARBON OF HIGH ACTIVITY AND COVERING POWER. YASUJURO NIKAIDO, Bay City, Mich. Filed Jan. 10, 1930. Serial No. 420,020. 14 Claims. (Cl. 252—3.)

1. The process of making a carbon of high activity and covering power comprising treating a liquor having present water soluble carbonaceous material and containing potential volatile components with a strong potential volatile components with a strong mineral acid in a quantity sufficient to liberate the said volatile components and to prevent expansion of the material during drying and carbonization, drying at a temperature insufficient to carbonize, and thereafter carbonizing in the presence of a flux fusible at the carbonization temperature.



10. The process of making a carbon of high activity and covering power comprising concentrating a liquor containing water soluble carbonaceous material, mixing therewith a sufficient quantity of a sulphur containing gas producing agent functioning to produce sulphur containing gas during the carbonization step and thereby increase the porosity and activity of the resulting carbon, adding a strong mineral acid in a quantity sufficient to liberate volatile components and prevent the expansion of the material during drying and carbonization, drying the reaction product at a temperature insufficient to carbonize the same, and thereafter carbonizing in the presence of a flux fusible at the carbonization temperature.

1,903,706. KNITTED FABRIC. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Mar. 25, 1932. Serial No. 601,204. 7 Claims. (Cl. 66—173.)

6. A weft knit stocking having a folded welt with a picot edge formation at the upper edge of said welt, said formation being composed of a plurality of courses each having a plurality of yarns, including one yarn heavier than another, the heavier yarn being floated in recurrent wales in a plurality of said courses and the stitch in the adjacent wale in one of said courses being knit of all the yarns.

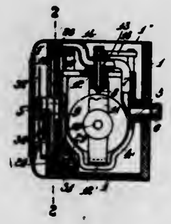
1,903,707. TELEPHONE. KARL PAREL, Vienna, Austria, assignor to Telephon- und Telegraphenfabriks-A. G. Kapsch U. Söhne, Vienna, Austria, a Company of Austria. Filed July 22, 1930, Serial No. 469,865, and in Germany May 5, 1930. 2 Claims. (Cl. 179—103.)

1. A micro-telephone of pressed material, comprising a handle with raised, flat extensions at either end of the

handle, with easily accessible terminals, contact pins and contact springs for transmitter and receiver on the flat faces of the said extensions and with deeply recessed, box-shaped caps which are screwed on to the said extensions and completely surround the transmitter and the receiver.

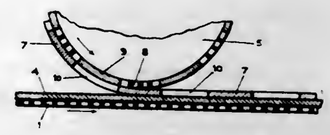
1,903,708. PROCESS FOR MANUFACTURING VAT DYESTUFFS OF THE PERYLENE SERIES. ALFRED PONGRATZ and ALOIS ZINKE, Graz, Austria, assignors to Felice Bensa, Genoa, Italy. Filed Apr. 6, 1929, Serial No. 353,249, and in Austria Jan. 9, 1929. 12 Claims. (Cl. 260—60.)

7. As a new article of manufacture, a vat dye stuff comprising a compound of the following formula:



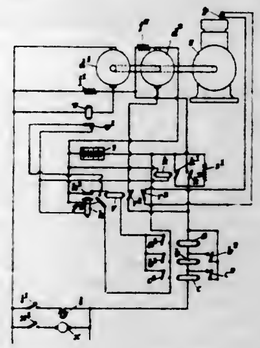
where —NH—R is an amino substitution product of a compound selected from the following group:—anthraquinone, perylene quinone.

1,903,709. TIGHTENING COMPOSITION. MURK JAN SCHOEN, Zaandam, Netherlands. Filed July 11, 1931, Serial No. 550,290, and in the Netherlands July 14, 1930. 4 Claims. (Cl. 106—8.)



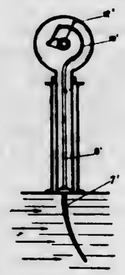
1. A tightening composition for use in fixing-in panes of glass in window frames, tightening of fissures and like purposes, consisting in a homogeneous mixture of two separate pastes to wit: as the first paste a mixture of a water insoluble carbonate, a drying oil, a polyvalent alcohol and a plastifying means; as the second paste a mixture of litharge and water.

1,903,710. GYROSCOPICALLY STABILIZED PENDULUM. ERICH STÖHR, Berlin, Germany, assignor to The Firm Gyrorector G. m. b. H., Berlin, Germany. Filed Nov. 29, 1927, Serial No. 236,576, and in Germany Dec. 2, 1926. 3 Claims. (Cl. 33—204.)



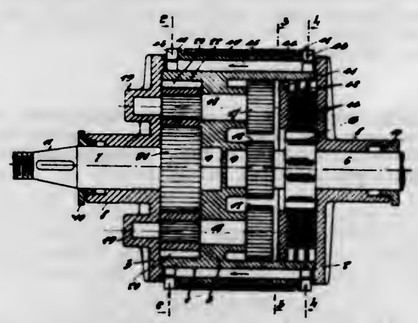
1. In a direction and curve indicator for a moving body, a gyroscope, a support constituting a pendulum and rotatable about a horisontal axis in the body, a frame for supporting the gyroscope for spinning said frame and gyroscope being rotatable about a vertical axis on the support, the respective axes of rotation being disposed at right angles to each other, a pneumatic impulse device, means connecting the impulse device and support for resisting rotation of the support, means for conducting fluid under pressure to the impulse device, and means operated by the precession of the gyroscope and frame, and mounted directly on the indicator pendulum for controlling the flow of fluid to the impulse device.

1,903,711. MANUFACTURE OF DUPLEX OR MULTIPLEX PAPER WITH DIFFERENT APPEARANCE ON VARIOUS SPOTS. REINHOLD M. WENDEL, Hafverud, Sweden, assignor to Aktiebolaget Papyrus, Molndal, Sweden. Filed May 14, 1931, Serial No. 537,447, and in Sweden Apr. 21, 1931. 6 Claims. (Cl. 92—39.)



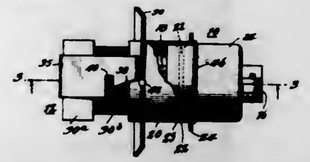
1. A method of making paper having transparent portions, consisting in forming a layer of transparent paper stock, forming a second layer of non-transparent paper stock, applying one layer upon the other layer and felting the two layers together to form a compound paper web, and finishing said paper web.

1,903,712. AUTOMATIC ELECTRIC CURRENT GENERATING APPARATUS. JOHANN HERMANN ARBINK SPAINK, West Smethwick, England, assignor to Chance Brothers and Co. Limited, West Smethwick, England. Filed Oct. 29, 1931, Serial No. 571,915, and in Great Britain Nov. 4, 1930. 8 Claims. (Cl. 290—30.)



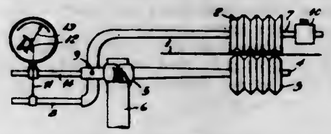
1. In automatic electric current generating apparatus of the kind specified, the combination of a generator consisting of a pair of parts, one of which is adapted to serve as an engine starting motor and to supply current to a low voltage battery which is permanently connected to the distributing circuit and to the said part of the generator, the two generator parts being adapted to operate jointly for supplying current at a higher voltage than that of the battery to the distributing circuit, and means responsive to a current flowing in the distributing circuit for connecting the two parts of the generator to the said circuit and the low voltage part to the battery, substantially as described.

1,903,713. DYNAMOMETRIC LOG. MARIE EMILE ALFRED BAULE, Chaville, France. Filed Mar. 14, 1930, Serial No. 435,935, and in France Mar. 16, 1929. 8 Claims. (Cl. 73—122.)



1. A device for measuring the instantaneous speed of a fluid with reference to the device, especially suitable for ship logs, comprising an indeformable tube whose cross-section is elliptically shaped having an end adapted to penetrate into the fluid, a resilient blade adapted to be bent by the fluid pressure, means to secure one end portion of said blade to the end of said tube which is adapted to penetrate into the fluid, a device for indicating the instantaneous speed; and means extending through said tube and connecting said device and said blade and adapted to transmit movements of the blade to the device.

1,903,714. SYSTEM FOR THE TRANSMISSION OF ROTARY MOTION. PASTOR J. FRIAS, CLEMENTE JONES, and MARCELO CHEBU, Buenos Aires, Argentina. Filed Mar. 7, 1932. Serial No. 597,582. 5 Claims. (Cl. 74—84.)

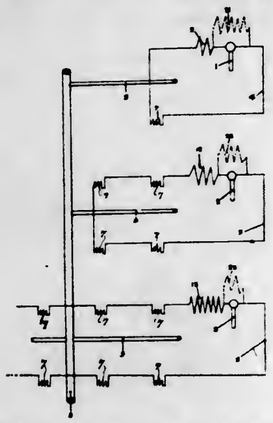


1. Transmission apparatus for rotatory motion, comprising a cylindrical tight case for containing and supporting the mechanism, provided with a transverse partition, a driving shaft extending axially into said case up to the transverse partition, a driven shaft extending axially into the opposite part of said case, a central pinion on each shaft in the interior of said case, planetary shafts which extend through said partition, planetary pinions integral with said shafts which extend through said partition, compensating pinions suitably supported for engaging with the driving pinion and said planetary pinions, planetary pinions integral with the shafts of the aforesaid planetary pinions and in engagement with the central pinion of the driven shaft, a housing snugly fitting against the sides and periphery of the last mentioned planetary pinions and central pinion, forming together with the same a gear pump, passages for the fluid to be pumped between the forcing side and the suction side of the pump, a cylindrical opening parallel to the axis of the housing at each passage for the fluid, a stationary sleeve in said opening, provided with orifices on the forcing side, a piston sliding within said sleeve, provided with annular grooves, the position of which in relation to said orifices allows of controlling the flow of the fluid, a rod extending from said piston outside the housing, a stuffing box on each rod, an annular disk, perpendicular to and concentrical with the shaft of the case, to which are secured the piston rods, means for operating from outside said disk, so as to move the same in a parallel direction to the case, and means for braking said cylindrical case.

1,903,715. ELECTRICAL CONNECTER. EMIL A. HORN, Jamaica, N. Y., assignor to Russell & Stoll Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1931. Serial No. 526,072. 8 Claims. (Cl. 173—330.)

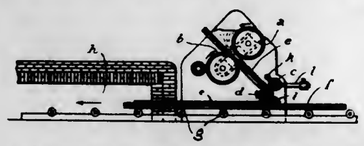
7. An electric connecting device, a receptacle comprising an insulating body, contacts on said body, a face plate, a strap supporting said body from said plate, said plate having an aperture with a radial recess, said contacts being accessible through said aperture, said strap having a cam surface adjacent said recess and having a slot at the end of said cam surface, in combination with a plug connectible with said receptacle, said plug comprising an insulating body, a sleeve thereon, said sleeve being capable of limited rotary motion relative to said body, a spring tending to rotate said sleeve relative to said body, and a pin on said sleeve adapted to cooperate with said cam surface and slot and to automatically lock said plug and receptacle together when they are fully connected.

1,903,716. MOISTURE INDICATOR FOR PAPER MAKING MACHINES AND PULP COLLECTING MACHINES AND IN SIMILAR APPARATUS. TORSTEN KÄLLS, Saffle, Sweden. Filed Feb. 9, 1928, Serial No. 253,195, and in Sweden Apr. 12, 1927. 3 Claims. (Cl. 73—51.)



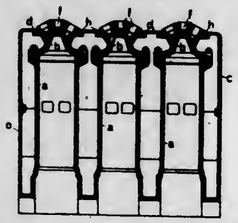
1. In means for indicating the degree of moisture of a travelling web of material the combination of a cylindrical member presenting a grooved surface and rotatably mounted on a stationary support, a shiftable rotatable cylindrical member presenting a grooved surface, said members being located opposite to one another and at opposite sides of the web, the members being so positioned one with respect to the other that the grooves of one are opposite the ridges of the other, means forcing the shiftable member toward the first mentioned member so that the position of the shiftable member is dependent on the moisture of the web, an indicating device, and means for transmitting the motion of the shiftable member to the said device.

1,903,717. HEAT CONSUMPTION METER. AAGE LANGKILDE LARSEN, Copenhagen, Denmark. Filed Aug. 12, 1925, Serial No. 49,857, and in Denmark Aug. 21, 1924. 2 Claims. (Cl. 73—184.)



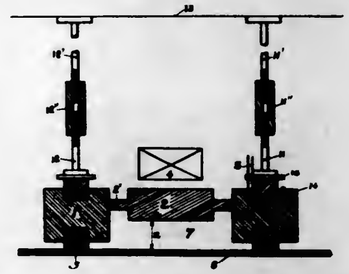
1. In a central heating system, a heat installation unit, an electric heat measuring device for said unit, a thermo-

electric element in circuit with said measuring device, said element being responsive to differences in temperature between said unit and the surrounding air for generating the



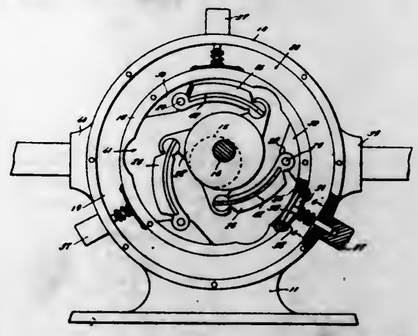
current passing through said measuring device, and a resistance element interposed in said circuit, the resistance of said resistance element being proportional to the volume of space to be heated by said unit.

1,903,718. PROCESS AND APPARATUS FOR PRINTING GLASS SHEETS. CLAUDE LOCRILLE, Fauques, Belgium. Filed Mar. 27, 1930, Serial No. 439,516, and in Belgium Mar. 28, 1929. 3 Claims. (Cl. 49—33.)



2. In apparatus for printing glass sheets, the combination of a glass rolling train, an annealing furnace, a movable table, a track for said table extending from under said rolling train to said annealing furnace, said glass rolling train comprising an upper pair of rolls and a lower pair of rolls, said lower pair comprising an upper printing roll and a lower smooth roll, and means for guiding a sheet of glass from said rolling train to said table through an angle of more than 90° whereby one side of the sheet will successively come into contact with said printing roll and with said table.

1,903,719. MULTICYLINDER INTERNAL COMBUSTION ENGINE. EUGEN MANDLER, Vienna, Austria, assignor to the Firm Climax Motorenwerke und Schiffswerft Linz A. G., Vienna, Austria. Filed Feb. 27, 1929, Serial No. 343,192, and in Austria Nov. 6, 1928. 3 Claims. (Cl. 123—173.)

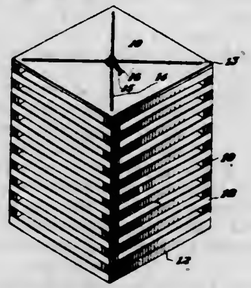


1. In a multi-cylinder internal combustion engine of the two stroke cycle type, a cylinder block comprising a plurality of cylinders open at their upper ends and cast together in one piece, said cylinders having their upper ends exposed to heat extending freely, so as to be capable of expanding without constraint under the action of heat, and separate cylinder heads secured to the said cylinders, as and for the purposes set forth.

1,903,720. EMITTING OR RECEIVING VIBRATION DEVICE FOR SUBMARINE SOUNDING. PIERRE AUGUSTE DANIEL MARTI, Montbeliard, and CHARLES FREDERIC MARIE BERTIN and ALBERT EMILE GUSTAVE NANDILLON, Toulon, France. Filed Sept. 30, 1931, Serial No. 566,134, and in France Oct. 8, 1930. 8 Claims. (Cl. 181—0.5.)

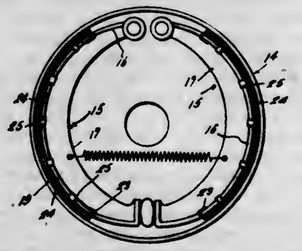
1. In a device for submarine sounding on board of a ship by means of vibrations reflected from the bottom of the sea, comprising a chamber opened on one face, said face bearing against the ship's hull below the water line, a liquid filling said chamber, a vibrating wall on said chamber and in contact with the said liquid, means for fluid tightly insulating the hull from the walls of the said chamber, said means being resilient and damping, attaching means comprising resilient damping devices between the ship and the chamber, both insulating and attaching means being arranged so as to prevent the vibrations to be transmitted to the vibrating surface otherwise than through the liquid.

1,903,721. PUMP. ELVIN R. MUNN, Humansville, Mo., assignor to The Munn Corporation, a Corporation of Missouri. Filed Sept. 26, 1931. Serial No. 565,355. 1 Claim. (Cl. 103—132.)



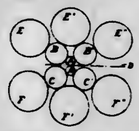
A rotary pump of the class described comprising a pair of circular end members each having a circular recess in the center of its inner face, and a rim part fastened to the marginal portion of the end members, a cylinder fixed in the casing and having its ends closed by a portion of said end members, said cylinder being spaced circumferentially from the rim part of the casing, a circular partition between the rim part and said cylinder and dividing the space between the cylinder and the casing into an intake manifold and an exhaust manifold, said cylinder having a plurality of pairs of ports therein, one port of each pair

CARNEGIE LIBRARY OF ATLANTA



communicating the cylinder with the intake manifold and the other port of each pair connecting the cylinder with the exhaust manifold, spring actuated valves controlling said ports, a pair of disks located in the circular recesses in the end members, a pin having its end eccentrically attached to said disks, a drive shaft connected to one of the disks, a number of disks concentrically arranged on the pin with the outermost disks having their outer faces contacting the inner faces of the end members and portions of the inner faces of the first named disks, an elongated hinge shoe having a portion integrally connected to a part of the periphery of each of the second mentioned disks, each shoe having its ends abutting the end members and each shoe having a substantially semi-circular recess at its forward face, which extends throughout the length of the shoe, inwardly extending lugs on the inner periphery of the cylinder of the same length of the shoe having substantially semi-circular recesses therein, substantially arc-shaped piston members having substantially circular enlargements at their side edges, one enlargement of each piston member fitting in the recess in a shoe and the other enlargement fitting in the recess of a lug, the other edges of said piston member engaging the inner faces of the end members and having packing means thereon.

1,903,722. CRATE. ANDREW J. MERRITT, Walsenburg, Colo. Filed Feb. 18, 1931. Serial No. 516,794. 1 Claim. (Cl. 217—36.)

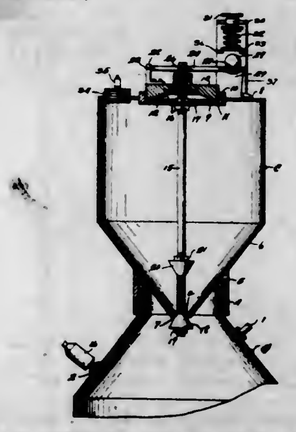


A crate comprising a plurality of bars each having openings at the end portions thereof, the bars being assembled to form the walls of a structure angular in cross section, wherein the corners include the end portions of the bars at an angle with each other, and flexible devices engaging the end portions at the respective corners, the flexible devices passing through the openings of the bars, being connected with each other at the upper portion of the structure, and secured to the lower portion thereof.

1,903,723. MECHANICAL FRICTION BRAKE ENSEMBLE. FRANK C. PALMER, West Palm Beach, Fla. Filed Sept. 22, 1932. Serial No. 634,898. 4 Claims. (Cl. 188—234.)

1. As a new article of manufacture, a brake unit of the class described comprising a lining formed along opposite longitudinal edges with keeper notches and formed at opposite ends with retention seats, and a backing element of measurement commensurate with the lining, said backing being provided along opposite longitudinal edges with bendable ears bent into said keeper notches, and alternate bendable ears adapted to be bent in opposite directions to be secured to a brake band or shoe, said backing being formed at opposite ends with abutment lips adapted to be bent against the end portions of the lining and into said seats and further formed at said opposite ends with elongated tongues adapted to be bent over the adjacent end portions of the shoe or band.

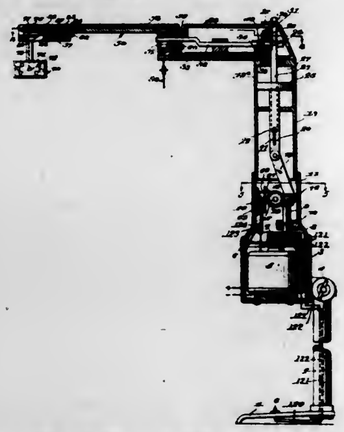
1,903,724. MULTIHIGH ROLLING MECHANISM. WILHELM ROHN, Hanau-on-the-Main, Germany. Filed July 15, 1931. Serial No. 550,922, and in Germany July 29, 1930. 11 Claims. (Cl. 80—38.)



1. A rolling mechanism comprising a pair of operating rolls adapted to engage the opposite faces of the work, a plurality of primary supporting rolls bearing against each of said operating rolls and located at opposite sides thereof, beyond the plane of the work and tangent to the operating roll at points beyond the center lines of the latter, and a plurality of secondary supporting rolls bearing against the primary supporting rolls.

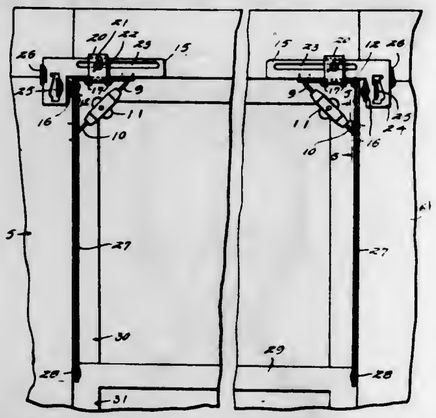
1,903,725. ROAD GUARD. JAMES T. SWEENEY, Scranton, Pa., assignor to Sweeney Bros., Scranton, Pa., a Corporation of Pennsylvania. Filed Apr. 11, 1932. Serial No. 604,570. 8 Claims. (Cl. 256—13.1.)

1. In a road guard for highways, a guard rail adapted to extend lengthwise of the highway at one side thereof, and comprising a continuous smooth surfaced ribbon of metal curved transversely of itself throughout its entire width to present a concave surface to the highway.



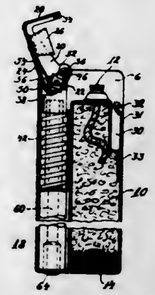
1,903,726. AUTOMATIC FEED CONTROL FOR CARBIDE GENERATORS. LESLIE M. WISE, McKeesport, Pa. Filed Feb. 6, 1933. Serial No. 655,505. 8 Claims. (Cl. 48—53.3.)

1. In a carbide generator, a carbide hopper having a discharge opening, a controlling valve for said opening,



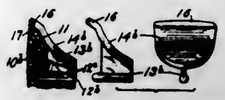
means for supporting said valve for movement toward or from the opening, means for holding the valve open until the pressure of the generator passes a predetermined degree, said means including a movable member, and a weighted member freely engaged with said movable member and having movement in any direction from its mounting on the member, said weighted member readily leaving the movable member upon undue lateral movement of the generator.

1,903,727. LEAF TURNER. ERNST BARTELS, Bandoeng, Java, Dutch East Indies. Filed May 14, 1930. Serial No. 452,368. 9 Claims. (Cl. 84—519.)



2. In a leaf turner a supporting structure, an arm swingably mounted on said structure, a leaf engaging member swingably mounted on said arm, vacuum controlled means connected to operate said member and the arm, electric means under the control of an operator for producing and releasing the vacuum whereby said member and arm may be swung in one direction on the forming of the vacuum, and means automatically operable on the release of the vacuum for moving the member away from the leaf and for resetting the leaf engaging member.

1,903,728. SUPPORT FOR SHADE ROLLERS AND CURTAIN AND DRAPERY RODS. DAVID FIRESTONE, Canton, Ohio. Filed Nov. 7, 1931. Serial No. 573,684. 2 Claims. (Cl. 156—24.)

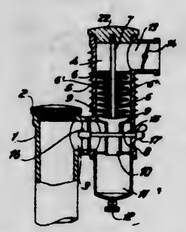


2. A support as set forth comprising in combination, an L-shaped bracket, prongs adjacent the end of each leg of the bracket, a turnbuckle disposed between the ends of the bracket legs, movement of the turnbuckle in one direction spreading the free ends of the legs apart and forcing the prongs into the confronting face of a window frame, a depending member secured to one of the legs of the bracket and having a laterally offset portion engaging about one end of the turnbuckle, and a shade bracket carried by one end of said member.

1,903,729. CIGAR LIGHTER. IRVING FLORMAN, New York, N. Y. Filed Jan. 20, 1933. Serial No. 652,743. 1 Claim. (Cl. 67—7.1.)

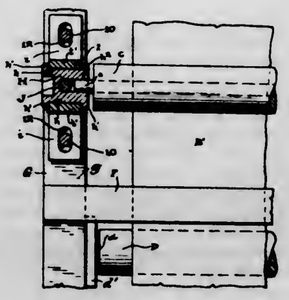
A cigar lighter comprising a casing having spaced, parallel quadrilateral rectangular side walls of substantially the same size and shape as the end wall of a package of cigarettes, lighting mechanism between said side walls including a wick located at a point below the upper edges of the side walls and a snuffer movable to cover and uncover the wick, said snuffer having a flat top surface which, when the snuffer is in covering position, lies substantially flush with the top edges of the side walls, and a tongue secured at its upper end to one of said side walls at its top, said tongue extending downwardly substantially parallel to but slightly spaced from the side wall, said tongue being of substantially the same width as said side wall, whereby to support the lighter on the end wall of a package of cigarettes when the tongue is inserted into the package with the end wall of the package between the tongue and the side wall of the lighter.

1,903,730. DIVISIBLE TOOTH. ROBERT HAMILTON GILLESPIE, Little Rock, Ark., assignor to The Columbus Dental Manufacturing Company, Columbus, Ohio, a Corporation. Filed July 1, 1924. Serial No. 723,500. 6 Claims. (Cl. 32—9.)



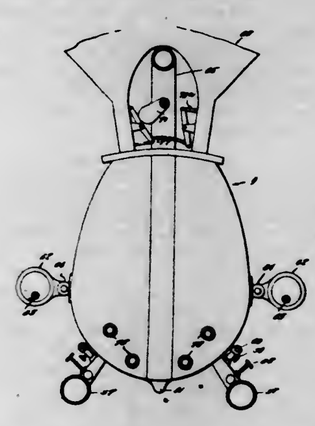
1. The divisible tooth which includes a tooth-body and a cusp-plate; the tooth-body being formed with a forwardly and upwardly inclined surface, a slot intersecting said surface and being open through the rear side of the tooth-body, and a cylindrical bore through said rear surface and extending forward and being in open communication with said slot; the said bore being substantially horizontal, so it is in diverging relation to said forwardly and upwardly inclined surface; said cusp-plate being provided with a cylindrical part to slide and fit in said bore, and a plate to slide and fit in said slot, this plate being thinner than the diameter of said cylinder and serving to unite the latter with the cusp-plate in such relation that the cusp-plate fits on said upwardly inclined surface when the said plate and cylinder are fitting in said slot and bore.

4. An artificial tooth comprising a tooth-body having an inclined occlusally directed end surface provided with an undercut recess directed forwardly in angular relation to said surface, and a cusp structure arranged to support said tooth body and having a similarly directed inclined surface provided with means arranged to so interlock with said recess as to tend to maintain said surfaces wedgedly engaged.



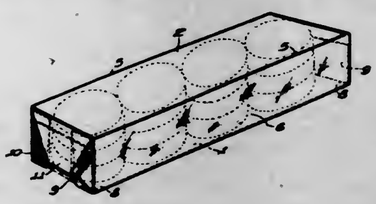
5. An artificial pontic tooth body having a root extension and having in its occlusally directed end surface an undercut socket comprising a slot, terminating away from said surface in a broadened recess inclined with respect to said surface.

1,903,731. PURIFICATION OF LUBRICATING OIL. ANGELA GASTÓN and ESTANISLAO BOODANY, Barcelona, Spain. Filed Apr. 18, 1931, Serial No. 531,150, and in Spain Feb. 7, 1931. 2 Claims. (Cl. 123—119.)



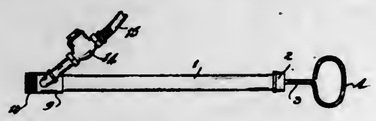
1. An apparatus for the purification by condensation of lubricating oil in the crank casings of internal combustion engines, comprising a cylindrical condenser casing provided at one end with a lateral outlet for connection to a suction pipe and at the other end with a lateral inlet for connection to a vent in the crank casing, and an open lower end formed with an annular seating, an axial support within said casing, a plurality of baffle plates disposed in series on said axial support, and a receptacle for water and impurities condensed from the air passing through the casing, said receptacle being fitted to said seating.

1,903,732. CONVEYER. JOHN C. WALTER and RUDOLPH VOGT, Cincinnati, Ohio, assignors to The Alvey-Ferguson Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 9, 1930. Serial No. 474,221. 14 Claims. (Cl. 198—127.)



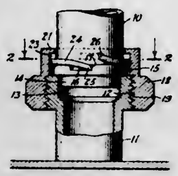
3. A bearing means for the end of a conveyer roller, said bearing means comprising a first member and a second member slidably mounted in the first member, together with means cooperating with the first member for supporting the second member and for fixing the latter in the position to which it has been set in said first member; said second member having a block-like body, two of whose opposite sides are formed with substantially broad channels and one of whose remaining sides is formed with an opening to receive an axial projection from the corresponding end of the roller; the first member having spaced flat sides which are fitted to the channels in the sides of the second member and a top member which overlies the top of said second member, said sides also having, at their lower ends, elements, including lateral flanges, for securing the bearing means in position; said supporting and fixing means including an element extending from the upper end of the second member through the top of the first member and provided with means operative thereon to adjust the second member and to hold the same in adjusted position.

1,903,733. SMELTING PROCESS AND APPARATUS. JAMES MADISON LIVELY, Gold Hill, Oreg. Filed Aug. 1, 1931. Serial No. 554,542. 5 Claims. (Cl. 266—24.)



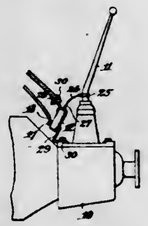
1. A smelting furnace, comprising, an elongated horisontally disposed furnace structure having by-products outlets, a hopper on its upper side at one end, a partition in the hopper defining separate fuel and ore receiving chambers, valve means for controlling the introduction into the furnace of the fuel and ore introduced into the hopper, rocking support means for the said furnace, said furnace being adapted to be rocked on its longitudinal axis, from side to side.

1,903,734. TRANSPARENT COVERED TRAY. TRUE M. AVERY, Glens Falls, N. Y., assignor to Union Bag & Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed Mar. 18, 1931. Serial No. 523,615. 3 Claims. (Cl. 206—44.)



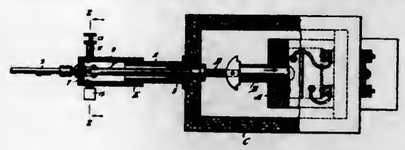
1. A display tray comprising a bottom composed of a strip of relatively stiff material having its ends bent upwardly, and a cover composed of a strip of transparent material of the same length as said strip of stiff material and having its longitudinal edges secured to the longitudinal edges of the bottom and forming an interior chamber between it and said bottom, and having ends folded against the outer sides of the upwardly bent ends of the bottom.

1,903,735. PIPE WASHING AND CLEAN OUT PUMP. ERNEST KRIEGER, Winnipeg, Manitoba, Canada. Filed Dec. 27, 1929, Serial No. 417,011, and in Canada July 29, 1929. 1 Claim. (Cl. 4—256.)



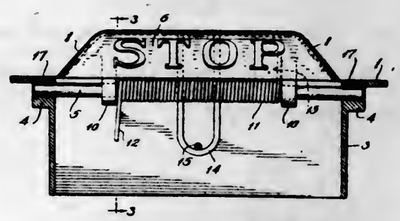
A pump for removing obstruction in a sewerage system having a vent pipe communicating with the system on the side of the obstruction opposite to the sewer discharge, comprising a cylinder adapted to be attached to a sewerage discharge pipe at the side of the obstruction opposite to the sewer and at all times in communication with the discharge pipe, a plunger tightly fitting the cylinder and boldly reciprocal therein, a piston rod for operating the piston, a liquid supply pipe communicating with the discharge end of the cylinder below the piston and a check valve in the supply pipe and opening in the direction of the pump.

1,903,736. NONREUSABLE COUPLING. JOHN J. LAUSTER, St. Albans, N. Y., assignor to George T. Ritchings, Maplewood, N. J. Filed Mar. 11, 1932. Serial No. 598,227. 5 Claims. (Cl. 285—120.)



1. The combination with a pair of members to be coupled, of a non-reusable coupling movable in one direction with reference to said members to effect coupling thereof and cooperative means for fracturing the coupling element upon movement in an opposite direction, said means including notched portions of the coupling element in one of said members and a split resilient element interposed therebetween with the opposite ends engageable respectively with the notched portions to lock the same upon attempted movement of the coupling in said opposite direction.

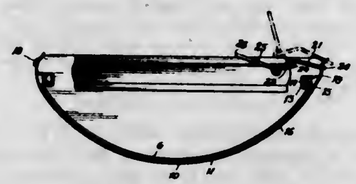
1,903,737. SAFETY SWITCH. FRANCIS MOSCATO, Central Park, N. Y. Filed Sept. 26, 1931. Serial No. 565,374. 7 Claims. (Cl. 200—59.)



1. The combination with a gear shift lever of a motion transmission means; of a safety switch comprising a casing in fixed relation to the lever, a contact within the casing and insulated therefrom and provided with means exteriorly of the casing for connecting the same with a suitable conductor, a contact within the casing and insulated therefrom and movable into and out of engagement with said first contact, and a push and pull flexible element connected with said lever and the movable contact to move the latter into engagement with the first contact in the movement of the lever into its neutral position, and the movable contact being moved out of engagement with said first contact by said element in the movement of the lever into any of its gear shifting positions.

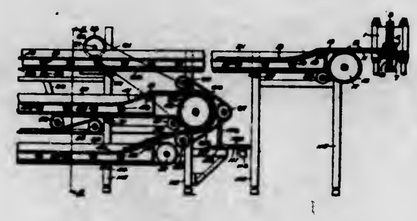
1,903,738. SILENCER AND REGULATOR. HARRY MUNSON, Wantagh, N. Y., assignor to Van Kannel Revolving Door Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 21, 1930. Serial No. 490,307. 2 Claims. (Cl. 188—94.)

1. A device for controlling the operation of an electromagnetically operated element to retard the movement of said element in one direction and to permit of free movement of the same in the opposite direction, said device comprising telescopically associated fixed and movable fluid chamber defining sections, a constantly opened fluid venting means communicating with said chamber and an inwardly opening, outwardly closing check valve controlled intake means communicating with said chamber and a connection between said movable section and said element, said connection extending through the fluid chamber.



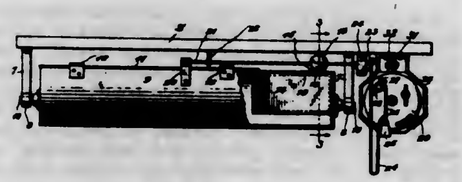
1,903,739. DEPRESSIBLE TRAFFIC SIGNAL. ROBERTS TATLOCK, Gastonia, N. C., assignor to E. E. Groves and George R. Poston, Gastonia, N. C. Filed Mar. 19, 1930. Serial No. 487,215. 9 Claims. (Cl. 40—125.)

1. A signal device of the class described, comprising a base plate in the form of a substantially rectangular frame, adapted to be supported flush with the surface of the road bed, a housing depending from the frame and encircling the opening thereof, a signal member composed of converging relatively long side walls, and converging relatively short end walls, a hinge connection between one of the side walls and the frame, resilient means on said hinge and engaging said frame and one of said side walls to normally support the member with the bottoms of the side walls substantially flush with the base plate, whereby the said member offers an inclined surface to vehicles approaching from any direction, and a stop for limiting the upward movement of the member.



1,903,740. STENCIL PRINTING DEVICE. WILLIAM A. WINTHER, Menominee, Mich., assignor to Edmund P. Smith, Menominee, Mich. Filed Dec. 1, 1931. Serial No. 578,359. 4 Claims. (Cl. 101—125.)

1. In a hand stenciling device, a body having sides cut away to form a handle, means to secure a stencil at one end of the body, cranks pivoted to the said sides at the other end of the body, a clamping member for securing the stencil at the said other end of the body, the clamping member being secured to the cranks, and an operating

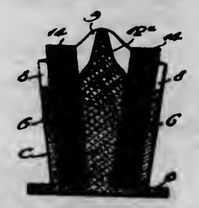


member secured to the cranks and normally disposed at the top of the body with its sides extending at the said cut-away portions of the body to permit of its convenient manipulation.

1,903,741. APPARATUS FOR AND METHOD OF TREATING ASPHALT BLOCKS. ROBERT F. MORRISON, Yonkers, N. Y., assignor to The International Pavement Company, New York, N. Y., a Corporation of Connecticut. Filed Dec. 10, 1929. Serial No. 413,080. 12 Claims. (Cl. 25—1.)

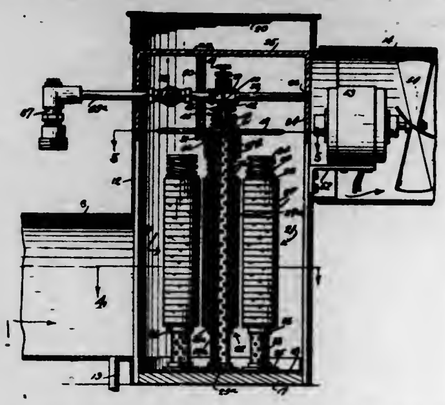
1. Apparatus for treating asphalt blocks delivered from a block forming press comprising means for traversing a row of blocks, said means operative to bend fins at the edges of said blocks for breaking off said fins, said means providing a narrow slot over which said row passes to permit discharge of the broken off fins.

1,903,742. FEEDER AND WATERER. ARTHUR F. BENDEL, Reading, Pa. Filed Jan. 17, 1931, Serial No. 509,513. Renewed Feb. 13, 1933. 4 Claims. (Cl. 119—51.)



1. A device of the class described comprising an elevated horisontal support, brackets secured to and projecting downwardly from said support, the lower ends of said brackets having horisontally alined bearings, a container between said brackets having trunnions engaged with said bearings, said container being provided also with a keeper spaced from the axis of said trunnions, a horisontal rod under said support normally engaging said keeper, said rod, keeper, trunnions and bearings normally supporting said container, said trunnions being positioned to allow tilting of said container to discharge position upon release of said rod, a bearing carried by said support and slidably supporting one end of said rod, a bell crank to which the other end of said rod is pivoted, a bracket carried by said support and carrying said bell crank, and means for moving said bell crank to release said rod from said keeper.

1,903,743. APPARATUS FOR HAIR WAVING. GEORGE DECKER, Cleveland, Ohio, assignor to The Philad Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1929. Serial No. 368,544. 3 Claims. (Cl. 132—36.1.)

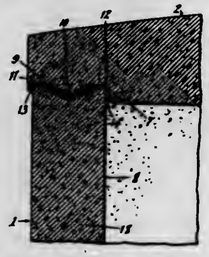


1. Hair waving apparatus including a clamp and a rod, the clamp being arranged to grip a flat strand of hair adjacent the scalp of the wearer and comprising two channel-shaped members having their recessed sides opposed to each other, said members being pivotally connected at one end, a detachable latch connecting said members at the other end, a strip of insulating material secured to the underside of each member, a strip of resilient material received within and extending from the recess of each channel, cradles projecting above and carried by the upper surfaces of said channels, an L-shaped spring having one leg secured to the web of one of said channels and having the other end extending upwardly and provided with a detent, a curler rod of substantially hyperboid of revolution shape provided with a pivoted tongue, and a ratchet formed on said rod adjacent one end and adapted to be releasably retained by said detent.

1,903,744. CARD DECK HOLDER. JULIUS HEUBSER and LESTER TULGREN, Clear Lake, Wis. Filed Nov. 30, 1931. Serial No. 578,132. 8 Claims. (Cl. 273—148.)

1. A holder for two decks of playing cards, comprising an open-topped container having two opposed side walls and two opposed parallel end walls, said side walls having thumb notches in their upper edges, and a vertical partition centrally disposed between said side walls, projecting above the latter and dividing said container into two pockets for card decks, said partition having side portions opposite said side walls and extending from the lower end of the partition to points substantially opposite the lower ends of said thumb notches, the side portions of said partition above said points being curved inwardly and converging upwardly to the upper end of the partition, said notches and inwardly curved portions allowing easy gripping of the decks of cards when removing them from said pockets, said inwardly curved portions also serving to guide the card decks into the pockets.

1,903,745. AUTOMATIC HUMIDIFYING APPARATUS. JAMES J. LAWLER, Mount Vernon, N. Y. Filed Oct. 29, 1931. Serial No. 571,889. 14 Claims. (Cl. 261—39.)

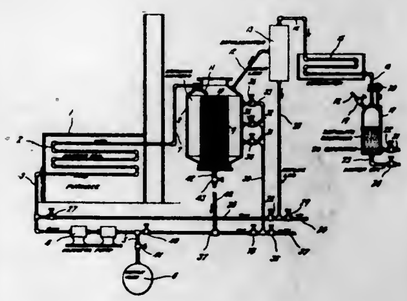


1. Humidifying apparatus comprising means adapted to be saturated with water, water supply means therefor, means for drawing air over the water saturated means and a part of the water saturated means being operable to shut off the water supply means.

1,903,746. NECKTIE SUPPORT. WILLIAM H. LUTZ, San Francisco, Calif. Filed Jan. 28, 1932. Serial No. 589,476. 1 Claim. (Cl. 24—64.)

In a device of the character described, a plate for attachment to a necktie, a shank secured to said plate, a head formed on said shank, a collar button cooperating with said shank, said collar button having a cupped shaped portion, a resilient lining formed in said cup whereby the head of said shank may be inserted in said cup and engaged by said lining.

1,903,747. BURIAL VAULT. ALBERT V. MILNES, West New Brighton, N. Y. Filed July 7, 1932. Serial No. 621,271. 2 Claims. (Cl. 72—7.)



2. A burial vault including a container having a wall with a longitudinal groove at the upper edge, a cover having a recessed portion on the lower surface near the edge, said recessed portion being adapted to fit against said wall with that part of the cover adjacent the inner part of the recessed portion forming a shoulder telescoping over said wall and extending into the container, said cover having a depending bead fitting into said groove, and a sealing medium arranged in said groove positioned to engage said bead, said sealing medium being formed with portions extending over the edges of said wall to present a sealing bead on each edge thereof, one of the sealing beads fitting against said shoulder to provide an inner seal.

1,903,748. ROAD MARKER. WILLIAM H. WOOLUMS and CLYDE B. AMBROSE, Washington, D. C.; said Ambrose assignor to Bulls Eye Road Marker Company, Washington, D. C., a Corporation of Delaware. Filed Apr. 16, 1931. Serial No. 530,620. 8 Claims. (Cl. 88—1.)

1. In a road marker, a translucent body portion, a peripheral retaining ridge coincident with the base portion thereof and forming an extended footing for added support, the upper edge portion of said ridge being rounded to prevent breakage.

1,903,749. ART OF CRACKING AND DISTILLING FUELS. RUSSELL CARTER, Washington, D. C. Filed Feb. 13, 1926. Serial No. 88,100. 11 Claims. (Cl. 196—56.)

1. In the art of recovering values from hydrocarbon containing solids, raising hydrocarbon liquid to cracking temperature while preventing cracking thereof, passing the thus heated liquid into heat transference contact with hydrocarbon solids capable of destructive distillation, and recycling past the heat source and back to the presence of the solids unvolatilized portions of the liquid from which lighter volatile portions have been released, and heating the said liquid while passing the heat source and delivering heat from the said liquid to the solids while in the presence of the solids until the heat balances in the solids are built up sufficiently and the solids are thereby raised to distillation temperature and thereby causing distillation of the hydrocarbon solids, and recovering the resulting mingled vapors.

CARNEGIE LIBRARY OF ATLANTA

Patents Nos. 1,903,750 to 1,904,990

THE OFFICIAL GAZETTE OF THE United States Patent Office

Vol. 429—No. 3 TUESDAY, APRIL 18, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.35; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Transfers of Classes

ORDER No. 3,231

U. S. PATENT OFFICE, *Washington, Jan. 16, 1933.*

The following transfers to take effect at once, are hereby ordered:

Class 294 from Division 1 to Division 4.
Class 260, Subs. 2–8, 10, 100–102, 145, 146, 148, and 152, from Division 6 to Division 50.
Class 216 from Division 17 to Division 53.
Class 287 from Division 19 to Division 46.
Class 17 from Division 25 to Division 2.
Class 123, Subs. 179 and 185, from Division 28 to Division 12.
Class 123, Subs. 142–169, from Division 28 to Division 48.
Class 94 from Division 33 to Division 38.
Class 24 from Division 35 to Division 5.
Class 132 from Division 35 to Division 58.
Class 137, Subs. 99, 112, 71, 90, 77, 75, 76, 78, 79, 73, 72, 91, 100, from Division 39 to Division 52.
Class 150 from Division 40 to Division 62.
Classes 4 and 182 from Division 43 to Division 1.
Classes 221 and 226 from Division 44 to Division 35.
Class 74, Subs. 21, 31, 32, 42, 43, 44, 49, 51, 61, 62, 63, 64, 65, 66, 67, 103, from Division 45 to Division 12.
Class 303 from Division 47 to Division 34.
Class 192, Subs. 116.5 to 150, from Division 47 to Division 12.
Class 53 from Division 49 to Division 1.
Class 134, except Subs. 17, 26, 54, and 79, from Division 50 to Division 64.
Class 106, Subs. 24–36, from Division 50 to Division 38.
Class 91, Subs. 1–67.8, from Division 50 to Division 22.
Class 197 from Division 58 to Division 41.
Classes 44 and 195 from Division 59 to Division 64.
Class 222 from Division 59 to Division 38.
Class 149 from Division 59 to Division 11.
Classes 187, 227, 228, and 304 from Division 61 to Division 4.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice

U. S. PATENT OFFICE, *Washington, Mar. 28, 1933.*

Frank L. Myers, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Edwin Archer Turner, 250 Madison Avenue, New York, N. Y., and patent granted January 12, 1932, No. 1,840,913, to Frank L. Myers, 506 Cathedral Street, Baltimore, Md., and a notice of such declaration sent by registered mail to said Myers at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Myers, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, Mar. 21, 1933.*

Lee B. Gribbens, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Simonis Company, 2101 Indiana Avenue, Chicago, Ill., to effect the cancellation of the trade-mark registration of Lee B. Gribbens, of 55 East 29th St., Chicago, Ill., No. 217,523, dated August 31, 1926, and the notice of such proceeding sent by registered mail to the said Gribbens at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Gribbens, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business March 31, 1933

(Total number of applications awaiting action, excluding Trade-Mark Division, 51,742; Trade-Mark Division, 1,062. Oldest new case, Dec. 1. 1932; oldest amended, Dec. 1, 1932. The dates given are 1932 except where † indicates 1933.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

DERBY AND CUNNINGHAM *v.* WHITWORTH

No. 3,045. Decided December 27, 1932

1. INTERFERENCES—APPEAL TO COURT OF CUSTOMS AND PATENT APPEALS—WHAT MAY BE CONSIDERED.

"The question of the right of a party to secure a patent cannot be raised in this court on appeals in interference proceedings."

2. SAME—SAME—SAME.

"If appellee was the prior inventor and has in fact already received a patent for the invention, or has dedicated a part of it to the public, such fact affords no ground for an award of priority of invention to appellants."

3. SAME—SAME—SAME—ALLEGATION OF DERIVATION FROM A THIRD PARTY.

A contention that one of the parties derived knowledge of the invention from a party not involved in the interference cannot be considered on appeal from the award of priority.

4. SAME—PRIORITY.

Record reviewed and *Held* that priority was properly awarded to W. on the ground that he was the first to conceive the invention and the first to reduce it to practice.

APPEAL from the Patent Office. Affirmed.

Mr. William W. Dodge for Derby and Cunningham.

Mr. H. C. Bierman and *Mr. Ellis S. Middleton* for Whitworth.

LENROOT, *J.*:

This is an interference proceeding wherein the Board of Appeals of the United States Patent Office affirmed a decision of the Examiner of Interferences, awarding priority of invention upon all the counts in issue to appellee. From such decision appellants have appealed to this court.

The invention involved relates to flotation agents and methods of effecting concentration of minerals therewith. The counts are thirty-three in number, of which the following are illustrative:

1. The method of effecting the concentration of minerals by flotation which comprises adding to the mineral pulp a modifying agent consisting of the reaction product of an organic compound together with sulphur and phosphorus, and subjecting the resulting mixture to a flotation operation.

8. The method of effecting concentration of minerals by flotation which comprises adding to the mineral pulp a reaction product of an oxygen-containing organic compound together with sulphur and phosphorus, and subjecting the resulting mixture to a flotation operation.

10. The method of effecting concentration of minerals by flotation which comprises adding to the mineral pulp a product produced by the reaction of cresol and phosphorus pentasulphide and subjecting the resulting mixture to a flotation operation.

12. A flotation agent comprising the product of reaction of sulphur and phosphorus with an oil.

16. A flotation agent comprising the product of reaction of sulphur and phosphorus with an oil containing distillates of tar including combinations of portions distilling therefrom at higher or lower temperatures.

21. A flotation agent comprising the product of reaction of about 1.5% of phosphorus and about 4% of sulphur with a tar oil.

22. A flotation agent comprising the product of reaction of about 3% of phosphorus and about 8% of sulphur with an oil.

24. A flotation agent comprising the product of reaction of about 1.5% to 3% of phosphorus and about 4% to 8% of sulphur with an oil.

32. As a new flotation agent, a phosphorized and sulphurized oil.

33. A process which comprises subjecting ore to a flotation process while in the presence of an oil containing sulphur and phosphorus.

The interference arises between an application filed by appellants on October 6, 1925 (Serial No. 60,911), and a patent, No. 1,593,232, granted to appellee on July 20, 1926, upon an application filed November 2, 1925, involving counts 1 to 11, inclusive, and between said application of appellants and an application filed by appellee on April 15, 1927, Serial No. 184,171, involving the remainder of the counts.

Inasmuch as appellants' application was pending at the time of the issue of said patent to appellee, and was filed earlier than either of appellee's applications, appellee is the junior party and the burden was upon him to establish priority of invention by him by a preponderance of evidence.

The history of the case with respect to the declarations of interference and the proceedings had in relation thereto, prior to the decision of the Examiner of Interferences, is stated in the decision of the Board of Appeals as follows:

The party Whitworth has a patent No. 1,593,232 but Derby and Cunningham are the senior party, their application having been filed October 6, 1925, while that upon which the Whitworth patent was granted was filed about one month later, on November 2, 1925. Derby and Cunningham copied all the claims of the Whitworth patent, except claim 8, and an interference, No. 54,789, was declared upon eleven counts, which are counts 1 to 11, inclusive, of the present interference. When the preliminary statements were opened Whitworth, on April 15, 1927, filed a second application, Serial No. 184,171, in which he copied all the claims of the Derby and Cunningham application not already in interference, except claims 20 and 28, accompanied by a motion to add these claims to the issue. The description in this second Whitworth application is alleged by both parties to be substantially the same as in the Whitworth patent. A second interference No. 56,876 was declared between the new Whitworth application and the Derby and Cunningham application on February 10, 1928.

On April 15, 1927, Whitworth brought a motion before the Law Examiner to amend the issue of interference No. 54,789 by the addition of the claims of his second application which motion was opposed by Derby and Cunningham on the ground that the claims could not be allowed in the second Whitworth application as this would involve double patenting and also on the ground that neither in his patent nor in his application, has Whitworth disclosed a basis for claims covering any oils or materials except oxygen holding substances. The Law Examiner granted Whitworth's motion except as to proposed claims 20, 21, and 28. Derby and Cunningham now seek to raise the same questions on this appeal under Rule 130.

In interference No. 54,789, Derby and Cunningham filed a preliminary statement alleging conception on May 1, 1925, and a reduction to practice on May 11, 1925. When interference No. 56,876 was declared, Derby and Cunningham filed a statement alleging a date of June 6, 1922, for conception and reduction to practice and accompanied it with a motion to amend the statement in interference No. 54,789 to allege the same date. The motion was denied by the Examiner of Interferences but was renewed on additional showing. Decision on the renewed motion was held in abeyance in view of the proof to be adduced on final hearing with respect to priority and was denied by the Examiner of Interferences in his decision on priority. Derby and Cunningham allege error in this holding and urge it as one of the grounds of appeal.

On May 21, 1928, interferences Nos. 54,789 and 56,876 were consolidated under No. 54,789 and the counts of the consolidated interference were designated as 1 to 33, inclusive, counts 12–33, inclusive, being the counts of the second interference.

The Board of Appeals held that appellants' opposition to the addition of the claims of the second application of appellee, as above stated, was equiva-

lent to a motion to dissolve the interference as to such claims, and affirmatively held that appellee had the right to make all of the claims corresponding to counts 12 to 33, inclusive, of the consolidated interference; that appellants had no right to raise the question that allowance of the claims of appellee's second application to him would involve double patenting, because this was an *ex parte* question and was irrelevant to the question of priority of invention; the Board also denied appellants' contention that a jurisdictional question was presented and that an interference has no standing if there is a statutory bar against one of the parties. The Board further found that the Examiner of Interferences did not err in denying appellants' motion to amend their preliminary statement with respect to counts 1 to 11, inclusive.

Upon the merits of the issue, the Examiner accorded to appellee a date of conception for all the counts as of November 23, 1924, and an actual reduction to practice of all of the counts except counts 20 to 24, inclusive, and count 28, as of April 1, 1925; as to said last named counts, the Examiner accorded appellee November 2, 1925, the filing date of his application, for a constructive reduction to practice. The earliest date accorded by the Examiner of Interferences to appellants for conception with respect to any of the counts in issue was June 16, 1925, which was subsequent to the date accorded to appellee for reduction to practice of all the counts except said counts 20 to 24, inclusive, and count 28, and subsequent to the date of conception awarded to appellee as to said counts. The Examiner further found, with respect to said counts 20 to 24, inclusive, and 28, that appellee was diligent in reducing the invention to practice from just prior to June 16, 1925, the date of conception accorded appellants, to his filing date, November 2, 1925, which was a constructive reduction to practice. He therefore awarded priority of invention to appellee as to all of the counts.

The Board of Appeals concurred with the findings of the Examiner in all respects except as to counts 20 to 24, inclusive, and count 28. As to these counts the Board held that appellee was entitled to a reduction to practice as of April 1, 1925, which is earlier than any date accorded to appellants for conception of the invention. The Board further held that if it be assumed that appellee had not so reduced to practice as of April 1, 1925, he was diligent in reducing to practice the invention embodied in said counts 20 to 24, inclusive, and 28, from immediately prior to the entry of appellants into the field, June 16, 1925, to appellee's filing date, November 2, 1925.

The Board refused to consider a contention made by appellants that the evidence established that the invention was made by certain persons not parties to this interference.

The Board, for the reasons stated in its decision, affirmed the decision of the Examiner awarding priority of invention upon all the counts to appellee, and from such decision of the Board this appeal is taken.

Appellants in their notice of appeal assigned thirty-one reasons of appeal. These may be grouped as to subject matter as follows:

1. That the Patent Office tribunals had no jurisdiction to hear and determine the interference, insofar as the claims of appellee's second application are concerned, because such second application was invalid.

2. That appellee is estopped to assert the claims in his second application.

3. That the Board erred in denying appellants' motion to amend their first preliminary statement.

4. That the Board erred in its findings as to the dates of conception and reduction to practice accorded to the respective parties.

While appellants contended before the Board of Appeals that appellee had no right to make certain of the claims of his second application because, neither in appellee's patent nor his second application, did he disclose a basis for said claims, and said Board ruled adversely to such contention of appellants, the reasons of appeal do not include such ruling, and it is therefore unnecessary for us to consider whether or not the Board erred in said ruling.

With respect to the claim of want of jurisdiction of the Patent Office tribunals to hear and determine the interference, appellants urge three grounds in support of such claim:

(*a*) That to allow to appellee the claims of his second application would result either in double patenting or in a withdrawal of a dedication to the public in the patent already issued to appellee of any portion of the invention not claimed therein.

(*b*) That there was presented to the Patent Office tribunals no "case" or "controversy" within the meaning of said terms as used in section 2 of Article III of the Constitution of the United States.

(*c*) That the record shows that appellee has admitted public use of the invention more than two years prior to the filing of his second application.

[1] With respect to point (*a*) above stated, it is well established that the question of the right of a party to secure a patent cannot be raised in this court on appeals in interference proceedings. *Gowen* v. *Hendry & King*, 17 C. C. P. A. (Patents) 789, 37 F.(2d) 426, 393 O. G. 1024; *Dorer* v. *Moody*, 18 C. C. P. A. (Patents) 1188, 48 F.(2d) 388, 410 O. G. 821.

As was said in the opinion in said case of *Gowen* v. *Hendry & King*, supra,

> • • • the question of the patentability of an alleged invention is an issue between the applicant and the Patent Office—the Patent Office representing the public.

[2] If appellee was the prior inventor and has in fact already received a patent for the invention, or has dedicated a part of it to the public, such fact affords no ground for an award of priority of invention to appellants; under appellants' theory, if appellee was the first inventor, his dedication to the public of the invention or a part of it should be disregarded and a patent issued to appellants, even though they were not the first inventors.

As to point (*b*) above stated, it is not necessary that an interference proceeding, to be valid, shall constitute a "case" or "controversy" within the meaning of said terms as used in section 2 of Article III of the Constitution of the United States. Suffice it to say with respect to this point that the tribunals of the Patent Office are not courts; they are purely administrative bodies, and the provisions of said section 2 of Article III of the Constitution have no reference to administrative tribunals. This is so clear that further discussion, or citation of authority, is unnecessary.

With respect to point (*c*), relating to jurisdiction, whether or not appellee has forfeited his right to a patent upon the claims in his second application, by reason of public use of the invention for more than two years prior to the filing of said second application, cannot be here determined. In the first place, appellants brought no public use proceedings in the Patent Office, as provided for in the rules of the Patent Office; and in the second place, if such proceedings had been brought, they would have gone only to the question of whether the interference should be dissolved. If dissolved, there could of course be no award of priority of invention. If not dissolved, we would have no jurisdiction to review such question, for the only matter before us for determination is that of priority of invention and questions ancillary thereto. *Gowen* v. *Hendry & King*, *supra*; *Mell* v. *Midgley*, 31 App. D. C. 534, 136 O. G. 1584.

In the case of *Burson* v. *Vogel*, 29 App. D. C. 388, 131 O. G. 942, there was directly involved the question of whether public use for more than two years could be raised upon an appeal from an award of priority in an interference proceeding. In its opinion, the court said:

> Whether Burson's use of his machine in his factory for more than two years before applying for a patent amounted to such public use within the meaning of sec. 4886, U. S. Rev. Stat., U. S. Comp. Stat. 1901, p. 3382, as to bar his right to a patent, is not a question which can be raised in this case, which involves priority of inventios as between him and Vogel. The question is one for the consideration of the Commissioner on the final allowance of a patent.

We are clear that there was no lack of jurisdiction of the Patent Office tribunals to consider and determine the question of priority of invention between the parties hereto. There is no contention that appellee's second application did not in form comply with the statute and the rules of the Patent Office, but, upon the contrary, such application appears to be in due form and hence cannot be held to be void upon its face, as contended for by appellants.

With respect to appellants' contention that appellee is estopped to assert any rights to a patent under his second application, upon the ground of equitable estoppel, we hold that there is nothing in the record warranting the application of the doctrine of equitable estoppel, or any doctrine akin thereto, so far as this interference proceeding is concerned.

In the case of *Miller* v. *Hayman*, 18 C. C. P. A. (Patents) 848, 46 F.(2d) 188, 405 O. G. 549, we applied, in an interference proceeding, a doctrine akin to equitable estoppel. The principle upon which it was based is found in the following quotation from the opinion:

> • • • if appellant should now be permitted to prove in this proceeding that he was the first inventor, and therefore entitled to rights under the patent laws, it would be against the principles of equity and good conscience, because by appellant's failure to make public his invention or apply for a patent, appellee devoted his genius and efforts and time to the discovery of that which, in fact, had been discovered by appellant, but which discovery had been concealed and suppressed by him. He did so at his peril, the risk undertaken being that another might independently and in good faith make the same invention and apply for a patent upon it, in which case appellant could not, in equity and good conscience, be awarded priority of invention in a contest between himself and the later inventor, as to which had the prior right of protection of the patent laws.

In the case at bar appellants have not been prejudiced in any way by appellee's failure in his first application to make the claims that are included in his second application. It is admitted that the disclosures in both applications are substantially identical. If there be any estoppel at all against appellee, as to which we express no opinion, only the public, represented by the Patent Office, has the right to assert it, and appellants can not secure an award of priority to themselves based upon the theory that, even though appellee be the first inventor, he has dedicated a part of his invention to the public by reason of the disclosure in his first application.

Respecting appellants' contention that the Board of Appeals erred in denying their motion to amend their first preliminary statement, we find it unnecessary to pass upon this question for the reason that, as hereinafter stated, we find that appellee conceived and reduced the invention to practice as to all the counts prior to any established date of conception by appellants, even if said motion to amend should have been granted. It is presumed that appellants would have introduced no additional evidence had such motion to amend been granted by the Examiner of Interferences; a final ruling upon such motion was held in abeyance until final hearing with respect to priority, and appellants had full opportunity to establish, if they could, the earlier dates set out in their motion to amend.

[3] Appellants make another contention, viz., that appellee derived the invention through parties strangers to this proceeding, and also that he derived it through appellants. With respect to the first of said contentions, the Board of Appeals correctly held that such contention could not be considered in this proceeding. *Cooper* v. *Hubbell*, 19 C. C. P. A. (Patents) 790, 53 F.(2d) 1072, 415 O. G. 475. With respect to the second contention, viz., that appellee derived the invention from appellants, the Board of Appeals found to the contrary, and we agree with this conclusion. We find no competent evidence in the record to support this contention made by appellants.

We now come to a consideration of whether or not the Board of Appeals erred in finding that appellee was the first to conceive the invention and reduce it to practice with respect to all of the counts in issue.

As heretofore stated, the invention here in issue relates to flotation agents and methods of effecting concentration of minerals therewith. The flotation

process consists in the grinding of ore to a high degree, mixing the same with a large amount of water to form a pulp, adding to the pulp suitable reagents in very small amounts, then agitating the pulp in the presence of air to produce a froth which carries the mineral particles, and skimming off the froth to recover the values.

The invention here involved includes a class of compounds obtained by the reconstruction, that is, the heating, of an oil or other organic substance having a hydroxyl group, either with phosphorus pentasulphide or with phosphorus and sulphur in the proper proportions to give phosphorus pentasulphide. The compounds obtained thereby are claimed to be powerful collectors and, to a degree, frothers. An essential element of the invention here involved is the presence of sulphur in one or the other of the forms above indicated.

The evidence introduced by the respective parties is very voluminous, consisting of nearly 500 pages of the record. We have carefully examined said evidence, and are of the opinion that the Board of Appeals was clearly right in its finding that appellee, upon whom the burden of proof rested, has established conception and reduction to practice of the invention as to all of the counts not later than April 1, 1925.

Appellants claim conception of the invention and its reduction to practice in 1922. In support of this claim, reliance is placed upon a certain laboratory experiment reported on a sheet of a laboratory record, under the caption "Sample 19," introduced in evidence as appellants' "Exhibit 2." Said laboratory record made no mention of sulphur. Both the Examiner and the Board of Appeals held that it was not established that sulphur was employed in the making of said experiment, and that, there being no other testimony of conception of the invention by appellants in 1922 which was corroborated, the earliest date which could be accorded to appellants for conception of the invention, under the evidence, was June 16, 1925. We do not see how any other conclusion could have been reached by the Board upon the record before us.

[4] No useful purpose would be served in reviewing the evidence upon which the conclusions of the Board of Appeals are based, and we content ourselves with saying that we have no doubt concerning their correctness.

For the reasons stated, the decision appealed from is affirmed.

Affirmed.

1,293,897, Daniel W. Parker, Stone saw, appeal filed Dec. 15, 1932, C. C. A., 2nd Cir. (New York city), Doc. 12459, *Parker Rotary Stone Saw Co.* v. *Lane Manufacturers Co.* Decree reversed (notice Mar. 21, 1933).

1,293,974, William L. Sullivan, Check-issuing machines, appeal filed Dec. 13, 1932, C. C. A., 2nd Cir., (New York city), Doc. 12472, *General Register Corp.* v. *Lock-Stub Check Co.* Decree reversed (notice Mar. 21, 1933).

1,328,531, Edward R. Hewitt, Means to measure the suction in the manifold of an internal combustion engine; 1,748,417, Butler J. Haskins, Mechanism for testing ignition of automobiles, filed Mar. 9, 1933, D. C., W. D., S. Div. Mich. (Grand Rapids), Doc. 2625 Eq., *Joseph Weidenhoff, Inc.*, v. *Allen Electric & Equipment Co.*

1,383,035, Charles Reuben Short, Bearing shims, filed Feb. 17, 1932, D. C., S. D. N. Y., Doc. E 65–213, *General Motors Corp. et al.* v. *Nat'l Motor Bearing Co., Inc.* Discontinued Mar. 7, 1933.

1,392,629, 1,890,974, Carbon P. Dubbs, Process of converting hydrocarbons; 1,537,593, Gustav Egloff, Process for cracking oil, filed Mar. 9, 1933, D. C. Del. (Wilmington), Doc. 1019 Eq., *Universal Oil Products Co.* v. *Octane Oil Refining Co.*

1,408,475. (See 1,231,764.)

1,440,978, Clinton E. Dolbear, Method of controlling foaming of boiling liquids, filed Mar. 30, 1932, D. C., S. C. Calif. (Los Angeles), Doc. W–71–H Eq., *Clinton E. Dolbear et al.* v. *American Potash & Chemical Corp.* Dismissed Mar. 13, 1933.

1,465,332. (See 1,231,764.)

1,470,524, Harry B. Burt, Process of making frozen confections; 1,718,997, same, Frozen confections, filed Aug. 1, 1932, D. C., N. D. Ga. (Atlanta), Doc. 688 Eq., *Good Humor Corp. of America* v. *George Moore Ice Cream Co., Inc.* Dismissed (notice Mar. 13, 1933).

1,470,723, William R. Gillies, Heat insulating tape; 1,875,297, same, Heat insulating material, filed Mar. 11, 1933, D. C., Del. (Wilmington), Doc. 1020 Eq., *Union Asbestos & Rubber Co.* v. *Southern Asbestos Co.*

1,477,873, Hannah Jacobs, Hair waving devices, filed Mar. 16, 1933, D. C., S. D. N. Y., Doc. E 75–31, *Hannah Jacobs* v. *Hyman & Hyman, Inc., et al.*

1,526,982, Edward W. Hill, Stencil sheets, filed Mar. 10, 1933, D. C., S. D. N. Y., Doc. E 74–458, *A. B. Dick Co.* v. *Kensington Supply Co., Inc., et al.*, Doc. 346 Eq., D. C., S. D. W. Div. Ohio (Dayton), filed Mar. 15, 1933, *A. B. Dick Co.* v. *Clarence E. Bradley.*

1,528,345, Harley W. Russ, Heels and method of making the same, filed Mar. 7, 1933, D. C., S. D. W. Va. (Charleston), Doc. 3250, *United Shoe Machinery Corp.* v. *Meadow River Lumber Co.*

1,537,593. (See 1,392,629.)

1,555,441, Hilding A. Sjodahl, Shingle; Des. 68,552, same, Shingle, filed Sept. 3, 1931, D. C., S. D. Calif. (Los Angeles), Doc. U–102–J Eq., *The Patent and Licensing Corp.* v. *Star Roof Corp. et al.* Consent decree holding patents valid and infringed Mar. 7, 1933.

1,567,863, H. R. Sargent et al., House wire structures; 1,567,864, H. R. Sargent, Wall attachment means for electrical devices, appeal filed Nov. 4, 1932, C. C. A., 2nd Cir. (New York city), Doc. 12399, *General Electric Co.* v. *United States Electric Mfg. Corp.* Decree modified (notice Mar. 14, 1933).

1,567,864. (See 1,567,863.) 1,571,029. (See Re. 16,989.)

1,575,945, Ben K. Stroud, Application of mud-laden fluids to oil or gas wells, filed Apr. 18, 1930, D. C., S. D. Calif. (Los Angeles), Doc. R–26–J Eq., *Nat'l Pigments & Chemical Co.* v. *Chamberlain Co., Inc., et al.* Consent decree holding patent held valid and infringed Mar. 8, 1933.

1,620,116, Dedrick A. Maanum, Can washers, filed Mar. 17, 1933, D. C., Mo., (Kansas City), Doc. 2266, *Cherry-Burrell Corp.* v. *Dairy & Creamery Equipment Co.*

1,635,753, Lloyd A. Johnson, Laminated shims, filed Mar. 8, 1932, D. C., N. D. Calif. (San Francisco), Doc. 3203–S Eq., *Nat'l Motor Bearing Co., Inc., et al.* v. *Federal-Mogul Corp. et al.* Order discontinuing suit and counter suit of defendants Mar. 11, 1933.

1,636,879, Rudolph Tichota, Anti-frost vision appliance, filed Mar. 9, 1933, D. C. Nebr. (Omaha), Doc. 1092, Eq., *Rudolph Tichota* v. *Edward A. Pepau.* Dismissed with costs to plaintiff Mar. 10, 1933.

1,651,035. (See 1,240,459.)

1,683,182, Chester I. Hall, Electric switches, filed Mar. 18, 1932, D. C., E. D. N. Y. (Brooklyn), Doc. E 6900, *Gen'l Electric Co.* v. *C. J. Tagliabue Mfg. Co., Inc.*

1,686,243, Edward B. Meyer, Snow plows, filed Sept. 14, 1932, D. C., N. D., E. Div. Ohio (Cleveland), Doc. 4401, *Edward B. Meyer* v. *John Q. Shunk et al.* Dismissed without prejudice Feb. 9, 1933.

1,718,997. (See 1,470,524.)

1,732,808, Solomon H. Goldberg, Hairpin, filed Mar. 18, 1933, D. C., S. D. N. Y., Doc. E 74–489, *Chain Store Products Corp.* v. *Adolph C. Hauptman*, Doc. E 74–490, *Chain Store Products Corp.* v. *Louis Silverman*, filed Mar. 15, 1933, D. C., E. D. Wis. (Milwaukee), Doc. 4003 Civ., *Chain Store Products Corp.* v. *Scolding Locks Corp.*

1,748,417. See 1,323,531.) 1,783,665. (See 1,240,459.)

1,786,405, Ernest M. Brogden, Apparatus for treating fruit and the like, filed Dec. 23, 1931, D. C., Del. (Wilmington), Doc. 939 Eq., *Brogden Co.* v. *American Fruit Growers, Inc.* Consent decree adjudging claims 5 and 10 of patent valid and infringed Mar. 15, 1933.

1,789,901, Fred Hotchner, Electrode, filed Jan. 2, 1932, D. C., N. D. Calif. (San Francisco), Doc. 3142–K Eq., *Fred Hotchner et al.* v. *Geo. E. Hill et al.* Dismissed for want of prosecution Mar. 6, 1933.

1,797,205, Harry W. Houck, Electron tube apparatus, filed July 29, 1931, D. C., Del. (Wilmington), Doc. 899 Eq., *Dubilier Condenser Corp.* v. *Perryman Electric Co., Inc.* Dismissed for want of prosecution Mar. 14, 1933.

1,831,925, Alfred Ferdinand Niggle, jr., Shoe heel, filed Mar. 10, 1933, D. C., W. D., S. Div. Mich. (Grand Rapids), Doc. 2626, *Alfred F. Niggle, jr.* v. *Ben Krause Co. et al.*

1,836,897, Earl D. Brown et al, Process of reducing the water requirement of compositions of matter embodying vegetable protein containing material and to the product thereof; 1,845,427, Irving F. Laucks and Glenn Davidson, Glues and methods of making; 1,854,703, same, Vegetable protein glues and processes of making; 1,883,989, same, Adhesives and methods of making, filed Mar. 7, 1933, D. C., W. D., N. Div. Wash. (Seattle), Doc. 1004, *I. F. Laucks, Inc.*, v. *Balfour Guthrie & Co., Ltd.*

1,841,159, Leo Silverman, Method of making textile fabrics, filed Feb. 17, 1933, D. C., S. D. N. Y., Doc. E 74–242, *Millinery Braid Manufacturers Research Corp.* v. *Practical Hat Co., Inc.* Consent order of discontinuance Mar. 14, 1933.

1,845,427. (See 1,836,897.) 1,854,703. (See 1,836,897.)

1,855,168, Clair L. Farrand, Loudspeaker, filed Oct. 10, 1932, D. C., S. D. N. Y., Doc. E 71–301, *Utah Radio Products Co., et al.* v. *Gimble Bros., Inc.*. Doc. E 71–304, *Utah Radio Products Co. et al.* v. *R. H. Macy & Co.* Filed Oct. 13, 1932, D. C., S. D. N. Y.: Doc. E 71–323, *Utah Radio Products Co. et al.* v. *The Rudolph Wurlitzer Co.* Doc. E 71–324, *Utah Radio Products Co. et al.* v. *Heins & Bolet Radio & Electric Supply Co.* Filed Oct. 18, 1932, D. C., S. D. N. Y.: Doc. E 71–370, *Utah Radio Products Co. et al.* v. *Stern Bros., Inc.* Doc. E 71–371, *Utah Radio Products Co. et al.* v. *Modells Radio Outlets, Inc.* Doc. E 71–372, *Utah Radio Products Co. et al.* v. *Park Radio Service, Inc.* Doc. E 71–373, *Utah Radio Products Co. et al.* v. *A. Finkenberg's Sons, Inc.* Doc. E 71–374, *Utah Radio Products Co. et al.* v. *Spear & Co., Inc.* Doc. E 71–375, *Utah Radio Products Co. et al.* v. *Roessler-Sterling, Inc.* Doc. E 71–376, *Utah Radio Products Co. et al.* v. *Hearn Department Stores, Inc.* Doc. E 71–378, *Utah Radio Products Co. et al.* v. *Amco Radio Stores, Inc.* Discontinued without prejudice and without costs Mar. 14, 1933. Doc. E 71–377, *Utah Radio Products Co. et al.* v. *Furst Radio Corp.* Discontinued (notice Mar. 18, 1933). Filed Oct. 20, 1932, D. C., S. D. N. Y.: Doc. E 72–11, *Utah Radio Products Co. et al.* v. *L. Bamman & Bro., Inc.* Discontinued without prejudice and without costs, Mar. 14, 1933. Filed Oct. 11, 1932, D. C., S. D. N. Y.: Doc. E 71–321, *Utah Radio Products Co. et al.* v. *Walter H. Nussbaum, Inc.* Discontinued (notice, Mar. 18, 1933). Filed Mar. 9, 1933, D. C., N. D. Calif. (San Francisco), Doc. 3523 K Eq., *Utah Radio Products Co. et al.* v. *William C. Cohen and Milton M. Cohen*, as independently and as jointly (doing business as I. S. Cohen's Sons, Ltd.).

1,856,720, George Stanley Meikle, Apparatus for producing combustion, filed Feb. 21, 1933, D. C., E. D. Mich. (Detroit), Doc. 5792, *George Stanley Meikle* v. *Timken Silent Automatic Co.*

1,865,080, Frank Bowers, Soot blower, filed Aug. 15, 1932, D. C., Delaware (Wilmington), Doc. 990 Eq., *Diamond Power Specialty Corp.* v. *The Vulcan Soot Cleaner Co.* Dismissed Mar. 13, 1933.

1,866,779, Howard F. Snyder, Washing machines, filed Mar. 8, 1933, D. C., E. D. N. Y., Doc. 6888 Eq., *The Maytag Co.* v. *Brooklyn Edison Co.*

1,870,942, Dana C. Beatty, Syringes, filed Mar. 9, 1933, D. C., S. D. N. Y., Doc. E 74–453, *Gynex Corp. et al.* v. *Dilex Institute of Feminine Hygiene, Inc., et al.*

1,875,297. (See 1,470,723.) 1,883,989. (See 1,836,897.)

1,886,517, Hugh W. Batcheller, Electric switches; 1,888,444, 1,888,445, same, Toggle switches, filed Mar. 15, 1933, D. C. Mass. (Boston), Doc. 3846 Eq., *Hugh W. Batcheller et al.* v. *Henry Cole Co.*

1,888,444. (See 1,886,517.) 1,888,445. (See 1,886,517.)

1,890,974. (See 1,392,629.)

Re. 15,061 (of 1,291,397) Edwin B. Cantrell and George E. Miller, Oil retainers, filed Mar. 16, 1933, D. C., E. D. Mich. (Detroit), Doc. 5831, *National Motor Bearing Co.* v. *Chicago Rawhide Mfg. Co.*

Re. 16,989 (of 1,571,029) William J. Waters, Hydraulic jacks, filed Nov. 9, 1931, D. C., S. D., W. Div. Iowa (Council Bluffs), Doc. 4191 Eq., *The Watson-Stillman Co.* v. *Union Pacific Co.* Dismissed at plaintiff's costs Mar. 8, 1933.

Des. 82,325, Elmer Hedeen, Burial vault, filed Mar. 13, 1933, D. C., N. D., E. Div. Ohio (Cleveland), Doc. 4624, *The Sosonian Vault Co.* v. *The Perfection Steel Body Co.*

Des. 82,430, Joseph F. Kasper, Kitchen cabinets, filed Apr. 8, 1932, D. C., Middle Dis. Pa. (Scranton), Doc. 922, March term., *Joseph F. Kasper* v. *Keystone Cabinet Co. et al.* Consent decree favor plaintiff (notice Mar. 11, 1933).

Des. 88,604, William Willheim. Textile fabric or similar article, filed Mar. 10, 1933, D. C., S. D. N. Y., Doc. E 74–473, *William Willheim Co., Inc.*, v. *Abbate-Swift, Inc., et al.*

Des. 88,779, Harry Greene, Textile fabric or the like, filed Mar. 14, 1933, D. C., S. D. N. Y., Doc. E 75–4, *The Schwarzenbach-Huber Co.* v. *Rose Silk Mills, Inc.*

T. M. 217,453, Sylvan M. Edison, Dental plate cleanser, filed July 15, 1932, D. C., N. D. Ill. (Chicago), Doc. 12118, *Sylvan M. Edison et al.* v. *Johnson & Johnson et al.* Dismissed at plaintiff's costs Aug. 25, 1932.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,711,030, E. C. Pifer, Display receptacle, decided February 1, 1933, claims 1, 2, 3, 5, 6, 8, and 9.

Pat. 1,796,285, Asger Eilersgaard, Positive crowd mechanism, decided March 23, 1933, claims 1 and 2.

Pat. 1,878,286, G. D. McCabe, Element supporting stem construction, decided March 20, 1933, claims 1 and 2.

Adjudicated Patents

(App. D. C.) Moore patent, No. 1,100,319, for rubber shoe, *Held* not infringed. *Moore* v. *Lansburgh & Bros.*, 63 F.(2d) 148.

(C. C. A. Ill.) Martin patent, No. 1,269,479, for loose-leaf binder, claims 1, 2, 3, 9, and 10 *Held* not infringed. *Martin* v. *H. C. Miller Co.*, 63 F.(2d) 5.

(C. C. A. Pa.) Daae patent, No. 1,441,217, for gas producer, *Held* not infringed. *Daae* v. *Allegheny Steel Co.*, 63 F.(2d) 107.

(C. C. A. Ill.) Widmer patent, No. 1,585,452, for manufacture of starch, claims 1, 2, 4, 5, 8, 9, 13, 14, and 18 *Held* not infringed. *Corn Products Refining Co.* v. *Penick & Ford*, 63 F.(2d) 26.

(C. C. A. Ill.) McCoy patent, No. 1,651,611, for closed wet-starch system, claims 7, 11, 12, 13, and 14 *Held* invalid. *Id.*

Disclaimers

1,794,358.—*William Bauer*, Neenah, Wis. PAD-MAKING MACHINE. Patent dated March 3, 1931. Disclaimer filed March 28, 1933, by the assignee, *International Cellucotton Products Co.*

Disclaims from the scope of each and all of the claims of said patent any machine or method except such as is used for making surgical pads or sanitary napkins wherein a pad of soft, absorbent, fibrous filling material is enclosed in a wrapper of gauze or other similar soft flexible material and

Limits the scope of each and all of the claims of said patent to machines and methods for making surgical pads or sanitary napkins wherein the wrapping material is made of gauze or other similar soft flexible material and the filling material is fibrous, soft, and absorbent.

1,755,930.—*Washington Irving Middleton*, Watertown, Mass. POWER CABLE. Patent dated April 22, 1930. Disclaimer filed March 29, 1933, by the patentee, assignee. *Simplex Wire & Cable Company*, consenting.

Hereby enters this disclaimer to exclude from the scope of claims 1, 2, 3, 4, and 5 of said specification, cables and conductors in which the interstices within the conductors or between the strands of the conductors are filled with rubber cement, varnish, lacquer, or filling compounds other than rubber or containing volatile solvents, and to limit said claims specifically to cables and conductors in which the interstices within the conductors or between the strands of the conductors are filled with rubber.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 18, 1933

[VOL. 429. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 326,627. WOLF COLLIERIES COMPANY, INC., Freeland, Pa. Filed Apr. 29, 1932.

Applicant does not claim the word "Lehigh" except in combination with the other features of the mark.

For Anthracite Coal.

Claims use since Jan. 1, 1932.

Ser. No. 328,434. THE KOPPERS COAL COMPANY, Pittsburgh, Pa. Filed June 30, 1932.

A trade-mark consisting of red and white spots, the spots being interspersed nonuniformly from each other, on the surface of the coal. Applicant disclaims the representation of a lump of coal shown in the drawing.

For Coal.

Claims use since Mar. 3, 1932.

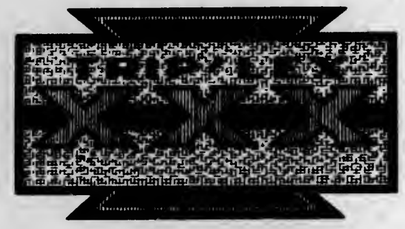
Ser. No. 332,846. HERBERT R. ISENBURGER, New York, N. Y. Filed Dec. 7, 1932.

For Chemical Preparation in Paste Form and Called a "Paint", Used as a Coating on Permanent Molds, Steel Dies, Iron Chills, Etc., in the Manufacture of Castings of All Varieties Including Aluminum, Brass, and Bronze Permanent Mold Castings, Aluminum, Brass, Zinc, and Tin Base Die Castings, Malleable Iron Castings and the Like. The Application of This Chemical Preparation Gives the Casting a Smooth Surface, Prevents Sticking to the Mold or Die, and Makes for Greater Durability of the Molds and Dies.

Claims use since Jan. 1, 1927.

Ser. No. 334,622. TENNESSEE EASTMAN CORPORATION, Kingsport, Tenn. Filed Feb. 8, 1933.

TENITE



For Molding Composition Comprising Cellulose Acetate and Suitable Plasticisers, and, in Some Cases, Pigments, and Being in the Form of Slabs, Sheets, Granules, or Powder.

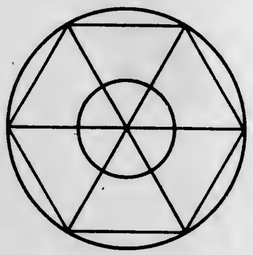
Claims use since Nov. 30, 1932.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 335,061. HARTMANN TRUNK COMPANY, Racine, Wis. Filed Feb. 17, 1933.

In the drawing, the main background is cross-hatched to represent gold, while the individual letters "X" and the upper and lower stripes are shaded to represent red coloring.



For Suitcases, Hat Boxes for Luggage Purposes, and Wardrobe Hand Luggage.

Claims use since Jan. 20, 1933.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 324,136. DAVID EDWARD BAILEY, Hamlet, N. C. Filed Feb. 11, 1932.

FRUGAL

For Soap, Soap Chips, Jelly Soap, Shaving Soap, and Cleaning Powder for General Household and Laundry Use.

Claims use since Mar. 1, 1931.

Ser. No. 334,664. CLAIRE MFG. CO., Chicago, Ill. Filed Feb. 6, 1933.

CLORENO

For Washing Compound Having Incidental Properties as a Bleach and Disinfectant.

Claims use since Oct. 10, 1932.

Ser. No. 334,872. HERCULES POWDER COMPANY, Wilmington, Del. Filed Feb. 11, 1933.

DRI-TEX

For Liquid Soap Used in Dry Cleaning Processes.

Claims use since Jan. 16, 1933.

Ser. No. 335,278. KLENZIT COMPANY OF NEW JERSEY, doing business as The Pretone Co., Camden, N. J. Filed Feb. 25, 1933.

PRETONE

For Cleaning Compound for Tile, Sanitas, Porcelain, Floors and Flooring, Painted Walls and Woodwork, and Varnished and Lacquered Surfaces.

Claims use since Feb. 2, 1933.

CLASS 5

Adhesives

Ser. No. 327,884. THE NAUGATUCK CHEMICAL COMPANY, New York, N. Y. Filed June 10, 1932.

For Rubber Adhesive.

Claims use since Mar. 23, 1932.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 331,420. PERCIVAL L. BONNELL, Saint John, New Brunswick, Canada. Filed Oct. 20, 1932.

bon-o-dent

For Dental Tooth Powder.

Claims use since April, 1932.

Ser. No. 331,631. FAY WOOD CORPORATION, New York, N. Y. Filed Oct. 27, 1932.

FLEET

For Toothpaste.

Claims use since Oct. 18, 1932.

Ser. No. 333,001. FR. KAISER G. M. B. H., Wurtemberg, Germany. Filed Dec. 12, 1932.

3-Pines Cough Drops

The words "Cough Drops" are disclaimed apart from the mark as shown on the drawing.

For Cough Drops.

Claims use since August, 1932.

Ser. No. 333,138. ANTISEPTIC RUBBER PRODUCTS COMPANY, Philadelphia, Pa. Filed Dec. 17, 1932.

ASEPTILASTIC

For Medicated, Surgical Dressings Intended to be Used for All Purposes, Particularly Minor Injuries, and Medicated Elastic Bandages and Plasters Treated with Analgesic to be Used Principally by Athletes and for Racing Horses.

Claims use since Oct. 1, 1932.

Ser. No. 334,034. JAMES A. HENDERSON, Turlock, Calif. Filed Jan. 16, 1933.

HENDERSON'S NU-LIFE

The lining appearing on the drawing is for shading purposes only.

For Insecticide.

Claims use since Nov. 1, 1931.

Ser. No. 334,156. MORTON G. NEUMANN, doing business as Valmor Products Co., Chicago, Ill. Filed Jan. 20, 1933.

LUCKY FORTUNE TELLER

For Incense.

Claims use since Sept. 15, 1932.

Ser. No. 334,402. MASTER LABORATORIES, INC., Omaha, Nebr. Filed Jan. 27, 1933.

Power House

For General Tonic and Mineral Water Crystals for Making Artificial Mineral Water.

Claims use since July 25, 1932.

Ser. No. 334,435. HEALTH PRODUCTS CORPORATION, Newark, N. J. Filed Jan. 28, 1933.

FEEN-A-SWEET

Applicant makes no claim to the word "Sweet" apart from the mark as shown on the drawing.

For Laxative.

Claims use since Jan. 10, 1933.

Ser. No. 335,031. NAOX COMPANY, Boston, Mass. Filed Feb. 16, 1933.

NAOX

For Internal Medicine in the Nature of a General Tonic for the Treatment of Stomach and Liver Troubles, and of Colds.

Claims use since Dec. 12, 1932.

Ser. No. 335,175. TAKARA LABORATORIES, Portland, Oreg. Filed Feb. 21, 1933.

FORFEM

For Tablets and Capsules for Headache, Backache, Neuralgia and Periodic Pains.
Claims use since Dec. 20, 1932.

CLASS 11

Inks and Inking Materials

Ser. No. 334,417. ZINSSER & CO., INC., Hastings-on-Hudson, N. Y. Filed Jan. 27, 1933.

VAPOR-INK

Applicant disclaims the exclusive use of the word "Ink" except as part of the mark as shown.
For Printing Ink.
Claims use since Jan. 11, 1933.

Ser. No. 334,850. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 10, 1933.

For Writing Inks, Inking Pads, and Carbon Paper.
Claims use since Nov. 16, 1932.

CLASS 12

Construction Materials

Ser. No. 333,652. JACOB A. MELNICK, Brooklyn, N. Y. Filed Jan. 3, 1933.

No claim is made to any of the words appearing on the drawing except the word "Jamco," except in the association shown.
For Window Frames, Sash, Doors, and Trim.
Claims use since Feb. 1, 1922.

CLASS 14

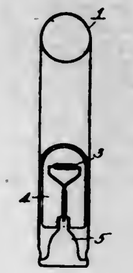
REISSUES

APRIL 18, 1933

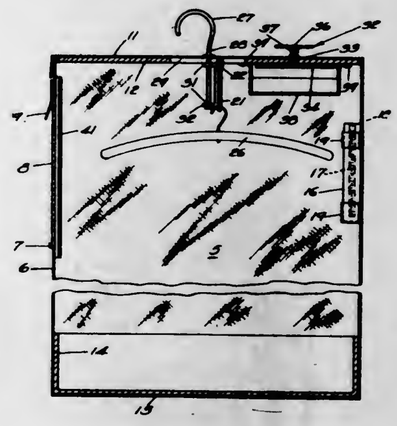
18,796. INDICATOR FOR RADIORECEIVERS. HYMAN MATZNER, New York, N. Y., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Original No. 1,674,608, dated June 19, 1928, Serial No. 209,517, filed July 30, 1927. Application for reissue filed Jan. 14, 1930. Serial No. 420,768. 8 Claims. (Cl. 177—311.)



1. A dial for radio receiving sets including an electrical indicator adapted to be rendered active only when the dial is set to tune in a station, a normally open circuit in which said indicator is arranged, and circuit closing means carried by the dial, said circuit closing means including a plurality of contact members carried by the dial and disposed in circuit closing position only when the dial is set to tune in a station.

18,797. AIR-POROUS PAPER AND PROCESS OF MAKING SAME. FREDERICK RIEBEL, Jr., Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a Corporation of Delaware. Original No. 1,854,427, dated Apr. 19, 1932, Serial No. 471,600, filed July 29, 1930. Application for reissue filed Oct. 3, 1932. Serial No. 636,090. 8 Claims. (Cl. 92—38.)

1. An air-porous paper, having its fibers meshed to leave interstices impervious to particles the size of wheat flour, and transmitting air such as to occasion no more back pressure than about two inches against a blower forcing not less than substantially 25 cubic feet of air per minute through a 11¾" square sheet of such paper, and having a tensile strength under such pressure resisting impact of an 0.24 lb. wooden ball falling through a 36 inch arc having a radius of 100 inches.



18,798. DISCHARGE TUBE. CARL J. R. H. VON WEDEL, Newark, N. J., assignor, by mesne assignments, to Electrons, Inc., a Corporation of Delaware. Original No. 1,807,140, dated May 26, 1931, Serial No. 259,715, filed Mar. 7, 1928. Application for reissue filed June 18, 1931. Serial No. 544,250. 16 Claims. (Cl. 176—122.)

1. A discharge tube having a single stem portion, a stem in said portion, a pair of electrodes erected on said stem, a hollow toroidal envelope mounted upon said stem portion and forming a continuous elongated discharge path extending in two directions from said stem portion, and a

discharge preventing shield between said electrodes whereby discharges therebetween are confined to said elongated path.

18,799. CLOTHES BAG. ABRAHAM J. LICHTIG, Oakland, Calif. Original No. 1,805,877, dated May 19, 1931, Serial No. 381,802, filed July 29, 1929. Application for reissue filed Sept. 17, 1932. Serial No. 633,697. 3 Claims. (Cl. 206—7.)

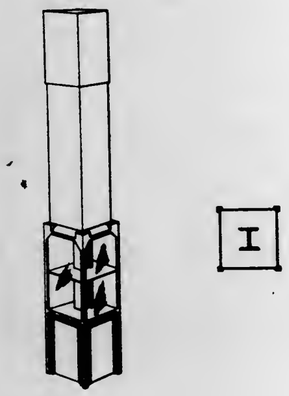
1. A clothes bag comprising a top; a rigid spreader frame therefor; flexible walls suspended therefrom; a hanger frame hinged to said spreader frame within the bag for swinging movement in a vertical plane; and a suspending hook swiveled to said hanger frame for rotary movement in a horizontal plane, the swinging of said hanger frame moving both it and said hook from their normal vertical positions to positions approximately parallel to the top of the bag.

PLANT PATENTS

GRANTED APRIL 18, 1933

60. STRAWBERRY. CARL E. SCHUSTER, Corvallis, Oreg., dedicated, by mesne assignments, to the People of the United States of America. Filed May 19, 1931. Serial No. 538,467. 1 Claim. (Cl. 47—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

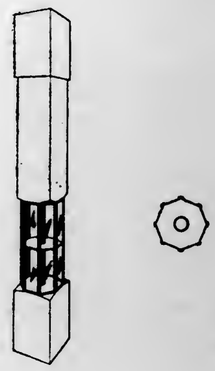
A strawberry plant, as described, bearing fruit characterized by being medium in size, conic to oblate in form, with no neck, the calyx on the larger, early berries reflexed when ripe; having a uniform ripening quality; having a surface glossy and luminous, and bright crimson in color; having seeds that are sunken yellow red; having flesh crimson in color, the texture being firm to melting, very smooth, with little trace of core; and having excellent canning and dessert quality, acid and aromatic, adapted to the frozen and late fresh market trade, as shown.



61. APPLE. EDWIN P. WRAY, White Salmon, Wash. Filed Dec. 9, 1931. Serial No. 579,889. 1 Claim. (Cl. 47—1.)

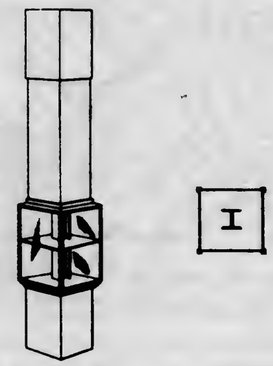
An apple substantially as herein shown and described, characterized by an exceptionally deep stem cavity and short stem, and five points of more or less irregular formation disposed circumferentially about its calyx, the color of the apple being a vari-colored red on a yellow background, with the area of lighter red having slight markings of a darker red, and substantially the entire area of the apple being flecked with small dots, the dots in the darker red portion being yellow and those in the lighter area being of a greenish yellow tint.

DESIGNS



APRIL 18, 1933

89,607. COMBINED BUILDING COLUMN AND DISPLAY CASE. RALPH N. ALDRICH, San Francisco, Calif., assignor to Standard Stations, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Apr. 6, 1932. Serial No. 43,409. Term of patent 14 years.



The ornamental design for a combined building column and display case, as shown.

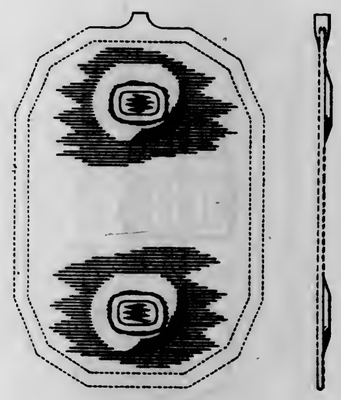
89,608. COMBINED BUILDING COLUMN AND DISPLAY CASE. RALPH N. ALDRICH, San Francisco, Calif., assignor to Standard Stations, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Apr. 6, 1932. Serial No. 43,410. Term of patent 14 years.

The ornamental design for a combined building column and display case, as shown.

89,609. COMBINED BUILDING COLUMN AND DISPLAY CASE. RALPH N. ALDRICH, San Francisco, Calif., assignor to Standard Stations, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Apr. 6, 1932. Serial No. 43,411. Term of patent 14 years.

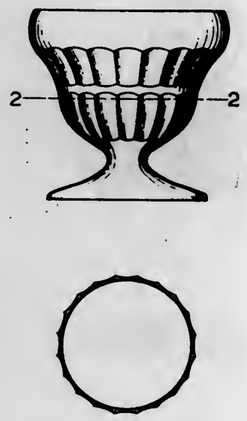
The ornamental design for a combined building column and display case, as shown.

89,610. BRIDGE FOR AN OPHTHALMIC MOUNTING. CHARLES O. COZZENS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 15, 1932. Serial No. 44,838. Term of patent 14 years.



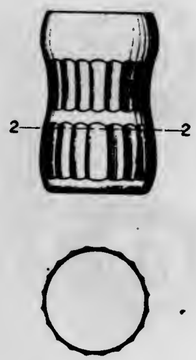
The ornamental design for a bridge for an ophthalmic mounting substantially as shown.

89,611. PASTRY CONFECTION. GERTRUDE H. CRAWFORD, Milliken, Colo. Filed Dec. 9, 1932. Serial No. 46,406. Term of patent 14 years.



The ornamental design for a pastry confection, as shown.

89,612. HEATING PAD OR SIMILAR ARTICLE. WALLACE W. DE LANEY, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Aug. 13, 1932. Serial No. 44,596. Term of patent 14 years.

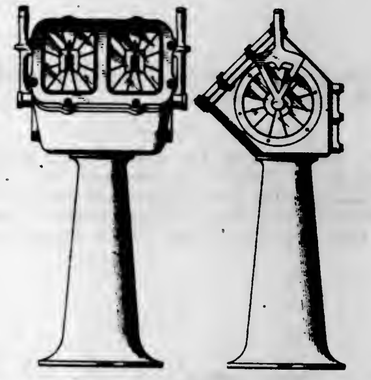


The ornamental design for a heating pad or similar article substantially as shown and described.

89,613. SHERBET GLASS OR SIMILAR ARTICLE. RICHARD C. DIEBENKORN, San Francisco, Calif., assignor to Dohrmann Hotel Supply Co., San Francisco, Calif., a Corporation of Nevada. Filed July 1, 1932. Serial No. 44,236. Term of patent 14 years.

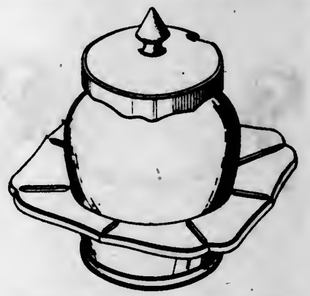
The ornamental design for a sherbet glass or similar article substantially as shown.

89,614. TUMBLER OR SIMILAR ARTICLE. RICHARD C. DIEBENKORN, San Francisco, Calif., assignor to Dohrmann Hotel Supply Co., San Francisco, Calif., a Corporation of Nevada. Filed July 1, 1932. Serial No. 44,237. Term of patent 14 years.



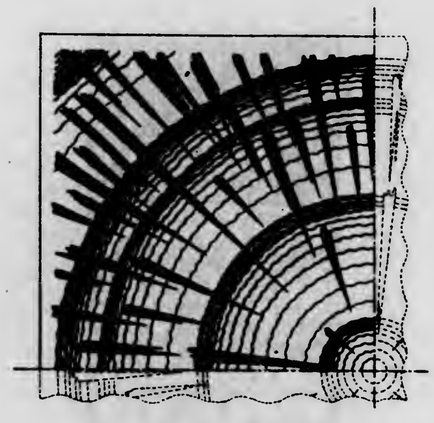
The ornamental design for a tumbler or similar article substantially as shown.

89,615. SHOE. FRANK GRUBS, Larchmont, N. Y., assignor to La Valle, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1932. Serial No. 46,465. Term of patent 14 years.



The ornamental design for a shoe substantially as shown.

89,616. SIGNALING INSTRUMENT. CHARLES J. HENSCHEL, Rutherford, N. J. Filed Jan. 21, 1932. Serial No. 42,580. Term of patent 7 years.

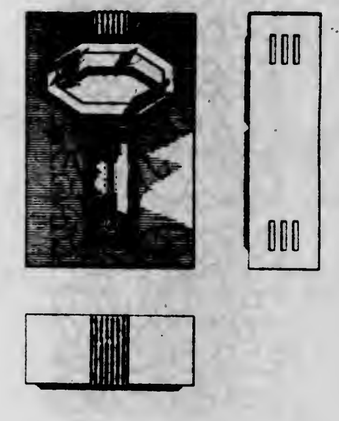


The ornamental design for a signaling instrument, as shown.

89,617. COMPOTIER. CLARENCE S. KEATING, Chicago, Ill., assignor to The Friedman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1932. Serial No. 43,503. Term of patent 7 years.

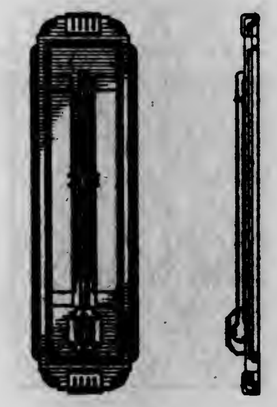
The ornamental design for a compotier substantially as shown.

89,618. TEXTILE FABRIC OR SIMILAR ARTICLE. GERTRUDE STEINHOLZ, Brooklyn, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Feb. 25, 1933. Serial No. 47,308. Term of patent 3½ years.



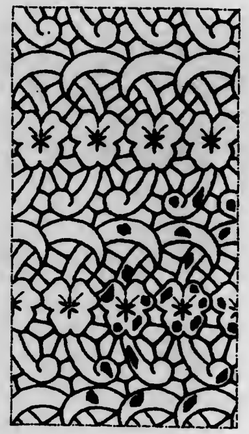
The ornamental design for a textile fabric or similar article as shown and described.

89,619. THERMOMETER. WALTER DORWIN TEAGUE, Forest Hills, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,918. Term of patent 7 years.



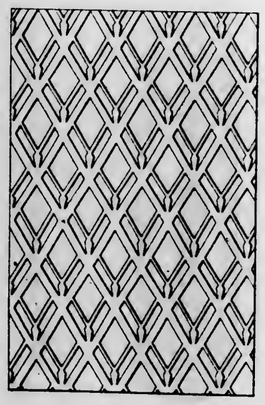
The ornamental design for a thermometer as shown.

89,620. INSTRUMENT CASING. WALTER DORWIN TEAGUE, Forest Hills, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,917. Term of patent 7 years.



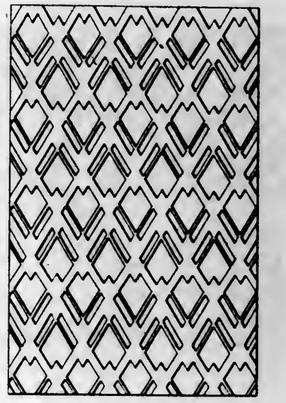
The ornamental design for an instrument casing as shown.

89,621. THERMOMETER. WALTER DORWIN TEAGUE, Forest Hills, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1933. Serial No. 46,919. Term of patent 7 years.



The ornamental design for a thermometer as shown.

89,622. EMBROIDERED TEXTILE FABRIC. JEAN ARMBRUSTER, Bergenfield, N. J., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 9, 1933. Serial No. 47,423. Term of patent 3½ years.

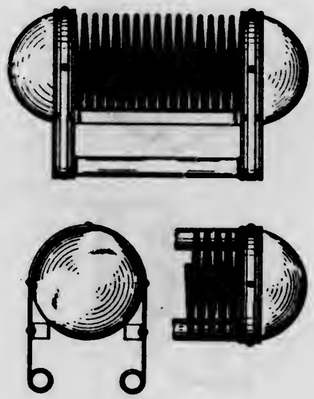


The ornamental design for embroidered textile fabric, substantially as shown and described.

89,623. GRILLE OR THE LIKE. LOIS M. BEAM, Short Hills, N. J., assignor to Hendrick Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1933. Serial No. 46,898. Term of patent 7 years.

The ornamental design for a grille or the like, substantially as shown and described.

89,624. GRILLE OR THE LIKE. LOIS M. BEAM, Short Hills, N. J., assignor to Hendrick Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1933. Serial No. 46,899. Term of patent 7 years.

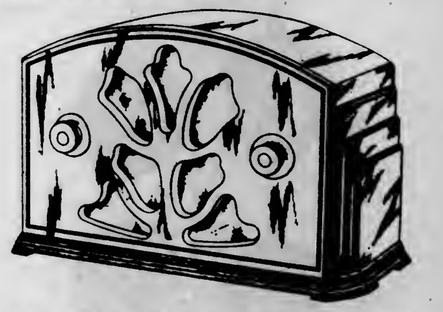


The ornamental design for a grille or the like, substantially as shown and described.

89,625. BUTTON. LEONARD R. CARLEY, Watertown, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 3, 1933. Serial No. 47,095. Term of patent 14 years.

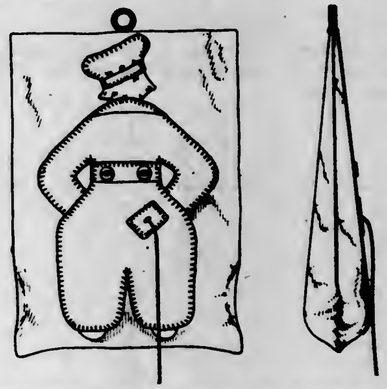
The ornamental design for a button, as shown.

89,626. MAGAZINE RACK. JAMES WARING CARPENTER, Pittsburgh, Pa., assignor to The McKay Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1933. Serial No. 46,927. Term of patent 7 years.



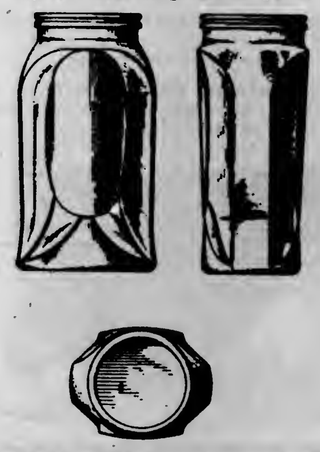
The ornamental design for a magazine rack, as shown.

89,627. POCKET FOR POT HOLDER. MOSES CAPLAN, Boston, Mass. Filed Jan. 20, 1933. Serial No. 46,906. Term of patent 7 years.



The ornamental design for a pocket for pot holder substantially as shown.

89,628. RADIOCABINET. OSTILIO CICCARELLI, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a Corporation. Filed Jan. 14, 1933. Serial No. 46,834. Term of patent 3½ years.



The ornamental design for a radiocabinet substantially as shown and described.

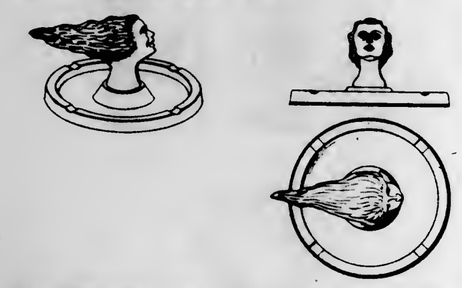
89,629. STRING HOLDER. ALBERT B. COLLINGBOURNE, Elgin, Ill. Filed Jan. 18, 1933. Serial No. 46,815. Term of patent 7 years.

The ornamental design for a string holder as shown.

89,630. JAR. IVOR CORDY, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Jan. 21, 1933. Serial No. 46,929. Term of patent 14 years.

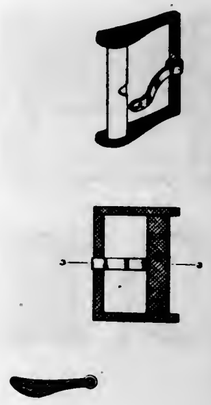
The ornamental design for a jar, as shown.

89,631. BIRD'S HOUSE. JOHN D. DAGGETT, Shafer, Minn. Filed Nov. 18, 1932. Serial No. 46,055. Term of patent 7 years.



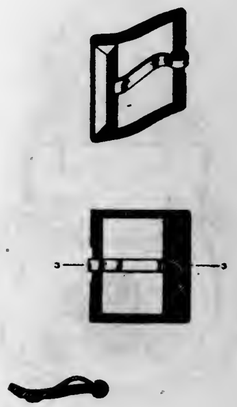
The new and ornamental design for a bird's house substantially as shown and described.

89,632. BOTTLE. EDWARD H. FABRICE, Chicago, Ill. Filed Apr. 18, 1932. Serial No. 43,529. Term of patent 7 years.



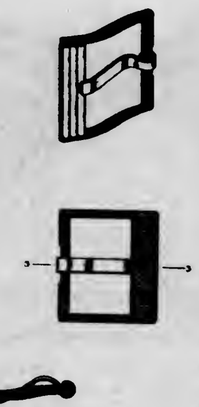
The ornamental design for a bottle as shown.

89,633. ASH TRAY OR THE LIKE. IRVING FLORMAN, New York, N. Y. Filed Aug. 12, 1932. Serial No. 44,585. Term of patent 7 years.



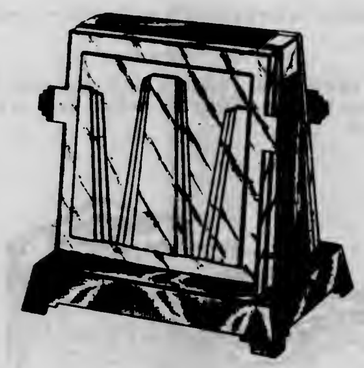
The ornamental design for an ash tray or the like substantially as shown.

89,634. BELT BUCKLE. GEORGE J. FROMM, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1933. Serial No. 47,227. Term of patent 3½ years.



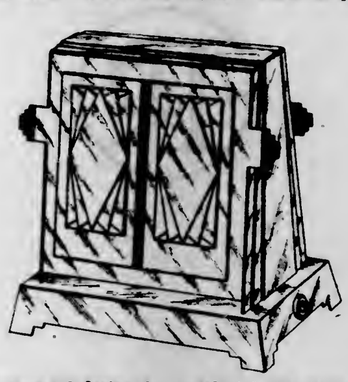
The ornamental design for a belt buckle, as shown and described.

89,635. BELT BUCKLE. GEORGE J. FROMM, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1933. Serial No. 47,228. Term of patent 3½ years.



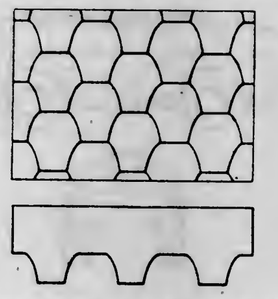
The ornamental design for a belt buckle, as shown and described.

89,636. BELT BUCKLE. GEORGE J. FROMM, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1933. Serial No. 47,229. Term of patent 3½ years.



The ornamental design for a belt buckle, as shown and described.

89,637. ELECTRIC TOASTER. JAMES J. GOUGH, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1933. Serial No. 47,058. Term of patent 7 years.



The ornamental design for an electric toaster, substantially as shown.

89,638. ELECTRIC TOASTER. JAMES J. GOUGH, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1933. Serial No. 47,059. Term of patent 7 years.

The ornamental design for an electric toaster, substantially as shown.

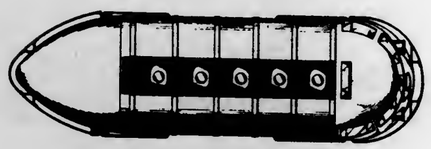
89,639. ROOFING. DON B. HUMPHREY, South Bend, Ind., assignor to McHenry-Millhouse Manufacturing Company, South Bend, Ind. Filed Dec. 17, 1932. Serial No. 46,473. Term of patent 14 years.

The ornamental design for roofing as shown.

89,640. TEXTILE FABRIC OR SIMILAR ARTICLE. ADOLPH C. JARGER, Port Chester, N. Y. Filed Dec. 10, 1932. Serial No. 46,428. Term of patent 7 years.

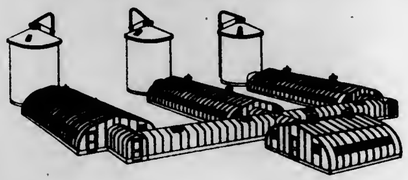
The ornamental design for a textile fabric or similar article substantially as shown and described.

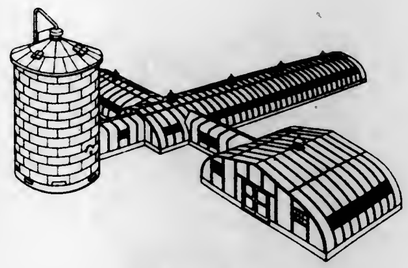
89,641. AUTO-PLATE. DANIEL J. KELLEY, Great Neck, N. Y. Filed Oct. 10, 1932. Serial No. 45,273. Term of patent 3½ years.



The ornamental design for an auto-plate, as shown.

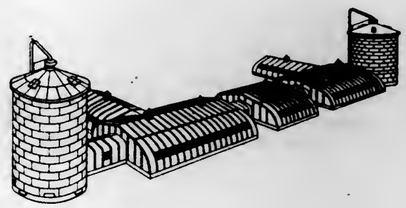
89,642. MOTOR DRIVEN TANK TRUCK. HOWARD W. KIZER, South Orange, N. J., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 20, 1933. Serial No. 46,907. Term of patent 14 years.





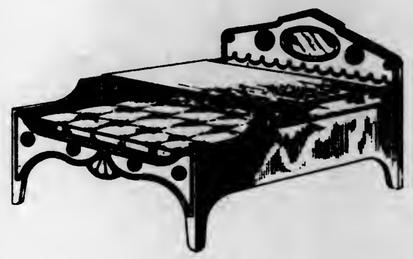
The ornamental design for a motor driven tank truck, as shown.

89,643. FARM BUILDING. FREDERIC J. KREUTZER, Elmira, N. Y., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Original application filed Oct. 17, 1932, Serial No. 45,386. Divided and this application filed Feb. 9, 1933. Serial No. 47,156. Term of patent 7 years.



The ornamental design for a farm building substantially as shown.

89,644. FARM BUILDING. FREDERIC J. KREUTZER, Elmira, N. Y., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Original application filed Oct. 17, 1932, Serial No. 45,386. Divided and this application filed Feb. 9, 1933. Serial No. 47,157. Term of patent 7 years.



The ornamental design for a farm building substantially as shown.

89,645. FARM BUILDING. FREDERIC J. KREUTZER, Elmira, N. Y., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Original application filed Oct. 17, 1932, Serial No. 45,386. Divided and this application filed Feb. 9, 1933. Serial No. 47,158. Term of patent 7 years.

The ornamental design for a farm building substantially as shown.

89,646. PET'S BED. LOUIS LARSON, Katonah, N. Y. Filed Jan. 25, 1933. Serial No. 46,974. Term of patent 14 years.

The ornamental design for a pet's bed, as shown.

89,647. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM H. MAYER, Jr., New York, N. Y. Filed Feb. 20, 1933. Serial No. 47,269. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

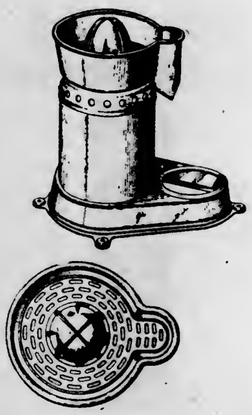
89,648. TEXTILE FABRIC OR THE LIKE. GEORGES MEGROZ, Bronxville, N. Y., assignor to The United Piece Dye Works, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1933. Serial No. 47,275. Term of patent 3½ years.

The ornamental design for a textile fabric or the like as shown, and described.

89,649. TEXTILE FABRIC OR THE LIKE. GEORGES MEGROZ, Bronxville, N. Y., assignor to The United Piece Dye Works, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1933. Serial No. 47,276. Term of patent 3½ years.

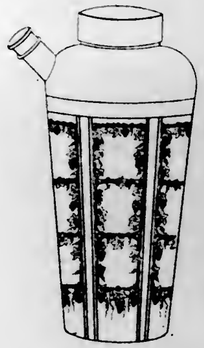
The ornamental design for a textile fabric or the like as shown, and described.

89,650. TEXTILE FABRIC OR THE LIKE. GEORGES MEGROZ, Bronxville, N. Y., assignor to The United Piece Dye Works, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1933. Serial No. 47,277. Term of patent 3½ years.



The ornamental design for a textile fabric or the like as shown, and described.

89,651. SMOKER'S STAND. ARTHUR DOUGLAS NASH, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 11, 1933. Serial No. 47,180. Term of patent 3½ years.



The ornamental design for a smoker's stand as shown.

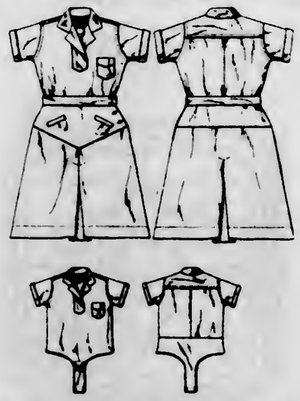
89,652. ORANGE JUICE EXTRACTOR. EDWARD S. PRESTON, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1933. Serial No. 46,776. Term of patent 7 years.

The ornamental design for an orange juice extractor, substantially as shown.

89,653. COCKTAIL SHAKER OR THE LIKE. LOUIS W. RICE, New York, N. Y., assignor to Bernard Rice's Sons Incorporated, a Corporation of New York. Filed Oct. 24, 1932. Serial No. 45,538. Term of patent 7 years.

The ornamental design for a cocktail shaker or the like, as shown and described.

89,654. PROTECTOR FOR A NURSING BOTTLE AND NIPPLE THEREOF. JOSEPH SCHNEIDERMAN, Chicago, Ill. Filed Aug. 20, 1932. Serial No. 44,648. Term of patent 3½ years.

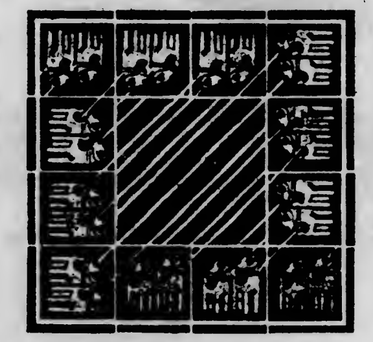


The ornamental design for a protector for a nursing bottle and nipple thereof substantially as shown.

89,655. LAMP SHADE. EUGENE SCHWARZ, Alexandria, Ind., assignor to The Mantle Lamp Company of America, Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1932. Serial No. 46,552. Term of patent 3½ years.

The ornamental design for a lamp shade, substantially as shown and described.

89,656. DRESS ENSEMBLE. WALTER A. STRASS, Baltimore, Md. Filed Feb. 21, 1933. Serial No. 47,278. Term of patent 7 years.



The ornamental design for a dress ensemble, as shown.

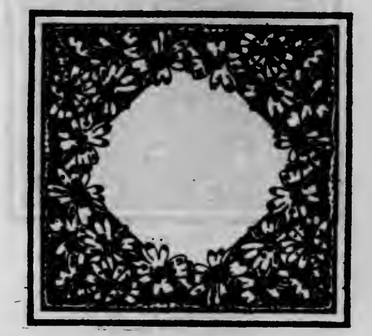
89,657. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,131. Term of patent 3½ years.

The ornamental design for a handkerchief substantially as shown.

89,658. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,132. Term of patent 3½ years.

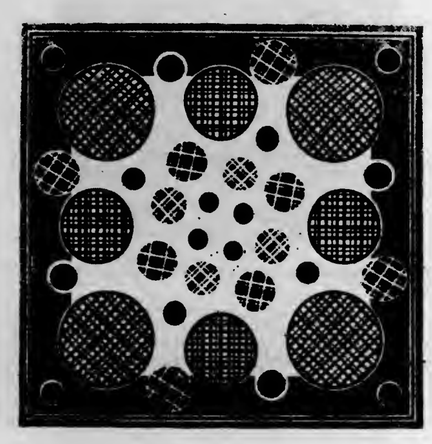
The ornamental design for a handkerchief substantially as shown.

89,659. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,133. Term of patent 3½ years.



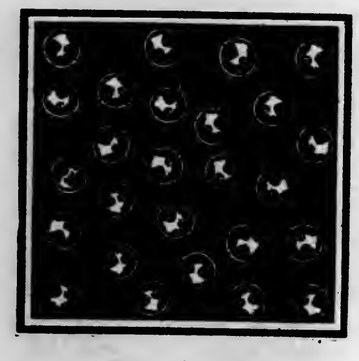
The ornamental design for a handkerchief substantially as shown.

89,660. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,134. Term of patent 3½ years.



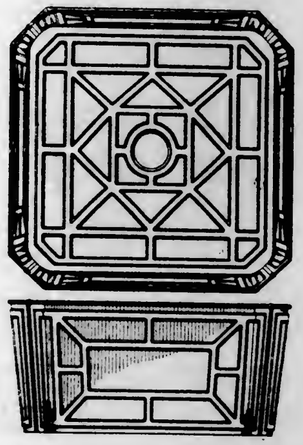
The ornamental design for a handkerchief substantially as shown.

89,661. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,135. Term of patent 3½ years.



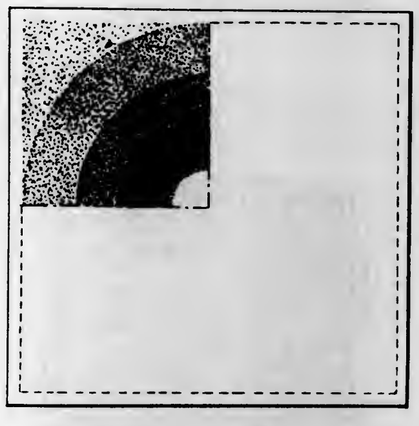
The ornamental design for a handkerchief substantially as shown.

89,662. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,136. Term of patent 3½ years.



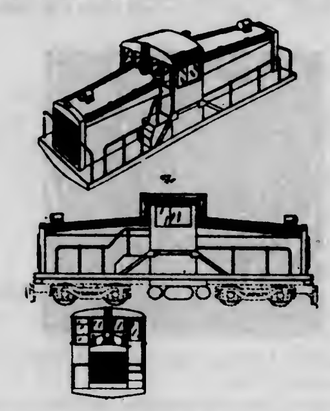
The ornamental design for a handkerchief substantially as shown.

89,663. HANDKERCHIEF. THOMAS W. TANSLEY, New York, N. Y., assignor to Bloch Freres, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1933. Serial No. 47,137. Term of patent 3½ years.



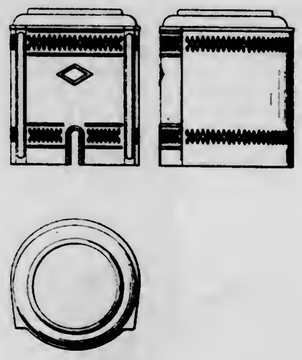
The ornamental design for a handkerchief substantially as shown.

89,664. WASHTUB. FRANK M. VOGAN, Canton, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Feb. 9, 1933. Serial No. 47,155. Term of patent 14 years.



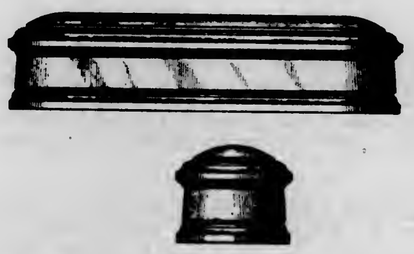
The ornamental design for a wash tub, as shown.

89,665. TEXTILE FABRIC OR SIMILAR ARTICLE. WILLIAM WILLHEIM, New York, N. Y. Filed Sept. 17, 1932. Serial No. 44,912. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown and described.

89,666. RAILWAY LOCOMOTIVE. DANIEL B. WORTH, Rochelle, Ill. Filed Jan. 23, 1933. Serial No. 46,940. Term of patent 7 years.

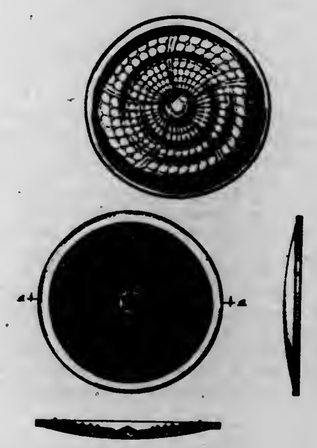


The ornamental design for a railway locomotive, as shown and described.

89,667. OLLA SHELL. MAX ALEX, Alhambra, Calif., assignor to York Water Corporation, Ltd., a Corporation of Nevada. Filed Jan. 24, 1933. Serial No. 46,958. Term of patent 14 years.

The ornamental design for an olla shell, as shown.

89,668. BURIAL CASKET. STEPHEN JUNKUNC, Jr., Chicago, Ill. Filed Oct. 31, 1932. Serial No. 45,672. Term of patent 14 years.



The ornamental design for a burial casket, as shown.

89,669. TEXTILE FABRIC OR THE LIKE. REBECCA SHAPIRO MARANISS, New York, N. Y., assignor to S. Shapiro Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1933. Serial No. 47,413. Term of patent 3½ years.

The ornamental design for a textile fabric or the like as shown.

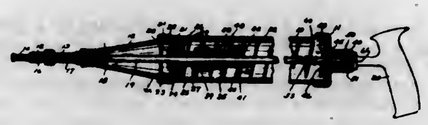
89,670. GLASS LENS FOR LIGHT REFLECTOR SIGNAL. HERMAN C. REICHHARDT, Evanston, Ill., assignor, by direct and mesne assignments, to Star-Brite Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1931. Serial No. 42,827. Term of patent 14 years.

The ornamental design for a glass lens for light reflector signal, as shown.

89,671. TEXTILE FABRIC OR SIMILAR ARTICLE. GABRIEL VIRGILS, Long Beach, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Mar. 10, 1933. Serial No. 47,427. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article as shown.

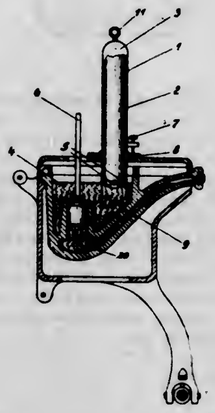
89,672. TEXTILE FABRIC OR THE LIKE. MICHEL BRODSKY, Paris, France, assignor to Cheney Brothers, New York, N. Y., a Corporation of Connecticut. Filed Jan. 25, 1933. Serial No. 46,965. Term of patent 3½ years.



The ornamental design for a textile fabric or the like as shown and described.

CARNEGIE LIBRARY OF ATLANTA

PATENTS



GRANTED APRIL 18, 1933

1,903,750. GREASE GUN. ROLLIN L. BACHER, Lakewood, and PAUL I. SCHULTZ, Cleveland, Ohio, assignors to The United States Air Compressor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 15, 1932. Serial No. 598,944. 12 Claims. (Cl. 221—47.3.)

1. In a lubricant dispensing device, the combination of a storage chamber, pumping means at the forward end of the chamber, a rod for operating the pumping means, a follower slidable upon the rod, a latch associated with the follower, and means for locking the latch at the rear end of the cylinder, means operable to release the latch solely by the movement of the rod with reference to the chamber.

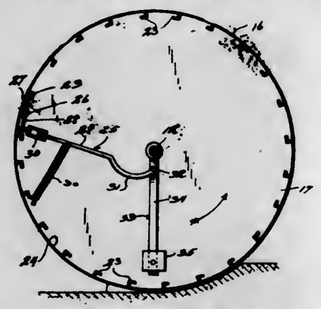
1,903,751. DEVICE FOR FEEDING THE CASTING POTS OF LINOTYPE AND SIMILAR MACHINES WORKING WITH SOFT METALS. KASPAR BADER, Berlin-Grunewald, Germany. Filed June 11, 1931, Serial No. 543,704, and in Germany May 6, 1930. 7 Claims. (Cl. 22—80.)

1. A device for feeding molten metal to linotype machines and the like, comprising the combination with a pot for the molten metal, of a supply reservoir carried by said pot and extending into and above a predetermined molten metal level in said pot and closed airtight above said level and having an air inlet opening at said level.

1,903,752. AIRPLANE. VINCENT BELIZZI, Bronx, N. Y. Filed Apr. 2, 1931. Serial No. 527,287. 5 Claims. (Cl. 244—12.)

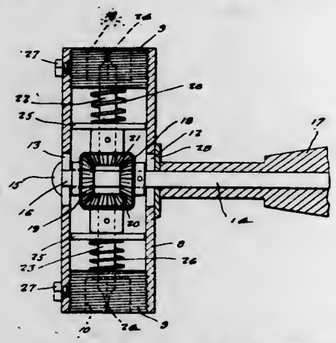
1. In an airplane, the combination with a fuselage, of a pivoted wing thereon, an engine for the plane, an air compressor connected to the engine, an air cylinder and piston, the piston connected to the wing, connections between the air compressor and the air cylinder and means for relieving the pressure in the air cylinder when the latter controls the opening of the wing.

1,903,753. CUTTER MECHANISM FOR MOWING MACHINES. DENNIS H. BENNETT, Dorr, Mich., assignor of one-third to Dean Halford and one-third to Walter E. Ihling, Kalamazoo, Mich. Filed Sept. 28, 1932. Serial No. 635,146. 14 Claims. (Cl. 56—300.)



1. A mowing machine of the class described, including an endwise reciprocating cutter bar carrying a series of wide, thin, transversely projecting blades, each blade comprising a forwardly projecting cutter portion having oppositely slanting cutting edges and a body portion having side edges that are forwardly tapered and wedge fitted from the rear through a correspondingly tapered transverse socket in the cutter bar, the parts being so proportioned that if displaced rearwardly, the blades will creep forward under normal cutting stresses, in combination with fixed guides for the cutter bar and a fixed safety bar extending along the rear of all of the blades, but spaced rearwardly therefrom so as to permit only limited rearward movement of each blade in its socket, if and when forced rearwardly during operation of the machine.

1,903,754. SELF-CLEANING FISH GATE. JOHN P. DOYLE, Lolo, Mont. Filed Dec. 30, 1930. Serial No. 505,616. 4 Claims. (Cl. 210—178.)

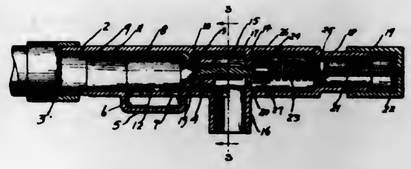


2. A self-cleaning gate of the character described, comprising a rotatable screen structure, a rockable cleaning member carried by said screen structure and operating means for said cleaning member actuated by rotation of

said screen structure, said operating means comprising a weighted member, means for connecting said weighted member to said cleaning member and resilient means en-

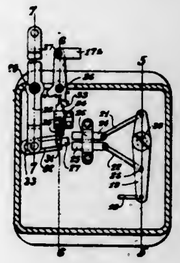
gaging said connecting means whereby to rock said cleaning member into inoperative position during one cycle of the rotation thereof.

1,903,755. AUTOMOTIVE TOOL. GEORGE F. FAGAN, Pueblo, Colo. Filed Nov. 29, 1932. Serial No. 644,904. 4 Claims. (Cl. 81—56.)



3. A combination tool of the class described comprising an elongated open ended cylinder formed intermediate its ends with diametrically opposed elongated slots, socket wrench elements plugged into the opposite ends of said cylinder, said elements being formed with bearing holes, a pair of longitudinally alined screw drivers located in the cylinder and having their intermediate portions mounted for rotation in the bearing holes of said wrench elements with the bladed ends projecting into the socket portions of said elements, extensible coil springs surrounding said screw drivers to permit the desired receding and projecting action thereof, a rotary operating shaft disposed at right angles to said cylinder and mounted for sliding and rotation in said slots, and operatively connected to the inner adjacent ends of said screw drivers.

1,903,756. EXPANSION JOINT FOR CONCRETE ROADS. ALBERT C. FISCHER, Chicago, Ill., assignor, by mesne assignments, to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Sept. 4, 1924. Serial No. 735,927. Renewed Mar. 20, 1931. 13 Claims. (Cl. 94—18.)

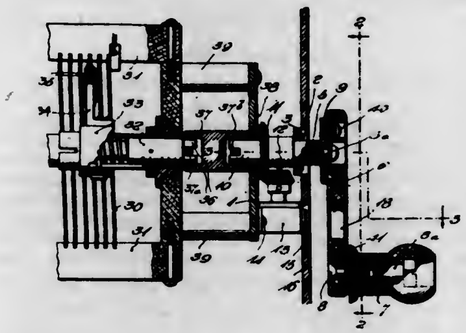


1. An expansion joint strip comprising a body of bituminous composition provided with separable thin reenforcing strips embedded in the surface of the bituminous body.

1,903,757. FAUCET STRUCTURE. PABLO VILAR FLORIDO, Annapolis, Md. Filed Mar. 14, 1932. Serial No. 598,826. 14 Claims. (Cl. 251—137.)

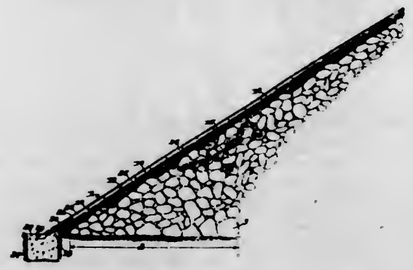
9. In a self-closing faucet, the combination of a casing having a valve chamber therein, primary inlet and outlet ports in said casing, a well formed integral with the casing, secondary inlet and outlet ports in the portion of the casing contiguous to the well, and a movable valve member adapted to simultaneously open or close the outlet ports and the secondary inlet port.

1,903,758. GEAR-SHIFTING MECHANISM. KENNETH W. GARKILL, Cleveland, Ohio. Filed June 19, 1931. Serial No. 545,573. 8 Claims. (Cl. 74—58.)



1. In a device of the class described, the combination of an engine, a shaft adapted to be driven thereby, a clutch connection and gear transmission between said engine and shaft, means operatively connected to said gear transmission for effecting change in the gear ratio, said means being capable of lateral adjustment according to and preparatory to the change desired in the gear ratio, cam means operatable through a fixed plane for effecting said lateral adjustment, mechanical means operatively connected to the clutch control for transmitting energy from the clutch control to said first-named means, adjustable means for establishing proper control connections according to the gear ratio desired and for simultaneously actuating said cam means for effecting adjustment of said first-named means laterally in one direction in accordance with the adjustment of said adjustable means, and means for automatically effecting lateral adjustment of said first-named means in the opposite direction.

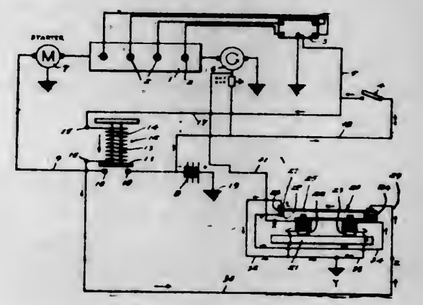
1,903,759. CONTROL APPARATUS. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 26, 1930. Serial No. 455,721. 3 Claims. (Cl. 116—124.3.)



1. In control apparatus for a high frequency signaling system, a rotary shaft for varying the effective impedance of said signaling system, a panel structure through which said shaft projects, a mechanical counter driven by said shaft and having calibrated drums movable by units for each revolution of said rotary shaft member, a crank formed of insulating material with a driving knob thereon, connecting means between said crank and the projecting

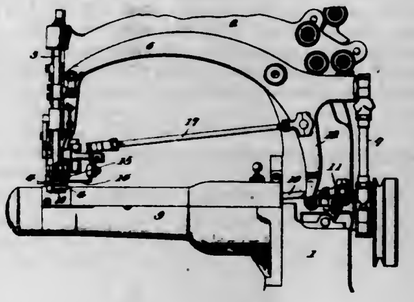
end of said rotary shaft member, said panel structure being apertured within the circle described by the outer end of said crank for displaying the indications of said

counter, said crank being apertured in alignment with said mechanical counter for observing the readings of said mechanical counter therethrough.



1,903,760. DAM AND METHOD OF MAKING SAME. JAMES B. GIRAND, Phoenix, Ariz. Filed Feb. 25, 1931. Serial No. 518,230. 12 Claims. (Cl. 61—30.)

1. A dam comprising a rock fill base, a water tight diaphragm spaced from the face of the rock fill base, and an interposed mobile stratum of loose-free-moving elements resting on the rock fill base and supporting the diaphragm, being capable of flowing into a depression in the rock fill base and thus maintaining the support of the diaphragm.

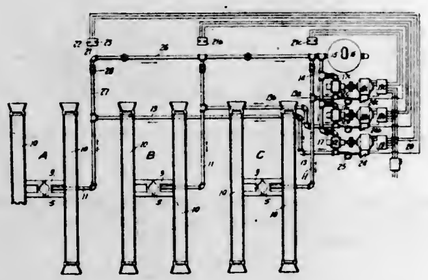


1,903,761. AUTOMATIC ELECTRIC STARTER FOR INTERNAL COMBUSTION ENGINES. FRANK GUETTNER, Jr., Shiner, Tex. Filed Apr. 14, 1931. Serial No. 530,064. 4 Claims. (Cl. 290—37.)

1. In an internal combustion engine starting system, a starting motor, a generator, a storage battery, an electrical connection between the battery and the motor, an ignition switch connected at one side with the battery, a normally open switch including a contact bridging arm controlling the electrical connection of the battery with the motor, an electromagnet including a coil and an armature having a core extending through the coil and carrying said arm and having one side of the coil thereof connected with the dead side of the ignition switch and having the other side grounded, a resistance coil, means interposed between the said other side of the first coil and the ground, actuated by the current from the generator, for connecting said resistance coil in series with said first mentioned coil, to reduce the flow of current through the latter to a point where it becomes ineffective to maintain the second mentioned switch closed, and means actuated by current from the generator for operating said connecting means, said resistance coil constituting the coil of an

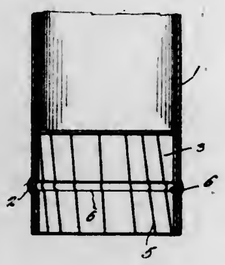
electromagnet which when energized maintains said means operative after the discontinuance of the flow of current from the generator.

1,903,762. FEEDING MECHANISM FOR SEWING MACHINES. NATHAN E. HANSON, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1931. Serial No. 566,537. 14 Claims. (Cl. 112—208.)



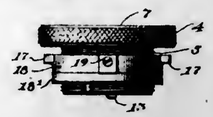
1. A feeding mechanism for sewing machines comprising a main feed dog, an auxiliary feed dog, means for supporting and raising and lowering said feed dogs, means for imparting feeding movements to said feed dogs including a rotating shaft, an eccentrically disposed member carried thereby, means operated by said eccentrically disposed member for imparting feed movements to one of said feed dogs, a device carried by said eccentric member and receiving movements therefrom, and means operated by said device for imparting feeding movements to the other feed dog, said device being disposed eccentrically on said eccentrically disposed member whereby a differential movement is imparted to the feed dog operated thereby.

1,903,763. HYDRAULIC LIFTING MECHANISM. ION VON KERT HOTT, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed July 15, 1930. Serial No. 468,109. 2 Claims. (Cl. 188—9.)



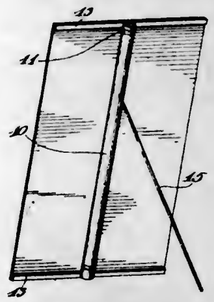
1. In a mechanism of the character described, a plurality of hydraulic lifting mechanisms each comprising a cyl-

inder, a piston, and means carried by said piston to receive and support an automobile; a separate pump connected with the cylinder of each lifting mechanism, said pumps being grouped at a point remote from said lifting mechanism and having their intakes connected with a common supply reservoir, check valves interposed between said intakes and said reservoir, a return pipe connected with the cylinder of each lifting mechanism, a check valve interposed between said return pipe and each cylinder, means arranged adjacent to the respective lift-



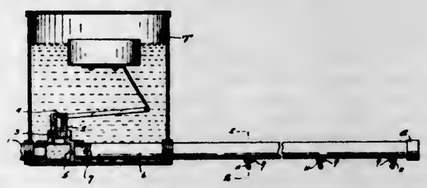
ing mechanisms and under the control of the operator for separately actuating said check valves to permit the escape of fluid from said cylinders, a separate motor connected with each pump, manually operated means arranged adjacent to the respective lifting mechanisms to control the starting and stopping of said motors, and pressure operated switches associated with the respective motors and connected with the cylinders of the corresponding lifting mechanisms and adapted to be operated by excess pressure in said cylinders to interrupt the operation of the respective motors.

1,903,764. ICE CREAM OR CONFECTION CONTAINER. JAMES EARL HOGUE, Hot Springs, Ark. Filed Sept. 2, 1931. Serial No. 560,822. 2 Claims. (Cl. 206—56.)



1. A container of the class described comprising a hollow body having its ends opened with an interior annular groove in each end part, a pair of cup-shaped caps provided with flexible flanges fitting in the ends of the container with their open ends outermost, each cap having an exterior annular rib on its flange, formed by an interior annular groove in the flange, for engaging a groove in the container, the flexibility of the flange enabling a cap to be pushed into the container to cause the contents thereof to force the other cap from the container, after which the contents will be forced from the container.

1,903,765. CLOSURE AND LOCK. ALFRED JOHNSON, Uniontown, Pa. Filed Oct. 10, 1930. Serial No. 487,850. 2 Claims. (Cl. 70—90.)

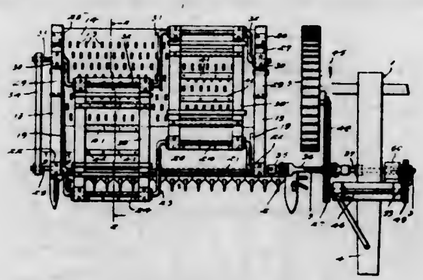


1. A lockable closure for tanks, including a threaded plug section, a cap section having a hub portion disposed on the interior of said plug section, a reciprocably mounted bolt on said cap section adapted to engage said plug, a lock cylinder mounted on the interior of the hub portion of the cap for controlling the operation of the bolt, and a plate in engagement with the lower end of the plug and fixedly secured to the lock cylinder, whereby said cap section is swivelly connected to said plug section.

1,903,766. POSTER SUPPORT. WILBERT R. JOHNS, Chicago, Ill. Filed Dec. 10, 1931. Serial No. 580,060. 4 Claims. (Cl. 40—125.)

1. A display poster comprising a sheet, buttons at the end portions thereof and projecting from the rear side, and a tube applied to the latter and formed with openings at its end portions to receive the buttons, one of the openings being an open slot by way of which the corresponding end of the tube straddles the neck of the related button, and the other opening being of a size for the passage of the button head and extended laterally with a narrow portion terminating with an offset to receive the button neck and lock the button from separation from the tube.

1,903,767. DRINKING FOUNTAIN FOR POULTRY. HENRY C. KARST, Sonoma, Calif. Filed Feb. 21, 1931. Serial No. 517,584. 1 Claim. (Cl. 119—80.)



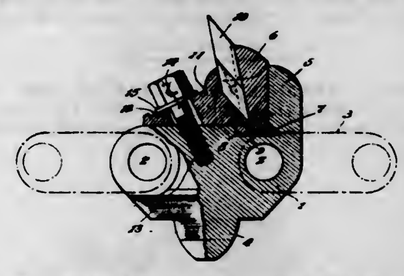
A poultry drinking fountain comprising a tank having two alined openings each in an opposite wall thereof, an inlet pipe extending through one opening and directed toward the opposite opening, a second pipe having an opening within the tank extending through the second opening and directed toward the first pipe in alinement therewith and having downward directed openings in that portion of the pipe extending outwardly of the tank, a

junction member connecting the adjoining ends of both pipes and securing the same within the tank, a float operated valve in the junction member for controlling the flow of water through the first named pipe, nipples in the second named pipe mounted in the openings, and valves mounted in said nipples and extending below the nipples for engagement by the beak of a fowl.

1,903,768. WOOD FILLER AND RELATED MATERIALS. PAUL S. KENNEDY, Newark, N. J., assignor to Murphy Varnish Company, Newark, N. J., a Corporation of New Jersey. Filed Nov. 12, 1929. Serial No. 406,723. 1 Claim. (Cl. 91—68.)

A wood article carrying a filling coating composition consisting of a polyhydric alcohol-polybasic acid-oil acids resin, a wood filler, and a cellulose ester overcoat.

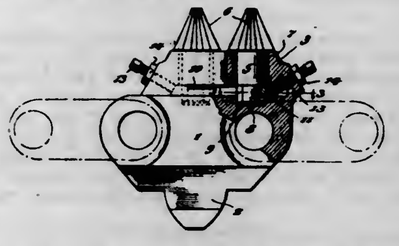
1,903,769. SEED GATHERER FOR MOWING MACHINES. CURRIE KING, Rutherford, Tenn. Filed Mar. 22, 1932. Serial No. 600,488. 12 Claims. (Cl. 56—19.)



1. A seed gathering attachment for a mowing machine having a cutter bar, comprising a pan having a rearwardly upwardly inclined top, means for coupling the pan with the cutter bar, a beater frame, means for rotating said beater frame to pass over the apertured top of the seed pan, hinged supporting means for said beater frame whereby the same may be raised at one end a substantial distance above the seed pan to facilitate removal of the seeds therefrom, and means for establishing a driving connection between the beater frame operating means and a wheel of the mower.

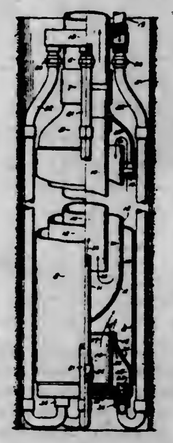
1,903,770. PROCESS FOR PREPARATION OF A PRODUCT CONTAINING ALL OPIUM ALKALOIDS. THORVALD BERNHART AAGAARD and BJARNE SAMDAHL, Oslo, and FRANTZ PHILIP HOPSTOCK, Krager, Norway, assignors to A/S Farmakon, Krager, Norway. Filed Apr. 11, 1930, Serial No. 443,608, and in Norway Apr. 17, 1929. 3 Claims. (Cl. 87—28.)

1. The process of separating morphine and other alkaloids from opium comprising, carefully extracting crude opium with petroleum ether, liberating the alkaloids from the extracted crude material by treating the same with an alkaline material, drying the mass containing the liberated alkaloids, dissolving the alkaloids in a mixture of solvents composed of a halogenated hydrocarbon and an aliphatic alcohol, precipitating the morphine from the solution by adding water thereto, separating the remaining alkaloids from the solution by evaporating the same to dryness, and extracting the residue with ether.



1,903,771. CUTTER-CHAIN BLOCK. NEWTON K. BOWMAN, Bowdil, Ohio. Filed June 10, 1932. Serial No. 616,535. 6 Claims. (Cl. 262—33.)

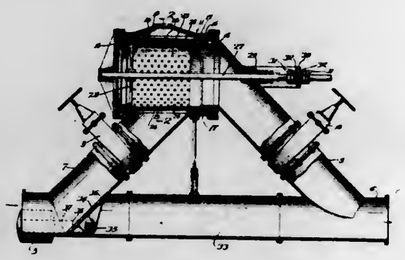
1. A bit block for cutter chains comprising a link body having a threaded opening therein disposed at an angle to the vertical axis of said body, a bit carried by the link body, a clamping member engaging the bit and having an opening therein registering with but of greater diameter



than the threaded opening, and a clamping screw extending through the opening in the clamping member and engaging the threads of the opening in the link body.

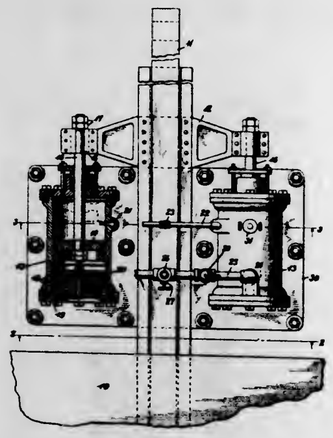
1,903,772. CORE-BREAKER. NEWTON K. BOWMAN, Bowdil, Ohio. Filed June 10, 1932. Serial No. 616,536. 6 Claims. (Cl. 262—33.)

3. A core-breaker including a link body having a reinforcing boss extending from one face thereof and provided with spaced sockets disposed one in advance of and offset with respect to the other, there being clean-out openings communicating with the sockets near the lower ends thereof, and core-chipping burrs mounted for rotation in said sockets.



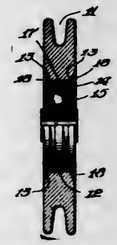
1,903,773. SIPHONIC AIR-LIFT TRAP. WALTER R. BRANDAU, Los Angeles, Calif. Filed Jan. 16, 1932. Serial No. 587,077. 10 Claims. (Cl. 103—261.)

1. A device of the character described, comprising; an intake nozzle; a surface above the inner end of said nozzle adapted to deflect a flow impinging thereagainst; a



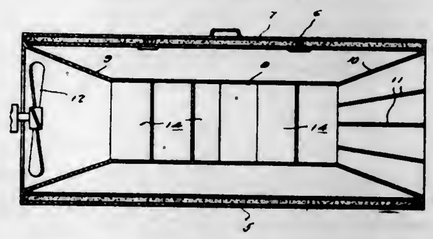
narrow annular passage surrounding the inner end of said nozzle whereby an annular jet may be caused, to draw liquid into the device through said nozzle, and to impinge upon said liquid after it has been deflected by said surface; and means for discharging the liquid from said device.

1,903,774. SCREENER EQUIPPED PIPE LINE. BENJAMIN S. BUARELL, East Chicago, Ind. Filed June 17, 1931. Serial No. 545,126. 6 Claims. (Cl. 210—166.)



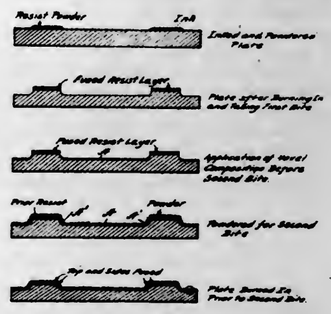
1. A fluid course having means therein for conditioning the fluid, a by-pass around said means, and a valve normally closing said by-pass to the flow of fluid therethrough and so positioned that the fluid sweeps against it in flowing to said means for keeping the face of the valve clean and operating automatically to open said by-pass for by-passing the fluid around said first-named means upon the building up of a predetermined back pressure in the portion of the course leading to said first-named means.

1,903,775. AIR SPRING AND CUSHION. FRANK E. CHRISTOPHER, Morgantown, W. Va. Filed July 21, 1931. Serial No. 552,264. 6 Claims. (Cl. 267—1.)



1. An air spring comprising, in combination, a structure to be reciprocated at different speeds in alternate directions, a reciprocating member secured to said structure, a cylinder closed at one end and having a port opening to the atmosphere at a point distant from said end, a piston reciprocable in said cylinder to uncover said port upon recoil from said closed end, means to connect said piston to said reciprocating member and means to vary the clearance of the piston from said closed end.

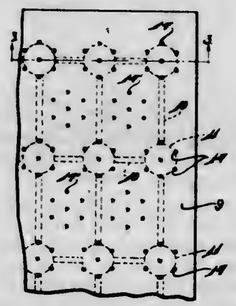
1,903,776. METHOD OF SECURING A BEARING WITHIN A PULLEY. GEORGE H. CLARK and JOHN L. DETERS, Cincinnati, Ohio, assignors to The Formica Insulation Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 9, 1931. Serial No. 514,640. 3 Claims. (Cl. 29—159.)



3. A method for securing a cylindrical core to an annular disk, comprising forming a groove in the peripheral edge portion of said core, introducing a metal tube about said core, rolling the metal of the tube into said groove, and spinning the outer edge of the tube against said disk.

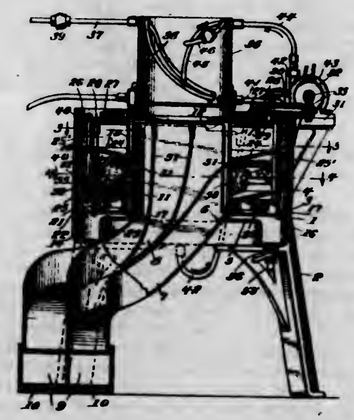
1,903,777. AIR REFRIGERATING DEVICE. GEORGE WILLIAM COIN, Manhattan, Kans. Filed May 12, 1932. Serial No. 610,944. 2 Claims. (Cl. 257—202.)

2. An air refrigerating device of the class described comprising a casing including four insulated walls, a tube inside the walls and spaced inwardly therefrom, said tube being formed with outwardly flared ends fixed to the ends of the walls, a plurality of horisontal and vertical partitions in one of the flared ends, a plurality of baffles in the tube.



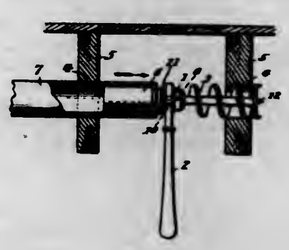
1,903,778. ETCHING PROCESS AND COMPOSITION FOR USE THEREIN. MARCUS F. CONROY, Luzerne, Pa., assignor of one-half to Luzerne Motor Company, Luzerne, Pa., a Copartnership consisting of Leo B. Corgan, William F. Corgan, and Michael H. Corgan. Filed Sept. 8, 1930. Serial No. 480,614. 14 Claims. (Cl. 41—48.)

1. The process of etching a printing plate or flat, which includes the step of applying a material to said plate after



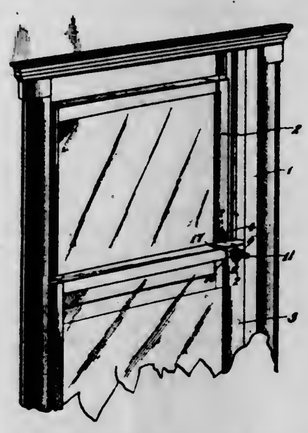
the initial etching to prevent a subsequently applied resist composition from adhering to those portions of said plate which are to be further etched, said material also being adapted to be removed during such subsequent etching.

1,903,779. GRATE. ARTHUR D. CRONIN, Detroit, Mich., assignor to Combustion Machinery Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 28, 1931. Serial No. 511,823. 3 Claims. (Cl. 126—163.)



1. A grate of the class described, comprising: a plate; a plurality of tubes projecting downwardly from the undersurface of said plate; reinforcing ribs projecting downwardly from the undersurface of said plate and extending between and connecting to said tubes, said plate having a plurality of openings formed therethrough communicating with each of said tubes.

1,903,780. DISHWASHING MACHINE. PAUL DE ASIS, Burbank, Calif. Filed July 29, 1932. Serial No. 625,881. 4 Claims. (Cl. 15—74.)

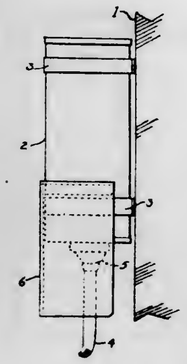


1. A dish washing machine comprising a casing having a washing chamber, a revolving supporting structure in said chamber to rotate about a vertical axis, a power means for rotating the supporting structure, upper and lower plates carried by the supporting structure, means for delivering cups to the upper plate, means for delivering plates to the lower plate, delivery chutes communicative with said upper and lower plates, means for deflecting the cups and dishes from their respective plates into said chutes, and means for spraying the cups and dishes while carried by the plates.

1,903,781. RATCHET GUIDE AND SUPPORT. HARRY T. EISELE, West Dover, Ohio. Filed Apr. 24, 1931. Serial No. 532,663. 1 Claim. (Cl. 145—129.)

In a means for guiding and holding a ratchet tool, a plurality of telescoping sleeve members, each provided at its forward end with a peripheral flange adapted to abut the peripheral edge of the next encircling sleeve, said flanges being stepped with relation to one another when the sleeve members are assembled and limiting the movement of the respective sleeves in one direction, a cylindrical shank fitting snugly in the inner telescoping sleeve member provided with a squared tool engaging outer end portion adapted to project beyond the forward end of the last mentioned sleeve, said squared end portion terminating in a spur, and a circumferential flange formed integral with said shank at the junction of the squared portion with the body of said shank, said latter flange being adapted to abut the forward peripheral edge of the inner sleeve to limit movement of said shank in one direction and also complete the stepped sequence of the aforesaid flanges.

1,903,782. COMBINED WINDOW VENTILATOR AND SASH FASTENER. ADOLF G. EYRING, Pittsburgh, Pa. Filed Aug. 13, 1931. Serial No. 556,885. 1 Claim. (Cl. 292—340.)

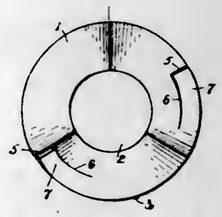


A window having a frame and upper and lower sashes slidable vertically in said frame, a latch in an upper corner portion of the lower sash having a plunger extending through the sash, a series of independent sockets embedded in the upper sash and each having its outer end open and provided with a circumferential substantially elliptical shaped end plate countersunk in the face of the upper sash and disposed in longitudinal alinement with the end plates of adjacent sockets, each end plate having its major axis extending in the direction of the length of said upper sash and inclined inwardly from each end thereof towards the adjacent socket, each socket

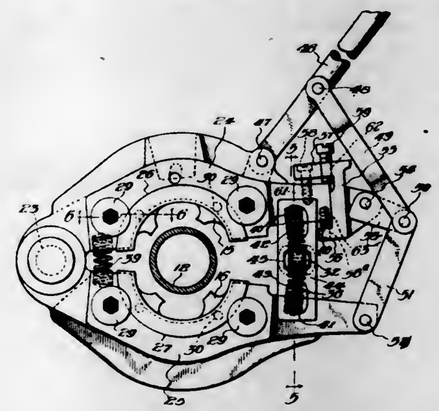
being provided with a head formed with a central opening, the plunger being of uniform cross sectional diameter throughout its entire length and adapted to successively enter the sockets and bear snugly against the interior walls thereof, a pad bearing against the head of each socket, and fastening devices passing through the pads and openings in the heads to secure the sockets and pads in place, each pad having a marginal flange projecting towards the open end of the adjacent socket beyond the fastening device and serving to prevent the plunger from striking the fastening devices when successively moved into the sockets to secure the upper sash in an adjusted position.

1,903,783. PRODUCTION AND APPLICATION OF LAYERS SENSITIVE TO LIGHT. WALTER FRANKENBURGER and GEORG ROESSLER, Ludwigshafen-on-the-Rhine, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Jan. 11, 1930, Serial No. 420,278, and in Germany Jan. 22, 1929. 13 Claims. (Cl. 95—2.)

1. The process for the production and application of layers sensitive to light, which comprises incorporating a plurality of portions of a liquefied organic colloidal substance, each with a light-sensitive silver halide which is differently and particularly sensitive to the different rays of light for each portion of the colloidal substance, thus forming a plurality of photographic emulsions, incorporating each of the said photographic emulsions with a different, finely divided water-insoluble colouring matter indifferent to light and practically inert to the said silver halide, dispersing each of the said photographic emulsions separately into fine globular particles and spreading the resulting globules to form an inhomogeneous light-sensitive layer onto a substratum having a superficial layer which is sticky with respect to the said globules.



1,903,784. SHIELD FOR IGNITION COILS. BARNWELL R. KING, Kalamazoo, Mich. Filed May 25, 1931. Serial No. 539,978. 9 Claims. (Cl. 175—357.)

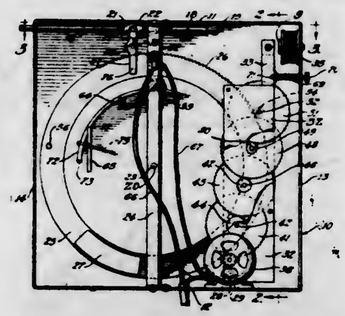


8. An ignition coil shield comprising a resilient split ring of metal, and a split skirt of rubber vulcanized thereon, the ring being disposed near one end of the skirt.

1,903,785. METHOD OF MANUFACTURING LOCK WASHERS. NICHOLAS RICHARD LILLIG, Portland, Oreg., assignor to Tice Lock-Washer Manufacturing Co., Portland, Oreg., a Corporation of Oregon. Filed May 21, 1931. Serial No. 539,099. 7 Claims. (Cl. 10—86.)

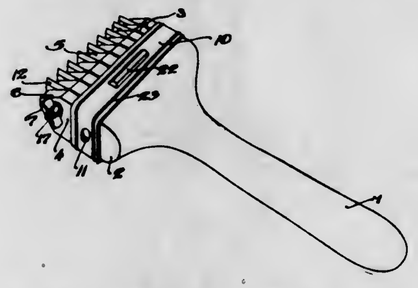
1. The method of manufacturing lock washers which consists in taking an annealed sheet metal blank of substantially uniform gauge and cutting therefrom a metal blank having a central bolt hole surrounded by an annular body of uniform thickness and of a definite overall diameter, forming undulations in said body without substantially changing the overall diameter of the blank or that of the hole and thereby "stretching" the metal of the blank in an annular direction.

1,903,786. DIE HOLDING MEANS. TIDEMAN M. LILLEBERG, Chicago, Ill., assignor to The Nye Tool & Machine Works, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1928. Serial No. 286,955. 15 Claims. (10—100.)



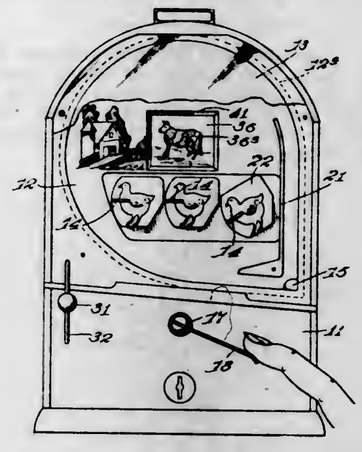
1. A holder for a sectional die comprising a support, a pair of upper and lower die-section-holding levers pivoted at one end to said support, an abutment on said support adjacent the other end of said pair of levers and located between the latter, springs bearing against said abutment and said levers, respectively, and yieldingly forcing said levers to die-open position, stop means for each of said levers limiting the upward movement of the upper one of said levers and the downward movement of the other of said levers, and lever mechanism having an actuating element fulcrumed on one of said die-holding levers, operatively engaging the other of said die-holding levers and by which said die-holding levers may be moved to die-closed position and be locked in such position.

1,903,787. PAPER PRODUCT AND PROCESS OF MAKING SAME. WILLIAM C. LODGE, Montreal, Quebec, Canada, assignor to Manson Chemical Company, a Corporation of New Jersey. Filed Sept. 28, 1929. Serial No. 396,006. 18 Claims. (Cl. 92—21.)



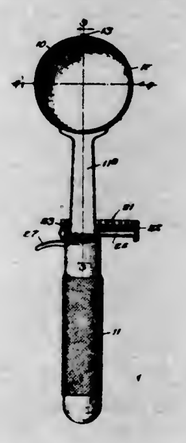
1. Paper material containing wax and starch deposited from a starch emulsion of the wax.

1,903,788. GAS WATER HEATER CONTROL. FRED CARL LORENZ, Chicago, Ill. Filed Apr. 1, 1931. Serial No. 527,005. 8 Claims. (Cl. 161—7.)



1. In combination an automatically closing pilot light valve including a movable element, a feed line valve of a gas heater burner, a device for opening the pilot light valve, and the burner feed valve and shutting off the burner feed valve after a predetermined length of time, said device comprising a motor, a speed reducing gear train operable by said motor, a pivotal supporting structure for said gear train, a rotatable shaft controlling said burner feed valve, a counterweighted disc fast to said shaft, gear teeth on an arc of the periphery of said disc and said teeth meshing with one of the elements of said gear train when said valves are closed to prevent rotation of said disc, a cam on said disc, electro-magnetic means for attracting said supporting structure to throw said element of said gear train out of mesh with said teeth to permit rotation of said disc and shaft in one direction to open said burner feed valve, a member on said disc engaging said movable element at the beginning of said rotation of said disc to open said pilot light valve, means for meshing said element of said gear train and said disc teeth when said electro-magnetic means are in open circuit position, circuit closing means co-acting with said cam to close circuit to said motor after circuit to said electromagnetic means is opened, and said gear train meshed with said disc teeth, whereby to rotate said disc and cam in the opposite direction, to close said burner feed valve by rotation of said shaft.

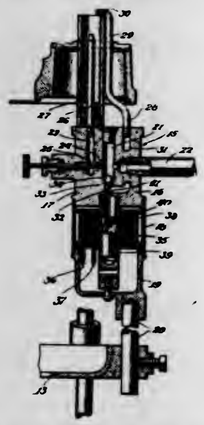
1,903,789. MEAT CUTTER. FRANK H. MICHAELS, Dishman, Wash. Filed Feb. 29, 1932. Serial No. 595,827. 1 Claim. (Cl. 17—30.)



In a duplex-multi-blade, meat cutter, the combination with a head having oppositely disposed gage-faces with differing degrees of angularity, and said head having spaced kerfs forming tongues on the head, of a plurality of cutting blades mounted in the kerfs for co-action with the gage faces, and a fastening bolt passed through holes in said tongues and blades.

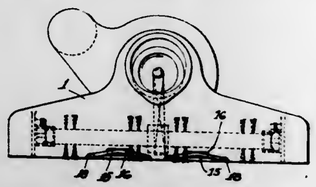
1,903,790. GAME APPARATUS. LOUIS MYERS, Chicago, Ill. Filed Sept. 25, 1931. Serial No. 565,167. 4 Claims. (Cl. 273—122.)

1. A device of the character described, including; a target movable from locking position to unlocking position; a shot; means for projecting the shot toward the target, said target adapted to be moved to unlocking position by impact of the shot; a member movable from set to released position; means yieldingly urging the movable member to released position; and a connection between the target and the movable member holding the latter in set position when the target is in locking position, said connection adapted to be released by movement of the target to unlocking position.



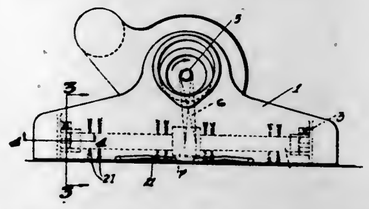
1,903,791. ICE CREAM LADLE. LOUIS MYERS, Chicago, Ill. Filed Apr. 2, 1932. Serial No. 602,799. 5 Claims. (Cl. 107—48.)

1. A ladle, including; a bowl; a handle attached to the bowl, including a cylindrical portion and a flattened bridging member; a bearing on the underside of the bridging member; a scraper swingably mounted in the bowl; a scraper-operating shaft rotatably mounted on the handle and extending through the bearing on the underside of the bridging member; a gear on said shaft; a spiral spring surrounding said shaft with one end attached to said gear; a spring tension adjusting nut on said shaft adjacent the bearing on the bridging member, said nut being



attached to the other end of said spring; means for retaining the spring tension adjusting nut in its adjusted position; and a transversely arranged reciprocable rack bar carried by the handle and engaging said gear.

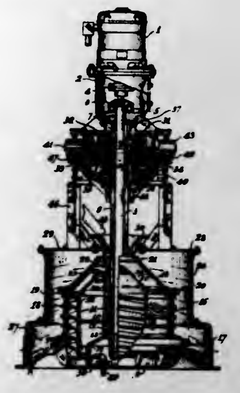
1,903,792. GAS IGNITION DEVICE. STANLEY PERRY, Chicago, Ill., assignor to Automatic Burner Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 21, 1929, Serial No. 333,832. Divided and this application filed Jan. 26, 1931. Serial No. 511,430. 2 Claims. (Cl. 158—115.)



2. In a gas ignition device, a body having a chamber adapted for communication with a source of gas supply, a pilot member extending from said body and communicating with said chamber, a flare jet coacting with the pilot member, said body having a passageway extending downwardly from the base of said chamber and thence upwardly to the flare jet, a ball valve in the base of said chamber normally closing the last mentioned passageway, a sleeve depending from the body, a core within the sleeve and connected to said ball valve, and an electro-magnetic winding surrounding the sleeve and coacting with the core whereby the ball valve may be raised and lowered with respect to its seat to enable gas to pass from said chamber to the flare jet.

1,903,793. VACUUM CLEANER BRUSH GUARD AND ADJUSTING ROLL ASSEMBLY. LEON W. RICHARDSON and ALLEN D. WASSALL, Worcester, Mass., assignors to Sweeper-Vac Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 8, 1931. Serial No. 542,870. 4 Claims. (Cl. 15—8.)

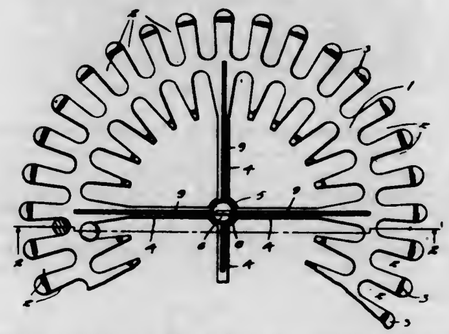
1. The combination of a suction nozzle providing a suction opening with end openings wider than said suction opening, walls between the suction opening and the end openings, recesses provided in said walls outside the area of said suction opening for the reception of bearings, a rod rotatably mounted in said bearings adjacent one longitudinal edge of said suction opening and externally thereof, arms rigidly mounted on said rod adjacent opposite ends thereof, wheels rotatably mounted on the ends of said arms within said end openings, said rod having an offset formed thereon, a screw pivotally connected to said offset, a nut engaging said screw, and a lug formed on said nozzle and engageable by said nut to hold said rod against rotation and limit movement of said wheels in said end openings.



1,903,794. BRUSH SHAFT HOLDING AND DRIVING MEANS FOR VACUUM CLEANERS. LEON W. RICHARDSON and ALLEN D. WASSALL, Worcester, Mass., assignors to Sweeper-Vac Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 8, 1931. Serial No. 542,871. 2 Claims. (Cl. 15—8.)

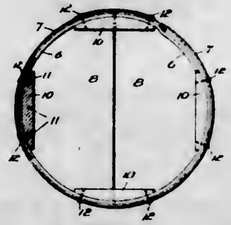
1. In a vacuum cleaner construction, the combination with a nozzle and a brush shaft therein, said shaft having bearings assembled on opposite ends thereof, of holding means for each bearing, comprising a U-shaped flange formed in the nozzle and opening toward the nozzle opening, an adjusting screw in the base of the flange and adjustable in said flange for determining the position of said bearing therein, and a spring actuated plunger extending into the space between the arms of said flange to engage said bearing and yieldingly hold said bearing against the opposed arm of said flange and the end of said screw.

2. In a vacuum cleaner construction, the combination with a brush shaft removably mounted in the nozzle opening of said cleaner, supports in said cleaner to receive the ends of said brush shaft, a motor having a shaft extending at right angles to the axis of said brush shaft and midway between the ends of said nozzle opening and a flat belt adapted to connect said shafts, of a cylindrical pulley on said brush shaft for receiving said belt, said pulley being located centrally of the nozzle opening and having a width great enough to receive said belt, irrespective of the reversal of said brush shaft within said nozzle opening.



1,903,795. CENTRIFUGAL DRIER. RICHARD W. RIGLER, Philadelphia, Pa. Filed July 18, 1930. Serial No. 468,949. 8 Claims. (Cl. 210—69.)

7. In a centrifugal drier, an outer hollow rotatable screen, and an inner rotatable screw conveyor having upwardly and transversely inclined flights provided with

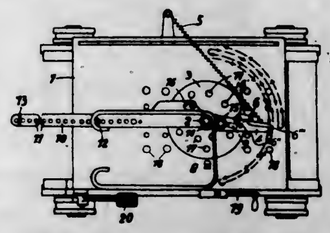


lower lateral surfaces facing in the direction in which the material is moving and having an acute-angle wedge relation to the inner surface of said screen to exert a wedging action upon the material being treated to force said material outwardly of said lateral surfaces towards said screen and through the clearance space between the screen and the conveyor to wipe clean the strainer holes of said screen, the upward incline of said flights facilitating the spreading of the material under the flights and the freeing of the liquid content of the material.

1,903,796. BROOM RACK. JOSEPH M. SMYGEL, St. Joseph, Mo. Filed Apr. 25, 1931. Serial No. 532,887. 2 Claims. (Cl. 211—66.)

1. A broom rack, comprising a flat annular body having a plurality of relatively deep recesses formed in each of the edges thereof, radially disposed arms within the body, connected therewith and joined at their inner ends at the radial center of the body, a post carried by said arms at the radial center of the body, means at the upper end of said post for suspending the structure with the body in horizontal position, and supporting brace arms connecting the body with the post adjacent the upper end of the latter.

1,903,797. SHIPPING BASKET. JOHN B. STEEL, Norfolk, Va., assignor to Farmers Manufacturing Company, Norfolk, Va., a Corporation of Virginia. Filed Nov. 24, 1931. Serial No. 577,077. 1 Claim. (Cl. 217—123.)



In a shipping basket of the type set forth, a body structure having the lower ends of the staves thereof clamped between a pair of bottom hoops, one inside the body and the other outside thereof, a board bottom whose outer edge rests on the upper edge of the inner hoop, and a plurality of narrow bars fastened to the under-face of the bottom and having their outer edges curved to fit against the inner face of the hoop, the grain in each one of these bars running lengthwise thereof and each bar having its outer face curved to fit against the inner face of the hoop, whereby the center portion of the bottom is left unobstructed, said bars being spaced apart around the hoop structure and being directly fastened to the hoop structure by fastenings passing inwardly through the hoop structure and entering said bars across the grain thereof.

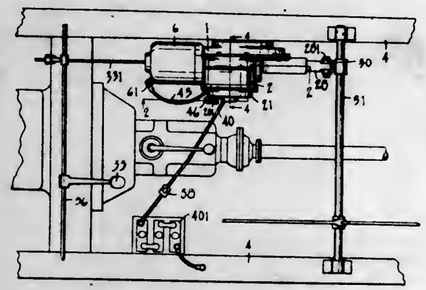
1,903,798. CARRIER CASE. EDWIN B. TURNER, Wellington, Ohio. Filed Apr. 29, 1930. Serial No. 448,829. 2 Claims. (Cl. 224—5.)

1. A carrier case comprising a tubular body of thin cross section, a cup secured over one end of said body to provide a bottom and a reinforcement, a ring through which the opposite open end of the body is extended, a cap on the extended open end of the body being abutted by the cap, a carrier strap, eyes attached to the cup and ring, one end of the strap being connected with the cup eye and said strap being threaded through the ring eye, the cup and ring relieving the body of strains imposed on their respective eyes, and means on the cap to which the remaining end of the strap is secured.

1,903,799. BENDING MACHINE. ANTON WAGENBACH, Elberfeld, Germany. Filed Mar. 10, 1928, Serial No. 260,788, and in Germany Sept. 24, 1927. Renewed Feb. 21, 1933. 4 Claims. (Cl. 153—46.)

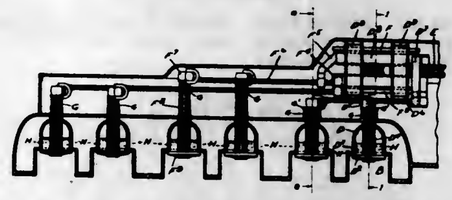
1. A bending machine, comprising in combination a frame plate, a substantially vertical shaft extending upward through said frame plate, a freely rotatable bending arm on said shaft, a driver arranged on said shaft above said frame and adapted to rotate said bending arm when said shaft is in rotation, means for automatically bringing said driver out of engagement with said arm, and means for withdrawing said arm into a resting position when disengaged.

1,903,800. DOUBLE-COLOR MECHANICAL PENCIL OR SHARP PENCIL. TAKEHIRO YAMASHITA, Koishikawa-Ku, Tokyo, Japan. Filed Mar. 28, 1932, Serial No. 601,630, and in Japan Aug. 28, 1931. 7 Claims. (Cl. 120—14.)



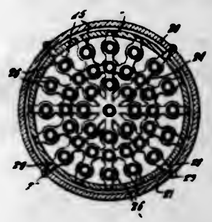
1. In a double-color sharp pencil, a guide-and-magazine unit made from one blank cut from a sheet metal and having two semi-cylindrical lead magazines and two guide

channels, lead propelling members respectively mounted in said guide channels, and a tubular driving screw having crossing helical grooves engaging with said lead propelling members.



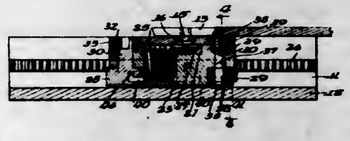
7. In a double-color sharp pencil, a lead holder, a lead propelling member, a flexible rod consisting of a wire rope and connecting said lead propelling member and the lead holder, and means for discharging the remaining short lead from said lead holder.

1,903,801. ELECTRICAL CONTROL MEANS FOR BRAKES. ROYAL E. ADAMS, Los Angeles, Calif., assignor to Edwin Pederson, trustee, Los Angeles, Calif. Filed Feb. 23, 1932. Serial No. 594,502. 16 Claims. (Cl. 188—162.)



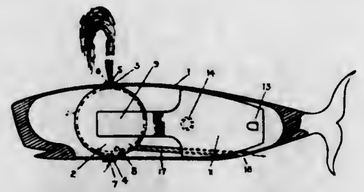
1. In an electric brake structure, the combination of a housing, an electric motor having a worm shaft and worm gear mounted in the said housing, a reciprocating rack with actuating pinion within the housing in a suitable way having connections to operate the brake, a reducing train of gears from the said worm gear to said pinion to actuate the same, a spring pressed disk clutch between the said worm gear and the said train of gears, an electromagnet to throw said clutch out of gear, a slideway parallel with the said rack and beneath the same, the way for the said rack and the said slideway having longitudinal slots in their bottoms, a slide in the said slideway, a rocker switch on said slide having a contact at one end to supply current to the motor and at the other end to supply current to the electromagnet, and having a central notch over the pivot thereof, balancing spring means to hold the switch in central neutral position, a downwardly projecting lug on the said rack having an insulated contact engaging the central notch of said rocker switch, a battery connected to the said switch to supply current to the motor or to the electromagnet, and a control pedal having a return spring and having a connection for actuating the said slide, whereby on depression of said pedal the notch reacts on the downwardly projecting lug on said rack to close the circuit to said motor to apply the brake and on the reverse of said pedal reacts to close the circuit to said magnet to release the brake and control the same according to the movement or position of said slide and switch.

1,903,802. INTERNAL COMBUSTION ENGINE. WILLIAM C. AGRELL, Chicago, Ill. Filed Apr. 18, 1928. Serial No. 269,671. 14 Claims. (Cl. 123—81.)



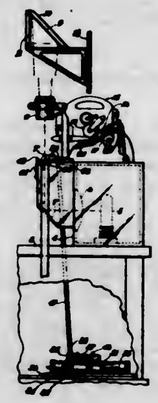
1. In combination in an internal combustion engine having a plurality of cylinders, a plurality of exhaust valves and of inlet valves, a single cam assembly for individually controlling the valves of each set and separate connecting members extending from cam means to the several valves of each set, respectively, whereby the exhaust valves are individually operated from a single cam assembly and the inlet valves are individually operated from a single cam assembly.

1,903,803. CATALYST FOR OXIDIZING CARBON MONOXIDE IN EXHAUST GASES. MAURICE E. BARKER, Edgewood, Md. Original application filed June 4, 1926, Serial No. 113,830, Patent No. 1,855,165. Divided and this application filed Aug. 25, 1931. Serial No. 559,829. 8 Claims. (Cl. 23—283.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. A catalyst for promoting the oxidation of carbon monoxide comprising an alloy of lead, manganese and copper having an oxidized surface for exposure to the carbon monoxide.

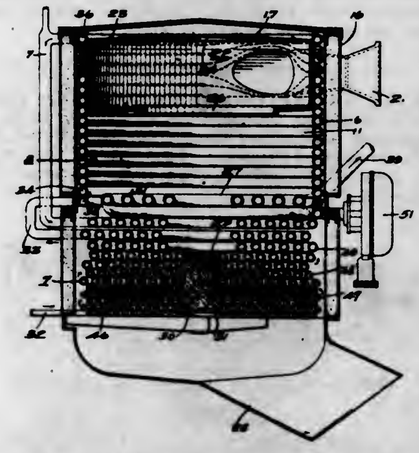
1,903,804. PRINTER'S REGISTER HOOK. WILLIAM F. BRÜGMANN, Chicago, Ill. Filed Mar. 31, 1930. Serial No. 440,232. 21 Claims. (Cl. 101—388.)



1. A printer's register hook embodying a body portion adapted to be inserted into a groove in a base, separate locking means at the ends of the hook, and means responsive to the operation of one of the first said means for simultaneously actuating the other of said locking means.

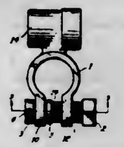
1,903,805. TOY. JOHN P. BUCKLEY, Washington, D. C. Filed Mar. 10, 1930. Serial No. 434,714. 10 Claims. (Cl. 46—40.)

1. In a device of the character described, an image, an expansible and collapsible receptacle in said image and having an inlet and an outlet, an inwardly opening valve being provided for the inlet whereby fluid may be drawn into the receptacle as the receptacle expands, and means for applying pressure to said receptacle to collapse the same and force fluid out through the outlet.



1,903,806. STOCK QUOTATION PROJECTING MACHINE. JAMES W. DECKER, New York, N. Y. Filed Jan. 25, 1928, Serial No. 249,383. Renewed Feb. 16, 1932. 16 Claims. (Cl. 88—24.)

1. The combination with a ticker tape, of a ticker having a printing mechanism for printing positive type impressions on said ticker tape and having a feeding mechanism for imparting a feeding impulse to said tape after a printing impression, a projecting mechanism having a horizontally disposed light aperture, a right angularly bent guide for twisting the tape through a right angular path of movement for inverting the tape and guiding the tape so inverted over said light aperture, a projecting lens above said light aperture for receiving images of the configurations on said tape, a deflector above said lens for receiving images from said lens, and a screen above said lens for receiving images from said deflector.

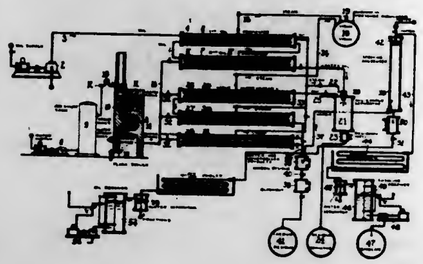


1,903,807. BOILER. WARREN DOBLE, Emeryville, Calif., assignor to Doble Steam Motors Corporation, Wilmington, Del., a Corporation of Delaware. Filed Dec. 28, 1929. Serial No. 415,997. 7 Claims. (Cl. 122—250.)

1. A boiler comprising a cylindrical boiler shell, a fire box in one end of said shell, a fluid tube having a plurality of convolutions through which fluid flows serially in the other end of said shell, the planes of said convolutions lying transversely of said shell, a cylindrical portion of said tube surrounding said fire box and receiving fluid from said convolutions, and an additional convolution

disposed intermediate said fire box and said first named convolutions and receiving fluid from said cylindrical portion.

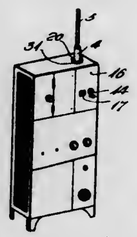
1,903,808. ELECTRICAL TERMINAL. CORNELIUS W. DORRMUS, Washington, D. C. Filed June 3, 1929. Serial No. 367,956. 1 Claim. (Cl. 173—259.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



An electric terminal clamp comprising means for establishing connection with an electric cable, a pair of jaws adapted to embrace opposite sides of a terminal post and having arms at their ends formed one with a threaded opening and the other with an unthreaded opening, an adjusting screw threaded through the arm having the threaded opening and having a tool engaging head at one end, the other end portion of said screw being reduced and unthreaded and freely engaged through the unthreaded opening of the other arm, a washer fitting loosely about the inner end of the reduced portion of said screw against a shoulder at the junction of the reduced portion of the screw with the threaded portion thereof, and a collar encircling the outer end of the reduced portion of said screw and a pin extending through the reduced portion of said screw and through said collar at diametrically opposite positions in said collar, said washer being arranged to engage the inner face of the arm formed with the unthreaded opening when the screw is turned to spread the jaws and said collar being adapted to engage the outer face of the last mentioned arm when the screw is turned to draw the jaws towards each other.

1,903,809. METHOD OF MAKING PHENOL-FORMALDEHYDE RESINS CONTAINING AN ALKALINE EARTH METAL BASE. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed June 1, 1923, Serial No. 642,868. Renewed Apr. 2, 1930. 1 Claim. (Cl. 106—22.)

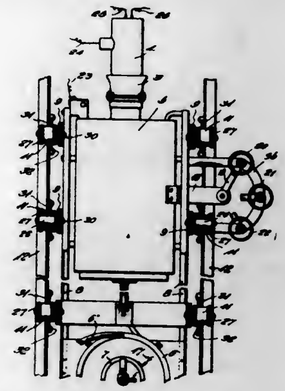
The process of making molding composition which comprises reacting at a temperature of from above 80 to be-



low 90° C. with aqueous formaldehyde on barium, phenate and phenol, said phenol not exceeding three times the amount by weight of combined phenol to form a homogeneous solution of the reaction product, incorporating the solution with a filler and exposing to heat in vacuo to dry and stiffen the reaction product.

1,903,810. APPARATUS FOR REFINING OIL. CHAUNCEY B. FORWARD, Urbana, Ohio, assignor, by mesne assignments, to Forward Process Company, Dover, Del., a Corporation of Delaware. Filed Oct. 13, 1919, Serial No. 330,490. Renewed Nov. 22, 1927. 7 Claims. (Cl. 196—107.)

2. An apparatus for refining oil, comprising a number of oil pre-heaters and a vapor and liquid separating-vessel and a number of vapor heaters connected in series, and a flash-boiler having superheating steam coils connected with both sets of heaters, and said vapor heaters having a steam discharge connection opening into the first of said oil preheaters.



1,903,811. ANTENNA SYSTEM. LOUIS A. GEBHARD and RAYMOND B. MEYER, Washington, D. C. Filed Mar. 11, 1930. Serial No. 434,882. 4 Claims. (Cl. 250—33.)

1. In a high frequency transmission system, a radiating antenna element comprising a multiplicity of tubular sections telescopically disposed one with respect to another and means extending axially through said sections for controlling the projection or collapse of said sections with respect to each other for correspondingly controlling the effective capacity of said antenna element.

1,903,812. SHOCKPROOF MOUNTING FOR A HIGH POWER HIGH FREQUENCY AMPLIFIER SYSTEM. LOUIS A. GEBHARD and CORBIE F. RUDOLPH, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1930. Serial No. 505,860. 10 Claims. (Cl. 250—17.)

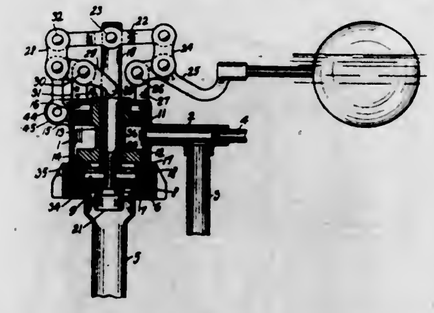
1. A shock proof mounting for parts of a high frequency transmitter comprising an outer frame structure, an inner frame structure, insulated strip members extending laterally of said inner frame structure and projecting beyond the limits thereof, electron tube apparatus supported by said inner frame structure and diametrically opposed resilient suspension members connected between opposite ends of said insulated strip members and said outer frame

structure for insulatingly and flexibly suspending the electron tube apparatus on said inner frame structure within said outer frame structure.

1,903,813. ENGRAVER'S MAT. ARTHUR B. GLENN, Los Angeles, Calif. Filed Dec. 7, 1927. Serial No. 238,410. 3 Claims. (Cl. 154—46.5.)

1. As a new article of manufacture, an engraver's mat capable of being engraved upon, consisting of a backing sheet of paper-board with a coating of shellac, and a facing adhering to the board on the shellacked face and consisting substantially of a composition of magnesium-silicate.

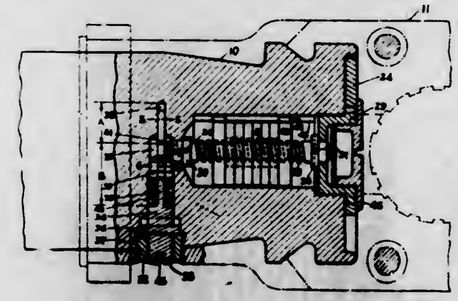
1,903,814. PYROTECHNIC STARTER COMPOSITION. GEORGE U. GRAFF, Washington, D. C. Filed May 18, 1932. Serial No. 612,149. 3 Claims. (Cl. 52—24.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



3. A pyrotechnic starter composition having as ingredients calcium silicide, lead peroxide, fused silicon, and copper oxide.

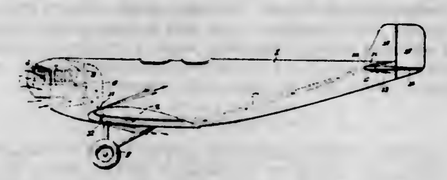
1,903,815. PROCESS FOR THE PRODUCTION OF NITRITES. STANLEY L. HANDFORTH, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 29, 1929. Serial No. 374,913. 15 Claims. (Cl. 23—104.)

1. The process of manufacturing a nitrite containing a minimum amount of nitrate which comprises bringing a gas containing appreciable quantities of NO and NO_2 into contact with an alkaline absorbing solution maintained at a pH value between 9.5 and 11.



15. The process of producing a nitrite which comprises starting the process with an absorbing solution containing sufficient carbonate to maintain the alkalinity close to a pH value of 11, maintaining this value substantially constant for a time by the gradual addition of soda ash, allowing the alkalinity to gradually decrease as the concentration of the salts in the solution increases until the concentration of salts in the solution has become such that the specific gravity of the solution is greater than 1,200, substantially neutralizing the solution, and continuing the absorption until the alkalinity has decreased to a pH value of 7.5 to 8.

1,903,816. FLOAT VALVE. LARRY A. HANSON and CHARLES F. OSNES, Altoona, Pa. Filed Dec. 28, 1931. Serial No. 583,520. 6 Claims. (Cl. 137—104.)

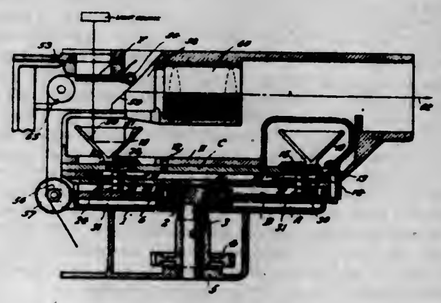


1. In a fluid pressure operated valve mechanism, a casing, a valve controlling the fluid supply to the casing, a valve seat, a float operated by the fluid supply delivered from the casing, a system of actuating levers connecting the float and the fluid controlling valve, a fluid pressure piston on the discharge side of the valve seat, and means for transmitting the movement of the piston to one of the fulcrums of said system of actuating levers.

1,903,817. PROPELLER BALANCE. NELSON V. JOHNSON, Philadelphia, Pa. Filed Apr. 7, 1932. Serial No. 603,825. 8 Claims. (Cl. 170—177.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A propeller comprising a hub, blades detachably secured in said hub, and adjustable means secured to and in the blades for varying the balance of said blades.

1,903,818. WING LIFT SYSTEM FOR AIRCRAFT. BERNHARD G. JUTTING, Jersey City, N. J. Filed Mar. 2, 1932. Serial No. 596,272. 4 Claims. (Cl. 244—18.)

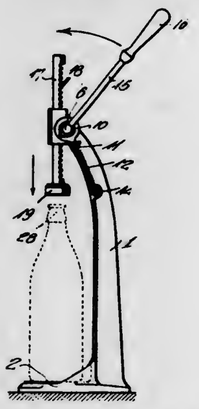


1. In an aeroplane, a fuselage, a motor frame at the forward end thereof, a blower carried by said motor, a wing mounted transversely of said fuselage and having a flat bottom surface and a convex upper surface, an air passage formed along the forward edge of said wing transversely of the direction of travel and nozzles extending rearwardly from said passage at both surfaces, and air intake passages formed in said frame and connected to the first named passage.

1,903,819. PIPE FITTING. EDWARD H. KOCHER, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed June 16, 1925. Serial No. 37,435. 15 Claims. (Cl. 285—203.)

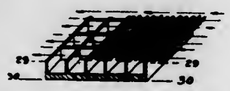
1. An unflanged dividing fitting including a plurality of tapped pipe terminal sockets radiating inward from the periphery, said sockets having beveled shoulders of decreasing diameter inwardly at their inner ends for coaction with compression coupling sleeves, bores of smaller diameter beyond said shoulders radiating inward and intersecting at the center of the fitting, said fitting having a bore free from communication with said sockets, serving for mounting said fitting, one side of said fitting being flattened for disposition in face contact with the supporting structure without interference with the pipe terminal sockets and the pipe terminals attached thereto or obstructing the tightening or loosening thereof, said flattened face being traversed by the plane of said pipe terminal sockets.

1,903,820. PRISM CARRIER FOR PROJECTION MACHINES. WILHO A. KOSKEN, New York, N. Y., assignor to Wilbo A. Kosken, Inc., a Corporation of New York. Filed Oct. 30, 1929. Serial No. 403,491. 4 Claims. (Cl. 88—16.8.)



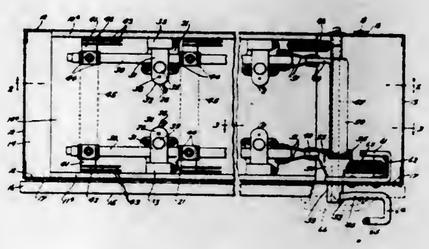
1. In a mechanical movement for transforming part of an angular rotation into a linear translation so that the linear velocity bears a fixed ratio to the angular velocity comprising a part constrained to revolve about a fixed axis; a part constrained to move in a straight line; a cross-slipway fixed to said part constrained to move in a straight line; a driver operatively working in said slipway; a link maintaining said driver at a fixed radial distance from said part constrained to revolve about a fixed axis; and additional guiding means restraining said driver at a fixed radial distance from a center fixed relatively to the axis of revolution of said revolving part and more distant from said part restrained to move in a straight line.

1,903,821. PROCESS OF PROMOTING THE BLOATING OF EARTHY MATERIALS. SHERMAN Q. LEE, Madison, Wis., assignor, by mesne assignments, to American Face Brick Research Corporation, a Corporation of Illinois. Filed July 3, 1930. Serial No. 465,653. 4 Claims. (Cl. 25—156.)



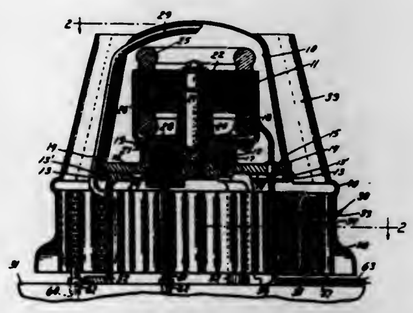
1. The process of promoting bloating which consists in adding to a mass of earthy material a liquid containing molassea and $FeSO_4$ in solution and incorporating the same throughout the mass of earthy material and in subjecting the mass to temperatures adequate to first evaporate the solvent portion of the liquid and thereafter cause bloating by fusing the earthy material and cause a reaction resulting in the liberation of gases throughout the mass.

1,903,822. BOTTLE CAPPER. HARRY J. LEBHERZ, Frederick, Md., assignor to The Everedy Company, Frederick, Md., a Corporation of Maryland. Filed Sept. 5, 1930. Serial No. 480,008. 3 Claims. (Cl. 226—84.)



2. A bottle capping tool comprising a frame structure terminating in a vertically disposed head, a ram movable through said head, a bottle capping throat carried by said ram for applying a crown cap to a bottle, said frame having a rearwardly extending portion integrally connected with said head, a shift gear projecting laterally through said rearwardly extending portion, said shift gear having teeth extending throughout a portion of its length adapted to engage teeth formed on said ram, the teeth on said actuating gear being laterally shiftable out of engagement with the teeth on said ram for effecting adjustment in the position of said ram, said actuating gear having opposite limiting stops formed integral therewith for limiting the stroke of said ram when said actuating gear is subjected to angular movement in engagement with the teeth on said ram, a member connected with said actuating gear, and spring means connected between said frame structure and said member for normally maintaining said actuating gear in engagement with said ram and elevating said ram in bottle capping position.

1,903,823. AERODYNAMIC SURFACE. VICTOR LOUGHEED, Washington, D. C. Filed Dec. 28, 1928. Serial No. 328,982. 5 Claims. (Cl. 244—41.)

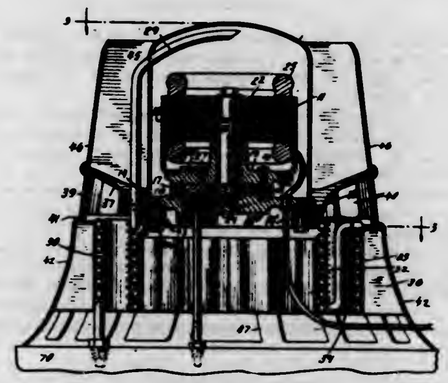


1. In a covering for aircraft, a layer of material having open vesicules or cells therein, and a freely-permeable covering therefor.

1,903,824. ELECTRIC SWITCH. MARTIN P. LUTHER, Chicago, Ill., assignor to Super Safety Switch Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1930. Serial No. 440,992. 10 Claims. (Cl. 200—50.)

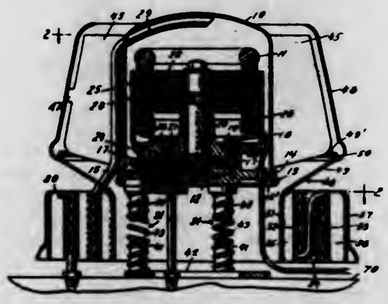
1. An electric switch comprising a support, insulating guides mounted thereon, fixed terminals carried by said guides and having contact blades, an apertured insulating housing enclosing each terminal and blade, reciprocable members mounted in said guides, movable contacts carried by said members and coactable with said blades through the apertures in said housing, and means for moving said members simultaneously.

1,903,825. REFRIGERATING APPARATUS. EDWARD B. MALLORY, Tenafly, N. J., assignor to The Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Feb. 14, 1930. Serial No. 428,324. 10 Claims. (Cl. 62—115.)



1. In refrigerating apparatus of the character described the combination of a compressor, a casing enclosing said compressor, and means for bringing into heat exchanging relation with said casing near the base thereof a convection current of air at a temperature above atmospheric temperature but below the temperature of said casing, whereby heat is removed from said casing by said current of air, said means comprising solely a condenser located below said casing and communicating therewith and acting to induce said air current by convection.

1,903,826. REFRIGERATING APPARATUS. EDWARD B. MALLORY, Tenafly, N. J., assignor to The Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Feb. 14, 1930. Serial No. 428,325. 15 Claims. (Cl. 62—115.)

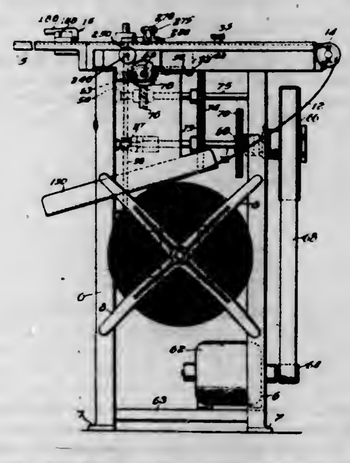


1. A refrigerating unit of the character described having in combination a casing, a compressor in said casing, and means supporting said casing in spaced relation above

a supporting surface, a condenser coil occupying space below said casing and being constructed and arranged to be cooled by convection air currents, and an air deflector

above said condenser constructed and arranged to deflect air rising from said condenser outwardly away from said casing.

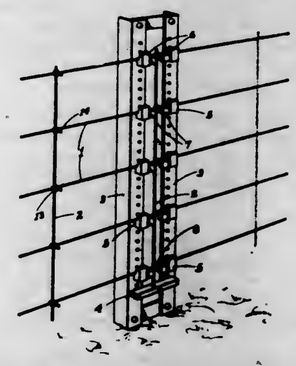
1,903,827. REFRIGERATING APPARATUS. EDWARD B. MALLORY, Tenafly, N. J., assignor to The Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Feb. 14, 1930. Serial No. 428,326. 27 Claims. (Cl. 62—115.)



1. A refrigerating apparatus of the character described comprising a motor and compressor in a sealed casing having cooling fins on said casing and a shroud enclosing said cooling fins and a condenser mounted on the exterior of said shroud.

1,903,828. ART OF TREATING VEGETABLE FIBERS. RALPH H. MCKEE, Jersey City, and EARLE H. MORSE, Nutley, N. J. Filed Sept. 26, 1929. Serial No. 395,457. 9 Claims. (Cl. 8—2.)

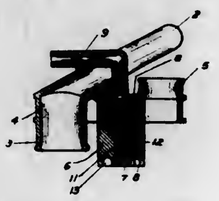
1. The process of converting vegetable fibers of the jute type to fibers having the appearance of wool or resembling wool which comprises subjecting the fibers to the action of a hot solution containing tri-sodium phosphate, treating the fibers with a dilute solution of sodium bi-sulfite, soaking the fibers in a solution of caustic alkali, boiling the fibers with a solution containing sodium bisulfite and applying a bleaching agent capable of whitening vegetable fibers to said fibers whereby crinkled light-colored fibers resembling wool and having characteristics thereof are produced.



1,903,829. TYPE BAR MACHINE. HARLEY J. MEDLEY, Chicago, Ill. Filed June 24, 1926, Serial No. 118,176. Renewed Feb. 21, 1930. 27 Claims. (Cl. 29—24.)

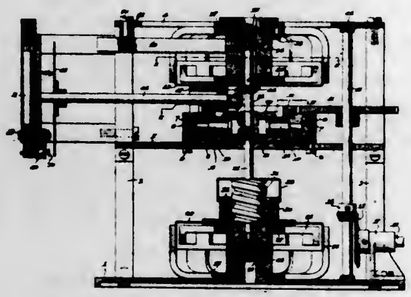
9. In combination, a table for supporting packing material, means slidably mounted thereon for engaging and moving said material, a feed-bar for said slidable means, a toothed advancing member for said feed-bar, cam means arranged to cause yielding engagement between said toothed member and said feed-bar, during the movement of said toothed member in one direction, mechanism for reciprocating said toothed advancing member, and means for locking said toothed member against engagement with said feed-bar.

12. In a machine for finishing and packing type bars that have been cast with grooves disposed on their sides adjacent the type face and with gates attached to the bar by a reduced portion, the combination of a table for supporting said type bars in vertical position on said gates, means for moving the bars on said table, packing means adjacent to said table, grooved guides for engaging the grooves of said bars and suspending them while they are being transferred from said table to said packing means, means for moving said bars from said table through said guides to said packing means, and means in the path of movement of said bars for severing the gates therefrom.



1,903,830. TOOL FOR TYING FENCE WIRES. MARTHA MOFFETT, Fresno, Calif. Filed June 5, 1931. Serial No. 542,246. 16 Claims. (Cl. 140—57.)

1. A tool for twisting staples comprising a turnable member, a support in which said member is turnably



mounted, single pair of opposed jaws mounted in said member for common engagement with the ends of the staple-legs, means to clamp the jaws against the legs, and means to then rotate the jaws and member as a unit.

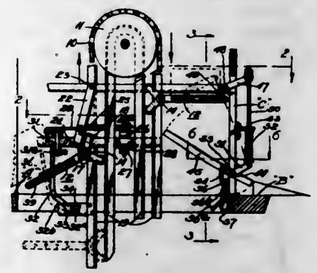
1,903,831. DRINKING MASK. RANDOLPH MONRO, Edgewood, Md. Filed June 25, 1929. Serial No. 373,640. 16 Claims. (Cl. 128—141.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A mask comprising means to carry on respiration, means associated with the mask to procure free flowing agents from ordinary containers, and other means to replace the agents removed with air exhausted from the mask.

1,903,832. CONSTANT SPEED MECHANISM. HORACE E. NICHOLS, Redford, Mich., assignor of one-third to Clyde Harrison Chase and one-third to Hugo A. Freund, Detroit, Mich. Filed May 4, 1927. Serial No. 188,839. 18 Claims. (Cl. 172—284.)

1. In a timing device, a driven shaft, a driving shaft, and a governor transmitting power from said driving shaft to said driven shaft, said governor, including a screw and nut drive in which the nut provides a gravitational element.

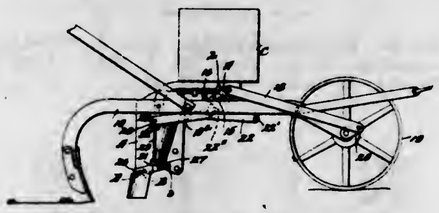
1,903,833. WALL OUTLET AND FITTING. JOSEPH N. NIELSEN, New York, N. Y. Filed Jan. 15, 1927. Serial No. 161,313. 3 Claims. (Cl. 247—3.)



2. A wall outlet comprising a molding including an insulation strip having longitudinal parallel slots in one side, conductors housed within the slots, plates covering the salts, one or more of said plates having perforations to receive terminals for contact with the conductors, and coacting means on the molding and plates providing for manually operable interlocking engagement between the plates and the molding.

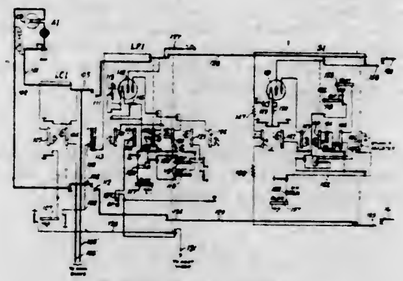
1,903,834. PROCESS FOR PRODUCING CARBONACEOUS MATERIAL. ALFRED OBERLE, Kansas City, Mo. Filed Aug. 11, 1928. Serial No. 299,100. 5 Claims. (Cl. 252—3.)

1. A continuous process for producing activated carbon from carbonaceous material of a mineral oil origin, consisting in heating the carbon under super-atmospheric pressure to a temperature in excess of 100° C. in the presence of an aqueous fluid, introducing an extraneous gas and withdrawing the volatile material and moisture and uncombined gases.



5. A continuous process for producing activated carbon from carbonaceous material of a mineral oil origin, consisting in heating the carbon to a temperature in excess of 100° C., under pressure up to 500 pounds, in the presence of an acidulated aqueous fluid withdrawing the volatile material and moisture.

1,903,835. SELECTIVE UNLOADER MECHANISM FOR ELEVATORS. SAMUEL OLSON, Chicago, Ill., assignor to Samuel Olson & Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1930. Serial No. 443,305. 8 Claims. (Cl. 198—155.)



1. In combination with a continuous vertically traveling belt and driving means therefor, a carrier pivotally engaged with the belt and normally extending horizontally and laterally to one side of the pivot axis, two guide rollers rigidly associated with the carrier and mounted in vertically spaced relation extending at the side of the belt in the direction opposite to that in which the carrier projects, a guideway for the rollers for controlling the position of the carrier, said guideway being provided adjacent each of a plurality of load-shifting stations arranged along the path of travel of the belt with a movable section adapted to be shifted for altering the guideway so as to include a laterally offset portion, whereby the leading guide roller may be caused to tilt out of its normal path and cause tilting of the carrier in a downward direction substantially about the axis of the following guide roller for discharging its load; independently operable mechanism disposed adjacent each of said discharge stations, each including linkage for controlling the movement of the guideway sections at the corresponding stations; means for selecting the stations at which the several carriers respectively discharge their loads, consisting of means on each carrier located thereon for rendering operative the mechanism at a predetermined station for causing discharge of the load at said station, said movable guideway sections being pivotally mounted at their upper ends about horizontal axes and arranged to permit swinging of their lower ends laterally outward in the direction of projection of the carrier, said movable guideway sections being arranged to constitute parts of the roll track at all positions within their range of movement.

1,903,836. SEED PLANTER. CHARLES T. RAY, Louisville, Ky., assignor to B. F. Avery & Sons, Louisville, Ky., a Corporation of Kentucky. Filed Feb. 27, 1929. Serial No. 343,217. 12 Claims. (Cl. 275—9.)

1. A seed distributing machine including, in combination, a wheel-supported frame, a seed chute, means for supplying seed to the chute, a valve to control the discharge of seed from the chute, a substantially horizontally tensioned lever pivotally connected at one end to the frame and having a projection intermediate its ends, a connection between the other end of the lever and the valve and a rotative member operated under control of the travel of the machine and having spaced projecting portions in operative relationship with the projection from the lever to operate the latter intermittently.

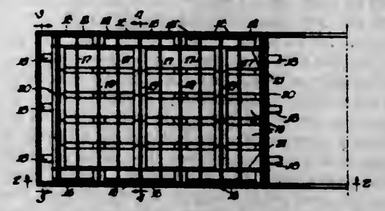
1,903,837. TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 8, 1931. Serial No. 542,759. 52 Claims. (Cl. 179—18.)

1. In combination, an automatic switch, a line extending to said switch, a vacuum tube having its grid controlled over said line, a plate circuit for said tube including a relay, primary and secondary motor magnets controlled by said relay, and means for shifting the control from the primary magnet to the secondary magnet.

1,903,838. IGNITIBLE STICK. FERDINAND RINGER, Vienna Austria. Filed Apr. 26, 1929, Serial No. 358,383, and in Austria May 5, 1928. 9 Claims. (Cl. 52—25.)

5. A combustible composition which when made in stick form may be blown out with a person's breath and then relighted by friction, comprising in the approximate proportions stated, a base mass of the class consisting of nitrocellulose, acetyl cellulose and mixtures of these in the neighborhood of one half of the total composition, oxygen carriers in the neighborhood of one fifth of the total composition, friction substances in the neighborhood of one tenth of the total composition, substances reducing the rate of combustion and improving moldability, in the neighborhood of one seventh of the total composition, a substance sensitive to friction, one sixteenth or less of the total composition.

1,903,839. FASTENING ATTACHMENT FOR PAPER BAGS. THOMAS M. ROYAL, Philadelphia, Pa. Filed Oct. 22, 1929. Serial No. 401,603. 3 Claims. (Cl. 229—65.)



1. A paper bag or other like container having an open end which is adapted to be closed by the folding of the open end portion of the said bag or other container, the said open end portion having means provided thereon for retaining the folds in folded relation to each other to maintain the closure of the bag, the said means comprising an attachment consisting of a multi-ply flexible strip having a plurality of wires held between plies of the said strip, the said wires adapted to be bent upon the folding of the end portion of the said bag to close the same and consisting of inelastic material whereby after having been bent in the folding of the end portion of the said bag they remain bent.

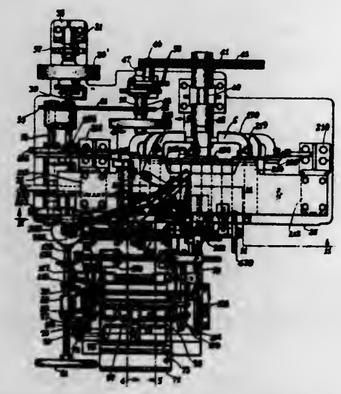
1,903,840. COMBINED INK SETTER AND STATIC ELIMINATOR. JULIUS SIMONS, Philadelphia, Pa., assignor to Simcoe Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1930. Serial No. 424,148. 5 Claims. (Cl. 175—264.)

4. An ink setter, comprising a hollow tubular insulator having an insulating partition, a conductor extending through said insulator upon one side and thence reversely upon the opposite side of said partition, independent condenser elements encircling the respective sections of said conductor upon the opposite sides of said partition and having terminal portions extending through the walls of said insulator.

1,903,841. LOADING OF SEWER PIPE, BUILDING TILE, ETC., FOR RAILWAY SHIPMENT. IVAN H. SPOOR, La Grange, Ill., assignor to The Gerrard Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 14, 1930, Serial No. 461,218. Renewed June 6, 1932. 22 Claims. (Cl. 105—367.)

1. A unit load of short elongated objects, such as sewer pipe, building tile and the like, for transportation in a railway car, consisting of several vertical tiers of the

objects positioned crosswise of the car in abutment with each other, vertical end gates positioned against the outer faces of the end tiers, and means for connecting the end gates together.



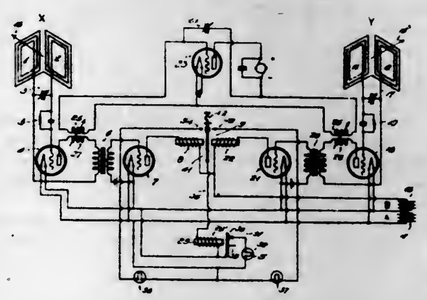
1,903,842. ALUMINUM ALLOY. COURT C. TITUS, New York, N. Y. Filed May 20, 1932. Serial No. 612,651. 4 Claims. (Cl. 75—1.)

1. An alloy consisting principally of aluminum and containing from 0.05 to 2% of boron, from 0.25 to 2.25% of magnesium, and from 0.25 to 3% of at least one metal of the group consisting of vanadium, tungsten, molybdenum and chromium.

1,903,843. ALUMINUM ALLOY. COURT C. TITUS, New York, N. Y. Filed June 20, 1932. Serial No. 618,348. 2 Claims. (Cl. 75—1.)

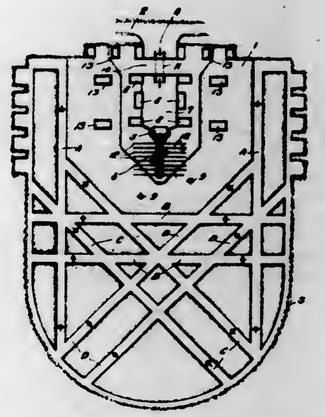
1. Alloys consisting principally of aluminum and characterized by containing from 0.05 to 2% of boron and from 0.25 to 2.25% of magnesium.

1,903,844. MACHINE FOR MAKING CARTONS. JOHN VAN BUREN, Brooklyn, N. Y. Filed July 9, 1929. Serial No. 376,919. 22 Claims. (Cl. 93—44.)



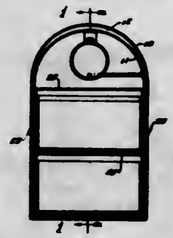
1. A machine for making cartons comprising means for supporting a supply of blanks, a carrier, a plurality of form blocks on said carrier, means for feeding said blanks one at a time to said blocks, means for folding the blanks around said blocks, a guideway, means for transferring the blocks and folded blanks from the carrier to said guideway, means for returning the blocks and folded cartons from the guideway to said carrier, and means for removing the cartons from the form blocks.

1,903,845. PROCESS OF CONVERTING NATURAL GAS AND SIMILAR GASEOUS HYDROCARBONS INTO A MIXTURE OF CARBON MONOXIDE AND HYDROGEN IN CONTROLLED PROPORTIONS. WILLIAM D. WILCOX, Idaho Falls, Idaho. Filed Aug. 29, 1928. Serial No. 302,876. 5 Claims. (Cl. 260—156.)



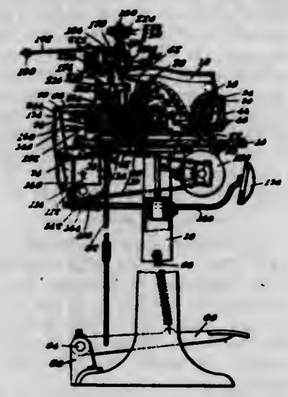
1. The process of obtaining a mixture of carbon monoxide and hydrogen in determined proportions by the dissociation of hydrocarbon gases and vapors, which comprises heating the interior of a conduit having a filling of refractory material to a temperature in excess of 2000° F. by burning combustible gas within the conduit, then admitting to the conduit a mixture of hydrocarbon gases with a controlled volume of steam and passing it through the conduit in a direction counter current to the travel of the combustion gases within the conduit, thence through a regenerator chamber having a filling of refractory material, withdrawing the gases; in the reheating cycle, passing the air which supports combustion through the regenerator in a direction counter current to the travel of the conserved gas.

1,903,846. PILOTING SYSTEM. JOHN A. WILLOUGHBY, Cambridge, Mass. Filed Jan. 8, 1929. Serial No. 331,004. 12 Claims. (Cl. 250—11.)



1. In a system for guiding mobile bodies, means for receiving electromagnetic energy on either side of a predetermined course, independent receiving circuits connected to each of said means, mechanism for rendering said receiving circuits alternately effective and ineffective, independent relay devices individual to each of said receiving circuits, a third relay device controlled by the operation of the aforesaid relay devices, a normal course indicator operated under condition of balanced signal in each of said independent receiving circuits, and separate indicator apparatus actuated by said independent relay devices for indicating the preponderance of energy in either of said energy collecting systems.

1,903,847. AIRPORT CONSTRUCTION. JOHN WALTER WOOD, Jr., New York, N. Y. Filed Aug. 30, 1930. Serial No. 478,828. 9 Claims. (Cl. 244—2.)

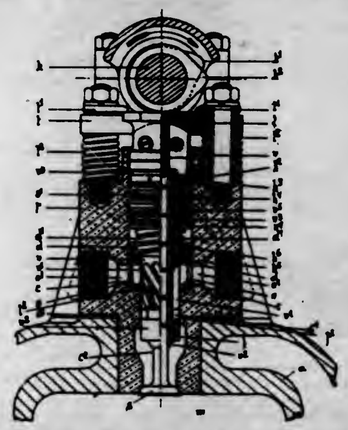


1. An airport construction having one boundary adjacent an approach for vehicles and including a passenger station between said boundary and the center of the field, and spaced from the latter, a roadway for planes extending generally parallel to said boundary and between it and the station, and means to permit vehicles to pass under said roadway.

1,903,848. REFRIGERATING MECHANISM. AUGUST J. ASMUSSEN, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 6, 1928. Serial No. 283,194. 8 Claims. (Cl. 62—126.)

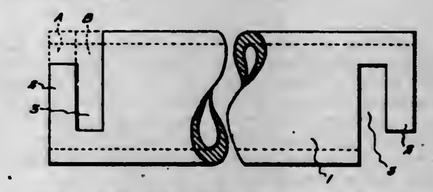
1. An expansion element for refrigerating mechanisms comprising a pair of wall members lying in substantially contacting relationship over the greater part of their area when the contacting surfaces are subjected to atmospheric pressure, said members being sealed against leakage between their edges, said walls being sufficiently flexible to separate a slight amount when said contacting surfaces are subjected to a pressure greater than atmospheric pressure, and means for introducing refrigerant to and removing it from between said contacting surfaces.

1,903,849. MACHINE FOR OPERATING ON TENNIS SHOES. ERNEST W. STACEY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 26, 1929. Serial No. 395,280. 58 Claims. (Cl. 12—1.)



1. In a machine for operating on the sole edge of a rubber-soled shoe, an edge treating tool, a support for holding a lasted shoe in operative relation to said tool, and means for causing a relative motion of said tool and the shoe constructed and arranged to transfer the point of contact of the tool and the work about the sole edge at a substantially constant linear velocity.

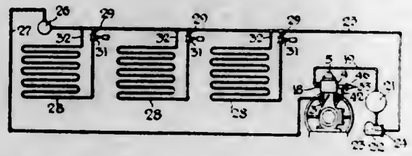
1,903,850. METHOD FOR THE REDUCTION OF FURFURAL ACETONE AND FURAN DERIVATIVES. FREDUS N. PETERS, Jr., Evanston, Ill., assignor to Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 28, 1927, Serial No. 171,725. Renewed Jan. 31, 1931. 6 Claims. (Cl. 260—54.)



1. A method for the reduction of furfural acetone which comprises dissolving furfural acetone in a solvent therefor, and suspending in such liquid a catalyst comprising nickel while subjecting the mixture to hydrogen, under superatmospheric conditions of temperature and pressure.

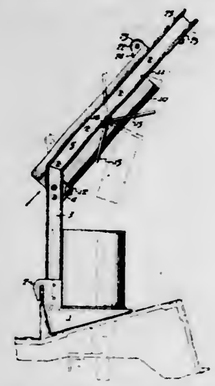
1,903,851. FUEL SUPPLY PROCESS FOR INTERNAL COMBUSTION ENGINES. FRANÇOIS ROCHEFORT, Paris, France. Filed Jan. 8, 1929, Serial No. 331,036, and in France May 31, 1928. 3 Claims. (Cl. 123—33.)

1. An internal combustion engine comprising a plurality of cylinders, a piston operating in each of said cylinders, a capacity common to all of said cylinders and adapted to be supplied with a part of the normally carburetted charge from the cylinders about the end of the compression stroke in each of them, a valve chamber arranged on each of the cylinders, passage means constantly connecting the common capacity with each of said valve chambers, passage means adapted to connect each valve chamber with its respective cylinder, means for supplying fuel under pressure to each of said valve chambers, and in each of said valve chambers valve means adapted to ensure a thorough mixing of the said fuel and of the normally carburetted charge, admitted from the common capacity in each of said valve chambers to produce a rich carburetted mixture in the same, means for controlling the passage means between each valve chamber and its respective cylinder to allow the flow of a part of the normally carburetted charge from each cylinder about the end of the compression stroke therein through the respective valve chamber to the common capacity, and inversely, the flow of the rich carburetted mixture from each valve chamber into the respective cylinder at the beginning of the next compression stroke therein.



1,903,852. PIPE JOINT. LEVY J. ROLLINS, Beaumont, Tex., assignor of one-half to Pete D. Renfro, Beaumont, Tex. Filed Oct. 5, 1929. Serial No. 397,659. 1 Claim. (Cl. 285—111.)

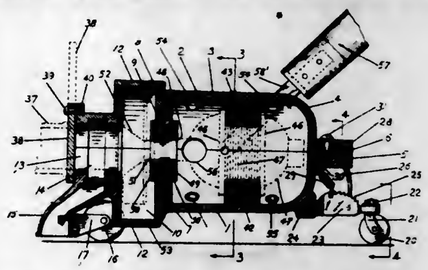
A welded pipe joint comprising two metal pipe sections having similar but oppositely disposed interlocking means on the end portions thereof and constituting an integral part of the pipe proper, said interlocking means comprising a pair of tongues and grooves cut from the end portions of the pipe proper, the tongues and grooves on one end of the pipe extending in an opposite direction from the tongues and grooves on the other end thereof, the tongues and grooves being of equal size in all dimensions, the tongues extending radially a substantial distance greater than the width of the grooves and lying



in a cylindrical plane having the same radius as that of the pipe section, whereby the tongues on one pipe section will fit snugly in the grooves on the other pipe section of the same size in interlocking engagement, the abutting edges of said tongues and grooves in interlocking engagement and of said pipe section being beveled and a filling of weld metal in the bevel to form a rigid joint between the abutting edges of the pipe section and of the tongues and grooves of the two adjacent pipe sections.

1,903,853. COMPRESSOR CONTROL. ALONZO W. RUFF, York, Pa., assignor to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed Aug. 9, 1929. Serial No. 384,639. 12 Claims. (Cl. 230—22.)

1. A suction pressure control device for a compressor, comprising in combination with such compressor, means for partially unloading said compressor; and means responsive to suction pressure and serving upon abnormal reduction thereof to render said unloading means effective.



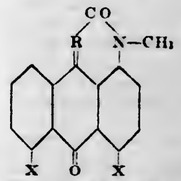
1,903,854. FRUIT CUTTING MACHINE. TADAO TACHI, Honolulu, Territory of Hawaii, assignor to Hawaiian Pineapple Company, Limited, Honolulu, Hawaii, a Corporation of Hawaii. Filed Feb. 15, 1932. Serial No. 593,152. 10 Claims. (Cl. 146—6.)

1. A machine for cutting slices of fruit into half slices, comprising a supporting frame including spaced parallel side members, a trough pivoted at one end to the frame for swinging movement and adapted to receive the fruit slices in edgewise relation, a knife mounted for sliding movement in and longitudinally of said side members and over said trough, and means for releasably holding the opposite end of the trough.

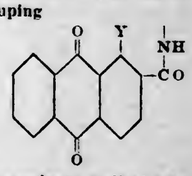
1,903,855. ELECTRICAL VACUUM CLEANER. ARTHUR TOWNSEND, Coogee, Sydney, New South Wales, Australia. Filed Oct. 2, 1929, Serial No. 396,864, and in Australia Feb. 25, 1929. 4 Claims. (Cl. 230—133.)

1. In an electrical vacuum cleaner of the type employing a fan driven by an electric motor, the combination of a motor housing formed in two longitudinal complementary and mutually attachable and detachable sections clamped together, a motor removable as a complete unit from the housing, and means for supporting the motor within the housing comprising compression pillows of insulating material, contacting with the interior of the housing at points removed from the line of juncture of

sections thereof, and compressed against the motor by the closure of the two sections to clamp the motor in place within the housing.



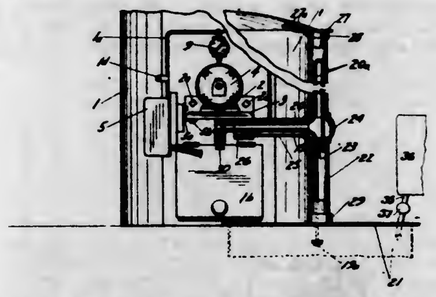
1,903,856. BUCKLE. WILHELM WUNSCHE, Detroit, Mich. Filed June 2, 1932. Serial No. 614,927. 3 Claims. (Cl. 24—163.)



1. A buckle comprising a flat base having opposed sides adjacent its extremities, a top portion connecting the upper ends of said sides at one extremity of the base, thereby forming a tubular guide, a plate pivotally supported between the sides at the other extremity of the base and spaced above the latter, means adapted to hold the outer extremity of the plate on the upper ends of the sides adjacent said top portion, the pivoted extremity of the plate and the base sides on which it is pivoted forming a second tubular guide, prongs extending upwardly from said base, a strap having spaced openings therethrough extending through each tubular guide, any one of said openings in one strap being adapted to be engaged by one prong, and any one of the openings in the other strap being adapted to be engaged by the other prong.

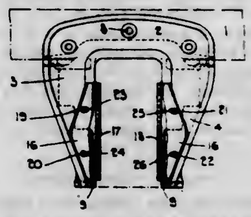
1,903,857. VAT DYESTUFFS OF THE ANTHRAPYRIDONE AND THE ANTHRAPYRIMIDONE SERIES. OTTO BAYER, Frankfort-on-the-Main, and FRITZ BAUMANN, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1931, Serial No. 506,832, and in Germany Jan. 15, 1930. 5 Claims. (Cl. 260—32.)

1. Vat dyestuffs corresponding probably to the general formula:



wherein R means CH or N and one X hydrogen and the other X the grouping

in which the anthraquinone radical may contain an amino-group in the position signified by Y, which new dyestuffs

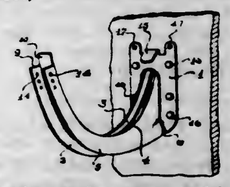


are when dry yellow to bluish red crystalline substances, which are scarcely soluble in organic solvents, and dye the vegetable fiber from a reddish to brownish vat yellow to bluish red shades of a good fastness.

1,903,858. OIL BURNER. BERT A. CLAYTON, Kewanee, Ill. Filed Aug. 12, 1931. Serial No. 556,521. 9 Claims. (Cl. 158—2.)

8. A feeding appliance for oil furnaces comprising an auxiliary tank, a furnace, a hollow vertical column pivotally mounted thereon in spaced relation to the furnace, a supporting base united to the column, the furnace door being united to the base and movable therewith, a burner mounted in the furnace door, a motor and an air compressor mounted upon the base, an air inlet leading to the compressor, an air conduit leading from the compressor having one branch leading to the burner and another branch leading to the auxiliary tank, an oil supply pipe leading from the auxiliary tank to the burner, and an air-tight plug inserted within the column through which plug the oil conduit and the terminal end of the air conduit pass.

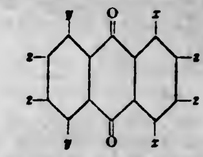
1,903,859. ROLLING STOCK. RICHARD THOMSON GLASCODINE, London, England. Filed Mar. 5, 1931, Serial No. 520,405, and in Great Britain Oct. 10, 1930. 4 Claims. (Cl. 105—225.)



1. In rolling stock the combination of an axle box, an axle guard carried by the stock, horns to said guard, vertically spaced guide members on each of said horns, flanged wear plates floating horizontally on said guide members and engaging vertical faces of said box to permit free vertical movement thereof, and india-rubber pads constrained between such wear plates and said horns to damp vibration of said box.

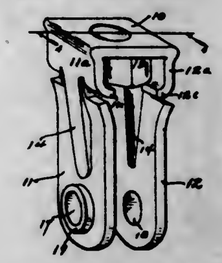
1,903,860. PREPARATION OF METALLIC COATINGS. HEINRICH GOCKEL, Leverkusen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 3, 1931, Serial No. 527,621, and in Germany Apr. 24, 1930. 6 Claims. (Cl. 204—1.)

2. In the process of depositing a metal on metallic surfaces from an aqueous solution, the step which comprises effecting the process in the presence of a compound of the group consisting of thiourea and methyl thiourea.



1,903,861. EAVES-TROUGH HANGER. WILLIAM HARRISON GRAY and WILLIAM JOSEPH GRAY, Rochester, N. Y. Filed Apr. 21, 1931. Serial No. 531,744. 5 Claims. (Cl. 108—29.)

1. An eaves-trough hanger comprising a vertically arranged attaching plate provided with a downwardly opening recess which is flared in a downward direction, and an integral curved trough supporting arm having two marginal downwardly extending spaced flanges widening toward their inner ends, and flaring with relation to each other toward their inner ends, which connect with the attaching plate at the edges of the recess.

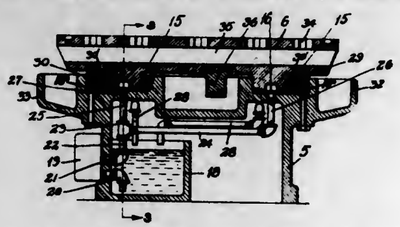


1,903,862. PROCESS FOR ELIMINATING SULPHONIC ACID GROUPS FROM DIHYDROXYDIAMINOANTHRAQUINONEDISULPHONIC ACID. PAUL GROSSMANN, Basel, Switzerland, assignor to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed Feb. 1, 1932, Serial No. 590,312, and in Switzerland Feb. 3, 1931. 4 Claims. (Cl. 260—59.)

1. A process for eliminating sulphonic acid groups from compounds of the general formula

in which one *x* stands for an OH-group and the other *x* for an NHR-group (R meaning H, alkyl or aryl), *y* for hydrogen, OH or an NHR-group (R meaning H, alkyl or aryl), and in which the *x*'s standing in the 2- and 3-position one means an SO_3H-group and the other a hydrogen atom, and of the *x*'s standing in the 6- and 7-position one means a hydrogen atom and the other a hydrogen atom or an SO_3H-group, this SO_3H-group standing in *o*-position to an OH- or an NHR-group, consisting in treating these compounds, so as to form leuco derivatives, in aqueous solutions of alkali metal hydroxides, in the absence of air and at temperatures which do not lie essentially above 0° C., with such quantities of reducing agents which correspond to about 2 hydrogen atoms for each sulphonic acid group to be eliminated, and subsequently feebly heating the resulting product.

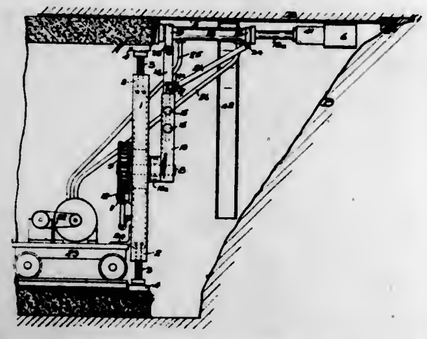
1,903,863. CONNECTING ROD END. HOWARD A. HAYDEN, Detroit, Mich. Filed Aug. 12, 1930. Serial No. 474,862. 1 Claim. (Cl. 287—20.)



A rod end comprising a U shaped member having a threaded nut firmly secured thereto and located adjacent

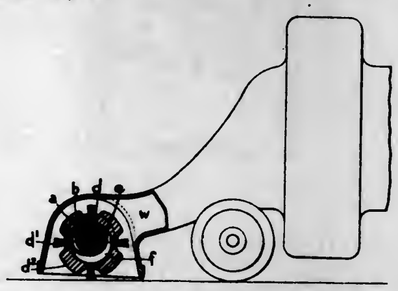
the bight portion thereof between the legs of the U, said bight portion having an aperture aligned with the threaded aperture in said nut, said U shaped member having portions of the legs deformed therefrom to grasp and engage the side walls and one face of said nut to firmly secure it in its desired position, and to hold said nut against said bight portion the legs between said deformed portions being ribbed longitudinally.

1,903,864. TEXTILE PEST PROOFING MEDIA. WENFRID HENTRICH and MAX HARDTMANN, Wiesdorf, PETER BACKES, Cologne-Deutz, and HERMANN STÖTTER, Leverkusen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 16, 1930, Serial No. 468,442, and in Germany Aug. 26, 1929. 3 Claims. (Cl. 167—37.)



1. A textile pest proofing medium containing a water soluble salt of selenic acid.

1,903,865. MACHINE TOOL SLIDE AND LUBRICATOR THEREFOR. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 19, 1931. Serial No. 523,793. 6 Claims. (Cl. 184—6.)

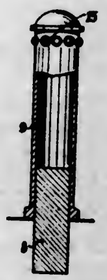


1. A machine tool slide construction and lubricator therefor, comprising a trough-like slide on one machine part having an opening in the thickness thereof in communication with a source of lubricant supply, ways on another machine part mounted to slide in said trough-like slide, a lubricant distributing reservoir in said slidably mounted ways, and a shoe on said slidably mounted ways having openings in its thickness to establish a communication between the reservoir and the ways to be lubricated, said openings also successively establishing a communication between the reservoir and the opening in the trough-like slide when the slidably mounted ways slide in the trough-like ways; whereby the reservoir is intermittently supplied with lubricant.

1,903,866. TUNNELING EQUIPMENT. DONATO LACAPRARA, Dearborn, and KARL E. KETCHUM, Detroit, Mich. Filed Dec. 23, 1931. Serial No. 582,682. 4 Claims. Cl. 61—84.)

1. An equipment of the character described comprising a tunnel lining consisting of a plurality of supporting members arranged side by side and having interlocking marginal portions which permit the movement in a longitudinal direction of any one of said members independently, inward projections on said members, a standard, a jack, and mounting means for said jack so arranged on said standard that the jack may be positioned opposite each of said projections in turn to force it and its supporting member in a longitudinal direction.

1,903,867. VACCUM CLEANER. FRANZ LEHMANN, Zurich, Switzerland. Filed Nov. 17, 1931. Serial No. 575,620, and in Germany Nov. 28, 1930. 5 Claims. (Cl. 15—6.)

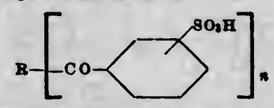


1. In a vacuum cleaner, a rotary driving shaft, a movable beating roller mounted with radial play on said shaft and coupling means on said driving shaft adapted to engage the beating roller so as to carry the beating roller round about by the rotation of the shaft while allowing it to be thrown as a whole outwardly in a radial direction with respect to the shaft.

1,903,868. PROCESS OF PREPARING ALKYL ESTERS OF CARBOXYLIC ACIDS. WILHELM LOMMEL, Leverkusen-Wiesdorf, and RUDOLF ENGELHARDT, Leverkusen-I. G.-Werk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 4, 1931, Serial No. 542,202, and in Germany June 16, 1930. 7 Claims. (Cl. 260—106.)

1. The process which comprises causing an alkyl ester of sulfuric acid containing two to four carbon atoms in the alkyl group and a carboxylic acid to react upon each other with the addition of a neutral salt of an acid of the group consisting of sulfuric acid and phosphoric acid in a quantity sufficient for binding the free sulfuric acid present and formed in the reaction, thereby maintaining an acid reaction in the mixture, and distilling off the alkyl ester of the carboxylic acid.

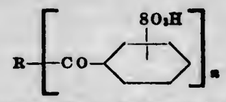
1,903,869. PILLAR OR POST STANDING IN THE STREET TRAFFIC. FRANZ MEISTER and JOHANN MAUL, Munich, Germany. Filed Mar. 28, 1931, Serial No. 526,068, and in Germany Oct. 1, 1930. 2 Claims. (Cl. 40—145.)



1. A street traffic post comprising a hollow upright standard of highly flexible material whereby said standard

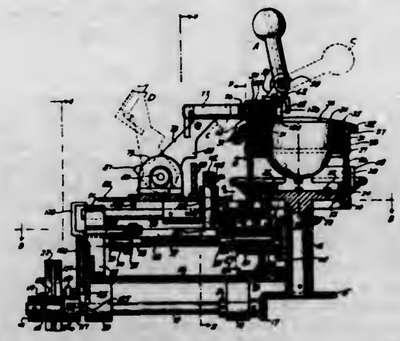
may act as a buffer and flex when hit, an elastic anchorage core fixed in the ground with a portion protruding therefrom and snugly received within the hollow standard for anchoring the same to the surface of the street.

1,903,870. PROCESS FOR DYEING AND PRINTING TEXTILE FIBERS. WALTER MIEG, Opladen, and RUDOLF MARIA HEIDENREICH, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 18, 1930, Serial No. 462,138, and in Germany June 19, 1929. 3 Claims. (Cl. 8—5.)



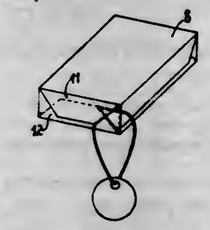
1. Process which comprises impregnating textile fibers with an ester of an indigoid vat dyestuff having in its free form the probable formula:

wherein R represents the radical of an indigoid vat dyestuff containing an indole ring system, *n* stands for one of the numbers 1 or 2 and wherein the CO-group is attached to the nitrogen atom of the indole ring system and treating the impregnated fiber with an alkali.



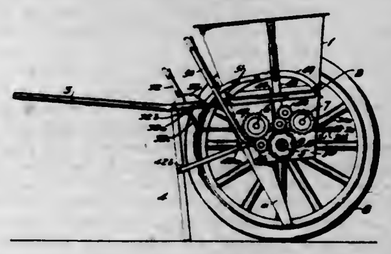
1,903,871. PROCESS FOR DYEING AND PRINTING TEXTILE FIBERS. WALTER MIEG, Opladen, and RUDOLF MARIA HEIDENREICH, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 18, 1930, Serial No. 462,139, and in Germany June 19, 1929. 2 Claims. (Cl. 8—5.)

1. Process which comprises impregnating textile fibers with a compound having in its free form the probable formula:



wherein R represents the radical of a leuco derivative of an anthraquinoid vat dyestuff, the CO-group being attached to an oxygen atom, which on its part is linked to a carbon atom standing in meso-position of an anthraquinone nucleus, *n* stands for one of the numbers 1 or 2, and developing the dyestuff on the fibre by treating the latter with an alkali and an oxidising agent.

1,903,872. HAT FLANGING APPARATUS. STEPHEN J. MILLER, Danbury, Conn. Filed May 8, 1929. Serial No. 360,075. 53 Claims. (Cl. 223—22.)

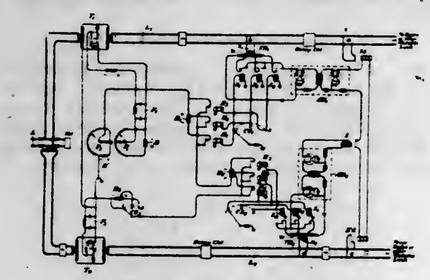


1. In a hat flanging machine, in combination, means adapted to support a hat block, a hat block having a peripheral flange over which the brim of a hat is fitted, means for rotating said block supporting means, and an upper and a lower iron adapted respectively to operate on different portions of the same surface of the hat brim and positioned above and below the peripheral edge of said flange.

1,903,873. PACKAGE FOR CIGARETTES. WALTER EVERETT MOLINS and JOHN WALKER CHALMERS, Deptford, London, England, assignors to The American Tobacco Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1929, Serial No. 396,282, and in Great Britain Oct. 31, 1928. 2 Claims. (Cl. 229—51.)

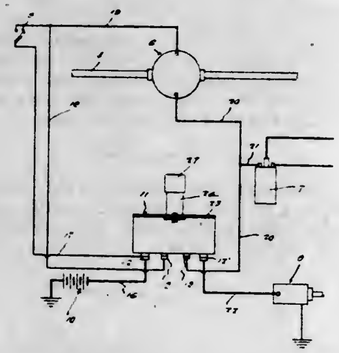
1. A wrapped package including an inner wrapper and an outer wrapper, the inner wrapper having at one side a fold free at its side edges from the adjacent folds, a tearing cord having the intermediate portion thereof lying beneath said free fold and portions at each side of the intermediate portion enclosed between folds of the outer wrapper, the two ends of the cord being free and pendant and connected in the form of a loop.

1,903,874. MACHINE FOR DISTRIBUTING MATERIAL ON LAWNS, ETC. LON A. MILLS, Knoxville, and KYLE H. MYNATT, Fountain City, Tenn. Filed June 20, 1931. Serial No. 545,728. 8 Claims. (Cl. 275—2.)



1. The combination with a truck, a receptacle, feed-drums located in the neighborhood of the discharge end of the receptacle, an adjustable partition within the receptacle for regulating the capacity of the chambers formed by the adjustable partition in the receptacle, said partition comprising a pivoted member and a member removably connected therewith and having means for fixing it in different adjustments.

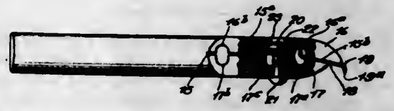
1,903,875. TRANSMISSION CONTROL. DOREN MITCHELL, Martinsville, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 18, 1931. Serial No. 563,646. 5 Claims. (Cl. 178—44.)



1. In a system for the transmission of energy, a first path adapted for transmission in one direction, a second path adapted for transmission in the opposite direction, means responsive to energy in each of said paths for controlling the transmission over the paths, a three-electrode vacuum tube bridged across one of said paths for introducing a variable loss therein, means for impressing

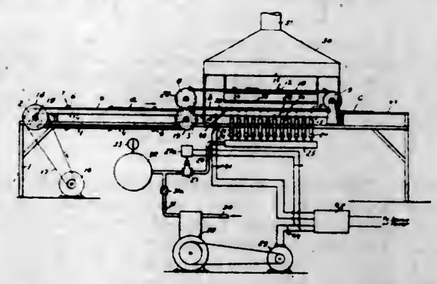
a voltage on the grid of said tube, means for regulating the voltage impressed on said grid, and a plurality of mutualy contributing means for effecting auxiliary regula-

tion of the voltage impressed on said grid, one of said plurality of means also acting to regulate the sensitivity of each of said transmission controlling means.



1,903,876. ENGINE CONTROL. TONY PILLA, Trenton, N. J. Filed May 17, 1932. Serial No. 611,910. 1 Claim. (Cl. 290—38.)

In combination, an internal combustion engine, a source of electricity, an ignition system for the engine, a starting motor for the engine, a fluid pressure line responsive to the action of the engine, a switch in said line adapted to be closed by fluid in the line under pressure, a multiple circuit maker and breaker including a primary switch and a secondary switch and a single operating member for controlling said primary and secondary switches, said primary switch being interposed between said source of electricity and the ignition system, said secondary switch being interposed between the source of electricity and the starting motor, said fluid pressure line switch being interposed between the source of electricity and the ignition system, said primary switch being closable by the single operating member before affecting the secondary switch, said secondary switch being closable by continuation in motion of the said operating member.

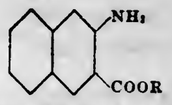


1,903,877. SCRAPER. WILLIAM POTTER, New York, N. Y. Filed Nov. 5, 1931. Serial No. 573,154. 5 Claims. (Cl. 145—47.)

5. A tool of the class described comprising a blade supporting member of unitary construction and comprising a handle portion, a blade supporting body at the free end of the handle portion, said body being split centrally and longitudinally to form relatively movable side jaw members, means for moving said jaw members together to clamp a blade within and between the same and one of said jaw members being longer than the other, one of said jaw members having a transverse groove opening into the split of said body to receive an angularly disposed flange at one end of said blade when mounted between said jaw members, and the longer jaw member having another groove opening into the split of said jaw mem-

bers adjacent the free end of said jaw member and adapted to receive a key element on the blade for supporting the blade against longitudinal movement with respect to the jaw members.

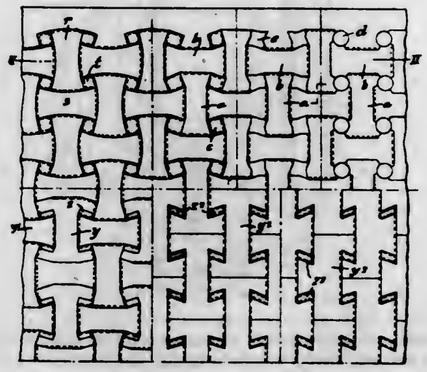
1,903,878. HEATER. FRANK T. POWERS, Douglaston, N. Y. Filed Oct. 20, 1931. Serial No. 570,026. 3 Claims. (Cl. 34—12.)



1. An apparatus for heating photo-mechanical printing plates comprising in cooperative combination conveying means for the plates, a source of supply of gaseous fuel, a compressor, means controlled electrically for driving said compressor, a plurality of high pressure gas burners operatively connected by duct to the discharge aperture of said compressor, a storage tank between said compressor and said burners, an electrically operated gas valve in said duct, and electrical controlling means operable by the passage of the plate for starting the said compressor and opening said gas valve.

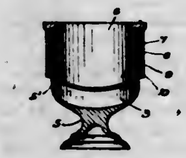
1,903,879. MANUFACTURE OF EMULSIFYING AND WETTING-OUT AGENTS. ALFRED RHEINER, Basel, Switzerland, assignor to Firm "Chemical Works Formerly Sandoz," Basel, Switzerland. Filed July 8, 1930, Serial No. 466,593, and in Great Britain Dec. 6, 1929. 9 Claims. (Cl. 252—1.)

1. A process for the manufacture of emulsifying and wetting-out agents, consisting in mixing monoarylethers of polyhydric alcohols with hydrotropic compounds of carboxylic or sulphonic acids of the aliphatic, aromatic and hydroaromatic series containing at least six carbon atoms in the molecule.



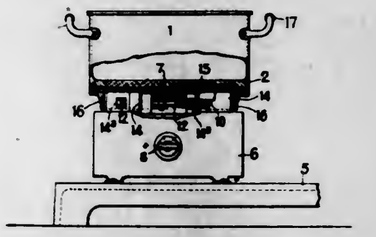
1,903,880. ESTERS OF 2,3-AMINO-NAPHTHOIC ACID AND A PROCESS OF PREPARING THEM. LUDWIG SANDER, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 1, 1929, Serial No. 375,334, and in Germany July 14, 1928. 7 Claims. (Cl. 260—105.)

4. As new products compounds of the following general formula:



wherein R stands for a substituent of the group consisting of isopropyl, butyl, isobutyl, $CH_2.CH_2.OH$, benzyl and phenyl being yellow compounds, soluble in organic solvents and in dilute mineral acids, insoluble in aqueous alkalies and forming diazonium compounds when treated with nitrite and an acid.

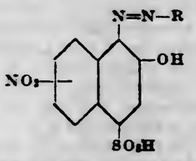
1,903,881. WALL STRUCTURE AND BUILDING BLOCK USED THEREIN. OTTO SANDER and KASPER KÖNIG, Cassel, Germany, assignors to Zeta-Bauweise G. m. b. H., Cassel, Germany, a German Company. Filed Feb. 9, 1931, Serial No. 514,654, and in Germany Feb. 17, 1930. 5 Claims. (Cl. 72—38.)



1. A wall structure comprising a plurality of building blocks each having an elongated central portion and an enlarged end portion the sides and ends of the blocks being alternately formed with grooves and ridges adjacent blocks being disposed in said wall in perpendicular relation to each other with an end of one block abutting the central portion of the adjacent block and with the ridges of one block entering the grooves of an adjacent block said disposition of said blocks resulting in a plurality of spaces unoccupied by said blocks, the margins of said spaces being defined by said end portions of said blocks, and a plurality of dowel blocks disposed in said spaces and substantially completely filling said spaces.

1,903,882. SHAVING CUP. HANS SCHNYDER, Biel, Switzerland. Filed Mar. 14, 1932, Serial No. 598,799, and in Switzerland Mar. 27, 1931. 4 Claims. (Cl. 45—136.)

1. In a shaving cup of the type described, in combination a foot member in the form of a goblet, an upper dish-shaped portion provided on said foot member, a cup member in the form of a dish and adapted to confine together with said dish-shaped portion a hollow space for a substance for producing shaving lather therefrom, a passage disposed in the side wall of said cup member in spaced relation to the bottom of said cup for leading liquid substance from said dish-shaped portion of said foot member to said cup member, and a screw thread engagement arranged between said foot member and said cup member and adapting the members to be approached on each other for forcing the substance from said hollow space into said cup member.

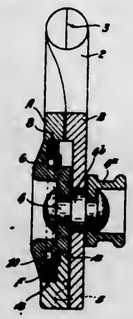


1,903,883. ELECTRIC COOKING. MAX SCHWANDER, Lucerne, Switzerland, assignor to Fabrik Elektro-Thermischer Apparate A. G. Luzern, Lucerne, Switzerland. Filed Feb. 4, 1931, Serial No. 513,425, and in Switzerland Feb. 8, 1930. 1 Claim. (Cl. 219—43.)

Electric cooking apparatus consisting of a cooking vessel with electric heating means and of an electric current supply device, the heating means of the cooking vessel comprising a heating resistance in connection with angularly displaced horizontal knife contact blades, the electric current supply device comprising equally angularly displaced pairs of horizontal knife contact blades, protecting housings being provided for enclosing said pairs of knife contact blades and having slots for the entrance of the cooking vessel knife contact blades, the cooking vessel knife contact blades being so arranged with respect to the current supply pairs of knife contact blades as to establish electric connection between the respective contact blades by a rotary motion of the cooking vessel in the manner of a bayonet junction, the vessel being provided at its bottom with a projecting rim for protecting its contact blades and for ensuring operative cooperation thereof with the respective current supply knife contact blades.

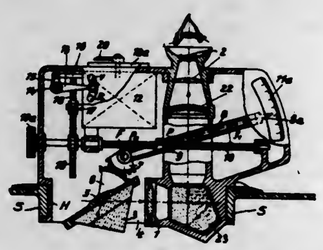
1,903,884. PROCESS FOR DYEING ANIMAL FIBERS FAST TINTS. FRITZ STRAUB, Basel, Switzerland, and HERMANN SCHNEIDER, Riehen near Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Sept. 15, 1930, Serial No. 482,155, and in Switzerland Sept. 26, 1929. 6 Claims. (Cl. 8—15.)

1. Process for dyeing animal fibers fast tints, consisting in first dyeing the fiber in a weakly acid bath with the chromium compounds of azo-dyestuffs of the general formula



wherein R stands for a naphthol, and then converting the dyestuff absorbed by the fiber into new complexes by developing it in the same bath which is made stronger acid by the addition of an acid.

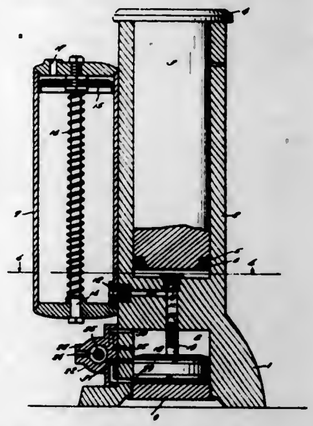
1,903,885. PERMUTATION PADLOCK. WILLIAM THEWHELLA, Trentham, Victoria, Australia. Filed Oct. 28, 1930, Serial No. 491,778, and in Australia Dec. 24, 1929. 3 Claims. (Cl. 70—19.)



1. A padlock comprising two body members pivotally connected together at their centers and each having a shackle arm, said shackle arms being adapted to form a shackle opened and closed by the pivotal movement of said body members, each of said members having a plurality of abutments, those of each member adapted to engage the abutments on the other body member, one of said body members also having a tongue, a plurality of re-

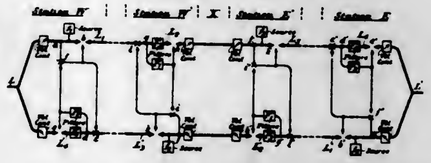
tatable concentrically arranged locking rings in one of said body members, and each formed with a gap, said tongue being adapted to bear against said rings when in

locked position, and to enter the gaps in said rings when in unlocked position, and means to move said rings to align said gaps with said tongue.



1,903,886. APPARATUS FOR DETERMINING THE SPEED OF FLIGHT OF AIRCRAFT. CHRISTIAN VON HORN, Vienna, Austria, and JOHANN BOYKOW, Berlin-Lichterfelde, Germany, assignors to Czechoslovak Company: Actiengesellschaft C. P. Goerz Optische Anstalt Actiova Spolecnost K. P. Goerz Opticky Ustav, Pressburg, Czechoslovakia. Filed July 8, 1930, Serial No. 466,496, and in Germany July 13, 1929. 3 Claims. (Cl. 88—1.)

1. Apparatus for determining the speed of flight of aircrafts for use with auxiliary targets ahead of, or in the rear of the said aircrafts comprising a sighting telescope; an entering reflector for the said sighting telescope comprising a rotatable pointer, means for rotating the said pointer and for simultaneously rotating the said entering reflector of the telescope, the last named means comprising a clock work, a spindle and a gearing for driving the said spindle by the said clock work, and means for starting, stopping and reversing the direction of movement of the said spindle; and means for turning the apparatus as an entirety around a vertical axis through an angle of at least 180°.

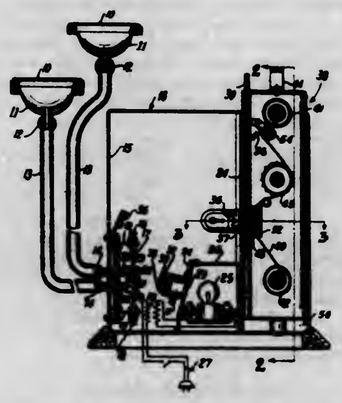


1,903,887. HYDRAULIC JACK. STERLING J. WIDENER, Augusta, Ga. Filed May 11, 1932. Serial No. 610,685. 1 Claim. (Cl. 138—9.)

A device of the class described comprising a cylinder, a piston in the cylinder and passing through the upper end thereof, a reservoir, a motor cylinder located below the first mentioned cylinder and a small cylinder connecting the bottom of the first cylinder with the motor cylinder, a conduit connecting the small cylinder with the reservoir, a downwardly closing check valve in the upper end of the small cylinder above the connection with the conduit, a check valve in the conduit closing toward the reservoir, a motor piston in the motor cylinder having a stem extending into the small cylinder, means, including an automatic valve, for introducing compressed fluid into the motor cylinder to reciprocate the piston and its stem therein, means for placing the fluid in the reservoir under pressure to force some of the fluid into the first cylinder to raise the piston therein against an object to be lifted, after which the motor piston is reciprocated for lifting the main piston and the object, a valve controlled conduit

between the lower end of the main cylinder and the reservoir and permitting the fluid in the main cylinder to flow back into the reservoir when the valve is opened, said means for placing the fluid in the reservoir under pressure comprising a piston in the reservoir, a guide member passing thru the reservoir for guiding the piston, and spring means for normally holding said piston in the reservoir in raised position, and means for forcing air into the upper end of the reservoir to lower the piston.

1,903,888. TWO-WAY TELEPHONE SYSTEM. SUMNER B. WRIGHT, South Orange, and DOREN MITCHELL, Martinsville, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 13, 1931. Serial No. 544,194. 11 Claims. (Cl. 178—44.)

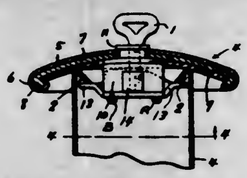


1. In a system for the transmission of energy, including a mutable transmission path and other transmission paths connected in tandem therewith, the method of controlling transmission over the system which consists in causing the energy transmitted thereover for the production of the desired overall effect to apply control energy to the transmitting end of the mutable path, causing the control energy to control the transmission over the receiving end of said path, and excluding the control energy so applied from the system beyond the point where it performs the above-stated function.

1,903,889. PROCESS FOR PURIFYING AND STERILIZING WATER. RUDOLF ADLER, Karlsbad, Czechoslovakia. Filed Feb. 7, 1930, Serial No. 426,774, and in the Netherlands Mar. 28, 1929. 2 Claims. (Cl. 210—28.)

1. Process for periodically purifying carbon serving the purpose of changing the chlorine, which has been utilized in sterilizing water, into chlorine ions, which comprises periodically adding a soluble alkali reacting substance to the chlorine containing water before it passes through the carbon.

1,903,890. OPTICAL POLYGRAPH. EMIL BLUM, Newark, N. J. Filed Mar. 7, 1931. Serial No. 520,787. 4 Claims. (Cl. 234—1.)



1. In a portable optical polygraph, the combination with a pulsatile element comprising an air tube open at one end and a spring-urged arm for sealing said end and having a mirror fastened thereon and being adapted to be set in vibration by pulsations, a source of light and means for causing a beam of light to impinge on said vibratory mirror, two stationary mirrors facing each other for receiving and redirecting the reflections from said vibratory mirror in the same direction acquired at its point of origination and a concentrating lens for causing said beam of light to concentrate into focus upon a moving photographic film and producing wavy records of arterial pulsations.

1,903,891. HALOGENATED ANTHRAQUINONEACRIDONES AND THE PROCESS OF MAKING SAME. WALTER BRUCK, Mannheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1929, Serial No. 398,820, and in Germany Oct. 27, 1928. 6 Claims. (Cl. 260—37.)

1. A process of producing anthraquinoneacridones containing chlorine and bromine, which comprises causing an anthraquinoneacridone containing one of the said halogens to react with a halogenating agent selected from the group consisting of one of the said halogens which is different from that already present in the initial material, and agents supplying such halogen.

1,903,892. TANK CAP. EPHRIAM L. CARNEY, Murfreesboro, Tenn. Filed Mar. 21, 1932. Serial No. 600,303. 3 Claims. (Cl. 220—55.)

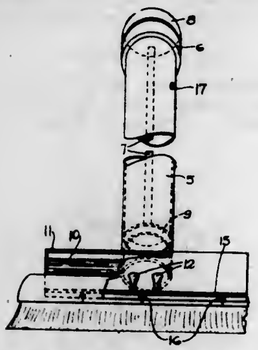
1. A tank cap comprising an inner disk, an outer disk rotatably mounted on the inner disk, means connecting the disks together in frictional contact with each other, and retaining means on the inner disk engageable with the tank for releasably securing the cap thereon, the first named means including a rounded, peripheral flange on the inner disk, and a rounded peripheral flange on the outer disk enclosing the first named flange.

1,903,893. HOLDER FOR REKNITTING FABRICS. CHARLEY ANN CROWLEY, Nashville, Tenn. Filed Mar. 22, 1932. Serial No. 600,546. 1 Claim. (Cl. 66—1.5.)

A darning last for supporting a fabric having a run therein to be reknitted comprising a substantially elongated cylindrical body provided with a socket opening at one end of said body, said socket adjacent the open end thereof being counterbored to provide an annular shoulder inwardly from the open end thereof, a transparent disk engaging said shoulder, a split ring in the counterbore of said socket and bearing against the outer face of said disk at the marginal edge of the latter, and a lamp within said socket at the inner end of the latter.

1,903,894. PROCESS OF PRODUCING VINYL CHLORIDE. FRIEDRICH KARL FRITSCH, Frankfort-on-the-Main-Griesheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Oct. 22, 1929, Serial No. 401,618, and in Germany Dec. 7, 1928. 4 Claims. (Cl. 260—166.)

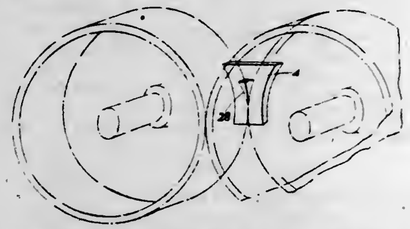
1. A process of producing vinyl chloride, which comprises passing hydrochloric acid gas together with acetylene over activated carbon at temperatures between 160 and 200° C.



1,903,895. NEW COLLOIDAL MERCURIZED AROMATIC HYDROXY COMPOUNDS. HEINRICH GÜNZLER and OSKAR NEUBERT, Elberfeld near Cologne, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Filed Nov. 17, 1925, Serial No. 69,701, and in Germany Nov. 21, 1924. 7 Claims. (Cl. 167—19.)

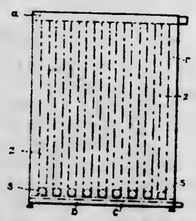
1. As new products colloidal mercurised nitro-phenol compound preparations being in their dry solid form grayish to yellow powders readily soluble in water and having valuable insecticidal properties.

1,903,896. COMBINATION SPRAYER AND SWEEPER. MANDEL GREENBERG, Brooklyn, N. Y. Filed May 31, 1930. Serial No. 457,923. 1 Claim. (Cl. 15—131.)



The combination with the elongated, curved back of a sweeping member, of an elongated chamber fitting over said back, conforming to the curvature thereof and constituting a liquid receptacle, extensions on the receptacle engaging said back, nozzles protruding from the chamber and extending beyond said back and through which the liquid is sprayed in the path of the sweeping member, a tubular handle on the receptacle, a piston in the handle

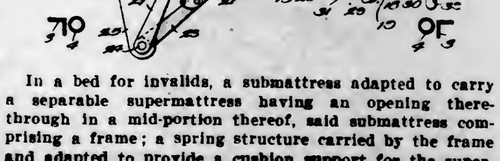
for compressing the liquid in the receptacle and forcing the same through said nozzles, a piston rod, one end of which is substantially the same diameter as and con-



stitutes a continuation of said handle, for operating said piston, and means in said receptacle extension for securing the receptacle to the sweeping member back.

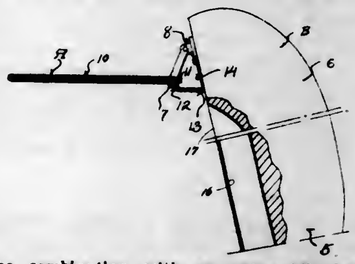
1,903,897. APPARATUS FOR CASTING METALS. HENRY HARRIS, London, England. Filed Aug. 9, 1930, Serial No. 474,166, and in Great Britain Aug. 27, 1929. 2 Claims. (Cl. 207—14.)

1. Apparatus for casting metals or alloys direct from the molten state comprising two rotary drums spaced apart on parallel axes to present at their line of approach an outlet space for metal or alloy, means for regulating the temperature of the said rotary drums, and plates bearing against the end faces of said drums for converting the converging space above the outlet into a receiving trough, a downwardly pointing wedge-shaped projection on the internal face of each end plate, means for supplying molten metal or alloy to said trough and means for maintaining a determined depth of metal or alloy in said trough.



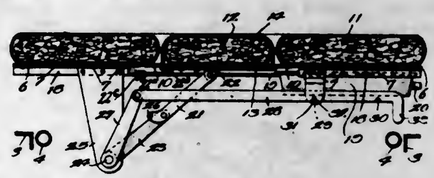
1,903,898. HEAT EXCHANGE DEVICE. GEORG KRÄNZLEIN, Frankfort-on-the-Main-Hoechst, and RICHARD SAMESREUTHER, Butsbach, Germany. Filed Mar. 27, 1929, Serial No. 350,352, and in Germany Apr. 10, 1928. 2 Claims. (Cl. 219—38.)

1. Heat-exchange device comprising two parallel plates, parallel spaced pipes being arranged between the said plates and in intimate contact with these plates, the ends of said spaced pipes being connected with upper and lower headers, the spaces between the pipes being provided with electrical heating bodies.



1,903,899. CARBOXYLIC ACID ARYLIDES OF THE BENZENE SERIES AND PROCESS OF MAKING SAME. LEOPOLD LASKA and OSKAR HALLER, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1929, Serial No. 401,972, and in Germany Oct. 31, 1928. 9 Claims. (Cl. 260—124.)

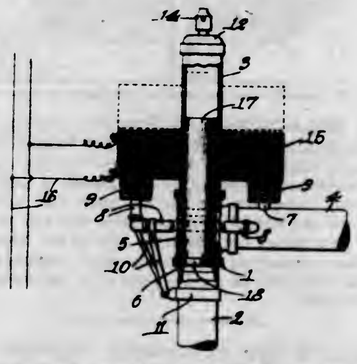
6. As new products, carboxylic acid arylides of the benzene series, corresponding to the following probable formula:



wherein X_1 stands for a hydrogen atom or a nitro or methyl group, X_2 and X_3 stand for a hydrogen atom or a methyl group, and one Y stands for hydrogen and the other Y for a hydroxy group, these products being insoluble in the usual organic solvents and in form of their alkali metal salts soluble in water, and distinguished by their affinity for the vegetable fiber.

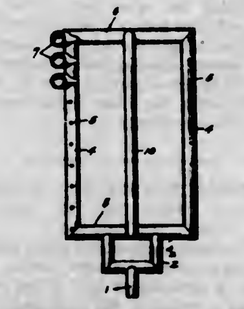
1,903,900. TABLE ATTACHMENT FOR AUTOMOBILES. CHARLES W. MARTIN, Chicago, Ill. Filed July 7, 1932. Serial No. 621,157. 3 Claims. (Cl. 45—51.)

1. The combination with an automobile having the front seat provided with a pivoted lap-robe rail on its rear face, of a table attachment for the automobile comprising a flat plate having a substantially U-shaped trough formed on one longitudinal edge, said trough forming an abutment shoulder for receiving the pivoted lap-robe rail, and an abutment flange for engaging the rear face of the seat.



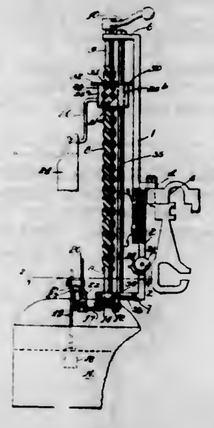
1,903,901. BED. WILLIAM C. MASSLOW, Forest Park, Ill., assignor of one-half to August E. Schultz, Forest Park, Ill. Filed Feb. 6, 1930. Serial No. 426,296. 1 Claim. (Cl. 5—90.)

In a bed for invalids, a submattress adapted to carry a separable supermattress having an opening therethrough in a mid-portion thereof, said submattress comprising a frame; a spring structure carried by the frame and adapted to provide a cushion support for the supermattress; an aperture in the spring structure for registering with the opening in the supermattress; a pair of



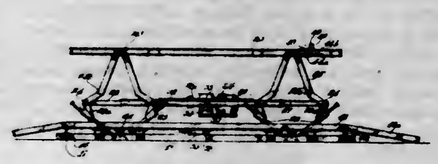
parallel rails carried by the spring structure and extending transversely of the submattress on each side of said aperture; a filler support pivoted on said spring structure transversely of the rails at one side of the aperture; a filler on said filler support for the opening in the supermattress; brackets depending from said rails; a rod journaled in the brackets and extending laterally beyond the rails; a link rigidly secured to the rod mid-way thereof and extending upwardly therefrom; another link pivoted to the first link and to the filler support substantially centrally thereof; a lever rigidly connected to one end of the rod and extending upwardly therefrom; an arm pivoted to the upper end of the lever and extending parallel with said rails toward a margin of the submattress, said arm being movable transversely of the submattress; a bracket carried by the submattress for slidably carrying the outer end of the arm; a handle on the arm between the bracket which carries the arm and the margin of the submattress; and a separable vessel slidably supported by said rails.

1,903,902. MAGNETIC VALVE. WILLIAM W. MCLAREN, Birmingham, Ala. Filed May 7, 1930. Serial No. 450,578. 8 Claims. (Cl. 137—139.)



1. In a device of the class described, a conduit, a movable magnet located outside of the conduit, and movable longitudinally of the conduit and a valve movable within the conduit longitudinally of the conduit and controlling the flow of fluid therethrough, the valve being free of mechanical connection with the magnet, but being continuously attracted by the magnet, whereby when the magnet is moved longitudinally of the conduit, the valve will be moved longitudinally of the conduit also, to control the flow of fluid through the conduit.

1,903,903. GAS BURNER. RAYMOND B. MCLAVY and JAMES E. CONNER, Columbine, Wyo. Filed Jan. 31, 1930. Serial No. 424,873. 4 Claims. (Cl. 158—104.)

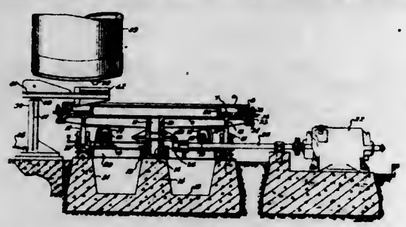


1. A gas burner including an intake pipe, spaced feed lines, one of which is connected to said intake pipe, manifold lines connecting the ends of said feed lines, a U-shaped by-pass connecting said feed lines, and a horizontal draft plate supported by said by-pass.

1,903,904. FEEDING DEVICE FOR TYPE CASTING MACHINES. JAMES LINDSAY EWING and ROBIN RUDOLF TOBIAS, New Orleans, La. Filed Dec. 5, 1929. Serial No. 411,752. 5 Claims. (Cl. 22—80.)

5. A feeding device for type casting machines comprising a frame, a rotatable threaded rod mounted in said frame, a nut connected with said rod, a support for the metal connected with said nut and having an outwardly bent end, the metal being provided with an enlarged opening into which the outwardly bent end is inserted and means for rotating said rod to lower the nut and the metal and a melting pot into which said metal is lowered.

1,903,905. AUTOMOBILE SERVICING MACHINE. WILLIAM T. CARTER, Chicago, Ill. Filed July 21, 1931. Serial No. 552,253. 8 Claims. (Cl. 254—89.)

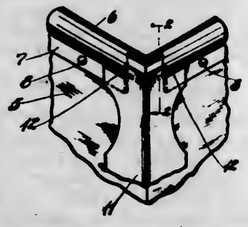


1. A lifting mechanism comprising a horizontal frame made up of telescoping units, a platform above the frame and adapted to receive a load, a base below the frame, connections between the units of the latter and the platform to raise and lower the latter by the telescopic action of the units, and connections between the latter and the base to raise and lower the frame and its superstructure from the base during such telescopic action.

1,903,906. CENTRIFUGAL MOLDING APPARATUS. HARRY M. NAUGLE and ARTHUR J. TOWNSEND, Canton, Ohio, assignors to Naugle & Townsend, Inc., Wilmington, Del., a Corporation of Delaware. Filed Feb. 18, 1930. Serial No. 429,359. 1 Claim. (Cl. 22—65.)

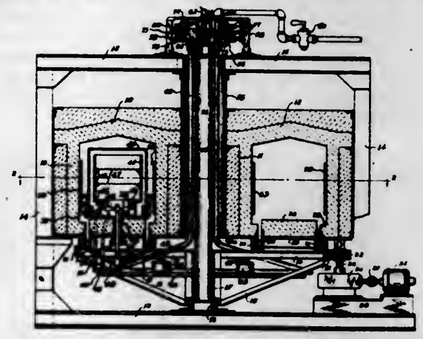
In rotary centrifugal molding apparatus, a bed plate disk rotatable about a vertical axis, an annular mold including upper, lower and outer side metal walls forming

an annular mold cavity, said mold including a ring plate forming the bottom wall of the mold, and an L-shaped



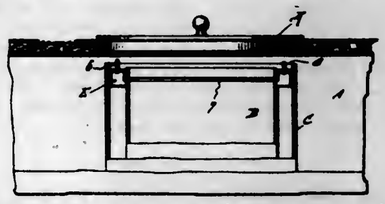
annular rim rabbeted to the ring plate forming the side and top walls of the mold, and means engaging the rim for clamping the rim and ring plate to the bed plate.

1,903,907. METAL POLE WITH REENFORCING PIPES. EDMUND W. RISMENSCHNEIDER, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed July 5, 1928. Serial No. 290,366. 1 Claim. (Cl. 189—24.)



A tubular pole, a reenforcing pipe located therein, a hollow base portion upon the pole, a flange upon the lower portion of the pipe and located within said hollow base portion, means projecting from the base for contact with the upper side of the flange, when the upper ends of the pipe and pole are connected together, means connecting the upper ends of the pipe and pole together whereby they may be erected as a unit, a foundation, and anchor bolts in the foundation arranged to be connected to the flange on the pipe.

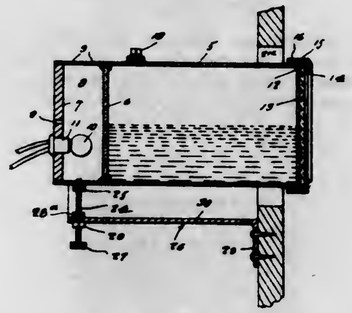
1,903,908. WASHTUB. JOHN L. ARLT, Saginaw, Mich., assignor to Fred W. Stork and John L. Arlt, doing business as Ideal Manufacturing Company, Saginaw, Mich. Filed Oct. 19, 1931. Serial No. 569,647. 4 Claims. (Cl. 68—31.)



4. A tub structure of the class described and provided with a rolled rim, openings provided in said rim, legs adapted to be detachably inserted in said rim openings, the upper ends of said legs being shouldered and shaped to lock them in the rim when in proper vertical assembled relation, and rods connecting said legs at a point intermediate their length.

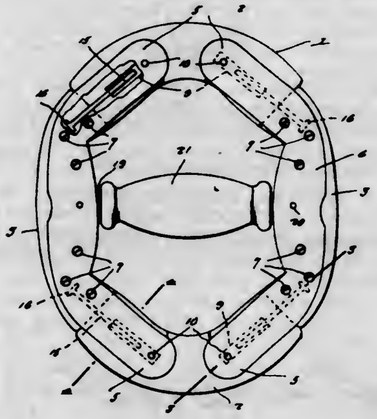
1,903,909. ROTARY HEAT TREATING FURNACE. FRANK T. COPE, ARTHUR H. VAUGHAN, and WILBUR S. BOWLING, Salem, Ohio, assignors to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Apr. 30, 1930. Serial No. 448,609. 9 Claims. (Cl. 263—7.)

1. A furnace having a discontinuous, annular chamber, a continuous, annular, rotatable hearth located concentric with said chamber and forming the bottom thereof, a closed container supported by said hearth, a hollow work-supporting receptacle within the container, open at its upper end and spaced from the sides and top of the container, and means for admitting gas to the lower end of said work-supporting receptacle and withdrawing gas from the container at a point outside of the work-supporting receptacle.



1,903,910. WASTE ELIMINATOR FOR ICE CREAM CABINETS. JOSEPH A. JANSON, Providence, R. I. Filed Jan. 14, 1932. Serial No. 586,681. 1 Claim. (Cl. 220—14.)

In an ice cream cabinet and in combination with an ice cream container and its surrounding member, a closure member for closing the upper part of the space between the container and said member, said closure member being formed of sections hingedly connected together and handle parts on the closure member, said closure member being of channel-shape in cross section with its flanges depending downwardly with the inner flange resting against a bead of the ice cream container.

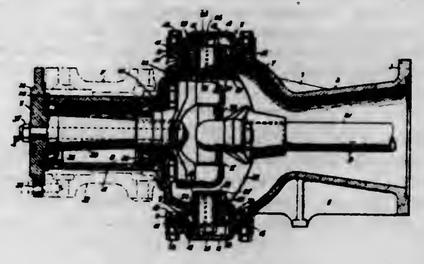


1,903,911. AERIAL NAVIGATOR. WALTER A. MEADOR, Gallatin, Tenn. Filed July 18, 1930. Serial No. 471,564. 3 Claims. (Cl. 33—206.)

3. A combined inclinometer and bank indicator for aircraft comprising a closed cylinder having a diameter of half its length, a dark liquid half filling said cylinder, a translucent dial mounted in the front end of the cylinder, a horizon line on said dial, and a flanged ring engageable with the cylinder for retaining said dial in position on the front end of the cylinder, and means at the rear end of said cylinder for illuminating said dial, said dial having its lower half translucently colored to represent

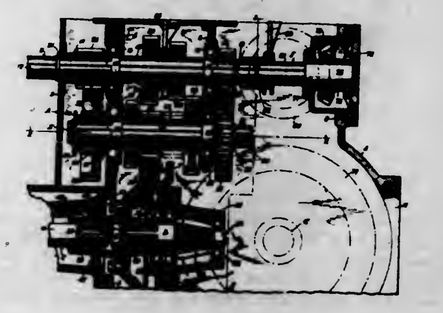
the earth, and its upper half translucently colored to represent the sky, and adjustable means for mounting said cylinder in an aircraft.

1,903,912. HAT BLOCK. GEORGEBEYS PAULOS PAPADOPOULOS, Detroit, Mich., assignor of sixty-six and two-thirds per cent to A. Victor Bizer, Detroit, Mich. Filed Nov. 12, 1931. Serial No. 574,629. 4 Claims. (Cl. 223—33.)



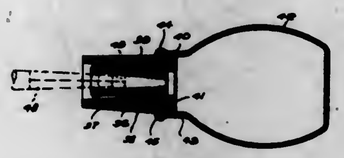
1. A hat block comprising a pair of side sections and a pair of end sections, said end sections having slots therein, means operatively connected with the side sections for shifting said side sections in opposite directions simultaneously, guide arms mounted on the side sections and extending slidably over the end sections, and pins mounted on the guide arms and extending through the slots for shifting the end sections in opposite directions relative to each other upon actuation of the side sections.

1,903,913. AXLE STRUCTURE. DENT PARRETT, St. Joseph, Mich., assignor to Joseph Gossner and Mathias Leupold, New York, N. Y. Filed Sept. 27, 1930. Serial No. 484,918. 6 Claims. (Cl. 180—43.)



1. An axle structure of the type described comprising, an open ended housing having co-axial ears at its open

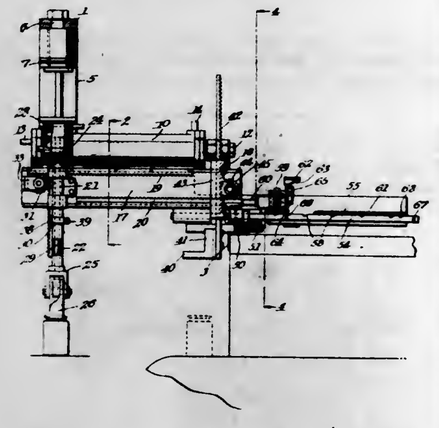
end formed with bearing receiving openings, bearings positioned in said openings, a hollow spindle having aligned



hollow bosses, and tubular bushings detachably received in the bosses of said spindle and in said bearings for pivotally supporting the spindle on said housing.

1,903,914. VARIABLE SPEED TRANSMISSION. DENT PARRETT, St. Joseph, Mich., assignor to Joseph Gossner and Mathias Leupold, New York, N. Y. Filed Oct. 30, 1930. Serial No. 492,251. 16 Claims. (Cl. 74—57.)

16. A transmission of the type described comprising a drive shaft, a countershaft continuously driven from the drive shaft at a constant speed ratio, a second countershaft selectively driven from said drive shaft at a plurality of different speed ratios, a driven shaft assembly including two shaft sections, both of which deliver power from the transmission, and means for selectively driving the driven shaft assembly from the drive shaft through either of said countershafts.

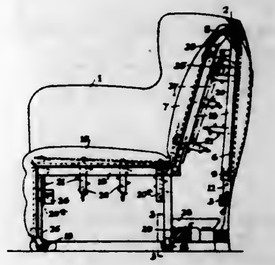


1,903,915. PIPE CLEANING DEVICE. RAMSEY SMITH, Oakridge, Roatan, Honduras. Filed May 27, 1932. Serial No. 613,961. 2 Claims. (Cl. 131—13.)

1. A tobacco pipe cleaning device, comprising a substantially rigid tubular neck having a tapered bore increasing in cross-sectional area forwardly, said neck being provided near the contracted end of the tapered bore with exterior

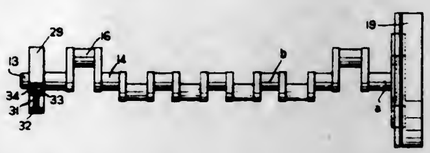
and interior circumferential grooves, a bulb receiving the rear end of the neck and having a bead for insertion within the exterior groove, and a sealing tube arranged within the bore of the tubular neck, said sealing tube having a tapered bore increasing in cross-sectional area forwardly and formed of compressible rubber, said sealing tube being provided at its rear end with an exterior circumferential flange for insertion within the interior circumferential groove.

1,903,916. LEER LOADER. THOMAS STENHOUSE and DAVID STENHOUSE, Washington, Pa., assignors to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1928. Serial No. 328,981. 21 Claims. (Cl. 214—1.)



1. A leer loader including means for gripping ware, an adjustable stop associated with said means, a rack associated with said means and arranged vertically with respect thereto, a gear meshing with the rack, and a friction clutch associated with the gear, whereby the gear is rendered inoperative when the stop becomes effective.

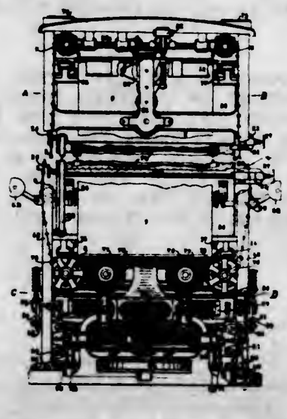
1,903,917. ANTIGLARE DEVICE. WILLIAM L. DYSART, Louisville, Ky. Filed Aug. 17, 1931. Serial No. 557,665. 3 Claims. (Cl. 296—97.)



3. The combination of a windshield having a leak proof chambered pane, a tube of expansible colored liquid, and means for heating and expanding the liquid from the tube into the chamber of the pane, comprising, an electric heating coil surrounding the tube, a source of electricity, conductor wires connecting the source of electricity with the coil, and insulating means for mounting the coil and tube stationary adjacent the windshield.

1,903,918. CHAIR OR SETTEE BEDSTEAD. HENRY ARTHUR FRASER and PETER FREDERICK CRIGHTON, London, England. Filed Jan. 29, 1931, Serial No. 512,167, and in Great Britain Feb. 13, 1930. 2 Claims. (Cl. 5—37.)

1. A chair or settee bedstead which comprises in combination a seat section rigidly carried by movable supporting means, a back section hinged at its lower edge to said seat section and at its upper edge to a third section, said third section being hinged to a relatively stationary main frame solely by a fixed pivotal connection, said sections being movable into line to constitute a resilient bed surface, during which movement said pivotal connection constitutes the sole connecting means between the said sections and the frame, and a yielding control operatively connected to at least one section and which tends to move all the sections from the extended into the folded position, and latching mechanism operable to lock the sections in the folded position with the back section arranged at any selected inclination of a range thereof.



1,903,919. INTERNAL COMBUSTION ENGINE. WALTER R. GRISWOLD, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 24, 1928. Serial No. 264,309. 6 Claims. (Cl. 74—6.)

1. The combination with an internal combustion engine having a crank shaft, of flywheels of different mass fixed to the shaft at the ends thereof, and a damping device adjacent the flywheel of greater mass including inertia means frictionally connected to the shaft.

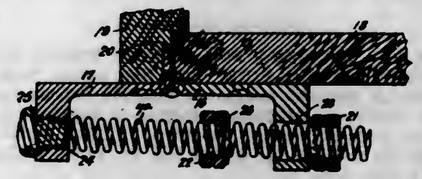
1,903,920. AUTOMATIC MACHINE FOR THE MANUFACTURE OF SOAP BARS. ALFRED THEODOR HÜNTEN, deceased, Koppern in the Taunus, Germany, by Gertrud Hünten, widow and administratrix, Frankfort-on-the-Main, Germany. Filed July 7, 1931, Serial No. 549,258, and in Germany Nov. 6, 1928. 12 Claims. (Cl. 18—26.)

1. An automatic machine for the manufacture of soap bars, comprising, in combination, four endless bands forming between them a space for the reception of hot liquid soap mass, cooling means arranged between the bands,

guiding members located at the corners of the space formed by the bands and having grooves therein receiving portions of the bands to form labyrinth packings.

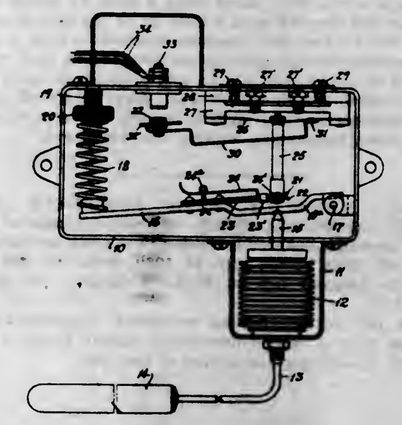
1,903,921. LOCK NUT AND METHOD OF MANUFACTURE. ERNEST L. RUPP, West New Brighton, N. Y. Filed Feb. 8, 1932. Serial No. 591,583. 5 Claims. (Cl. 151—21.)

3. A lock nut formed from a standard nut, said lock nut having a portion of a lateral face beveled and a corresponding portion of the metal at the periphery of the hole opposite the bevel pressed longitudinally and laterally of the nut.



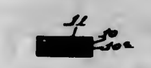
1,903,922. LOCK NUT AND METHOD OF MANUFACTURE. ERNEST L. RUPP, West New Brighton, N. Y. Original application filed Feb. 8, 1932, Serial No. 591,583. Divided and this application filed June 15, 1932. Serial No. 617,276. 6 Claims. (Cl. 10—86.)

1. The method of converting a standard nut into a lock nut which comprises displacing the metal at the periphery of the hole, both inwardly toward the axis of the nut and longitudinally of the nut by pressing a bevel on a side of a lateral face of the nut opposite the portion to be displaced.



1,903,923. CLOSURE-HOLDING AND RETURN SPRING. WILLIAM JAMES HYDE, London, England. Filed July 7, 1932, Serial No. 621,249, and in Great Britain June 2, 1931. 18 Claims. (Cl. 16—180.)

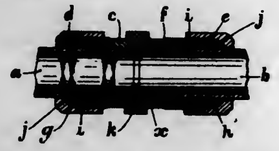
1. In combination with a member and a member mounted to swing relatively thereto, spring means anchored to one member, guide means on the other member for the spring means, means coacting with the spring means operable to limit movement of the guide member to different positions along the spring means to accordingly limit movement of the second member in one direction,



such spring means permitting movement of the second member in the opposite direction notwithstanding the position of the third mentioned means.

1,903,924. AUTOMATIC CONTROL SWITCH. LAWRENCE C. IRWIN, Brooklyn, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 6, 1930. Serial No. 435,576. 23 Claims. (Cl. 200—140.)

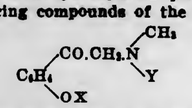
1. In an automatic control switch for controlling an electric circuit in response to variations in the temperature or pressure at a selected point, in combination, an element adapted to expand in response to an increase in the temperature or pressure at such point and to contract in response to a decrease in such temperature or pressure, a snap plate having a concave section adapted to snap rapidly to a reverse concave position when moved for a distance from a position of rest, a resilient connection between said element and plate arranged to absorb a part of the movement of said element and become tensioned thereby, and a switch arm operated by said plate to make or break quickly an electric circuit as said plate snaps into reverse position aided by the stored-up energy of said resilient connection.



1,903,925. TIRE BEAD REENFORCING ELEMENT. ALFRED H. JOHNSON, Niles, Mich., assignor to National-Standard Company, Niles, Mich., a Corporation of Michigan. Filed Dec. 26, 1930. Serial No. 504,927. 2 Claims. (Cl. 245—1.5.)

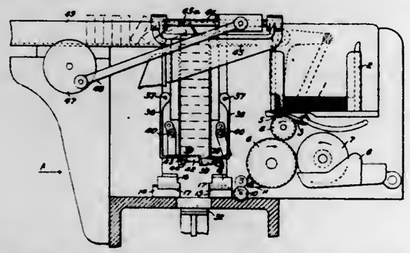
1. A tire bead reenforcing element including a plurality of separate parallel tension members each composed of a plurality of wires twisted tightly together throughout

their length, said members being wholly disconnected by cross wires and imbedded in a substance to which rubber will adhere, said substance serving to hold said members in parallel spaced relationship.



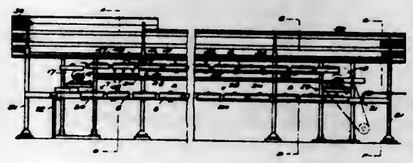
1,903,926. COUPLING FOR JOINING PIPES, RODS, WIRES, AND THE LIKE. BOYD NEIL ROBERT LAMONT, Feltham, England, assignor to Simplifix Patents Limited, Teddington, Middlesex, England, a Registered Company of Great Britain. Filed Oct. 13, 1930, Serial No. 488,496, and in Great Britain Oct. 21, 1929. 3 Claims. (Cl. 285—122.)

1. A coupling comprising in combination a pair of constraining members adapted for surrounding the element to be coupled and hollowed out to receive a straight cylindrical metal sleeve, said sleeve being a close fit within said members but adapted to be a loose fit on the said element, means for drawing said members together axially, a pair of oppositely-bevelled internal surfaces one on each member and arranged such that on said members being drawn axially together each end of said sleeve is forced down the respective bevelled surface to grip the element and at the same time axially shorten the said sleeve.



1,903,927. MANUFACTURE OF SECONDARY AROMATIC AMINO-ALCOHOLS. HELMUT LEGERLOTZ, Berlin, Germany, assignor to Frederick Stearns & Company, Detroit, Mich. Filed Mar. 24, 1930, Serial No. 438,642, and in Germany Jan. 16, 1929. 4 Claims. (Cl. 260—128.5.)

1. A method for making secondary aromatic amino alcohols with a monohydroxylated phenyl group which consists in reducing compounds of the type

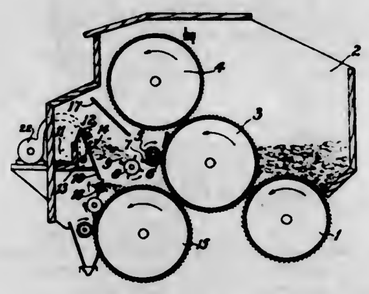


in which the two substituents of the phenyl group are in the para or meta position, X is a benzyl or benzoyl group and Y a benzoyl or toluolene sulfonyl group, saponifying the product obtained by the reduction, and separating the alcohol from the reaction mixture.

1,903,928. MACHINE FOR APPLYING BANDS, STAMPS OR THE LIKE TO PACKETS. JAMES MASON, Deptford, London, England. Filed Oct. 27, 1931, Serial No. 571,480, and in Great Britain Nov. 6, 1930. 10 Claims. (Cl. 216—55.)

1. In a machine for applying bands to packets the combination with a support for bands having spaced band engaging portions, means for delivering a band to said support, said means including a device for bowing the band transversely of the longer dimension thereof to render the band self-supporting, and means for lifting the band from the support and contacting the same with a packet.

1,903,929. PROCESS AND APPARATUS FOR THE MANUFACTURE OF SWEATED PARAFFIN FROM NONSWEATED PARAFFIN AND THE LIKE SUBSTANCES. REINIER MEIJER, The Hague, Netherlands, assignor to Naamloose Vennootschap de Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Filed July 29, 1930, Serial No. 471,530, and in the Netherlands Aug. 13, 1929. 6 Claims. (Cl. 196—20.)



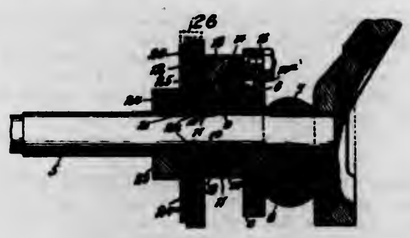
1. A process for obtaining sweated paraffin from a nonsweated paraffinous mass and filling similar substances comprising trays having perforated bottoms with the liquid base material at the entrance of a cooling passage, conducting said trays through said cooling passage with the bottoms of the trays immersed in a stream of water flowing through said cooling passage and then leading said trays through a sweating chamber.

1,903,930. SLED. CHARLES Z. MILLER, Fort Scott, Kans. Filed Jan. 19, 1931. Serial No. 509,792. 6 Claims. (Cl. 280—21.)

1. In a sled, the combination of a frame; two runners extending along and under the side edges thereof; and separate yieldable means connecting the respective runners to the frame and normally maintaining the runners in predetermined spaced relation with respect to the frame, the connections of each runner being yieldable independently of movement of the other runner upon the concentration of weight above said first-named runner to permit relative collapsing movement of the frame and runner to thus effect steering of the sled.

1,903,931. APPARATUS FOR SUPPLYING TOBACCO TO A CIGARETTE MAKING MACHINE. WALTER EVERETT MOLINS and FELIX FREDERIC RUAU, Deptford, London, England. Filed Feb. 25, 1931, Serial No. 518,225, and in Great Britain Mar. 18, 1930. 8 Claims. (Cl. 131—39.)

1. A method of winnowing tobacco for use in a cigarette making machine which comprises the following steps:—



(a) Projecting the tobacco in an upwardly directed shower at an angle to the horizontal.

(b) Subjecting the shower to an air blast to check the motion of the light particles of tobacco.

(c) Separating the stalks from the desired shreds in the shower.

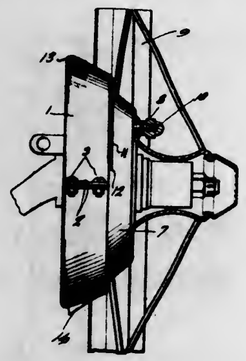
(d) Projecting the desired shreds in a shower to evenly spread the tobacco over the surface of a distributor.

1,903,932. ADJUSTABLE THROW ECCENTRIC. CHARLES W. MUELLER, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Filed Nov. 18, 1931. Serial No. 575,880. 7 Claims. (Cl. 74—1.)

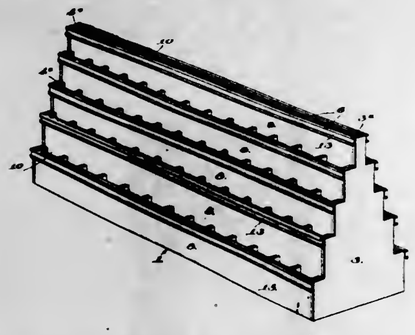
1. In an adjustable throw eccentric, the combination with a shaft, of a driving disc fixed to the shaft, an adjusting eccentric rotatable about the shaft and located along side the driving disc, an adjusting disc fixed to the adjusting eccentric and located at the end thereof opposite the driving disc, a driving eccentric surrounding the adjusting eccentric, a driving link connection between the driving disc and the driving eccentric, and means cooperating with the adjusting disc and the driving eccentric for retaining the same against relative movement in different positions of adjustment of the adjusting eccentric.

1,903,933. SEAM. CHARLES W. MUELLER, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Filed May 6, 1932. Serial No. 609,720. 2 Claims. (Cl. 112—268.)

1. A seam for sewed articles, comprising a body fabric having a hem along one edge thereof and folded to lie against the upper face of said body fabric, and a single row of connected stitches entering and emerging from the same side of the fabric comprising a series of equally spaced and connected needle thread loops penetrating upwardly through the hem at points spaced from the inner edge thereof, alternate loops only entering and emerging from the upper face of the body fabric below the hem, the loops being positioned against the upper face of the hem and extending from the points of penetration to the inner edge of the hem and lying in parallel planes diagonal to the general line of the hem.



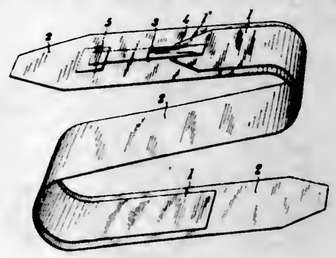
1,903,934. REFRIGERATION. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 29, 1929, Serial No. 350,845, and in Germany May 25, 1928. 4 Claims. (Cl. 62—95.)



1. In a refrigerator, a cabinet, a horizontally disposed evaporator shell in said cabinet, air cooling means on the rear part of said shell, ice freezing means on the front part of said shell, means for introducing an inert gas into the rear part of said shell, a plurality of vertically spaced horizontally disposed liquid distributing plates within said shell, a transverse rib on the central part of the uppermost of said plates, a conduit for conveying liquid refrigerant to said shell, said conduit entering the rear part of said shell and extending forward of said transverse rib and means for removing refrigerant and inert gas from the rear of said shell.

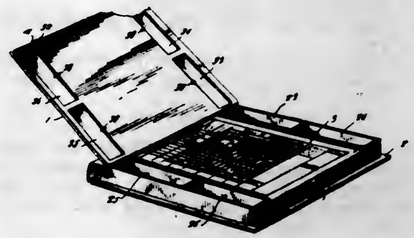
1,903,935. BRAKE DUST GUARD. HERBERT E. NICHOLS, Santa Ana, Calif. Filed Mar. 3, 1931. Serial No. 519,815. 7 Claims. (Cl. 188—218.)

1. In combination with a brake including a backing plate and a relatively rotatable drum, a band mounted on the backing plate and extending therefrom over the drum, and a flange formed on one edge of the band and overhanging the drum, said flange being formed on an upper portion of the band and having its ends terminating in points spaced from said one edge of the band.



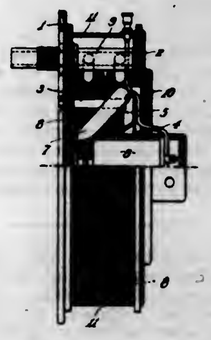
1,903,936. DISPLAY RACK. RAYMOND B. NUNNERY, Chickasha, Okla. Filed Sept. 27, 1930. Serial No. 484,897. 4 Claims. (Cl. 211—69.)

2. A pyramidal display rack for pencils and the like comprising sets of independent transversely and longitudinally arranged partitions intersecting one another, one of said sets of partitions having slots to receive the other partitions and form article receiving pockets, the transverse partitions having step-shaped edges, the steps forming spacers for the longitudinal partitions, said transverse partitions having transversely extending slots, and longitudinal strips extending through said slots in said transverse partitions and forming bottoms for the pockets.



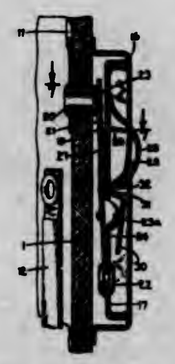
1,903,937. PHOTOGRAPHIC ROLL FILM SPOOL. GERHARD OLLENDORFF, Wolfen near Bitterfeld, Germany, assignor to Agfa Anaco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Nov. 13, 1928, Serial No. 319,171, and in Germany Dec. 8, 1927. 3 Claims. (Cl. 95—9.)

1. A photographic roll film cartridge comprising a flanged spool with a core, a protective paper strip provided on its leading end with a slot, and a strip of light-sensitive photographic film with a tongue-like extension on its leading end, said film lying on the inner surface of the said protective paper strip and wound onto the spool



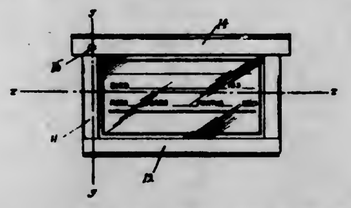
with the latter, the tongue-like extension of said film being passed through said slot in the protective paper strip and fastened on the outer surface of the latter.

1,903,938. INDICATING DEVICE. HARRY H. PARSONS, Missoula, Mont. Filed Feb. 3, 1931. Serial No. 513,199. 4 Claims. (Cl. 129—1.)



1. A container comprising front and back sections, an end section connecting the rear edges of the front and back sections, side sections forming compartments between the front and back sections, and means in the front section for allowing access to the compartments without opening the front section.

1,903,939. HEATING AND VENTILATING APPARATUS. MATT PAYNE, Surbiton, England. Filed Dec. 30, 1931. Serial No. 588,990, and in Great Britain Jan. 26, 1931. 8 Claims. (Cl. 257—137.)

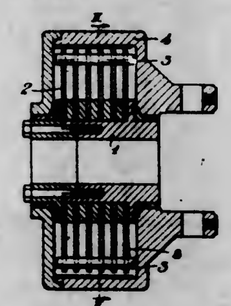


3. An air heater comprising a pair of parallel frame plates arranged to form a flat cylindrical chamber, a sleeve carried by one of the frame plates, a fan disposed within said chamber, a driving motor for the fan mounted in the sleeve, the frame plate which carries the sleeve having an annular air inlet opening surrounding the motor, and annular heating means disposed between said frame plates around said fan.

1,903,940. FLASH LIGHT SAFETY SWITCH. GOODRICH B. PRATT, Jersey City, N. J., assignor to Bond Electric Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 16, 1930. Serial No. 444,663. 9 Claims. (Cl. 200—60.)

1. A device of the character described comprising a contact box, a resilient contact arm carried thereby, a button on the arm extending through an aperture in the box, a slide on the box, a lever carried by the slide and having a camming extension engaging the button, a recess in the box under the slide, and an extension on the lever within the slide to maintain the button depressed when the slide is moved from a normal locked position.

1,903,941. CARD HOLDER. EDWARD A. RASBRIDGE, Lebanon, Pa. Filed Dec. 28, 1931. Serial No. 583,445. 3 Claims. (Cl. 40—124.5.)



1. A card holder comprising a pair of plates, at least one of which is transparent, a coating of cementitious water-proof material covering the side and bottom edges of the plates and securing the same in spaced relation, the upper edges of the plates being open to receive a card or name plate, a casing for the plates of sheet metal disposed flat against the back of the plates and having its side and bottom edges turned inwardly at the front, said bottom edge being spaced from the bottom of the plates and open at each end to provide a drain channel and a cover fitted over the top of the casing.

1,903,942. PROCESS FOR CONVERTING TOBACCO STEMS INTO PULP. JOHN F. REICHARD, York, Pa., assignor to United States Cigar Company, Inc., York, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1932. Serial No. 606,527. 9 Claims. (Cl. 92—14.)

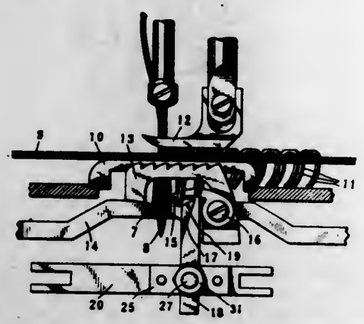
1. The process of converting tobacco stems into pulp for the purpose of making tobacco sheet, which consists in separating the foreign material from the stems, crushing the stems, treating the crushed stems in a solution of caustic soda, pressing, washing, and grinding the mass, and subjecting the mass to the action of a beating machine.

1,903,943. CLUTCHING DEVICE. CARL AUGUST RUDQVIST, Stockholm, Sweden, assignor to Pulvis Aktiengesellschaft, Glarus, Switzerland. Filed June 14, 1929, Serial No. 370,930, and in Sweden Mar. 13, 1929. 11 Claims. (Cl. 192—58.)

1. In a clutching device, a hub, a drum shaped casing rotatably surrounding said hub and containing a powdered material, disk-shaped members carried by said hub, and substantially axial bolts carried by said disk shaped members.

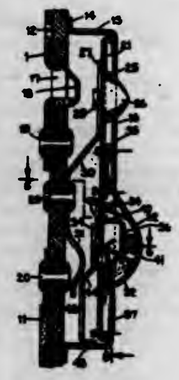
1,903,944. CASTING OF ALUMINUM SILICATE REFRACTORIES. FREDERIC WILLIAM SCHROEDER, Louisville, Ky., assignor to Corhart Refractories Company, Louisville, Ky., a Corporation of Delaware. Filed Oct. 9, 1931. Serial No. 567,950. 3 Claims. (Cl. 49—79.)

1. A core for molding cast aluminum silicates formed of grains of aluminum silicate and a suitable bond.



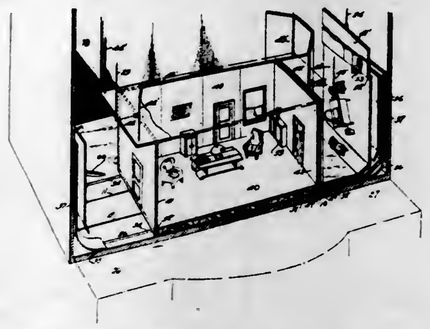
1,903,945. ANODE FOR WATER-COOLED VACUUM TUBES. RINJIRO SHIMIZU, Tokyo, Japan, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1929, Serial No. 416,852, and in Japan Jan. 24, 1929. 1 Claim. (Cl. 250—27.5.)

An electron discharge device comprising an envelope enclosing a plurality of electrodes and including a cup-shaped metallic portion constituting an anode for the de-



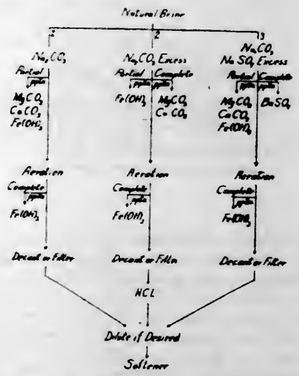
vice, a cylindrical glass portion closing the end of said metallic portion, and a plurality of vanes affixed to said metallic portion at an angle to the longitudinal axis thereof, said vanes extending lengthwise of said metallic portion and being in spaced relation with one another and positioned so that a cooling liquid may pass freely between them and over the outer surface of said metallic portion.

1,903,946. TUFTING MACHINE ATTACHMENT. LOYD A. SMITH, La Grange, Ga., assignor to Truline, Incorporated, La Grange, Ga., a Corporation of Georgia. Filed Aug. 1, 1930. Serial No. 472,299. 28 Claims. (Cl. 112—79.)



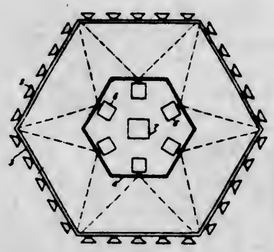
1. A tufting machine comprising a needle, actuating mechanism for the needle, means for feeding the work through the machine, a looper, means for actuating the looper for cooperation with the needle to form a loop, a loop cutting means, and a support for both said feeding means and looper, at least part of said loop cutting means being fixed to said support.

1,903,947. FLASH-LIGHT SAFETY SWITCH. FRANK G. STIMSON, Belleville, N. J., assignor to Bond Electric Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 16, 1930. Serial No. 444,648. 21 Claims. (Cl. 200—60.)



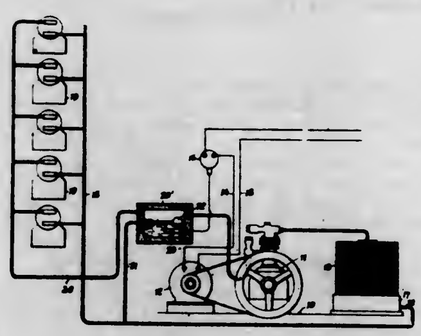
21. A device of the character described comprising a casing, a contact box on the casing, switch contacts within the contact box, an operating slide movable upon the contact box and bringing the contacts into operable position thereby, at least one slot in the contact box adjacent the slide, the slide having a raised portion, an opening in the raised portion at the base thereof forming a relatively narrow opening between the wall of the raised portion and the contact box, a locking lever within the raised portion and engageable in a slot to lock the slide in position, a U-shaped bend in the locking lever receiving the wall of the raised portion of the slide at the opening to pivot the lever thereupon, and a spring between the inner wall of the raised portion and the locking lever.

1,903,948. THEATER. JACK POTTER STOCKTON, Spring Lake, N. J. Filed Sept. 18, 1928. Serial No. 306,641. 36 Claims. (Cl. 272—22.)



1. The combination with a theater having a permanent stage, proscenium arch in front of the stage, and wings to each side of the stage, of a scene shifting traveler supported on the permanent stage and guided for movement back and forth between the wings, and two preassembled stage settings each coupled to the traveler and movable thereby so that one setting or the other setting or adjacent portions of both settings are visible through the arch.

1,903,949. PROCESS OF REGENERATING BASE-EXCHANGE SUBSTANCES. ORLAND RUSSELL SWEENEY, Ames, Iowa, assignor, by mesne assignments, to The Permutit Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 20, 1929. Serial No. 415,425. 8 Claims. (Cl. 23—112.)

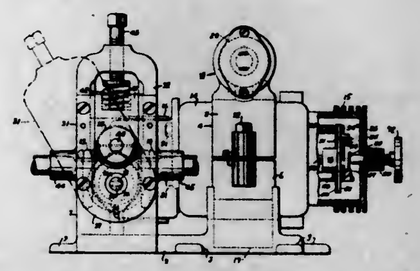


8. The method for economical regeneration of base-exchange material of a water-softening system which comprises supplying regenerating solution by treatment of natural salt brine to remove harmful constituents, including removal of calcium and magnesium by chemical precipitation and separation of the precipitate, while always retaining the sodium chloride of the brine in a state of solution, and passing the treated solution through said material; the brine being withdrawn from an earth source and conditioned for use as regenerating solution by such treatment and passed through said material as successive connected operations.

1,903,950. MOTION PICTURE THEATER AND APPARATUS. JULIUS WEINBERGER, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 29, 1929. Serial No. 410,445. 3 Claims. (Cl. 88—16.2.)

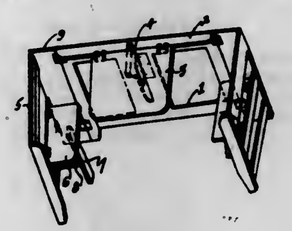
3. The combination of an enclosure provided with translucent wall sections, a projection room located within said enclosure, a plurality of moving picture projectors arranged in said room simultaneously to project pictures upon said walls, and means operated in synchronism with said projectors for causing sound to be produced in proximity to said wall sections.

1,903,951. TEMPERATURE CONTROL CHAMBER. EDWARD T. WILLIAMS, Pelham Manor, N. Y. Filed May 7, 1930. Serial No. 450,338. 8 Claims. (Cl. 62—3.)



1. In combination with a compression type refrigerator including an evaporator, means forming a control chamber in the suction line separate from the evaporator, means for supplying liquid to said chamber from the pressure line, a float for controlling the quantity of liquid in said chamber, a thermostat in said chamber below the normal liquid level, and a switch operated by the thermostat for controlling the operation of the refrigerator.

1,903,952. WELDING ROD AND PROCESS OF MAKING THE SAME. WILLIAM A. WISSLER, Jackson Heights, N. Y., assignor to Haynes Stellite Company, a Corporation of Indiana. Filed Feb. 20, 1931. Serial No. 517,378. 8 Claims. (Cl. 219—8.)

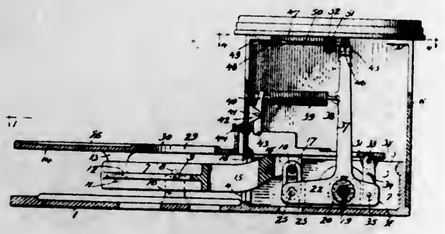


1. A welding rod adapted to give a deposit of sound metal highly resistant to abrasive wear, said welding rod containing cobalt 20% to 65%, chromium 15% to 45%, tungsten 2% to 35%, carbon 0.25% to 3.5%, manganese as an impurity not more than 0.9% and silicon in such quantity, not greater than 2%, that the proportion of the silicon to the manganese is at least 1 to 2.5.

1,903,953. WIRE FEED DEVICE. JAMES L. ANDERSON, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1930. Serial No. 442,701. 15 Claims. (Cl. 140—128.)

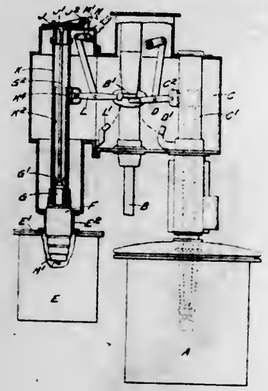
1. A wire feed device comprising a base having two clamps, a roll assembly having a neck held in one of said clamps, an electric motor having a case held in the other of said clamps and a reduction gear unit between said motor and said roll assembly, said clamps enabling both said motor and said roll assembly to be adjusted relatively to each other and to the base.

1,903,954. FOLDING TABLE AND CHAIR. LOUIS BLUMENTHAL, Brooklyn, N. Y. Filed July 29, 1932. Serial No. 625,595. 8 Claims. (Cl. 155—124.)



1. In a device of the character described, in combination, a normally upright supporting member, a table swingably connected to the top of said supporting member, a seat assembly and means for swingably connecting said seat assembly to a side edge of said supporting member whereby said seat assembly may be folded in spaced relation to said supporting member.

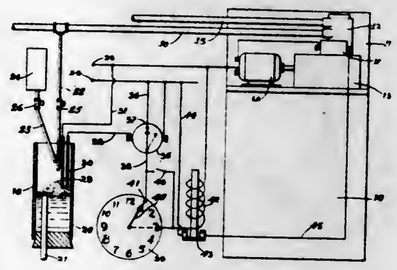
1,903,955. SCALE. HUGH M. CAMERON, Woodhaven, N. Y., assignor of one-half to Edward A. Judge, New York, N. Y., and one-half to Jacob E. Seederer, Bloomfield, N. J. Filed Aug. 7, 1931. Serial No. 555,712. 9 Claims. (Cl. 265—68.)



1. In a scale the combination of a platform, a lever of the first class disposed below the plane of the platform, means forming two points of support for said lever below the plane of the platform, means forming points of support for said platform on one arm of said lever, a T lever supported below the plane of the platform, means for

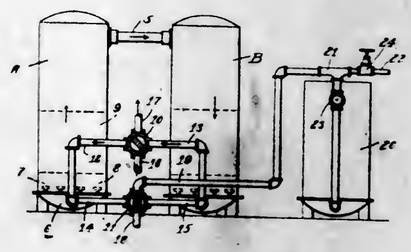
connecting one arm of said first mentioned lever with one arm of said T lever, and means for connecting a portion of the platform with another arm of said T lever

below the plane of said platform, counterbalancing means associated with said T lever and means for indicating the weight of a body resting on said platform.



1,903,956. HIGH VOLTAGE ELECTRIC SWITCH GEAR. JOHN CHRISTIE, Sunderland, and DONALD FOSTER AMER, Jarrow, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Registered Company of Great Britain. Filed Mar. 14, 1932, Serial No. 598,836, and in Great Britain Apr. 17, 1931. 19 Claims. (Cl. 175—298.)

1. A potential transformer fuse mounting for high voltage electric switchgear, comprising a potential transformer tank, a condenser-type bushing insulator which supports the fuse mounting in the wall of the tank, a metal tube constituting the innermost layer of the bushing insulator, a potential transformer fuse disposed within the bushing insulator, and an insulating tube surrounding the fuse and surrounded by the metal tube.

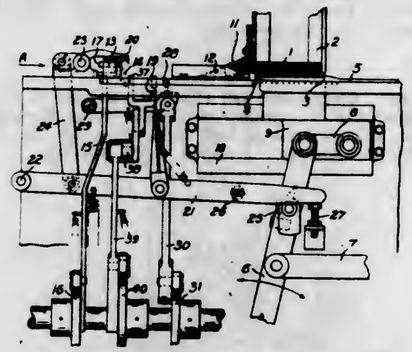


1,903,957. WATER SOFTENING SYSTEM AND MEANS FOR CONTROLLING OPERATION THEREOF. THOMAS B. CLARK, Rockford, Ill., assignor, by mesne assignments, to The Permutit Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 169,827. 16 Claims. (Cl. 210—24.)

1. In a water softening system, the combination with a water softener and means for regenerating the same, of a controller governing the operation of said regenerating means, said controller comprising a receptacle, means for diverting water from the outlet or service side of the water softener into said receptacle in a suitable volume, means for supplying a soap solution to the water in said receptacle to form a lather, and means arranged to

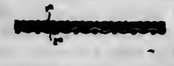
render said regenerating means operative, said means being itself rendered operative upon a failure of lather formation in said receptacle, but being otherwise maintained inoperative in the presence of the lather evidencing the relative softness of the water.

1,903,958. WATER SOFTENER. THOMAS B. CLARK, Rockford, Ill., assignor, by mesne assignments, to The Permutit Company, Wilmington, Del., a Corporation of Delaware. Filed May 7, 1928. Serial No. 275,601. 6 Claims. (Cl. 210—24.)



1. A water softener comprising in combination a pair of tanks connected together at the top, each of said tanks containing a bed of water softening material, water distributing means in the bottom of each of said tanks, and a pair of four-way valves, each of which has two ports connected with the bottoms of said tanks, there being a source of hard water supply connected with one of the remaining ports of one of said valves and a pipe leading to a service system connected with the other port thereof, and there being a source of brine and flush water connected with one of the two remaining ports of the other valve and a pipe leading to a drain connected to the other port thereof.

1,903,959. PACKING MACHINERY. RUSSELL CLARKSON, Deptford, London, England. Filed Nov. 4, 1929, Serial No. 405,439, and in Great Britain Nov. 22, 1920. 7 Claims. (Cl. 93—2.)



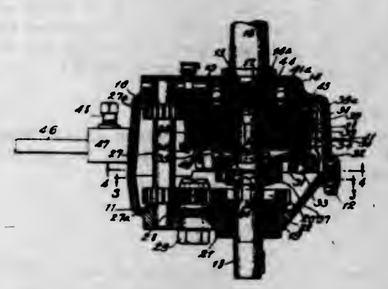
1. In apparatus for opening collapsed shells of cartons of the slide and shell type, the combination with means for engaging and exerting thrust on the outer folded edges

of the shell to urge them toward each other, of means acting simultaneously with said first named means and engaging said shell to impart a double curvature thereto

in the direction of the thrust exerted by said first named means to ensure movement of the flattened folds in the proper direction.

1,903,960. FABRIC AND SHEET MATERIAL AND THE MANUFACTURE THEREOF. CAMILLE DREYFUS, New York, N. Y. Filed Dec. 15, 1925, Serial No. 75,653, and in Great Britain Jan. 23, 1925. 4 Claims. (Cl. 154—2.)

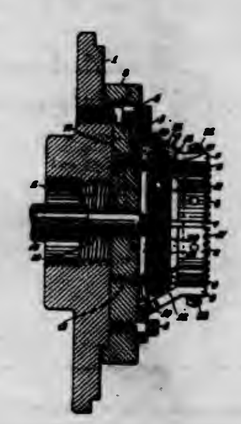
1. A process for the manufacture of composite sheet material which comprises applying to a fabric containing yarns comprising a thermoplastic derivative of cellulose a softening agent in solution in volatile solvents which are non-solvents of said derivative, associating it with another fabric by superposition, and subjecting the fabrics to heat and pressure to soften the cellulose derivative and unite the fabrics to form a sheet material of increased impermeability.



1,903,961. METHOD OF REMOVING COMBINED SULPHUR FROM CELLULOSE ACETATE. CAMILLE DREYFUS, New York, N. Y., and GEORGE SCHNEIDER, Montclair, N. J., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Apr. 29, 1930. Serial No. 448,414. 6 Claims. (Cl. 260—102.)

1. Method of removing combined sulphur from cellulose acetate comprising subjecting the solid cellulose acetate to an aqueous liquid under super-atmospheric pressures and at temperatures above 100° C.

1,903,962. MANUFACTURE OF CELLULOSE OR CELLULOSIC PRODUCTS. HENRY DREYFUS, London, England. Filed Sept. 5, 1931, Serial No. 561,443, and in Great Britain Nov. 8, 1930. 13 Claims. (Cl. 92—7.)



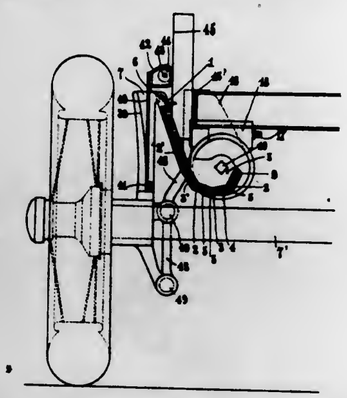
1. Process for the manufacture of cellulose or cellulosic materials from wood, straw, grass or other raw materials by processes in which the materials are subjected to the action of chemical reagents at elevated temperatures and under elevated pressure, characterized in that such pressure is produced at least partially by means of inert gases or vapours which are introduced into the reaction vessel or digester whether directly or by development from materials introduced into said vessel or digester in addition to the normal reaction ingredients.

1,903,963. MULTIPLE DISK CLUTCH. GEORGE W. EMRICK, Brooklyn, N. Y., assignor to Ettco Tool Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 8, 1930. Serial N. 442,702. 7 Claims. (Cl. 192—69.)

1. In a device of the class described, a drive member and a driven member, the driven member being movable longitudinally with respect to the axis of the drive member, a friction disk clutch arranged on said members at adjacent ends thereof, said clutch involving a series of clutch plate elements and a series of clutch disk elements interposed between said plate elements, one series of elements being keyed to the drive member and the other series of elements keyed to the driven member, tensional means for normally supporting said disks and plates in non-engaging position to permit free and differential rotary movement thereof with respect to each other, means actuated in one directional movement of the driven member for bringing the clutch elements in operative engagement in the direct drive of the driven member through said disk clutch, said means comprising dogs pivotally supported in connection with the drive member and circumferentially spaced with respect to said clutch elements, and an equalizing ring having a swivel mounting on the driven member and cooperating with the free ends of said dogs.

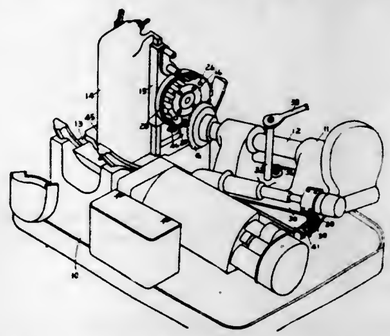
1,903,964. SPRING CHUCK. CLAUS WILHELM FAUST, Elmwood, Conn., assignor, by mesne assignments, to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 2, 1932. Serial No. 608,740. 3 Claims. (Cl. 279—16.)

1. A chuck comprising a plate, a jaw member formed of a single piece of sheet metal and having a substantially flat annular base portion secured to the plate and having a tapering or conical part its larger end spring from the



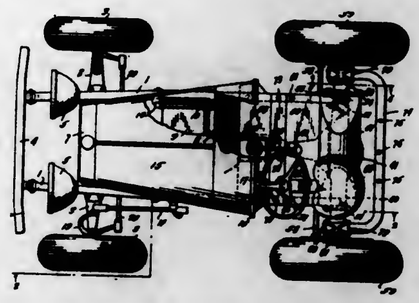
flat annular base portion and continuing at its smaller end in a number of work engaging fingers, the fingers being set off one from the other by means of slots extending from their outer ends well into the conical or tapering portion, a wedge or plunger member mounted within the tapering portion and furnished with a wedge or cam face for engaging the inner faces of the set off members of the slanting portion, and a push rod extending through the plate and having a rounded end for engaging the rear face of the plunger member.

1,903,965. DRAFTING PEN. HENRY FRANK, Brooklyn, N. Y. Filed June 25, 1932. Serial No. 619,246. 3 Claims. (Cl. 120—43.)



1. A writing pen comprising a vented barrel, a hollow writing head carried by the barrel and having a passage providing communication with the barrel, said head also having a furcated writing end and a plurality of openings in its walls, and a closely fitted cap removably carried by the head having a discharge opening adjacent the furcated end of the head, the walls of the cap cooperating with the head to form recesses at the upper edges of the openings, the lower end of the passage terminating below the recesses to prevent the flow of fluid from the head into the barrel.

1,903,966. VEHICLE SUSPENSION DEVICE. LOUIS GRANGES, Paris, France. Filed Aug. 4, 1930, Serial No. 473,078, and in France May 27, 1930. 5 Claims. (Cl. 280—124.)

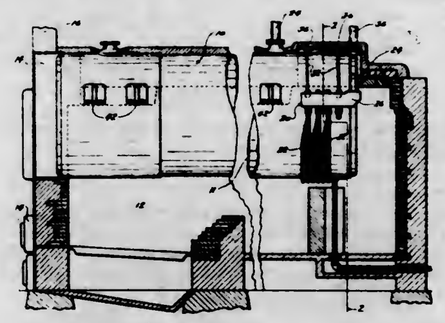


1. A suspension device for a vehicle having a chassis supported on a plurality of axles, comprising flexible connecting means between the chassis and the axles, a yielding power means, a rotatable cam in contact with the flexible means, the cam being contoured to be affected by the flexible means and in turn to affect the yielding power means, and means for controlling the intensity of the initial reaction of the yielding power means from a remote position so that irrespective of the magnitude of the load on the chassis the cam may assume a suitable intermediate position for every possible load condition, the said intermediate position of the cam permitting the elastic reactions to remain substantially proportional to the applied load.

1,903,967. GRINDING APPARATUS. ERNEST C. HEAD, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Apr. 29, 1929. Serial No. 358,937. 4 Claims. (Cl. 51—241.)

1. An attachment for grinding the nose and front face of the cutter spindle of taper gear cutting machines on which the work head is adjustable angularly relative to the axis of the cutter spindle, comprising a rotatable grinding wheel, a slide on which the grinding wheel is mounted, means for driving the wheel comprising a motor housed on said slide and means operatively connecting the armature shaft of the motor to the grinding wheel, a support on which the slide is movable in a direction inclined at an angle to the axis of the grinding wheel equal to the inclination of the front face of the spindle to the side of the nose, and the means for moving the slide on the support, said support having an arm adapted to be detachably mounted in the bore of the work spindle of the machine to carry the support on the work head.

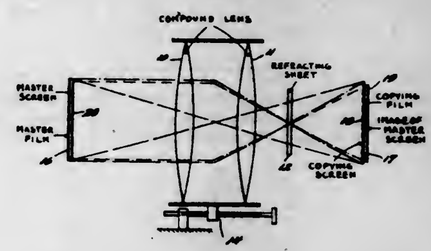
1,903,968. TRACTOR. WARREN S. HOSMER, Bartow, Fla. Filed Nov. 2, 1931. Serial No. 572,689. 4 Claims. (Cl. 180—1.)



1. A tractor comprising a frame, a transmission and a differential secured thereto, a universal joint positioned between the differential and the transmission adapted to connect them directly to each other so as to shorten the wheel base of the tractor, and a metallic plate having a weighted lug associated therewith to maintain the tractor in a level position when exerting a forward pull, said metallic plate being cut away on its underside to receive the differential.

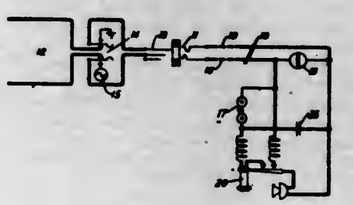
1,903,969. BORE HOLE SURVEYING APPARATUS. ALEXANDER ANDERSON, Fullerton, Calif. Original application filed May 11, 1927, Serial No. 190,641. Divided and this application filed Mar. 4, 1931. Serial No. 520,096. 18 Claims. (Cl. 234—1.)

1. In combination in a bore surveying instrument, a light-sensitive record member a light source and a plurality of reflecting members adapted to reflect light from such source upon such record member one of such reflecting members being fixed and the other being mounted for movement.



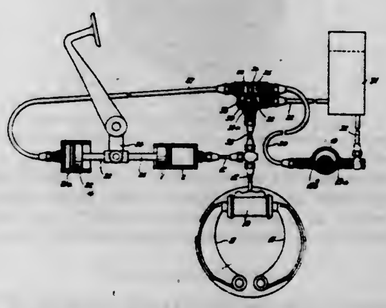
1,903,970. SUPERHEATER ARRANGEMENT FOR CYLINDRICAL SHELL BOILERS. WILBUR H. ARMACOST, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Apr. 25, 1932. Serial No. 607,534. 4 Claims. (Cl. 122—469.)

1. The combination with a boiler having a horizontal cylindrical shell portion, of means for passing heating gases along the lower outer surface of said portion, and a superheater having tubes running beneath said portion from side to side thereof and each substantially parallel to its outer surface.



1,903,971. COLOR PHOTOGRAPHY. THOMAS THORNE BAKER, Middlesex, England, assignor to Spicers Limited London, England, a British Company. Filed Nov. 7, 1931, Serial No. 573,690, and in Great Britain Nov. 7, 1930. 7 Claims. (Cl. 88—24.)

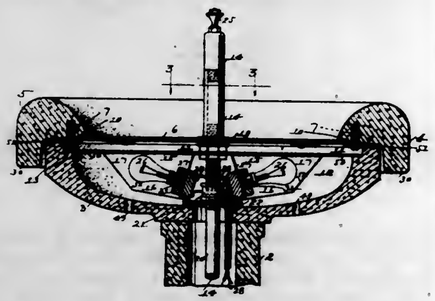
1. The method of avoiding the occurrence of interference effects when printing from colored transparencies of the color screen type onto a copying film also bearing a color screen which comprises sharply focussing an image of the picture on a master transparency onto the emulsion of the copying film by means of a lens of large aperture and of such critical focus that the image of the



master color screen formed at the same time and in the plane of the copying color screen is sufficiently diffused to avoid the occurrence of interference effects.

1,903,972. TELEPHONE SYSTEM. CHARLES B. BARTLEY, Pittsburgh, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1930. Serial No. 503,703. 13 Claims. (Cl. 179—81.)

1. A telephone substation including a signal lamp associated with the instruments comprising said substation and arranged in the circuit network of said substation to respond directly and only to incoming signaling current.



1,903,973. BRAKE FOR USE ON VEHICLES. EDWARD BISHOP BOUGHTON, London, England. Filed May 4, 1931, Serial No. 535,025, and in Great Britain May 17, 1930. 7 Claims. (Cl. 188—152.)

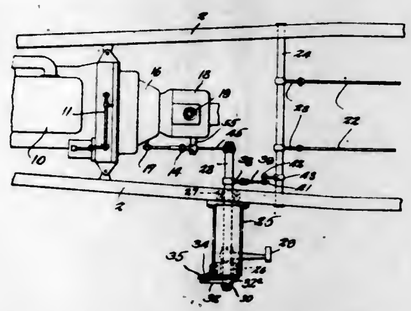
1. A fluid pressure braking system for vehicles of the type including a manually operable master piston, a brake operating piston and a fluid pressure line connecting the pistons, said system including a pressure limiting piston open to the manual pressure in the system and movable

to limit that pressure, means cooperating with the pressure limiting piston to predetermine the manually operable pressure in the system under which the pressure limiting piston will operate, and pressure generating means controlled by and proportional to the movement of the vehicle to provide for a pressure in the system in excess of the manually permissible pressure.

1,903,974. FOUNTAIN STRUCTURE. HENRY A. BRINK, Spring Lake, Mich. Filed July 2, 1931. Serial No. 548,320. 4 Claims. (Cl. 299—4.)

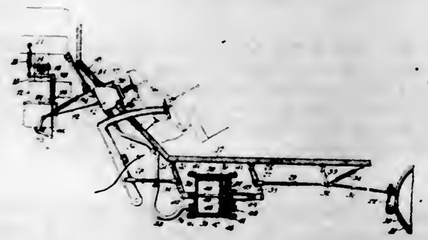
1. In a fountain structure of the character described: a lower member having a chamber in its upper side; an upper member on the lower member, adapted to contain water and comprising an upwardly extending rim portion and a translucent bottom portion above the chamber; a water projecting pipe extending upwardly through the chamber and through said bottom portion in tightly fitting relation therewith; a sash frame on the lower member having openings angularly disposed about the pipe and downwardly extending partitions between the openings forming compartments in the chamber; an electric lamp in each compartment.

1,903,975. SUBMARINE SIGNALING CABLE. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 13, 1929. Serial No. 392,351. 17 Claims. (Cl. 178—45.)



1. A signaling cable comprising an insulated central conductor, a concentric return conductor surrounding said central conductor, means surrounding said return conductor for causing the return current to flow chiefly through the concentric return conductor, said means comprising an envelope of magnetic material having a low magnetic reluctance in a closed path circumferential to said cable.

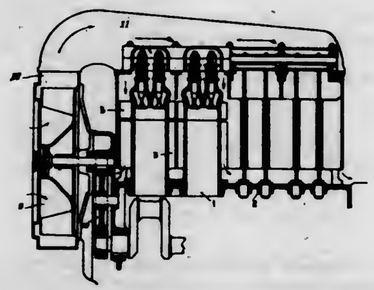
1,903,976. PROCESS OF MAKING CONCRETE. ROBERT M. BURNS, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1929. Serial No. 347,737. 2 Claims. (Cl. 247—1.)



1. The method of preventing the corrosion of lead alloy cable sheath enclosed in concrete ducts which consists in producing a saturated silicate condition adjacent the lead sheath which forms or causes to be formed a coating of an insoluble film on the lead sheath.

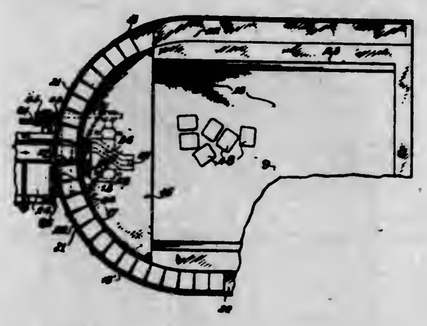
1,903,977. DELIVERY TRUCK CONTROL. JAY H. BUTLER, Newark, Ohio. Filed May 25, 1931. Serial No. 539,909. 3 Claims. (Cl. 192—4.)

1. In a motor propelled vehicle having a brake, a clutch, and a transmission, mechanism for setting the brake, throwing out the clutch, and putting the transmission into neutral, said mechanism comprising a shaft, means for supporting the shaft for rotation, means for connecting the shaft with the clutch, means for connecting the shaft with the transmission, means for connecting the shaft with the brake, a pair of operating members, the pair including a pedal and a hand lever, the shaft and an operating member of the pair constituting coacting parts, one of said operating members being secured to the shaft, and means for mounting the other of said operating members for movement with respect to the shaft, a lost motion connection between said other of the operating members and one of said coacting parts, whereby the operating member which is secured to the shaft can be actuated independently of the operating member which is movable with respect to the shaft, the lost motion connection comprising relatively movable parts, the operating member which is movable with respect to the shaft being so movable in order to bring the said parts of the lost motion connection together, thereby restraining the operating member which is fixed to the shaft, and latch mechanism cooperating with the hand lever, to hold the hand lever releasably against movement.



1,903,978. AUTOMOTIVE BRAKE SYSTEM. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Aug. 8, 1928. Serial No. 298,229. 17 Claims. (Cl. 192—3.)

1. In an automotive power plant, the combination of an internal combustion engine having an intake manifold and a throttle valve controlling the supply of fuel to the manifold, the engine when operating maintaining in said manifold a sub-atmospheric pressure which varies under varying conditions of operation; a brake cylinder; a piston

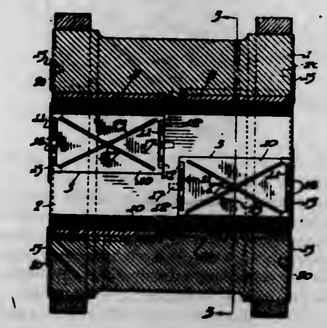


in said cylinder constantly subject on one side to atmospheric pressure; a connection from said cylinder at the other side of said piston; and a valve mechanism connected to said connection and in communication with said manifold, and having an atmospheric port, said valve mechanism including two coacting movable valve members, a loaded motor means responsive to various depressions of pressure in the brake cylinder to move one of said members corresponding distances, and manual means for moving the other of said valve members, said members according to their relative positions serving alternately to connect the brake cylinder connection to the manifold or to the atmospheric port or to disconnect it from both.

1,903,979. AIR-COOLED INTERNAL COMBUSTION ENGINE. GIULIO CESARE CAPPA, Turin, Italy, assignor of one-half to Società Anonima Automobili Ansaldo, Turin, Italy. Filed Aug. 22, 1930, Serial No. 477,102, and in Italy Aug. 29, 1929. 2 Claims. (Cl. 123—171.)

1. In an air-cooled internal combustion engine with overhead valves, a fan, a jacket surrounding the engine cylinders, a horizontal supporting plane at the upper end of said jacket, a hood mounted on said plane and closing the upper part of said jacket, said hood communicating with the outlet of said fan and a support for the valve operating means mounted on said supporting plane within said jacket and hood.

1,903,980. CAPPING TABLE. AUSTIN S. CHANDLER, Fitchburg, Mass., assignor to The Brown Bag Filling Machine Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Mar. 24, 1932. Serial No. 601,032. 5 Claims. (Cl. 198—31.)

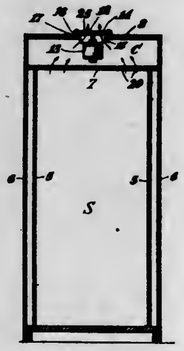


1. A work table of the character described comprising a work supporting surface, fixed concentric outer walls thereon of a common radius with spaced apart proximal ends and an inner replaceable concentric guide element spaced inwardly from the walls to form oppositely extending curved alleys, a work shifter at the proximal ends of the alleys, and terminal rectilinear alley portions leading from the outer parts of the curved alleys and including laterally adjustable bars as inner boundaries, forming a junction with the periphery of said inner guide element.

1,903,981. MOTION PICTURE FILM. JOE W. COFFMAN, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1928. Serial No. 308,166. 1 Claim. (Cl. 95—9.)

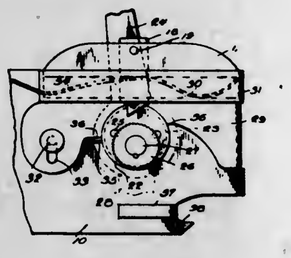
A band of sensitized film having thereon at intervals throughout its length latent images of sensitometric strips, and having a longitudinal series of exactly spaced perforations, each sensitometric strip image varying in exposure longitudinally of the band in an accurate dimensional relation to the perforations.

1,903,982. SHAFT COUPLING. WILLIAM CRAIK, Paauilo, Territory of Hawaii. Filed Jan. 25, 1932. Serial No. 588,790. 3 Claims. (Cl. 64—91.)



1. A coupling box for shafts having square ends, said box having a square opening provided with arcuate recesses in the walls defining said opening, and wear blocks having the form of cylindrical segments fitting said recesses.

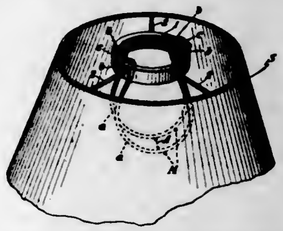
1,903,983. VENTILATING SYSTEM. GEORGE DE BOTHEZAT, New York, N. Y. Filed Oct. 9, 1930. Serial No. 487,892. 3 Claims. (Cl. 98—31.)



1. A telephone booth comprising inner and outer walls providing a space between them, an inner compartment enclosed by said inner walls, an upper enclosed chamber having an outer discharge opening provided with power driven means for exhausting air from said chamber so as

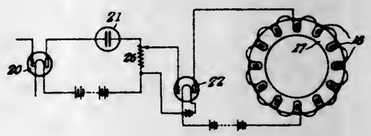
to lower the pressure therein and an inner opening communicating with said inner compartment and acting to draw air therefrom above the breathing line so as to lower the pressure in said compartment, and means providing a supply of air to the lower portion of said compartment

below the breathing line, said openings in said chamber being arranged in staggered relation so as to be out of register with each other and sized to pass the air at velocities higher than the velocities through said compartment and chamber.



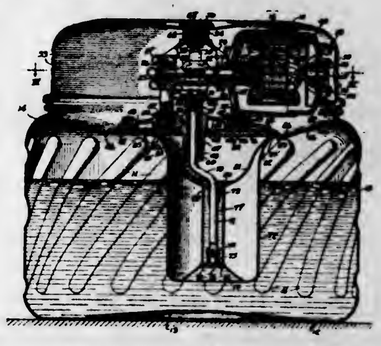
1,903,984. CAN OPENER. OCTAVE F. DEMERS, Bristol, Conn. Filed Jan. 29, 1931. Serial No. 512,141. 6 Claims. (Cl. 30—3.)

1. A can opener comprising a sheet metal arm lying in a vertical plane and having provision to be secured to a stationary support at one end; an offset vertical flange at the upper edge of the arm at the other end; a cutter secured to the flange and projecting downwardly at one side; an eccentrically mounted feeding wheel adjacent to the lower end of the cutter arranged to engage the lower edge of a can bead and force the can upwardly to be punctured by the cutter; means for imparting eccentric movement to the wheel; a yieldable and vertically slidable spring-urged abutment between the cutter and the arm against which the upper edge of the can bead is adapted to be pressed by said wheel at the cutting point; and a crank handle for rotating the wheel after the can top is punctured.



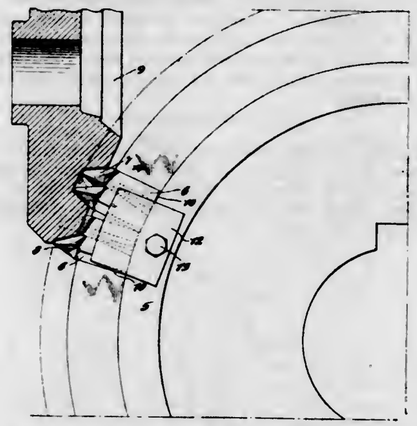
1,903,985. LAMP SHADE SUPPORTING DEVICE. WILLIAM N. DE SHERBININ, Hastings upon Hudson, N. Y. Filed Mar. 9, 1929, Serial No. 345,711. Renewed Aug. 20, 1932. 5 Claims. (Cl. 240—138.)

1. The combination with a shade, and an apertured supporting member secured thereto substantially centrally thereof, of a device adapting said shade for support by a lamp bulb, said device comprising plural-member sections extending through said supporting member and biased



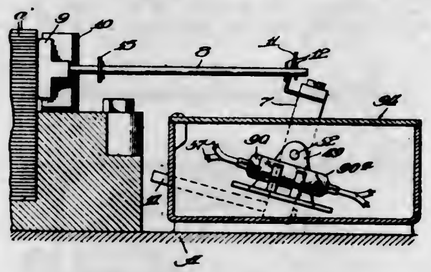
from each other toward and into engagement with said supporting member, the members of the respective sections being joined together.

1,903,986. TELEVISION RECEPTION. HAROLD P. DONLE, Meriden, Conn., assignor to Radio Inventions, Inc., a Corporation of New York. Filed Sept. 17, 1928. Serial No. 306,890. 4 Claims. (Cl. 178—69.5.)



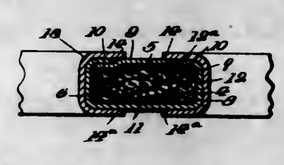
1. In television receiving apparatus, a system for synchronizing the speed of a rotating armature with received signals, including a circuit having an element that passes substantially no current for less than a minimum applied voltage, means for impressing varying currents upon said circuit, means for periodically reducing the voltage applied to said element below said minimum, a resistor in said circuit and means for applying a drop of potential developed across said resistor to the input of a vacuum tube relay whereby for minimum current in said circuit maximum current is delivered by said tube, a magnetic system acting upon said armature, and means for applying said tube current to said system.

1,903,987. WASHING MACHINE. AXEL OLOF ENGBERG and ERIK AHNSTRÖM, Stockholm, Sweden, assignors to Inventia Patent-Verwertungs-Gesellschaft, Schaffhausen, Switzerland, a Corporation of Switzerland. Filed Oct. 13, 1928, Serial No. 312,314, and in Sweden Oct. 15, 1927. 12 Claims. (Cl. 68—24.)



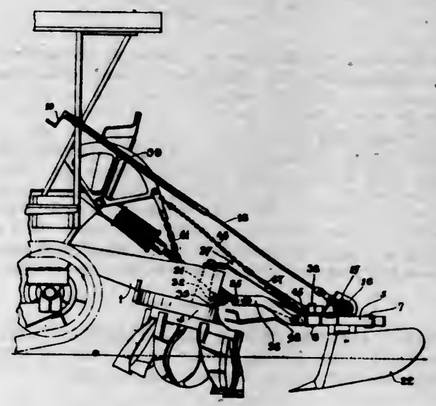
1. In a washing machine, a container, a cover for said container, said cover comprising a cap and a cover plate, crank mechanism depending from said cover, an agitator member mounted on said mechanism, and driving means positioned between said cap and said plate for producing relative planetary movement between said agitator member and said container.

1,903,988. CUTTER FOR CUTTING SPIRAL BEVEL GEARS. ERNEST L. FICKETT, Fitchburg, Mass., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1929. Serial No. 410,359. 4 Claims. (Cl. 29—105.)



1. A rotatable toothed cutter for cutting spiral bevel gears having cutting teeth both lateral cutting edges of each of which lie in substantially the same plane at an angle to the axis of the cutter and so arranged that the teeth and spaces of a spiral bevel gear cut thereby will be of uniform cross-section throughout their length and will taper substantially equally, substantially as described.

1,903,989. CONTROL MECHANISM FOR CLINCHING MACHINES. HENRY A. FINK, New York, N. Y., and JOHN E. SCHMIDT, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed May 24, 1930. Serial No. 455,482. 2 Claims. (Cl. 192—125.)



1. A control mechanism for a can machine comprising a clutch throwing mechanism including a magnetic device, a tiltable bracket, an electric switch mounted thereon and adapted to close the circuit for the electric magnetic device when said bracket is tilted in one direction, means attached to the bracket for moving the same to a position for closing the switch, a stack holder, a control rod connected to said bracket, a head carried by said rod and adapted to bear against the can ends in the stack holder, which can ends restrain the movement of the rod and the tilting of the bracket whereby when said can ends give out, the rod will move and permit the tilting of the bracket to stop the machine.

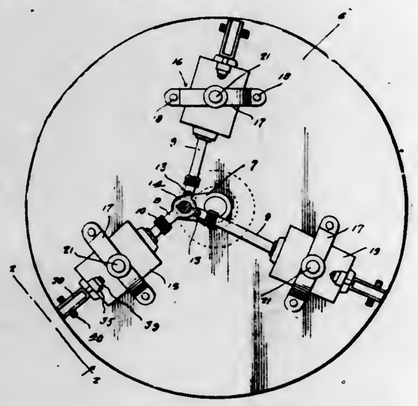
1,903,990. GASKET. MARTIN D. FITZGERALD, Torrington, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 28, 1932. Serial No. 640,095. 3 Claims. (Cl. 288—1.)

3. A gasket for internal combustion engines comprising a body portion having a plurality of cylinder openings therein and including a sheet of refractory material disposed between top and bottom facing members, a reinforcing unit completely enclosing the body portion of the gasket in the narrow region between the cylinder openings, and a securing ferrule extending around the edge of each of said openings and having the edge portions thereof turned upon the top and bottom faces of the gasket whereby to secure the body portion and reinforcing unit together.

1,903,991. RIDGING IMPLEMENT ON TILLING MACHINES. CHARLES HENRY FOWLER, Leeds, England. Filed Mar. 25, 1930, Serial No. 438,794, and in Great Britain Jan. 28, 1930. Renewed Aug. 11, 1932. 6 Claims. (Cl. 97—43.)

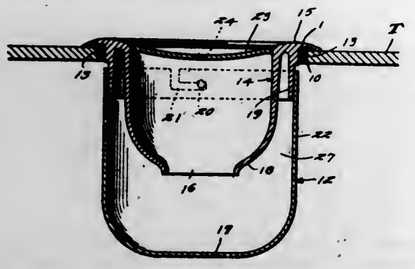
1. In a tilling machine comprising ridging implements adapted to be drawn through the loosened soil, the combination with the tilling machine frame, of a transverse frame attached to the tilling machine frame so as to be immovable laterally in respect thereof, ways in said frame, a carriage movable along said ways transversely of the line of tillage, ridgers attached to said carriage, and means extended to proximity of the driver's seat for traversing said carriage.

1,903,992. SUBMARINE CABLE LOADING COIL. JOHN J. GILBERT, Douglaston, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1930, Serial No. 477,243, and in Great Britain Oct. 25, 1929. 6 Claims. (Cl. 178—46.)



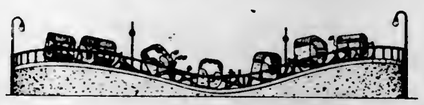
1. A deep sea signaling cable comprising an armor and a plurality of loading coils within said armor, said coils having elongated cores of magnetic material for lump

CARNEGIE LIBRARY OF ATLANTA



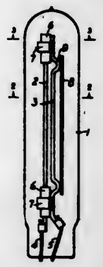
loading said cable and being arranged in at least two groups of which one is located adjacent the ends of the cable and the other is located more remote from the ends of the cable, the coils contained in the first mentioned group being different from those contained in the last mentioned group in that they have longer cores, lower hysteresis losses and lower ohmic or pure resistance losses.

1,903,993. CLUTCH. WILLIAM F. GOEHRING, Baltimore, Md. Filed Jan. 14, 1931. Serial No. 508,763. 4 Claims. (Cl. 192—60.)



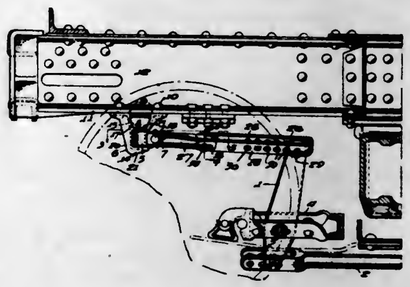
1. A clutch of the character described comprising a driven shaft crank, a fly wheel for the usual drive shaft, a plurality of cylinders swingably mounted on one side of the fly wheel, pistons operative in the cylinders, each of said pistons being divided into a pair of plates, one plate of each piston being connected to the aforementioned driven shaft crank, a shaft projecting from the remaining plate of each piston to a point exteriorly of the corresponding cylinder, a laterally disposed lever operatively connected to the outer end of each piston plate shaft extending in a direction away from the fly wheel, said piston plates being provided with registrable openings therein.

1,903,994. ASH TRAYS FOR CARD TABLES. JACOB S. GOLDMAN, Port Huron, Mich. Filed June 16, 1932. Serial No. 617,666. 2 Claims. (Cl. 45—75.)



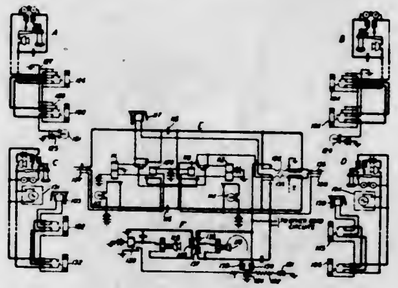
1. In combination, a table top and an ash receiver mounted within the top, said ash receiver comprising a rim fixedly secured to the table top within the marginal edges of the table, a flanged cup-shaped member having an open top and bottom, the flange of the member substantially enclosing the rim, a receptacle, means for suspending the receptacle from the cup-shaped member in a position with the walls of the receptacle spaced outwardly from the walls of the cup-shaped member, and a balanced closure pivotally carried by the cup-shaped member at the top thereof.

1,903,995. AMUSEMENT DEVICE. CLARENCE RAY GRAHAM, North Tonawanda, N. Y. Filed Sept. 8, 1928. Serial No. 304,719. 4 Claims. (Cl. 272—44.)



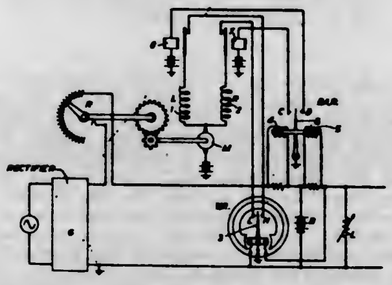
1. In an amusement device, a structure moving in an undulated path, a curved track supported thereon and lying substantially in the same direction as the path of travel of the structure and having its ends upwardly extending, and a passenger car mounted upon the track for free movement apart from the undulating movements of the structure.

1,903,996. PROTECTIVE DEVICE. FRANK GRAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1926. Serial No. 105,398. 6 Claims. (Cl. 250—275.)



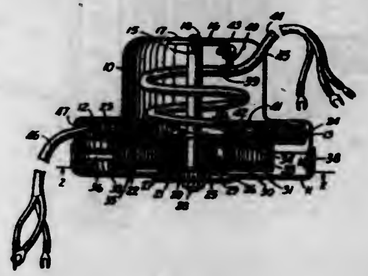
1. A protective device comprising an enclosing vessel, a pair of electrodes at least one of which has loops near the ends thereof, said electrodes being separated by a small unobstructed gap and supported in said vessel, a filling of inert gas therein, and an auxiliary member in direct contact with the loops on one of said electrodes, said member containing an oxide of an alkali metal.

1,903,997. BRAKE RIGGING FOR RAILWAY CARS. CYRUS HANKINS, Washington, D. C. Filed Mar. 25, 1931. Serial No. 525,239. 31 Claims. (Cl. 188—206.)



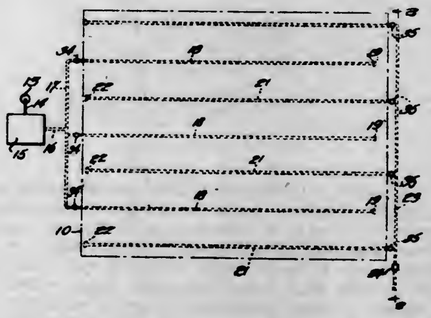
1. In a railway car brake rigging, the combination with the underframe of a car and a truck swiveled thereto, of a dead lever carried by the truck, and means connecting the upper end of the dead lever to the underframe adapted to permit the lever to move angularly with respect to the longitudinal axis of the underframe in substantially all directions to compensate for relative movement between the underframe and truck, said means involving a member having spaced portions rotatably mounted on the underframe, and rigid means having a portion adjacent one end pivotally connected to the lever and a portion adjacent the other end interposed between and pivotally connected to the spaced portions of said first-named member.

1,903,998. TELEPHONE EXCHANGE SYSTEM. ROBERT W. HARPER, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1932. Serial No. 608,356. 7 Claims. (Cl. 179—52.)



1. In a busy test system, a telephone switchboard, subscribers' common battery lines terminating in multiple jacks at the switchboard, subscribers' local battery lines also terminating in multiple jacks at the same switchboard, universal cord circuits for interconnecting said lines, an operator's telephone circuit associated with said cord circuits, means responsive to the connection of one of said cord circuits to a common battery line to connect the sleeves of the multiple jacks of said line to ground, a source of battery potential, means responsive to the connection of said cord circuit to a local battery line to contact only said potential source to the sleeves of the multiple jacks of that line, a conductor, means for maintaining said conductor at a potential intermediate that of battery and ground, and means for connecting the operator's telephone circuit between said conductor and the tip conductor of a second of said cord circuits.

1,903,999. REGULATING SYSTEM. WILLIAM H. T. HOLDEN, Brooklyn, and ROBERT P. JUTSON, Yonkers, N. Y.; said Holden assignor to American Telephone and Telegraph Company, a Corporation of New York, and said Jutson assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1930. Serial No. 461,415. 3 Claims. (Cl. 171—314.)

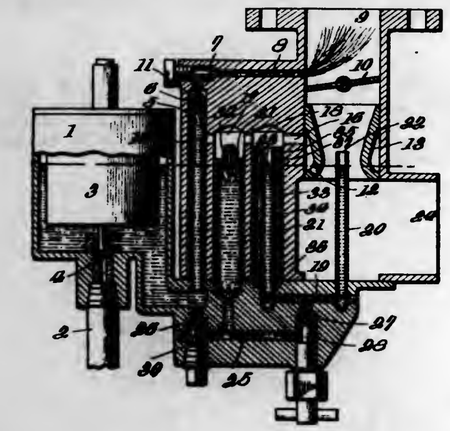


1. In a battery charging system, in combination, a battery, a source of current for charging the battery and associated therewith, a variable resistance in series with said source, a load circuit connected across the terminals of said battery, a reversible motor for varying said resistance means connected with said battery controlled solely by changes in voltage thereof, and a differential ammeter relay having one winding in series with the charging circuit and the other winding in series with the load, said voltage responsive means and differential relay acting jointly to control the motor to prevent more than a predetermined current unbalance between the two windings of said differential relay.

1,904,000. REELING DEVICE. FREDERICK A. HOYT, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 18, 1929. Serial No. 364,146. 15 Claims. (Cl. 242—107.)

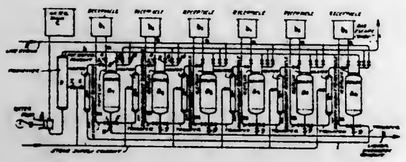
13. A reeling device comprising a stationary shaft, a sheave rotatably mounted on said shaft, stop members attached to said shaft and sheave, and means cooperating with said stop members and rotatable by one of said stop members for limiting the rotation of said sheave.

1,904,001. METHOD AND APPARATUS FOR CONTROLLING THE TEMPERATURE OF THE SOIL. JOSEPH G. KIMMEL, Sarasota, Fla. Filed Apr. 11, 1931. Serial No. 529,468. 13 Claims. (Cl. 61—35.)



1. The method of elevating and controlling the temperature of the soil to render it favorable to plant growth which comprises continuously supplying a liquid heating medium to the soil beneath the surface thereof, and continuously withdrawing the medium from the soil beneath the surface thereof at a point horizontally spaced from its point of introduction into the soil.

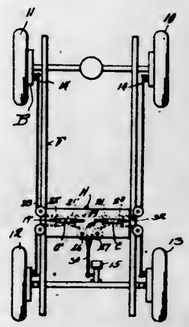
1,904,002. CARBURETOR. CHARLES H. KIRBY, Flint, Mich., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Illinois. Filed Aug. 6, 1928. Serial No. 297,696. 9 Claims. (Cl. 261—41.)



1. In a carburetor, a main mixture passageway, a throttle valve for controlling the passage of the mixture through said passageway, a fuel nozzle extending into the passage-

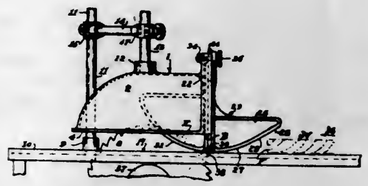
way, primary and a plurality of reserve supply means for feeding fuel to the nozzle during acceleration, and means communicating with the mixture passageway for

placing sub-atmospheric pressure on the primary and reserve supplies to modify the feeds from the same as the throttle valve is moved.



1,904,003. PROCESS AND PLANT FOR EXTRACTING GLUE FROM GLUE-CONTAINING MATERIAL. JULIUS KOHL, Berlin, Germany. Filed Mar. 17, 1931, Serial No. 523,350, and in Germany Apr. 8, 1930. 7 Claims. (Cl. 87—7.)

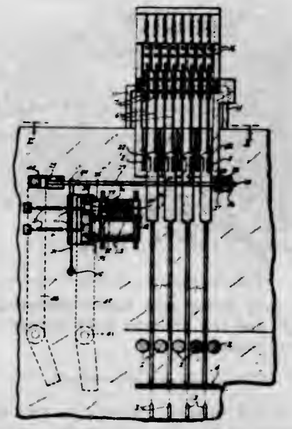
1. Process of extracting glue from glue-containing material which comprises preparing charges of the material of successive degrees of extraction, subjecting all charges to steam treatment, admitting an individual supply of extracting liquor to each charge, removing and collecting the liquor from each charge separately, again subjecting the charges to steam treatment, thereafter separately returning the collected liquors to the charges, transferring the liquor from each charge to a charge of a lesser degree of extraction, and continuing the sequence whereby a continual countercurrent flow is established of the liquors with the respect to the charges so that each batch of liquor is successively exposed to charges of lesser degrees of extraction and the charges are subjected to steam treatments in periods between the successive exposures.



7. An extraction battery comprising a plurality of units each including an extraction vessel, a liquor receptacle, a valved conduit for joining said vessel and receptacle, and a liquor heater, and a valve conduit joining said heater to the extraction vessel; a steam main having valved connections to each of said vessels, means whereby all of said heaters may be warmed, an exhaust main having valved connections to each of said vessels, independent valved transfer conduits between each two said vessels whereby they may be connected in series, and means including a common main with valve connections for forcing fresh liquor into any of said vessels so that the liquor in each unit may be forwarded through said transfer conduits into another unit, and a common discharge main having valved connections to each of said units.

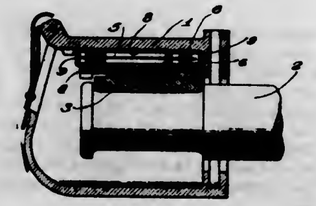
1,904,004. BRAKE EQUALIZER. ORVAL M. LEWIS, Shelton, Wash. Filed Nov. 12, 1931. Serial No. 574,631. 2 Claims. (Cl. 188—204.)

1. A brake equalising means comprising cables connected one to each selected pair of the brakes of a vehicle, a carriage for each cable, a housing within which the carriages are slidable, and a carriage engaging cable connected to the brake pedal of the vehicle, each carriage comprising a pair of shafts, a pulley on each shaft, said housing having slots in opposite sides thereof to slidably receive the ends of said shafts, and connecting bars positioned one on each side of the housing and secured to the shafts for holding the shafts in spaced relation to each other.



1,904,005. SAW GUARD. EDWARD MASSET, New York, N. Y. Filed Feb. 3, 1932. Serial No. 590,547. 22 Claims. (Cl. 143—159.)

1. A saw guard for a work table comprising in combination a housing having a main section, said section having an open bottom to receive the top of a saw means for supporting said housing to provide a space between said bottom and the table, a relatively movable section having rear spaced walls within said housing and extending therebelow for guarding the saw in said space, cooperating vertically disposed bearings integral with said sections, and an inclined surface extending forwardly from said second section in the path of a work piece, whereby the latter on being fed to the saw in said space may move said second section vertically.



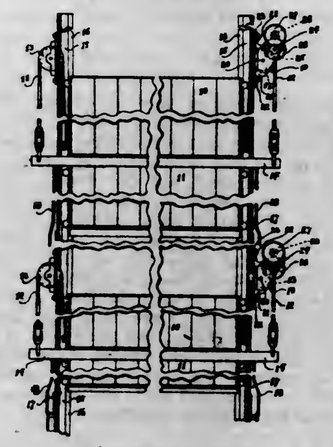
22. In a saw guard, a housing comprising a section having substantially vertically disposed guiding surfaces extending completely from the top to the bottom thereof, and a movable section including a vertically disposed elongated standard having guiding surfaces slidably engaging the first mentioned surfaces.

1,904,006. PATTERN CONTROL MECHANISM. GARDINER C. MEANS, Poughkeepsie, N. Y. Filed Mar. 22, 1929. Serial No. 349,034. 21 Claims. (Cl. 139—55.)

1. In a pattern control mechanism for looms and the like, the combination of a pattern element presenting a pattern defined by light and light and dark portions, means for intermittently advancing said element, a photo-electric cell, and means movable transversely of the pattern element for effectively transmitting to said cell increments of light which vary in cell affecting value according to the light value affecting characteristics of said light and dark portions of the pattern.

1,904,007. JOURNAL CUSHION. RICHARD J. O'BRIEN, Depew, N. Y., assignor to Waugh Equipment Co., Depew, N. Y., a Corporation of Maine. Filed July 25, 1929. Serial No. 380,885. 3 Claims. (Cl. 308—54.)

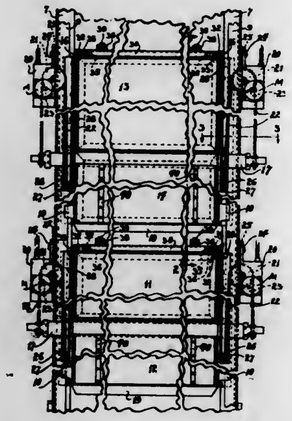
1. The combination of a journal box, a filler block, a journal bearing supporting said block, and a shock absorbing device between the filler block and the top of the box comprising a retainer having depending flanges, and a resilient cushion comprising a plate having rubber annuli on each face thereof in said retainer.



1,904,008. ELECTRICAL INTERLOCK. ROBERT S. PEELLE, Hollis, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 27, 1928, Serial No. 273,351. Renewed Oct. 28, 1932. 10 Claims. (Cl. 187—31.)

1. A device of the character described embodying therein the combination with a vertically slidable door, of a switch mechanism including co-operating movable and fixed contact members, and means acting to normally disengage said contact members, an oscillatory latch member associated with said switch mechanism, and a keeper bar im-

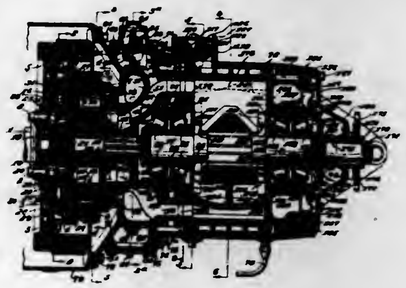
movably secured to and movable with said slidable door adapted to actuate said movable contact member and to be operatively engaged by said latch member.



1,904,009. OPERATOR FOR COUNTERBALANCED ELEVATOR DOORS. ROBERT S. PEELLE, Hollis, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 5, 1930. Serial No. 441,918. 3 Claims. (Cl. 187—54.)

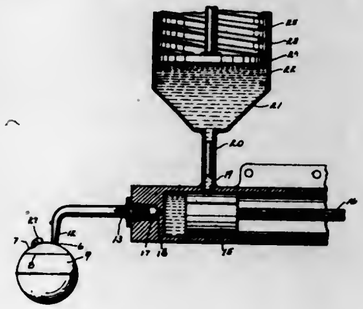
1. An operator for counterbalanced elevator doors embodying therein the combination with a guide rail structure within an elevator shaft, a series of elevator doors each having sections vertically and oppositely movable on said structure, connections between said sections on the opposite sides thereof, and sheaves above which said connections pass, of an electric motor secured to said guide rail structure within the shaft, a speed reducing gear train, the first gear of which is connected with the shaft to said motor, and the last gear of which is connected directly with a sheave, a main electric power line

extending adjacent all of said doors, a branch line extending therefrom adjacent each door and connected with the motor adjacent such door, a normally open switch in each of said branch lines adapted to be operated only when a car is positioned adjacent said switch, pole changing switches controlling the circuits to said main power line, electro-magnetic control mechanisms for said pole changing switches, and manually operative switch mechanisms controlling the circuits to the windings of the magnets of said control mechanisms whereby said control mechanisms may be selectively actuated from a remote point.



1,904,010. PASS-TYPE ELEVATOR DOOR. ROBERT S. PEELLE, Hollis, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 3, 1931. Serial No. 578,791. 7 Claims. (Cl. 20—19.)

1. A pass-type elevator door embodying therein two sections oppositely movable in parallel planes, guide rail structures upon which said sections have movement, whereby one of said sections is positioned closely adjacent the wall of an elevator shaft, and the other is spaced away from said wall to permit sections of doors at adjacent floors to pass each other when opening a door, sheaves carried by said guide rail structures at opposite sides of the door opening and below the top of the upper door section when the door is closed, legs projected downwardly from the lower edge of the upper door section, hanger fittings adjacent the top of the lower door section, and flexible connections between the lower end of each leg and one of said fittings, and passing about said sheaves, whereby all parts of the door structure, including said sheaves but excluding said guide rail structure, are contained within the height of said door.



1,904,011. POWER TRANSMISSION. ALDEN G. RAYBURN, Sausalito, Calif., assignor, by mesne assignments, to Automotive Engineering Corporation, a Corporation of Delaware. Filed Apr. 11, 1928. Serial No. 269,135. 17 Claims. (Cl. 60—53.)

1. A hydraulic torque multiplying transmission comprising a driving member; a driven member; a set of coacting rotary pumping elements actuated by said driving member and by said driven member respectively; a rotary hydraulic motor substantially aligned with said pump and actuated by fluid delivered thereto by the difference in rotation of said driving and said driven members, said motor being designed to drive said driven member; and fluid distributing means provided with high and low pressure fluid passages interposed between said pump ele-

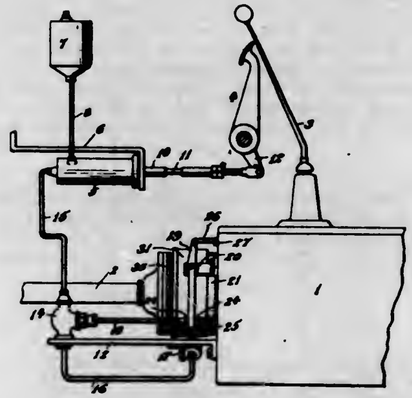
ments and said motor said means including stationary annular high and low pressure fluid storage spaces intersected by said passages.

1,904,012. GOLF BALL. WILLIS E. REICHARD, Elyria, Ohio, assignor to The Worthington Ball Company, Elyria, Ohio, a Corporation of Ohio. Filed Nov. 7, 1929. Serial No. 405,508. 20 Claims. (Cl. 154—18.)

10. A center or core for golf balls comprising a hollow spherical shell, a pair of spaced perforations in the wall of the shell and a predetermined area of the exterior surface of the shell and containing the two perforations being distinctively indicated, a filler of fluid material entirely filling the shell and the perforations, and a sealing cap of substantially the size and shape of said area and of the form of a section of a hollow sphere and cemented to the exterior surface of the sphere and sealing the said perforations.

20. The method of producing a core for golf balls which includes producing a pair of hemispherical shells, having flanges at their annular edges, joining the shells along the flanges, introducing a fluid material into the hollow sphere thus formed through a perforation in the wall thereof, and sealing the perforations with a cap cemented to the external surface of the sphere and overlapping the perforation.

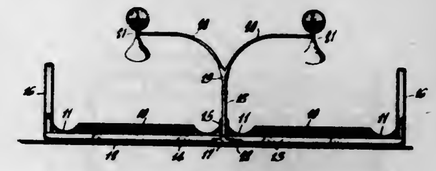
1,904,013. METHOD OF PRODUCTION OF ETHANOL AMINES. ERNEST W. REID, Pittsburgh, and DONALD C. LEWIS, Darmont, Pa., assignors to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed Aug. 18, 1927. Serial No. 213,890. 3 Claims. (Cl. 260—127.)



1. In the process of making ethanolamines involving the operations of reacting ethylene oxide with an excess of aqueous ammonia while cooling and agitating the mixture, the improvements which consist in gradually adding the ethylene oxide to the aqueous ammonia by diffusing the former into the latter at such a rate that the concentration of uncombined ethylene oxide in the resulting reaction mixture is at all times low with respect to the concentration of uncombined ammonia whereby to minimise the formation of by-products in said reaction mixture, and continuously abstracting heat from said reaction mixture whereby to maintain the latter at a temperature below 100° C.

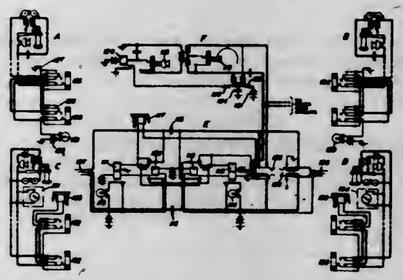
1,904,014. FOUNTAIN PEN CAP AND INK GUARD. SOLOMON M. SAGER, Glencoe, Ill. Filed May 4, 1931. Serial No. 534,791. 1 Claim. (Cl. 120—42.)

A fountain pen comprising a barrel, a tubular member removably secured on one end of said barrel, forming a continuation thereof, a partition member in said tubular member, a pin secured on said partition, a closure disk slidable on said pin, spring means between said partition and said disk urging said disk to normally close an end of said tubular member, and a fountain pen cap having an end threadedly entered in the end of said tubular member forcing said disk inwardly against said spring.



1,904,015. SAFETY DEVICE. BENJAMIN F. SINGER and JOSEPH J. EHRMANN, Lancaster, Pa. Filed Aug. 17, 1931. Serial No. 557,620. 5 Claims. (Cl. 192—4.)

4. In apparatus for the purpose set forth, the combination of a fluid pressure means for permitting or preventing reverse travel, a valve located in said means having an extended stem, a rocking arm having one end engaged with said stem and its opposite end disposed in the path of a reverse gear shifting rod, and yieldable means acting on the stem to hold the valve normally closed.

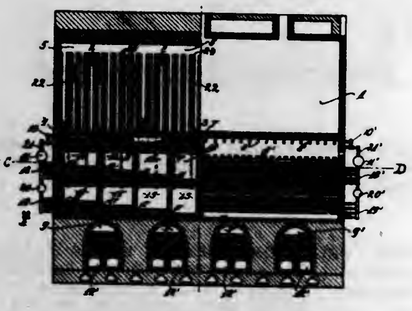


1,904,016. LAMP MOUNTING FOR BOWLING ALLEYS. AKSEL SOLUM, Lancaster, N. Y. Filed Dec. 28, 1931. Serial No. 583,478. 2 Claims. (Cl. 240—3.)

1. In combination with the sub-flooring and division wall of adjoining bowling alleys, of a tubular base member secured to the sub-flooring beneath said division wall, a standard rising from said base member above the division wall, and a lamp-bearing frame mounted on the upper end of said standard for movement about the axis thereof to

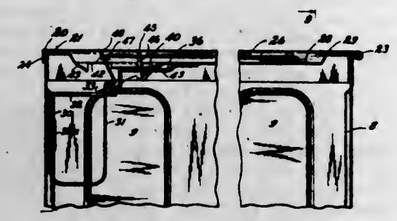
assume a position at right angles to the division wall in overhanging relation to the alleys or a position in line with said division wall.

1,904,017. TELEPHONE SYSTEM. HORACE W. ULRICH, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1932. Serial No. 609,412. 20 Claims. (Cl. 179—52.)



1. In a telephone system comprising lines of two different characters, a universal cord circuit for interconnecting any two of said lines, answering and calling connecting terminals for said cord circuit, tip and ring conductors connecting said terminals, inductive means included in each of said conductors, a supervisory signal for each end of the cord, an individual direct current responsive supervisory relay for controlling each signal normally disconnected from said conductors, an alternating current responsive signal controlling winding normally connected between the tip conductor of one end of the cord and the ring conductor of the other end, and means responsive to the connection of either terminal to a line of one character to connect its associated relay to that end of the cord circuit and to disconnect and transfer the alternating current responsive winding from that end to the opposite end and responsive to the connection of both terminals to lines of said one character to entirely disconnect said winding.

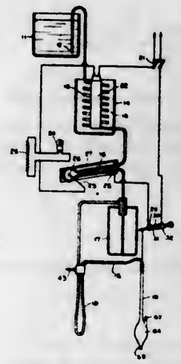
1,904,018. COKE OVEN. PAUL ETIENNE VERPEAUX, Brussels, Belgium, assignor to Union Chimique Belge, Societe Anonyme, Brussels, Belgium. Filed May 3, 1929, Serial No. 360,102, and in Belgium Apr. 3, 1929. 3 Claims. (Cl. 202—135.)



1. A series of alternate horizontal coking chambers and heating walls therefor arranged side by side in a row, each of said heating walls comprising vertical combustion flues separated by partition walls, gas chambers communicably connected with the flues and located under the said combustion flues and partition walls, air expansion chambers located underneath the said gas chambers, regenerators communicating with the combustion flues and alternating with the air expansion chamber, along said series, auxiliary flues positioned in the partition walls

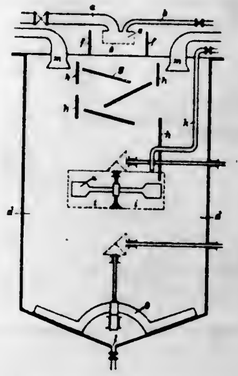
and opening into the combustion flues at different levels, said air expansion chambers being communicably connected with said auxiliary flues extending in the partition

walls, an air supply conduit, and a gas distributor communicably connected with said air supply conduit and said air expansion chambers.



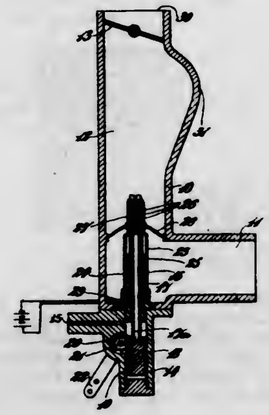
1,904,019. METAL BOTTLE CARRIER. PAUL VIGNOS, Canton, Ohio, assignor to Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 30, 1932. Serial No. 649,493. 15 Claims. (Cl. 220—72.)

1. A sheet metal container for glass bottles or the like, comprising an enclosure having side, end and bottom walls, a lid hingedly secured to the container, a lock for said lid comprising a spring latch secured to the side wall and a keeper secured to the lid, said lid being formed to provide an aperture therein above the keeper, said latch having a tongue adapted to extend through the aperture to permit release of the latch.



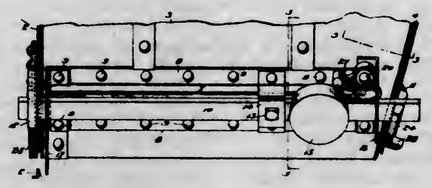
1,904,020. TEMPERATURE CONTROLLING APPARATUS. REINHOLD H. WAPPLER, Yonkers, N. Y. Filed Oct. 26, 1929. Serial No. 402,581. 6 Claims. (Cl. 128—264.)

1. In a device of the character described, a hollow applicator adapted to permit a liquid to flow therethrough, a liquid supply tank, a heating tank having an electric heating unit therein, a bimetallic thermostatic strip in the circuit of said heating unit, and a continuous, relatively fine conduit extending from the supply tank to said applicator and thence to a drain, said conduit having



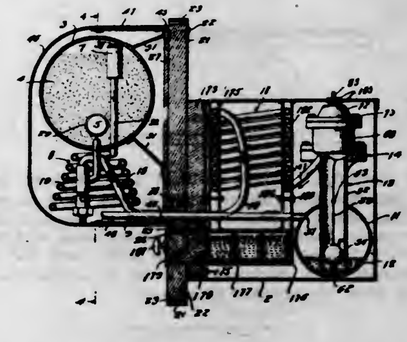
a coiled portion immersed in said heating tank and a doubled-back portion in direct contact with said thermostatic strip.

1,904,021. APPARATUS FOR PRODUCING SOAPS. HERMANN WEBER, Dusseldorf, and WILHELM PAPE, Benrath-on-the-Rhine, Germany, assignors to the Firm Henkel & Cie Gesellschaft mit beschrankter Haftung, Dusseldorf, Germany, a Corporation of Germany. Filed July 16, 1929, Serial No. 378,735, and in Germany Aug. 6, 1928. 3 Claims. (Cl. 87—16.)



1. An apparatus for continuously converting fatty acids and mixtures of fatty acids and neutral fats into soap, comprising a main container, means above said container to receive and mix the fatty acids with an amount of a solution of alkali metal carbonate necessary to effect the saponification and to deliver such mixture to the main container, means for continually feeding fatty acids or mixtures of fatty acids and neutral fats and a solution of alkali metal carbonate to the said mixing means, heating means in the upper part of the main container below said mixing means by which the unconverted portions of the fatty acids are saponified, the residual carbon dioxid is driven out and the excess of water is evaporated, means in the main container below the heating means for adding caustic alkali lye to the reaction mass, means at the upper part of said container for removing the liberated carbon dioxid and water vapor from the container and means at the lower end of the main container for drawing off the soap continually from the container.

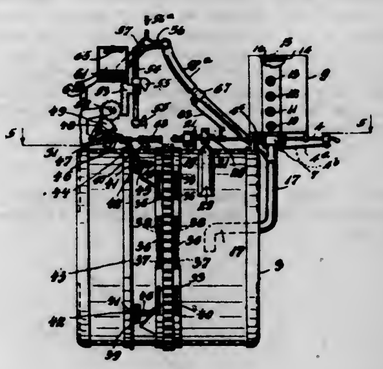
1,904,022. CARBURETOR. JAMES LEIGHTON WHITEMAN, Putney, London, England. Filed Oct. 14, 1931, Serial No. 568,840, and in Great Britain Dec. 24, 1930. 9 Claims. (Cl. 261—50.)



1. A carburetor including a fuel passage having an air inlet, a jet tube controlling the fuel admission to the passage, an air valve controlling tube surrounding the jet tube, a needle valve carried by the air valve controlling tube and cooperating with the upper end of the jet tube, means for operating the jet tube to initially cooperate with the needle valve and thereafter lift the air valve controlling tube, and an air valve controlling the admission of air from the air inlet to the fuel passage and operated in the movement of the air valve controlling tube.

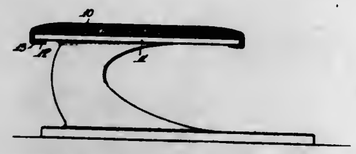
1,904,023. DOOR MECHANISM FOR RAILWAY CARS. WILLIAM E. WINE, Toledo, Ohio, and BYERS W. KADEL, Baltimore, Md. Filed Dec. 10, 1925, Serial No. 74,496. Renewed May 11, 1931. 17 Claims. (Cl. 105—308.)

1. Car door mechanism involving, in combination with a door hinged to the car body so as to swing to open position under the influence of gravity, means for securing said door in closed position, said means including a latch bar pivotally mounted between its ends upon the door and extending beyond the opposite edges of the latter, and brackets secured to the car body on opposite sides of the door for cooperating with the latch bar to maintain the door in closed position, the segments of said latch bar on opposite sides of its pivot being of unequal length and the shorter segment being heavier in proportion to its length.



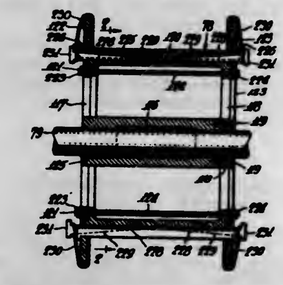
1,904,024. REFRIGERATION APPARATUS. LEONARD KAY WRIGHT, Jackson Heights, N. Y., assignor to Freenidor Syndicate, New York, N. Y. Filed Nov. 5, 1927. Serial No. 231,357. 18 Claims. (Cl. 62—118.)

1. A refrigerating apparatus for installation in an icebox comprising a panel adapted to be substituted for a door of the ice compartment, on the exterior of the panel an adsorber-generator, a condenser connected to the adsorber-generator, on the interior of the panel a refrigerant storage tank connected with the condenser, an evaporator, means to convey a fluid from the storage tank to the evaporator, and means to convey a fluid from the evaporator to the adsorber-generator.



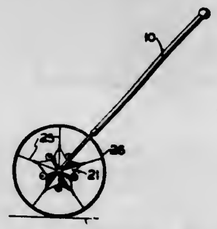
7. In a refrigerating apparatus operating on the adsorption principle, a casing in which are mounted a generator and a condenser and an opening at the base of the casing and another opening at the top for circulation of air therethrough.

1,904,025. CONSISTENCY CONTROLLING MECHANISM FOR CONCRETE MIXERS. PERRY P. YOHE, North Hollywood, Calif., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Continuation of application Serial No. 268,215, filed Apr. 7, 1928. This application filed Mar. 1, 1930. Serial No. 432,484. 15 Claims. (Cl. 83—73.)



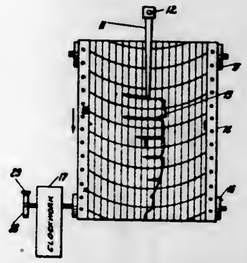
1. The method of predetermining the consistency of a mixture of cement, aggregates and water which consists of placing the said elements in a moving vessel, utilizing the resistance to movement of the vessel offered by the mixture therein to predetermine the quantity of water to bring the mixture to a known consistency, and supplying said quantity of water to the mixture as determined by the said resistance.

1,904,026. MANUFACTURE OF RESILIENT PADS. CROSBY FIELD, Brooklyn, and CLINTON L. CAMPBELL, Scarsdale, N. Y., assignors to Brillo Manufacturing Company, Inc., a Corporation of New York. Filed June 12, 1929. Serial No. 370,218. 3 Claims. (Cl. 29—148.)



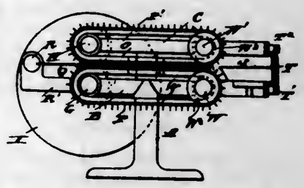
1. A method of making resilient pads of metal wool which includes subjecting a loose matted mass of wool in forming dies to a pressure in excess of one-sixth of a ton per square inch, the quantity of wool being such that the wool is flattened out into a thin sheet under the dies and expands to a thickness of about three-quarters of an inch when the pressure is relieved.

1,904,027. REEL. CROSBY FIELD, Brooklyn, N. Y., assignor to Brillo Manufacturing Company, Inc., a Corporation of New York. Original application filed June 18, 1927, Serial No. 199,692. Now Patent No. 1,886,661, dated Nov. 8, 1932, and in Canada June 11, 1928. Divided and this application filed Apr. 1, 1931. Serial No. 526,837. 4 Claims. (Cl. 242—77.)



1. A reel for winding wire, including a drum, two flanges, one of said flanges being rigid on said drum, the other flange being detachably secured to said drum so that a coil of wire formed on the drum may be removed therefrom; a set of endwise removable bars extending between said flanges and projecting radially beyond the surface of the drum to form bearing surfaces for the coil; and a set of endwise movable wedge elements for forcing said bars to and locking them in their radially projected positions.

1,904,028. TOY. JACOB KERSTEN, Kalamazoo, Mich. Filed Dec. 15, 1930. Serial No. 502,373. 3 Claims. (Cl. 272—85.)

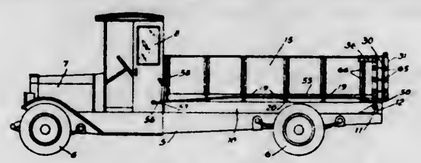


3. In a toy of the class described having an outer rim and an inner rim together with spokes therebetween, the combination of two axially spaced star-shaped members having bendable flaps extending radially at a plurality of points thereon, said flaps being attached to the said spokes, an axle member extending between said shield members and solely supported thereby, a bell unit mounted on said axle intermediate said star-shaped members and a yoke member mounted exteriorly of said star-shaped members upon the said axle.

1,904,029. METHOD AND APPARATUS FOR RECORDING ELECTRICAL QUANTITIES. OTTO A. KNOPF, Oakland, Calif. Filed Sept. 16, 1927. Serial No. 220,052. 7 Claims. (Cl. 234—5.5.)

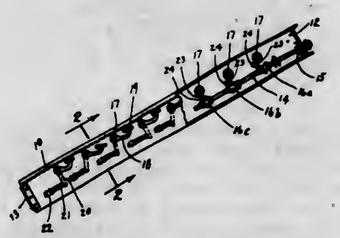
1. In a system for recording the power consumption of a polyphase network having a pair of meter elements, the method which comprises moving a chart at uniform speed, actuating a common graph drawing implement in accordance with the actuation of the meter elements, and periodically rendering one only of the elements inactive for a short period.

1,904,030. FLUTING MACHINE. CHARLES B. POST, New London, Ohio. Filed Apr. 15, 1931. Serial No. 530,222. 5 Claims. (Cl. 223—42.)



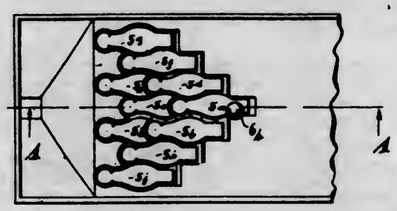
1. An automatically acting fluting machine, comprising a main frame, a pair of longitudinally spaced shafts therein, an upper frame pivoted to said main frame, at one side thereof, a pair of spaced shafts in said upper frame parallel with the shafts in said main frame, pulleys on said shafts, and upper and lower endless flexible toothed fluting members connecting the pulleys on each respective pair of shafts, the teeth on one flexible member intermeshing in turn with the teeth on the other flexible member, a needle support in line with the common pitch center of said flexible fluting members, and needles on said support, the intermeshing teeth of said endless flexible fluting members being provided with marginal guide openings in which said needles are supported throughout the fabric covered portion thereof, to prevent buckling thereof.

1,904,031. VEHICLE BODY. ELWIN H. REEVES, Toledo, Ohio. Filed Nov. 18, 1929. Serial No. 407,998. 4 Claims. (Cl. 296—50.)



1. In a device of the character disclosed, a vehicle receptacle for transporting materials having an open end; of a closure for said open end formed of sheet metal; a member surrounding the open end of said receptacle and positioned exteriorly of said receptacle; a recess in said

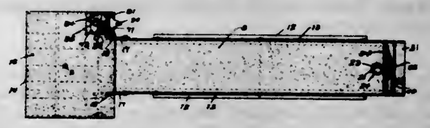
member; a sealing gasket in said recess and means including a beading formed on said closure and engageable with said gasket for forming a fluid tight joint; and means



including a plurality of eye-bolts for securing said closure in engagement with said receptacle, said eye-bolts being adapted to be retained in a position out of use.

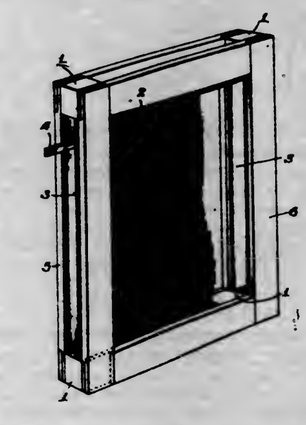
1,904,032. APPARATUS FOR SCREENING MATERIALS. BENJAMIN F. ROBERTS, Brazil, Ind. Filed Jan. 16, 1931. Serial No. 509,044. 2 Claims. (Cl. 209—347.)

1. In combination with a screen, an agitating striker therefor, a rock shaft upon which said striker is mounted, an arm carried by said shaft, a worm rotatable about an axis in a plane transverse to the axis of said rock shaft, the blade of said worm engaging said arm and moving the same to rock said shaft in one direction when said worm is rotated, and yielding means for resisting the rocking of said shaft and for returning the same to initial position to cause said striker to strike said screen when said arm reaches the end of its engagement with said worm.



1,904,033. COMBINATION BILLIARD-TABLE AND BOWLING ALLEY. ARNO SCHULZE, Los Angeles, and WILLIAM AMANN, Willowbrook, Calif. Filed Oct. 27, 1930. Serial No. 491,376. 3 Claims. (Cl. 273—41.)

1. In a game of the class described, a structure with a smooth top, tenpins hingedly mounted in the structure and so spaced and arranged relative to each other that a pin in falling may contact with an adjacent pin to knock down the latter.



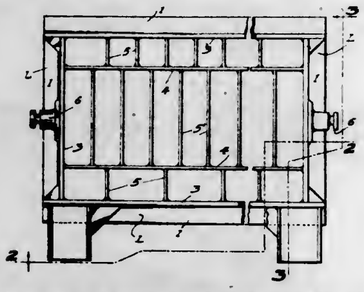
1,904,034. INDOOR GOLF GAME DEVICE. AXEL M. WALSTROM, Minneapolis, Minn. Filed Mar. 30, 1931. Serial No. 526,146. 7 Claims. (Cl. 273—32.)

1. A golf game device, comprising: a normally level runway which is mounted for tilting movement, a ball receiving pocket at the rear end of said runway, a means for returning a ball from said pocket to the top surface

of said runway, and means for tilting said runway so as to cause said ball to roll back to the front end on the surface of said runway.

1,904,035. FLY SCREEN. MARY ELIZA WEBSTER, Duncan, Okla. Filed June 11, 1932. Serial No. 616,616. 2 Claims. (Cl. 156—87.)

1. A fly screen having two frames, opposite one to the other, bolsters between them, one frame to fit the opening to be screened, and to support the outer, or screen bearing frame, at a sufficient distance from the surrounding structure, to leave fly exits between the two frames, so that said exits may be seen by every fly on the inside of the screen, while the exits are behind the frame, and out of sight, to every fly on the outside of the wire screen.

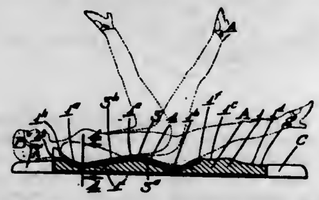


1,904,036. SEAMLESS HOSIERY AND PROCESS OF MAKING SAME. JOHN M. ALLEN, Toronto, Ontario, Canada, assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Apr. 28, 1931. Serial No. 533,557. 5 Claims. (Cl. 66—187.)

1. In a process for manufacturing seamless hosiery having a seamless toe pocket commenced on substantially half the needles and tapered progressively to the tip of the toe the step of knitting individual spaced gussets to the tapering sides forming same with opposed tapered ends, then after completion of the knitting of said gussets knitting an intermediate fabric between the adjacent tapered ends of said gussets forming the latter with op-

posite tapered ends to mate with the opposed tapered ends of said individual spaced gussets, then continuing the knitting of said intermediate fabric to complete the toe pocket increasing the number of needles progressively from the narrow toe end.

1,904,037. MOLDING FLASK. ERNEST A. ANHEUSER and GEORGE S. REMIKER, Milwaukee, Wis. Filed Apr. 30, 1931. Serial No. 534,000. 1 Claim. (Cl. 22—96.)

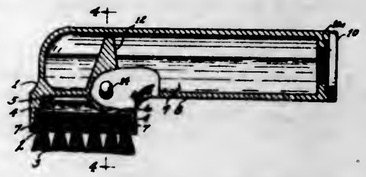


In a flask box the combination, a rectangular inclosure, unitary angle elements of relatively heavy forged product integrally joined together to form the walls of said inclosure, said elements offering outwardly extending webs abuttingly disposed in a plane normal to said walls and coincident to the parting-surface plane of said flask box, and individual embossed plates integrally united as a grating to divide and sub-divide the aforesaid inclosure.

1,904,038. RESILIENT SUPPORT FOR PHOTO-ELECTRIC CELL EXCITER. WILLIAM H. BAUCH, Shelbyville, Ind., assignor to Sono Equipment Corporation, Indianapolis, Ind., a Corporation. Filed June 28, 1930, Serial No. 463,037. Renewed Sept. 16, 1932. 4 Claims. (Cl. 248—30.)

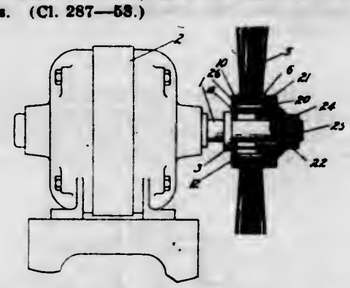
1. A mounting for an exciter bulb including a bulb-supporting member, a flexible support for supporting one end of said bulb-supporting member, a pair of spring members adapted to exert opposing forces upon the opposite end of said bulb-supporting member, and a single adjusting means for simultaneously varying the tension of said springs, said springs being proportioned in size and strength so that movement of said tension-varying means deflects said springs without substantial movement of said bulb-supporting member.

1,904,039. BODY EXERCISING APPARATUS. EMIL A. BRUDER, Los Angeles, Calif. Filed Oct. 27, 1930. Serial No. 491,355. 2 Claims. (Cl. 128—69.)



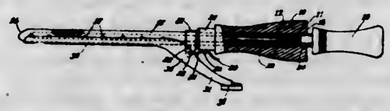
1. In a body exercising apparatus of the class described, a substantially horizontal and substantially rigid supporting means conforming in shape at its upper surface substantially to the longitudinal curvature of the back of the user, and a relatively thin yieldable and resilient rubber pad removably positioned over the curved portion of the supporting means, said pad having spaced apart and upwardly extending yieldable projections.

1,904,040. SHOCK ABSORBER. CHARLES H. CHAPIN, Chicago, Ill. Filed June 17, 1930. Serial No. 461,705. 14 Claims. (Cl. 188—89.)



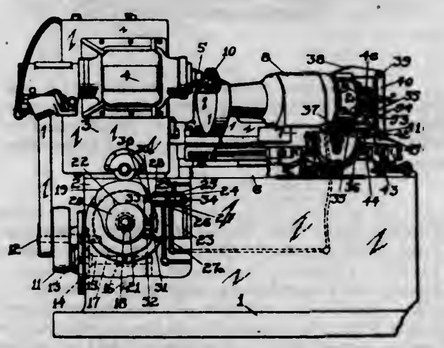
1. In a shock absorber, a housing, a member movably mounted therein, means within the housing for co-operation with the movably mounted member for applying an increasing resistance to the movement of said movable member in one direction, and for maintaining the resistance in the reverse direction at the maximum which it has attained during movement in the initial direction.

1,904,041. CLEANING BRUSH. GEORGE V. EVANS, Cleveland, Ohio, assignor to Brushaway Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1932. Serial No. 618,138. 5 Claims. (Cl. 15—138.)



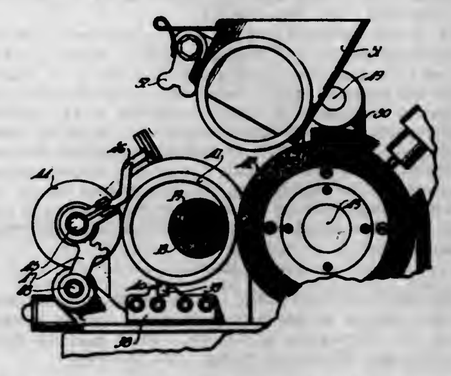
1. A brush for the purpose described, comprising a hollow body, bristles secured therein and extending outwardly thereof, said body having ducts communicating with the interior and discharging exteriorly of the body and onto the bristles, a handle surmounting said body and extending longitudinally therefrom and adapted to be gripped in the hand of an operator, a reservoir within said handle for storing cleaning fluid, a duct communicating the reservoir with the interior of the body, said body extending laterally from said handle and forming an exposed upwardly facing wall at one side of said handle, a valve for controlling the flow of liquid through said duct, a stem for operating said valve, said stem extending exteriorly of the body through said upwardly facing wall and being in position for engagement by the thumb of the operator while the handle is grasped in the operator's hand, said stem being moved for operating the valve and positioned for movement consequent upon normal flexure of the thumb of the operator in the direction when the hand and thumb are flexed for more firmly gripping the handle.

1,904,042. TOOL HOLDER. FLOYD A. EVERTS, Detroit, Mich. Filed Mar. 17, 1932. Serial No. 599,529. 3 Claims. (Cl. 287—53.)



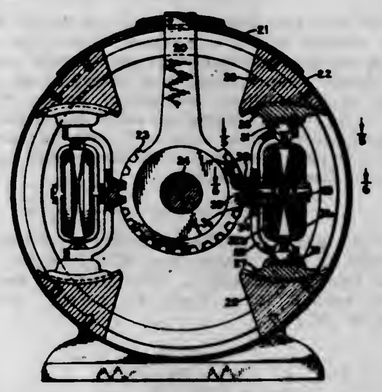
1. A holder for a buffer wheel or the like, comprising a hub-like member provided with a central aperture for disposition over a shaft, said hub-like element having a flange part at one side, segments carried by the flange part, said flange extending radially outward of the segments the free ends of the segments being shaped internally to provide an inverted frustro-conical shape, and a nut element having an internally threaded aperture for being threaded upon the shaft, and having a tapered part for engagement with the inverted conical-shaped formation.

1,904,043. MARCELLING DEVICE. MARY FRANK and JOHN FRANK, New York, N. Y. Filed Sept. 29, 1931. Serial No. 565,760. 4 Claims. (Cl. 132—37.)



1. A hair curler comprising a hollow iron having a channel passing therethrough and adapted to be dipped into water before using, a handle secured to said iron and having an axial channel communicating with said first-named channel, and a heating pin insertable when heated into said channels through said handle, said iron having a plurality of holes in the walls thereof for the escape of steam formed upon contact of the heated pin with the moistened interior of the iron.

1,904,044. MECHANISM FOR RECIPROCATING GRINDING WHEEL SPINDLES. WALDO J. GUILD, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 21, 1930. Serial No. 469,499. 8 Claims. (Cl. 51—34.)

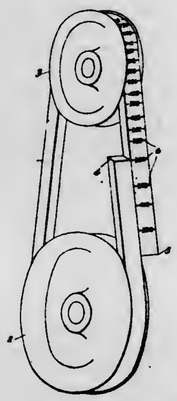


1. A grinding machine comprising a rotatable grinding wheel spindle mounted for axial movement thereon, a griading wheel on said spindle, means to reciprocate said spindle, fluid pressure operated means to actuate said last named means, and means to control the actuation of said fluid pressure means.

1,904,045. GRINDING MACHINE. FREDERICK S. HAAS, Cincinnati, Ohio, assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 29, 1930. Serial No. 484,953. 18 Claims. (Cl. 51—105.)

1. In a machine of the character described the combination with a bed and a grinding wheel supported thereby, of a work holding unit for presenting work in opposition to the grinding wheel and means for imparting relative feeding movement to said unit and wheel including an oscillatable cam disposed in non-translatable relation to one of said parts and a cam follower carried by the other of said parts and shiftable therewith on movement of the cam, hydraulic means for oscillating the cam to effect said movement, and means for yieldingly urging the follower into engagement with the cam, said means including a cylinder and a hydraulically actuable piston movable in the cylinder and having a portion engaging the follower bearing member.

1,904,046. VARIABLE SPEED POWER TRANSMISSION MECHANISM. FRANK A. HAYES, Middletown, N. J. Filed Oct. 9, 1930. Serial No. 487,452. 12 Claims. (Cl. 74—26.)



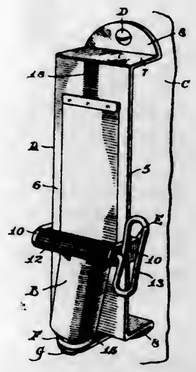
1. In a variable speed power transmission mechanism, in combination, coaxial friction disks having toroidal grooves in their opposed faces, a plurality of pairs of friction rollers between the disks and cooperating with the grooves therein, a pair of carriers for each pair of rollers

adapted to rock on an axis transverse to the axes of rotation of the rollers and enabling the rollers of each pair to rock relatively to each other on said axis, and supports for said carriers in which the carriers of each pair are mounted for relative longitudinal movement.

1,904,047. PROCESS OF REDUCING A NITRO COMPOUND BY MEANS OF A METAL. CLARK C. HERITAGE, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1926. Serial No. 101,399. 18 Claims. (Cl. 260—130.5.)

4. In the process of reducing a nitro compound by means of a metal and an acid, the improvements which comprise passing an acid solution of a nitro compound in contact with the metal so that a portion only of the solution constituting a charge is in contact therewith at any instant, withdrawing the resulting liquor from the metal before reduction is substantially completed, regulating the temperature of the liquor resulting from said contact to compensate for the temperature change produced during the reaction, and returning the liquor for recirculation in contact with the metal until the reduction is substantially completed.

1,904,048. BELT FITTER. MATTHEW E. HILL, Atlanta, Ga., assignor to The Holfast Rubber Company, Atlanta, Ga., a Corporation of Georgia. Filed Aug. 26, 1930. Serial No. 477,865. 1 Claim. (Cl. 33—179.)



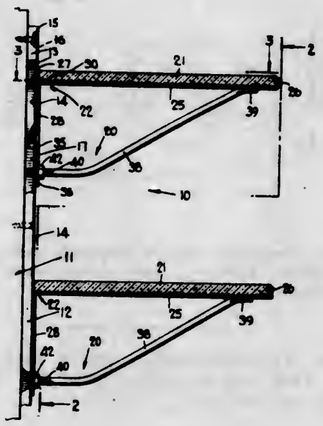
A belt fitter for automobile fan belts or the like comprising a material having a V-shaped cross-section and of such a length as will enable the ends thereof to overlap when trained over a plurality of pulleys of the various makes of automobiles, said pulleys having V-shaped grooves, the portion adjacent one end of said material having markings spaced in accordance with standard automobile belt sizes to cooperate with the opposite end to indicate the size of belt required.

1,904,049. DIAMOND CHARGED CUTTING TOOL BIT. SAMUEL L. HOYT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 5, 1929. Serial No. 390,621. 6 Claims. (Cl. 29—95.)

1. A cutting tool bit consisting of a supporting portion and a cutting portion, said supporting portion being sintered and consisting largely of tungsten carbide but containing an appreciable amount of cobalt, said cutting portion consisting of diamond particles held in a matrix having substantially the composition of the supporting portion of the tool.

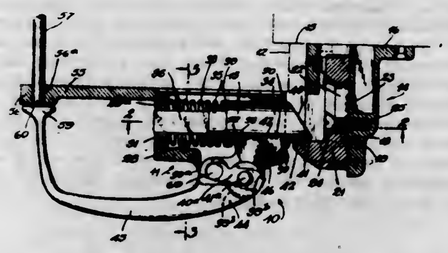
1,904,050. HOLDING AND DISPENSING DEVICE FOR COLLAPSIBLE TUBES. HENRY JANDICK, Brooklyn, N. Y. Filed July 23, 1931. Serial No. 552,709. 2 Claims. (Cl. 221—60.)

1. A device for holding a collapsible tube and dispensing the contents thereof including a base adapted for attachment to a support, said base having a supporting surface upon which the tube is arranged, means at one end of the base for supporting the breast of a collapsible tube and for receiving therethrough the threaded outlet neck thereof, a carriage embracing the base and guided thereby for longitudinal movement with reference thereto, a roller journaled in said carriage to roll over the tube from its closed end toward its outlet end to compress the tube and dispense its contents and milled portions of the roller periphery and the base functioning to obtain a traction of the roller on the tube to effect translatory movement of the roller and carriage with respect to the tube and base, and for preventing relative movement of the tube with respect to the base.



1,904,051. SOLDERING IRON. LESTER L. JONES, Oradell, N. J. Filed Sept. 28, 1929. Serial No. 395,800. 17 Claims. (Cl. 219—26.)

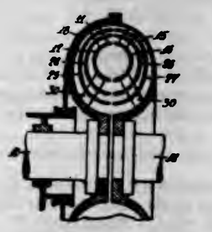
1. A soldering iron comprising a handle and a heat retaining body, a soldering tip heated thereby and movably related thereto, and means located at the handle for controlling the movement of the tip in order to regulate the temperature of the tip.



1,904,052. SHELVING CONSTRUCTION. ALEXANDER S. KATZ, Brooklyn, N. Y. Filed July 2, 1930. Serial No. 465,259. 1 Claim. (Cl. 248—19.)

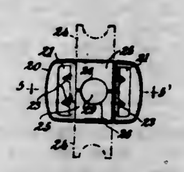
An article of manufacture comprising an angle shaped member comprising a plurality of arms interconnected by a flexible joint, one of said arms having an opening therein, and a member fixed to the other of said arms having a portion slidably extending thru said opening, and a member mounted on said second member adapted to limit angular movement of said arms toward one another, one of said arms being formed with an integral hook portion bent away from the plane of said arm, a portion of said

angle shaped member being folded back on itself, said portion being formed with a pair of slots in opposite edges thereof as and for the purpose described and specified.



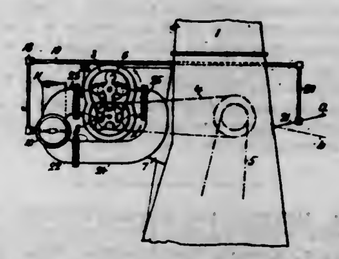
1,904,053. LOCK. ALEXANDER S. KATZ, Brooklyn, N. Y. Filed Dec. 24, 1930. Serial No. 504,571. 3 Claims. (Cl. 292—172.)

1. A latch comprising a casing, a spring-projected bolt movable in said casing, said bolt having a rack, bolt retracting means comprising a handle pivoted for movement toward and away from said casing and a gear segment operated by said handle and meshing with said rack, and a stop on said gear segment adapted to engage said bolt in the projected position of the latter to limit positively the movement of said handle toward the casing when the bolt is in projected position.



1,904,054. HYDRAULIC COUPLING. JOHANN NIKOLAUS KIEP, Altona-Hochkamp, and WALTER BROSE, Hamburg, Germany. Filed July 11, 1931, Serial No. 550,106, and in Germany Nov. 11, 1930. 13 Claims. (Cl. 60—54.)

1. A hydraulic coupling of the Föttinger type, including a driving member and a driven member, each having an annular outer wall and an annular inner wall, said inner walls forming a core and said outer walls forming a working chamber around said core for the circulation of liquid in a vortex ring, and an annular guide wall carried by one of said members between the outer and inner walls thereof, and forming with said walls separate paths for the liquid flow in the same direction, but at different



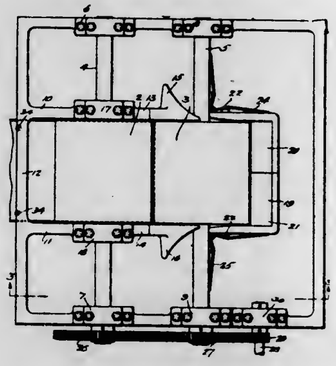
distances from said core, said paths being in open communication with each other in the plane between said members.

1,904,055. DETACHABLE FASTENER. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 18, 1932. Serial No. 605,851. 4 Claims. (Cl. 24—77.)

1. A detachable snap fastener comprising a stud element having a socket-engaging head and an underlying neck of a diameter less than that of the head and a socket element having a throat of a diameter less than that of the head of the stud but great enough to receive its neck, one of said fastener elements comprising a single piece of metal having strap-receiving slots disposed along a pair of opposite margins and portions turned and extended inwardly from the intervening margins and provided with closely adjacent terminal portions of forms and dimensions such as to serve as the means of attachment with the attaching portion of the other fastener element and have direct but resilient engagement therewith.

1,904,056. REVERSIBLE ROTARY BLOWER OR PUMP. VIGGO AXEL KJAER, Copenhagen, Denmark. Filed Nov. 13, 1930, Serial No. 495,500, and in Denmark Dec. 2, 1929. 4 Claims. (Cl. 103—117.)

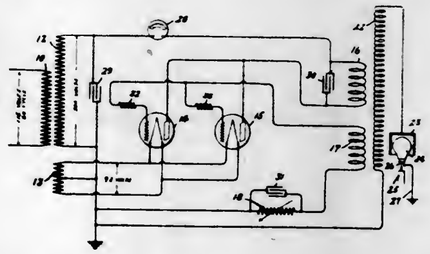
1. In a reversible rotary blower for supplying air to reversible internal combustion engines, a blower housing having ports therein, a valve housing provided with inlet and discharge fittings, two pipes connected with the valve



housing at the opposite sides thereof and communicating respectively with the ports of the blower housing, and a rotatable flap valve arranged in the valve housing and closing communication between the inlet and discharge fittings and arranged to be moved between two end positions, in one of which the valve establishes communication between the inlet and the discharge fittings through the ports of the blower housing in one direction, whilst in the other end position the flap valve establishes communication between the inlet and the discharge fittings through the two ports of the blower housing in the opposite direction.

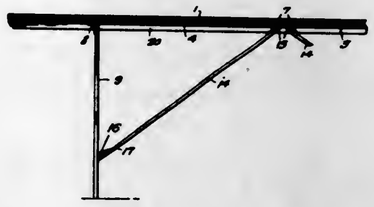
1,904,057. FLASH LAMP. KEISHIRO KOBAYASHI, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed May 9, 1932, Serial No. 610,266, and in Japan May 26, 1931. 2 Claims. (Cl. 67—33.)

1. A flash lamp comprising a bulb hermetically sealed and containing a flashing medium and an ignition means located in said bulb comprising an inflammable substance and a heat conductor in contact therewith extending through said bulb and having a portion thereof extending beyond said bulb.



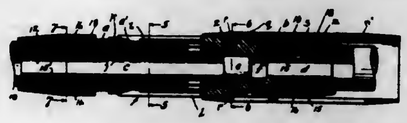
1,904,058. GRINDING APPARATUS. JOHN KOTOUC, Philadelphia, Pa. Filed Nov. 11, 1930. Serial No. 494,937. 4 Claims. (Cl. 83—12.)

1. In a grinding device, a plurality of adjacently disposed movable elements each comprising a grinding roll, a scoop comprising halved parts mounted on one of said elements on opposite sides of the grinding roll thereof for lifting material to be ground and dropping it between said rolls, and means disposed in the path of a portion of said halved parts for moving said parts outward to permit complete rotation of said scoop with the interposed roll.



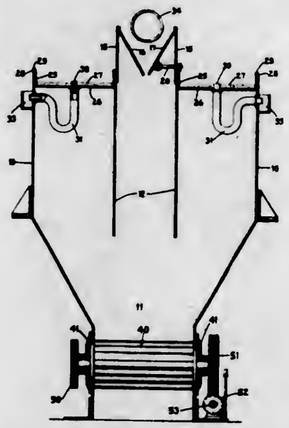
1,904,059. METHOD AND APPARATUS FOR TESTING INCANDESCENT LAMPS AND SIMILAR ARTICLES. WILLIAM L. KUBACH, East Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Apr. 23, 1928. Serial No. 272,175. 4 Claims. (Cl. 175—183.)

1. In an apparatus for testing devices comprising an evacuated or gas-filled enclosure, the combination of a receptacle into which said device may be inserted and a high-frequency electrical discharge circuit including said



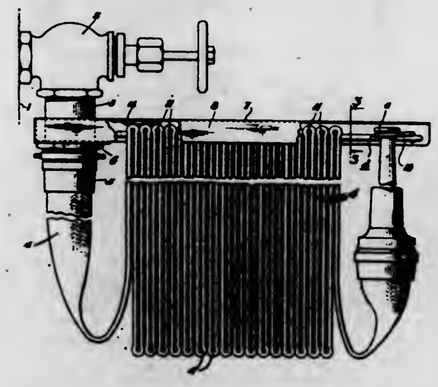
receptacle comprising current indicating means actuated by the current flowing in said circuit while the device is being subjected to said discharge.

1,904,060. BANQUET TABLE. RAY C. KUHN, Warsaw, Ohio. Filed July 31, 1931. Serial No. 554,338. 2 Claims. (Cl. 45—11.)



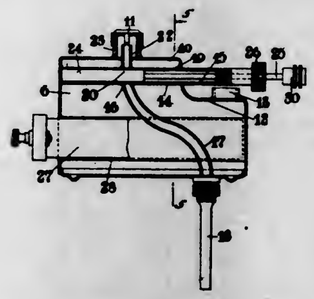
1. A banquet table having a top made up of thin laminated wooden sheets which are glued together, a cross sectionally rightangular rim in which the ends and edges of the sheets are received and to which the sheets are connected, and transverse brace and reinforcing strips having their ends secured to the inwardly directed longitudinal members of the rim, receiving the laminated top thereon and having such top secured thereto, the transverse reinforcing elements being spaced and the outer elements having hinged thereto crossed legs which are swingable against the table top between said outer and the inner transverse elements.

1,904,061. HOSE COUPLING. SIGFRID LARSON, Portland, Oreg. Filed Dec. 3, 1930. Serial No. 499,712. 9 Claims. (Cl. 284—19.)



1. A hose coupling comprising male and female members, two collars mounted one behind the other on the end of the male member, the inner of said collars being slidable and of greater exterior diameter than the outer collar, the female member formed with peripherally arranged longitudinally extending resilient fingers, the extremities of which form locking heads, the inner faces of which are beveled, whereby in coupling said members, said fingers ride over and engage with the outer of said collars and the further pushing of said members together causes said fingers to ride onto said inner collar and again spread and disengage said fingers.

1,904,062. DISCHARGE APPARATUS. WILLIAM C. LAUGHLIN, Glendale, Calif., and ABRAHAM B. ASCH, New York, N. Y., assignors to The L. A. B. Company, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1929. Serial No. 413,794. 7 Claims. (Cl. 210—55.)

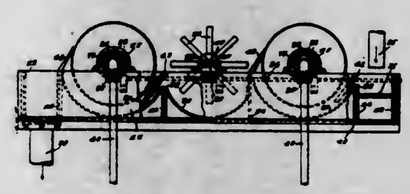


4. In a clarifier tank, a sludge hopper having a discharge opening and closure means for said opening comprising a roller mounted in said opening, members located on each side of said roller, means whereby a permanent closure is effected between said roller and one of said members for preventing passage of material or air therebetween and means whereby material is passed between said roller and the other of said members when said roller is rotated.

1,904,063. FIRE HOSE RACK. RUDOLPH O. LUND, New York, N. Y. Filed Aug. 25, 1931. Serial No. 559,195. 2 Claims. (Cl. 248—28.5.)

1. In a fire hose rack, the sub-combination comprising a longitudinal frame, a pair of skeleton supports secured to opposite sides thereof and being spaced therefrom throughout the greater portion of the length of such supports and said supports each having in-turned ends which are secured to said frame, a plurality of hose supporting pins pivotally connected to one of said supports and of sufficient length to span the intervening space between said supports, said pins having arc-shaped ends of a curvature of less than 90° and insufficient to permit of the extreme ends of said pins projecting below the bottom of the support on which they rest, whereby when such free ends are respectively forcibly projected against the end of one of said supports when resting thereon, the same will ride upwardly and over the end of such support, but said free end of said pin is normally prevented from becoming accidentally disengaged from the support upon which it rests.

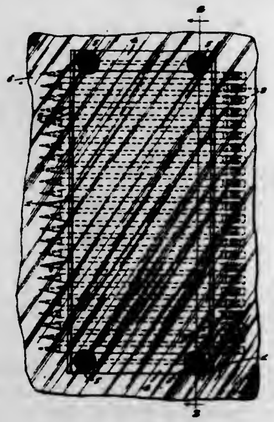
1,904,064. APPLIANCE FOR USE IN HAIR WAVING. WILLIAM MACDONALD and HUGH MACDONALD, Inverness, Scotland. Filed Aug. 25, 1931, Serial No. 559,304, and in Great Britain Aug. 30, 1930. 9 Claims. (Cl. 132—36.)



1. Means for supplying steam to a hair-waving appliance, comprising a steam boiler, a tubular seating member projecting through a wall of the boiler, a pair of apertures in the tubular seating permitting steam to enter the tubular member and pass out to atmosphere, a second pair of apertures permitting steam to pass into the tubular member and thence to the hair-waving appliance, and a valve device located in the tubular seating and adapted to cover and uncover the pairs of apertures alternatively.

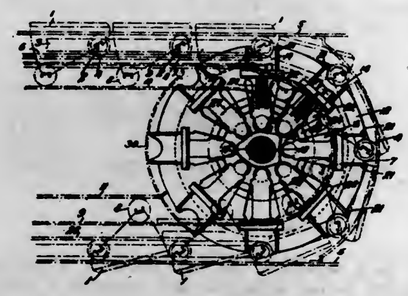
1,904,065. LUBRICATING OIL. KENNETH G. MACKENZIE, Westport, Conn., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed July 12, 1930. Serial No. 467,628. 8 Claims. (Cl. 87—9.)

1. A lubricating oil for heavy machinery consisting of at least 95% of a hydrocarbon oil having a viscosity considerably lower than that normally used for such purposes and within the range of from 37 seconds to 60 seconds (Saybolt) at 100° F. and from 2% to 5% of oxidised paraffin wax which has been oxidised in such manner as to contain a large proportion of saponifiable material.



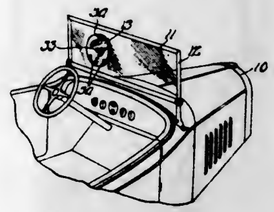
1,904,066. BOOK STOCK WASHER. GEORGE G. MCARTHUR, Niagara Falls, N. Y. Filed May 25, 1931. Serial No. 539,907. 5 Claims. (Cl. 141—12.)

1. In a machine of the class described, a plurality of cylinders having heads and each including a perforated peripheral wall connecting the heads and an annular chamber within said wall, means for rotatably mounting the cylinders, means including low pressure pipes opening into the chambers for producing suction within said chambers, a valve casing rotatable with each cylinder, a non-rotatable



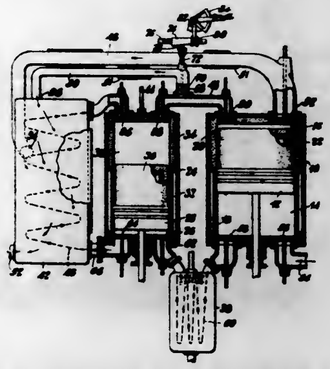
valve member positioned within each casing and including a port, said casings each having ducts in communication respectively with the low pressure pipes and successively in communication with the port of the valve during the rotation of each valve casing and cylinder.

1,904,067. PENCIL DISPLAY RACK. FRED H. MCGEHEE, Okolona, Miss. Filed Aug. 8, 1931. Serial No. 554,855. 1 Claim. (Cl. 211—87.)



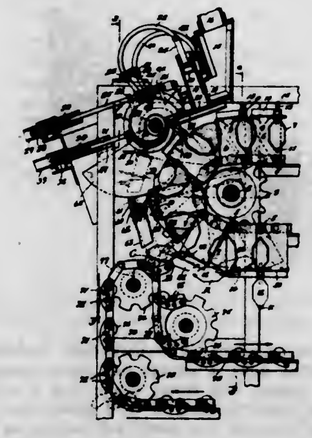
A rack for displaying articles through store windows comprising a substantially rectangular member including side members having one of their edges provided with a plurality of aligned notches, transverse cross sectional T-shape members connecting the side members at the top and bottom thereof and being disposed inwardly of the notched edges of said side members, said transverse members having relatively wide outer faces, vacuum cups secured to the faces and extending beyond the rack to support the latter on the inner face of a display window in a vertical position, and said display window, affording a cover plate for the rack.

1,904,068. CONVEYER, ESCALATOR, AND THE LIKE. JOHN HARPER MEACOCK, Northampton, England. Filed Mar. 15, 1932, Serial No. 598,914, and in Great Britain Mar. 5, 1931. 4 Claims. (Cl. 74—31.)



1. Apparatus of the kind specified comprising a chain, a rotatable sprocket wheel for engaging the chain, a plurality of members movably mounted on the sprocket wheel and each provided with a tooth space for engaging joints of the chain and means rendered effective by rotation of the sprocket wheel for moving one of the said members away from the centre of rotation of the wheel during the interval between the engagement of the tooth space of that member with a joint of the chain and the engagement of the next tooth space with the next joint of the chain.

1,904,069. WINDSHIELD VISOR. PETER MILLER, Chicago, Ill. Filed Oct. 4, 1930. Serial No. 486,453. 5 Claims. (Cl. 296—97.)



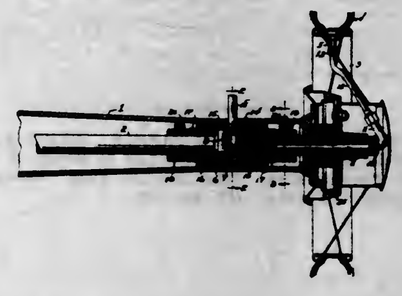
2. An anti-glare visor comprising a transparent colored plate adapted to be positioned in front of a transparent member, and means for detachably securing said plate to said member including a female element carried by said member, and a male element carried by and slidably mounted in said plate for movement transversely therethrough, said male element being adapted to be inserted into and frictionally engaged in said female element to detachably secure said plate to said member.

1,904,070. COMBUSTION ENGINE WITH PREHEATED AIR. JOHN D. MORGAN, Maplewood, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 20, 1928. Serial No. 255,619. 7 Claims. (Cl. 60—15.)

1. The combination of an internal combustion motor, an air compressor, a recuperator, connections whereby compressed air from said compressor is conducted to said recuperator and from the recuperator to said motor, connections arranged to lead gases exhausted from said motor to said recuperator to heat the air therein, and connections arranged to bleed partially expanded gases from said motor and to lead the bled gases to said recuperator.

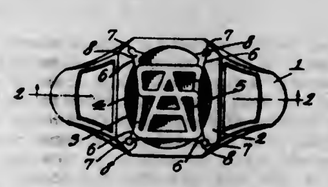
1,904,071. SOAP MOLDING MACHINE. LAFAYETTE HENRY NELLES, New York, N. Y. Filed May 2, 1930, Serial No. 449,283, and in Great Britain May 2, 1929. 22 Claims. (Cl. 18—26.)

1. Soap molding machine comprising an endless conveyor, a plurality of molds whose walls will flex as said molds open and close and extending transversely thereon into which the soap is to be poured, and means for cooling the soap during movement of the conveyor.



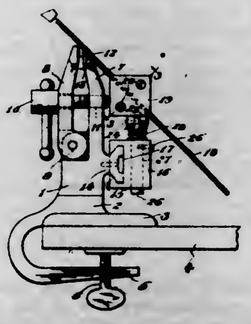
1,904,072. PAPER FLOWER BOX. JOHN F. NELSON, Charleroi, Pa., and LLOYD HODGE, Kent, Ohio. Filed Dec. 7, 1931. Serial No. 579,530. 2 Claims. (Cl. 229—15.)

1. A holding and displaying device for the purpose set forth, comprising a paper box having an open top, said box having its ends extended and the said ends being bent into the box in a line with the open top of the box to provide flanges, a flat apertured partition plate affording a rack arranged in the box to contact with the side walls and with the flanges in the box, and said partition plate having depending side and end flanges to contact with the bottom of the box and certain of said flanges being formed with bendable tongues designed to be bent against the box and to underlie and contact with the flanges in the box.



1,904,078. TIRE INFLATING DEVICE. LOUIS R. O'CONNOR and CULLEN G. STARNES, Mount Vernon, Ga. Filed Aug. 28, 1931. Serial No. 560,032. 1 Claim. (Cl. 152—11.)

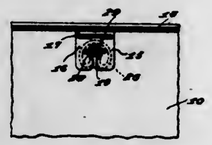
In combination with an axle housing having an axle and a wheel carried by the axle housing and provided with a pneumatic tire, said axle having a passage, means connecting the passage to the tire, an enlargement formed on the axle and having a groove in communication with the passage, a sleeve engaging the enlargement, a pipe carried by said sleeve and extending through the housing for connection with an air supply means to furnish air pressure to the passage by way of the groove, packing glands mounted on the axle and threaded to the sleeve, packing between the enlargement and the glands, and



adjusting means for rotating the glands in either direction relative to the sleeve and extending exteriorly of the housing.

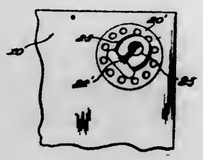
1,904,074. FINGER RING OR THE LIKE. HENRY W. PETERS, Boston, Mass. Filed Apr. 4, 1932. Serial No. 603,163. 6 Claims. (Cl. 63—15.)

1. A finger ring or the like including a portion having a recess in one face, there being spaced sockets in said face opening through the wall of the recess, a mounting seated within the recess, and a guard overlying the mounting and having portions filling the sockets and holding the guard against displacement.



1,904,075. SCISSORS SHARPENER. ANTON J. PETRICH, Milwaukee, Wis. Filed May 1, 1931. Serial No. 534,375. 10 Claims. (Cl. 76—82.2.)

1. A shears sharpening device comprising a blade holder having a body adapted to be secured to a support, jaws carried by said body and one movable towards and away from the other whereby a shears blade may be gripped between the jaws, means spaced transversely from one jaw to slidably support a sharpener for recipro-



cating motion across a blade held between the jaws, the sharpener supporting element and jaws being movable one with relation to the other transversely of the support, the sharpener supporting element having a vertically disposed stem rotatably mounted whereby a sharpener carried thereby may be swung longitudinally of a blade gripped between the jaws, and a spring about the stem for yieldably resisting depression of the stem and said sharpener supporting element.

1,904,076. SECURING TRIM PANELS. BION C. PLACE, Detroit, Mich., assignor of one-half to George E. Gagnier, Detroit, Mich. Filed July 20, 1928. Serial No. 294,124. 8 Claims. (Cl. 45—138.)

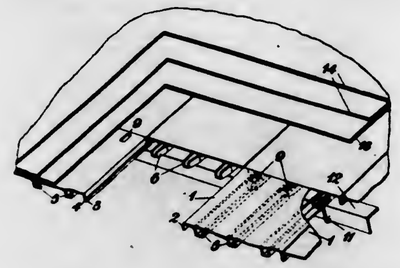
8. A trim panel comprising a body of fibrous material, a sheet metal fastener anchoring tab secured thereto, and a fastener having a head, and a shank extending away from the head and that is wider in one direction than in a direction at right angles thereto, the anchoring tab consisting of an elongated strip attached to said body by bending one end of the strip so as to snugly embrace a portion of said body, the other end of said tab being provided with a slot having a narrow portion and a wider portion, said fastener being interlocked with said tab and body by passing its shank through the narrow portion of said slot into said wider portion and turning the fastener so that the wider dimension of the shank extends across the wider portion of said slot.

1,904,077. SECURING TRIM PANELS. BION C. PLACE, Detroit, Mich., assignor of one-half to George E. Gagnier, Detroit, Mich. Filed July 20, 1928. Serial No. 294,125. 10 Claims. (Cl. 45—138.)

7. The method of preparing a trim panel for attachment to the supporting structure of the interior of an automobile body or the like, which consists in attaching small plate like sheet metallic fastener anchoring elements to the foundation or body at the points at which the fasteners are to be applied, and then interlocking spring fasteners to said elements with their shanks protruding away from the panel so that the fasteners will remain in position for subsequent application of said shanks to openings in said supporting structure.

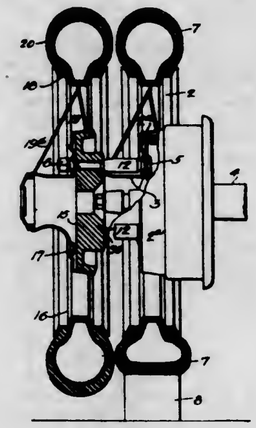
1,904,078. STRIKER BAR FOR BAG MACHINES. GEORGE W. POPPE, Brooklyn, N. Y. Filed July 30, 1932. Serial No. 626,597. 4 Claims. (Cl. 93—33.)

1. In a bag machine, in combination, sprocket chains having pivoted links, a striker bar frame supported between the chains, said frame comprising a rod passing through the roller bearing in each chain, and a second rod passing through the roller bearing of an adjacent link of each chain.



1,904,079. METHOD AND APPARATUS FOR FORMING FOUNDATION COLUMNS. CHARLES L. POWELL, New York, N. Y., assignor to Caisson Contracting Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1932. Serial No. 599,078. 13 Claims. (Cl. 61—57.)

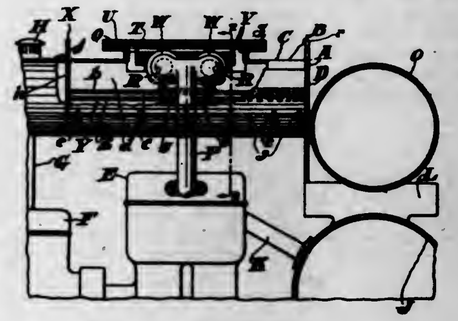
1. A caisson for sinking a hole in the ground, comprising in combination, a working chamber of substantially the diameter of the hole, a shaft of lesser diameter extending from the top of said chamber and being free of the walls of the hole, and means for preventing entrance of extraneous material into said caisson.



1,904,080. CONSTRUCTION OF ROOFINGS, PARTITIONS, AND THE LIKE. HERBERT LEONARD PLUMMER and DAVIS LAMBERT IRWIN, High Holborn, London, England. Filed May 31, 1930, Serial No. 458,618, and in Great Britain Sept. 5, 1929. 2 Claims. (Cl. 108—18.)

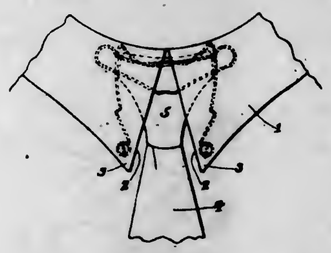
1. A substantially flat panel of rectangular form adapted for use on structural surfaces comprising flanges whereby the sides of the panel may be interengaged with the sides of adjacent similarly formed panels, reinforcing ribs generally parallel with the said flanges extending beyond

one edge of the panel, and apertures in the said ribs adapted to accommodate a fastening member for securing the panel to a structural member.



1,904,081. AUXILIARY WHEEL FOR AUTOMOBILES. HOWELL D. PRATT, Chestnut Hill, Pa. Filed Feb. 17, 1931. Serial No. 516,409. 3 Claims. (Cl. 301—38.)

3. The combination in an automobile, of a main wheel having a hub with an extended central portion; a supplemental wheel having a recessed hub; a hub disc mounted in the recess and having an annular groove for receiving the extension of the hub of the main wheel; bolts having their threaded portions projecting from the hub of the main wheel and supplemental bolts screwed onto the projecting portions of the bolts in the main hub and extending through the hub disc and hub of the supplemental wheel; and nuts mounted on the said supplemental bolts for drawing the supplemental wheel and its hub disc firmly against the projecting portions of the hub of the main wheel.

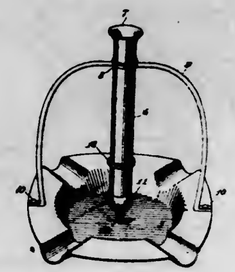


1,904,082. PORTABLE COMPRESSOR. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 2, 1931. Serial No. 566,436. 2 Claims. (Cl. 230—32.)

1. A portable compressor outfit comprising a housing, a compressor in the housing, a motor in the housing to drive the compressor, an air intake device for the compressor having an inlet opening above the compressor and

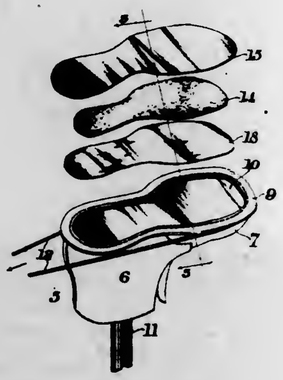
the motor, and means for preventing the heat radiating from the compressor and the motor from mingling with the air flowing to the intake opening.

1,904,083. NECKTIE AND COLLAR HOLDER. GUSTAVE A. PRIESTSON, Cliffside, N. J. Filed June 28, 1932. Serial No. 618,977. 7 Claims. (Cl. 24—49.)



7. A combined necktie and collar holder comprising, a length of resilient wire bent to provide a body part formed of an upper portion of concave curvature, a lower portion having an arcuate central part and a pair of oppositely extending curved upwardly inclined outer parts and a pair of oppositely curved end portions connecting said upper and lower portions together, said upper portion formed of a pair of oppositely disposed overlapping sections, a pair of bends at the inner ends of said sections and spaced from said end portions, the bend at the inner end of one section extending above the other of said sections, and a pair of depending coupling arms connected to said upper portion by said bends and normally extending towards each other, one of said arms seating against the front face of one of said sections and the other against the rear face of the other section, said arms seating against the rear face of said lower portion and having their lower ends provided with means for interengaging in the collar.

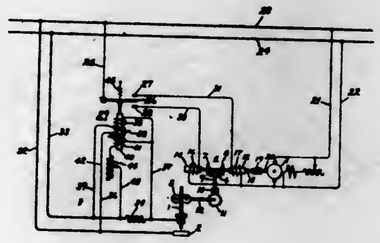
1,904,084. SMOKER'S ACCESSORY. CHARLES J. RILEY, East Orange, N. J. Filed Sept. 30, 1930. Serial No. 485,487. 3 Claims. (Cl. 131—51.)



1. The combination with an ash tray having an extinguisher closure element mounted on the tray bottom and elevated above said tray bottom, of a cigarette extinguishing device including a tubular open ended member of a size to snugly receive a cigarette and stationary means

on said tray mounting said member on and over the tray for guided vertical movement in the line of the axis of said member and for gravitational movement to a normal

lowered position in engagement with the closure element whereby the lower end of said member is closed by said closure element.



1,904,085. SHOE AND METHOD OF MAKING THE SAME. SAMUEL RIZZO, Rochester, N. Y., assignor to Artisan Shoe Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 9, 1930. Serial No. 474,138. 6 Claims. (Cl. 12—142.)

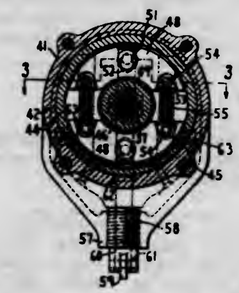
1. The method of manufacturing a shoe which comprises making an upper including a vamp, fastening a welt to the edges of the upper, simultaneously drawing the edges of the vamp with the welt attached thereto toward each other by a uniformly bendable medium engaging a substantial portion of the upper and extending only along the outside of said upper, holding the edges of the upper with the welt attached thereto in fixed relation as drawn, and attaching a sole on said welt.

1,904,086. AUTOMATIC ARC WELDING. SALLY SANDELOWSKY, Hennigsdorf, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 17, 1931, Serial No. 523,333, and in Germany Mar. 26, 1930. 3 Claims. (Cl. 219—8.)

1. An automatic arc welding system, comprising electrode feeding mechanism, a regulator having a plurality of actuating coils, one of which is connected to be responsive to arc voltage and act differentially with respect to another of said coils which is connected to be responsive to arc current, and another of which is connected to

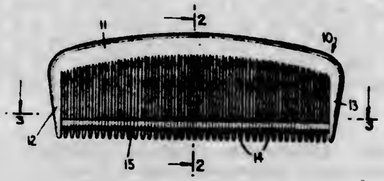
neutralize the maximum effect of one of said first mentioned coils, and means controlled by said regulator for controlling said electrode feeding mechanism.

1,904,087. PAPER MAKING PROCESS. ELMER C. SCHACHT, Troy, N. Y., assignor to Behr-Manning Corporation, Troy, N. Y., a Corporation of Massachusetts. Original applications filed Dec. 16, 1931, Serial No. 581,511, filed Mar. 11, 1932, Serial No. 598,285. Divided and this application filed Apr. 21, 1932. Serial No. 606,725. 7 Claims. (Cl. 92—41.)



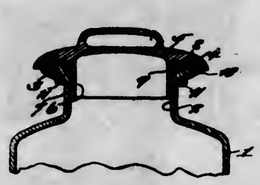
1. The process of making a paper-like material which comprises preparing a mixture of comminuted cork and fibres with sufficient water to form a stock, forming the stock into a web, and including a flexible binder in the web and in amount sufficient to increase the inherent strength and resilience of the web and render it flexible so that it is resistant to creasing and flexing.

1,904,088. FRAME PROVIDED WITH EASEL-STAND. HENRI SCHUTZ, Paris, France. Filed Feb. 4, 1932, Serial No. 590,876, and in France July 17, 1931. 7 Claims. (Cl. 40—146.)



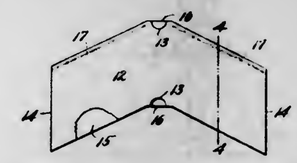
1. Easel-support comprising the combination of a front supporting element, a rod having at its upper part a spherical member, a cross-shaped member having two resilient arms adapted to press against the back of the supporting element, and two arms adapted to be removably secured to the sides of the said supporting element, the central portion of the cross-shaped member being in the form of a cup for receiving the spherical member of the rod, and a resilient blade attached to the said cross-shaped member and adapted to press the said spherical member against the bottom of the said cup-shaped portion.

1,904,089. CENTRIFUGAL BRAKE. FRANK H. SCHWEBIN, Bellevue, Pa., assignor to The Duff-Norton Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Dec. 5, 1929, Serial No. 411,770. Divided and this application filed Nov. 9, 1931. Serial No. 573,765. 9 Claims. (Cl. 188—185.)



1. In a centrifugal brake, a rotary disc, and a brake segment, one of said members being provided with a groove and the other with a guiding rib slidable in the groove to prevent turning of the segment with respect to the disc, and a pin passing through a slot in the segment for retaining the guiding rib in the groove.

1,904,090. COMB AND ACCESSORIES THEREFOR. MILTON M. SHAW, New York, N. Y., assignor to New York Merchandise Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1932. Serial No. 591,283. 7 Claims. (Cl. 132—19.)

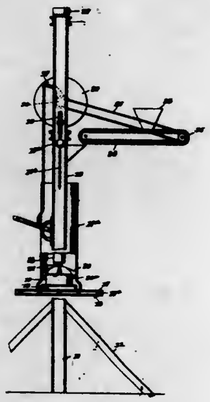


1. In combination with a comb having a plurality of teeth, a protector for said teeth comprising an elongated member having a row of openings receiving and gripping the outer ends of the teeth of said comb.

1,904,091. SEALING DEVICE FOR CLOSED CONTAINERS. FRED M. SHOOP, Burnt Cabins, Pa., assignor of one-fourth to Charles E. Fuller, Burnt Cabins, Pa. Filed Sept. 19, 1932. Serial No. 633,901. 3 Claims. (Cl. 220—46.)

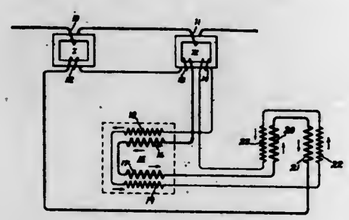
1. In a sealing device for shipping milk cans, the combination with a can body having a neck and including an entrance mouth, the neck merging into a marginal flange, of a closure or cover provided with a depending neck engaging the entrance mouth, a flexible or pliable sealing device having an enlarged bead or flange at one end fitting closely about the depending neck of the cover, said sealing device comprising a pliable or flexible skirt to be stretched back over the cover when the cover is not in use, the other end of the sealing device having a bead or flange, the pliable or flexible skirt adapted to be stretched over the flange of the can neck, whereby the second bead or flange may hug closely against the exterior of the neck of the can.

1,904,092. SHIELD FOR SUSPENDED WEARING APPAREL. MELVIN H. SIDEBOTHAM, West Newton, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1930. Serial No. 502,308. 2 Claims. (Cl. 223—61.)



1. A paper garment protector comprising two sections of single thickness throughout and adhesively connected at their upper edges and free from each other at their sides and lower edges, the side edges being parallel and the upper and lower edges being inclined in opposite directions from the mid-width thereof, and one of said sections having a recess at the midwidth of its lower edge.

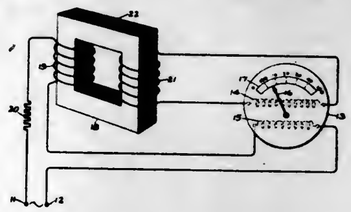
1,904,093. LICENSE PLATE FOR MOTOR VEHICLES. CONWAY B. SMITH, Portsmouth, Va. Filed Feb. 15, 1932. Serial No. 593,138. 2 Claims. (Cl. 40—125.)



1. A license tag for automotive vehicles comprising, a plate provided with a license number, an exposure opening for a selected yearly indicator and a pair of spaced slots, and an adjustable disc positioned at the rear of and revolubly connected to said plate, said disc being provided with a circular row of spaced radially disposed selectively exposable portions outset with respect to the remaining part of the disc and providing different yearly indicators, each of said portions formed of an outset inner part for extension into said opening and an outset outer part in the form of a digit extended from said inner part, said disc formed with a circular row of radially disposed slots between said portions, an identifiable, yearly license paid indicating element having portions thereof extending through the slots of said plate and a pair of slots of said row and opposing the rear faces of the latter, said disc being formed with a circular row of openings, said plate being formed with an opening for selective registering with an opening of said row, and means extended through the registering openings for locking the disc in its adjusted position.

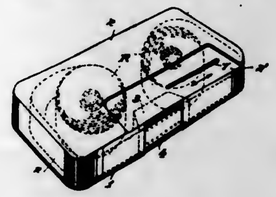
1,904,094. METHOD AND APPARATUS FOR MOLDING CONCRETE PIPE. CLAY M. SNYDER, Atlanta, Ga., assignor to Centrifugal Machine Company, Atlanta, Ga. Filed May 27, 1929. Serial No. 366,227. 14 Claims. (Cl. 25—36.)

1. In a concrete pipe making apparatus, the combination of a form, means for compacting concrete in said form, said form being movable away from the compacting means by the pressure of concrete placed in the form against said compacting means, and means for gradually increasing the resistance offered the movement of said form as the weight of the concrete placed in the form increases.



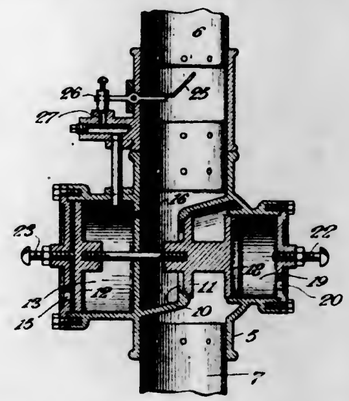
1,904,095. ELECTRICAL MEASURING INSTRUMENT. BYRON W. ST. CLAIR, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 16, 1931. Serial No. 530,604. 1 Claim. (Cl. 171—264.)

A wattmeter including field coils, auxiliary coils interwound therewith, a duplicate set of said coils in circuit therewith located in non-inductive relation to said first coils, the direction of current in said duplicate coils being such that the voltage due to the mutual inductance in said coils is of the same magnitude but of opposite sign to the voltage due to the mutual inductance of said first mentioned coils, whereby the effect of mutual inductance in the circuit is neutralized.



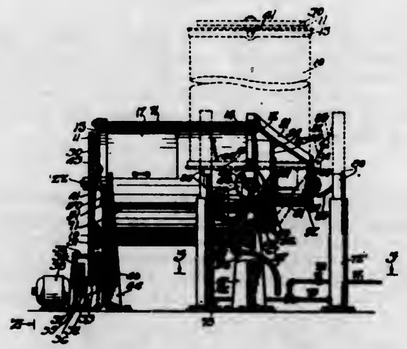
1,904,096. ELECTRICAL INSTRUMENT. BYRON W. ST. CLAIR, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 19, 1932. Serial No. 587,597. 6 Claims. (Cl. 171—95.)

2. In combination with an alternating-current circuit, a transformer having primary and secondary windings, and a voltmeter having a pair of opposing field windings, said transformer primary and one of said field windings



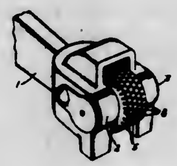
in series being connected to said alternating-current circuit, said transformer secondary being connected to the other of said voltmeter field windings.

1,904,097. FILM HOLDER FOR PHOTOGRAPHIC CAMERAS. OTTO STEINER, Berlin-Spandau, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Apr. 6, 1931, Serial No. 528,037, and in Germany Aug. 18, 1930. 7 Claims. (Cl. 95—34.)



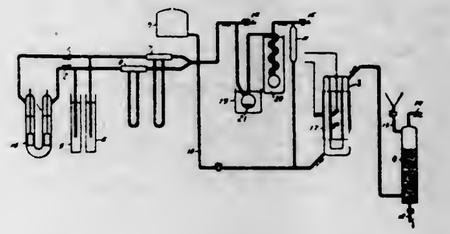
1. A film holder constructed to house the winding-off reel and the take-up reel and composed of two companion members, said holder having an external recess within which a portion of the film is adapted to travel on its way from one reel to the other, exteriorly of the holder, and a guard constructed to embrace said two members and hold them together and adapted to cover said recess.

1,904,098. PNEUMATIC DISPATCH SYSTEM VALVE. JOSEPH JOHN STOMTZEL, Queens Village, N. Y., assignor to G & G Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 31, 1929. Serial No. 417,629. 4 Claims. (Cl. 243—12.)



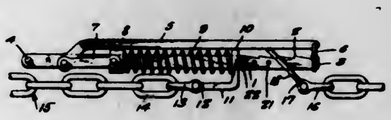
1. A control valve for a minimum flow pneumatic dispatch system comprising a valve casing having a main port, a valve member closing said port and movable in opposition to the flow of air to close said port and pneumatic means subject to pressure within the line and connected to said valve member to actuate it in either direction, said pneumatic means communicating with the line through a restricted opening.

1,904,099. LAUNDRY MACHINE. NICOLA STRAMAGLIA and THOMAS SCHILLACI, Chicago, Ill. Filed Mar. 7, 1931. Serial No. 520,913. 8 Claims. (Cl. 68—18.)



1. In laundry apparatus, a combination washing machine and centrifugal dryer comprising a shell and a perforated drum rotatable in horizontal position therein in a cleansing solution adapted to be contained in the shell, a structure for detachably supporting the shell and drum in horizontal position, motive power operated means for rotating said drum with the shell during the washing operation, means for rotating the shell and drum from horizontal into vertical position at the end of the washing operation, a plurality of flexible members each having one end attached to the shell, and a plurality of fluid pressure operated vertically movable plungers to which the other ends of said flexible members are attached so that the shell and drum may be lifted off said first named supporting structure and suspended from said plungers by said flexible members during rotation of the drum within the shell when both are in vertical position and the machine used as a dryer.

1,904,100. WHEEL DRESSER. GEORGE F. TAYLOR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 1, 1930. Serial No. 440,837. 2 Claims. (Cl. 125—37.)

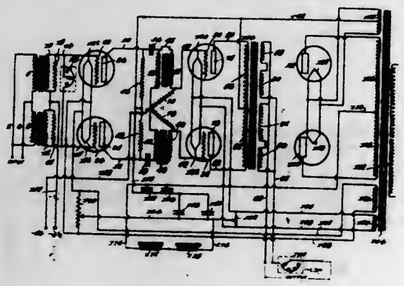


1. A wheel dresser comprising a circular radially corrugated plate having a substantially smooth outer periphery, cemented carbide pieces mounted in the corrugations on both sides of said plate and at the outer edge thereof and rigidly secured thereto, the outer ends of said cemented carbide pieces being flush with the outer periphery of said corrugated plates.

1,904,101. METHOD AND APPARATUS FOR CARRYING OUT CHEMICAL REACTIONS. MAURICE C. TAYLOR and CHESTER N. RICHARDSON, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Sept. 19, 1930. Serial No. 482,944. 2 Claims. (Cl. 204—81.)

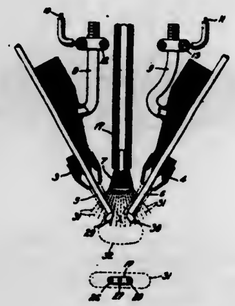
1. In the production of hydrogen peroxide, the improvement which comprises subjecting a mixture of hydrogen, oxygen and mercury vapor to the corona discharge.

1,904,102. CHAIN FASTENER. FRANK E. THOMPSON, Winona, Minn. Filed July 22, 1932. Serial No. 624,092. 2 Claims. (Cl. 24—68.)



1. In a device for the purpose set forth, a bar having teeth on one of its edges from one of its ends, a swingable lever pivoted to the non-toothed end of the bar, links carried by the lever, a sleeve movable on the bar and to which the links are connected, a spring on the bar having one end contacting with the sleeve, a slide on the bar with which the second end of the spring contacts, said slide having an angle portion, a split chain having one of its edges swingably secured to the angle portion of the slide, a latch plate pivotally secured to the second end link of the chain, said latch plate having a substantially rectangular opening to receive the bar therethrough, and the end wall provided by the opening opposite the teeth of the bar having a tooth to engage with one of the teeth of the bar, and means for latching the lever to the toothed end of the bar when swung thereover, all as and for the purpose set forth.

1,904,103. PUSH-PULL AMPLIFIER CIRCUIT. FLETCHER THORINGTON, Birmingham, Ala. Filed Nov. 15, 1929. Serial No. 407,454. 2 Claims. (Cl. 179—171.)



1. In a two stage cascade amplifier circuit, a pair of transformers in said first stage having their primary windings connected in reverse parallel and their secondary windings connected in series, high resistances connected in shunt with each of said secondary windings, a pair of transformers in the second stage having the secondary windings of each transformer connected in series and

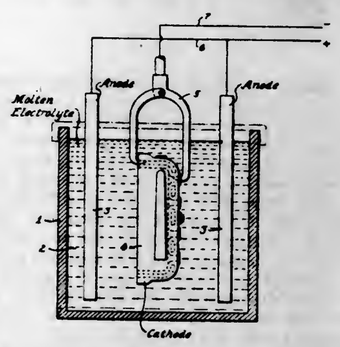
the primary windings of each transformer connected in series and to the output circuit of the first stage tubes, a pair of high resistances connected in series and across

the output circuit of said first stage tubes and high resistances connected across the windings of each of said second stage transformers.

1,904,104. WELDING TORCH. HARRY W. TOBEY and HAROLD V. MAY, Pittsfield, Mass., assignors to General Electric Company, a Corporation of New York. Filed Sept. 24, 1931. Serial No. 564,882. 7 Claims. (Cl. 219—8.)

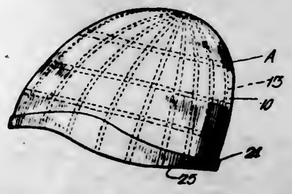
1. Welding apparatus comprising means for holding a plurality of electrodes in converging positions relatively to one another, and means for directing a fan-shaped stream of gas across and about the arcing terminals of said electrodes.

1,904,105. NONSAG HELICAL TUNGSTEN FILAMENT AND METHOD OF MAKING IT. JOHANNES ANTONIUS MARIA VAN LIEMPT and WILLY GEISS, Eindhoven, Netherlands, assignors to General Electric Company, a Corporation of New York. Filed Apr. 27, 1925, Serial No. 26,290, and in the Netherlands May 24, 1924. 3 Claims. (Cl. 176—182.)



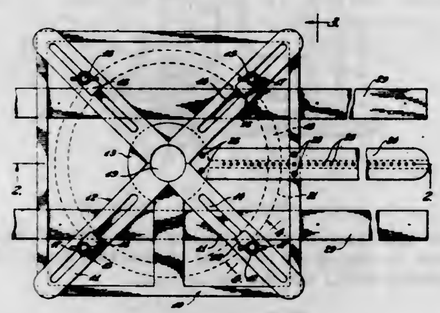
1. The method of producing a helical tungsten filament which is substantially non-sag when mounted and used as a filament in a lamp in the usual way, which consists in winding drawn tungsten wire capable of developing non-sag crystalline structure into a helix on a core which is solid at temperatures above the recrystallising temperature of tungsten, heating the core with the coil on it above the temperature of recrystallisation to develop said non-sag structure, and then chemically removing the core by re-agents inert to tungsten.

1,904,106. CABLE LOCK FOR REVOLVING DOORS. BURNS H. UHRICH, Independence, Kans., assignor to The Atchison Revolving Door Co., Independence, Kans., a Corporation of Delaware. Filed Apr. 11, 1932. Serial No. 604,607. 6 Claims. (Cl. 20—18.)



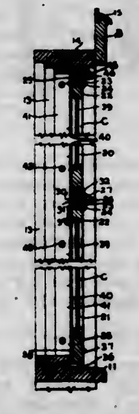
1. In a revolving door wing cable lock which includes a movable cable terminal gripping device normally urged to a position to lock the cable and a casing embodying a guide for said device; a rollable anti-friction bearing unit interposed between the device and the guide and unconnected with said device or guide.

1,904,107. ELECTROPLATING WITH ALUMINUM. ALFRED VON ZEERLEDER, Neuhausen, Switzerland, assignor to Aluminium Industrie Aktiengesellschaft, Neuhausen, Switzerland, a Joint-Stock Company of Switzerland. Filed Aug. 12, 1930, Serial No. 474,741, and in Germany Aug. 24, 1929. 9 Claims. (Cl. 204—20.)



1. The process of electroplating metals, such as iron, light metal alloys, etc., with an adherent dense coating of aluminum, wherein the object to be coated is the cathode and the anode is metallic aluminum, or an alloy or mixture thereof; comprising using an electrolyte composed of a molten salt or salts, having a melting point lower than that of aluminum, and electrolytically causing aluminum together with small quantities of an auxiliary metal, comprising lead, to be deposited from the electrolyte upon the cathode.

1,904,108. CROWN FOR LADIES' HATS. MARY WALSH, New York, N. Y. Filed Aug. 2, 1930, Serial No. 472,611. Renewed Nov. 2, 1932. 1 Claim. (Cl. 2—198.)

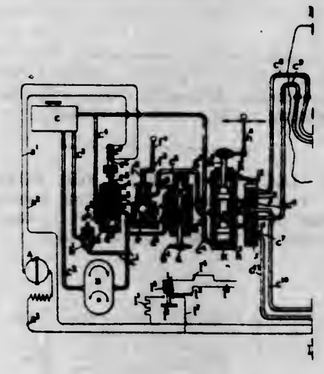


In a hat, a crown-shaped body consisting of a plurality of united layers of material, a plurality of radial reinforcing elements secured to the body on the inside wall thereof, and a plurality of circumferentially extending strengthening elements secured to the interior wall of said body and through said radially extending reinforcing elements, and an inner lining for said hat, the free edge portion of the outer layer of material forming said body being folded into said body slightly in contact with said lining and in overlapping relation to the radiallly extending reinforcing element, the portion of said outer layer between the inwardly folded portion thereof and the portion of the outer layer making up the body of the hat being folded flatly upon the adjacent portion of the body of the hat to form a rim.

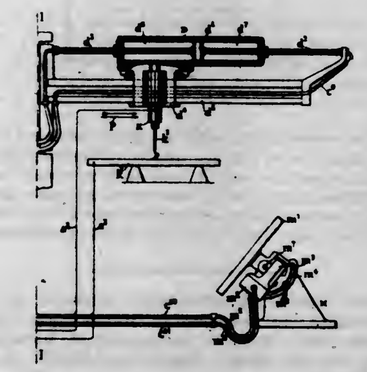
1,904,109. ROUTER GAUGE AND GUIDE. ALBERT E. O. WENDORF, Wauwatosa, Wis. Filed Apr. 6, 1932. Serial No. 603,643. 5 Claims. (Cl. 145—129.)

1. A device of the class described, comprising a frame, radially extending arms on said frame each provided with a slot, an element slidable in each of said slots, clamping means on each of said elements, and means associated with said frame for guiding the same relative to the work.

1,904,110. WINDOW CONSTRUCTION. PAUL WILLMANN, Merion, Pa. Filed Feb. 10, 1932. Serial No. 592,115. 6 Claims. (Cl. 20—53.)



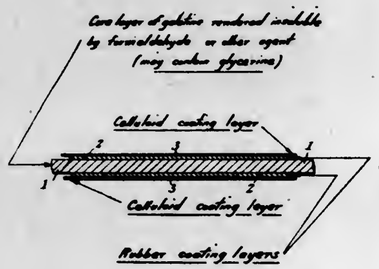
1. In a window construction, a window casing and a pair of independent sash sections pivoted thereto, with the rail of one sash section provided with an arcuate socket, said rail overhanging the rail of the adjacent sash section, said last named rail provided with an arcuate portion co-axial with the pivot of its sash section, accommodated in said socket.



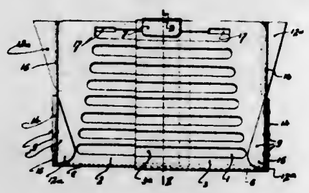
1,904,111. GLASS TANK FURNACE. MOTT WEANT, Greenfield, Ind. Filed July 14, 1930. Serial No. 467,863. 8 Claims. (Cl. 49—54.)

1. In a glass tank furnace, having a melting chamber and a working chamber both of the usual rectangular construction, said chambers having a contracted depressed throat connecting and of considerably less width than that of the same; the floor of the melting chamber having adjacent said throat opposite lateral passages provided each with an inclined floor forming an approach to said throat and leading downwardly from a dead corner part of said melting chamber, whereby the flow of the metal into said throat will be caused to extend the full width of said chamber from the outer lateral parts to the central part thereof.

1,904,112. DEVICE FOR THE CONTROL OF ELECTRIC ARC WELDING MACHINES. JEAN ACHARD, Paris, France. Filed Mar. 18, 1931, Serial No. 522,835, and in France May 14, 1930. 8 Claims. (Cl. 219—8.)



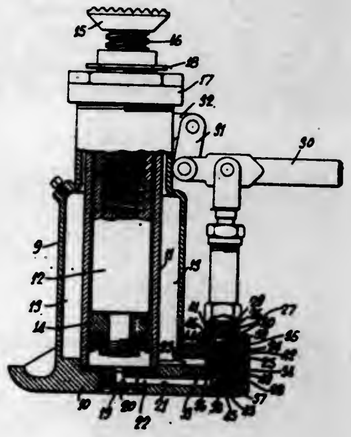
1. An electric arc welding machine of the type described comprising in combination an electrode, means for supporting the piece to be welded, an electric welding circuit including the electrode and the piece to be welded, a driving organ adapted to be operated through a fluid under pressure to produce a relative displacement of said electrode and said piece along the line of welding, means for conveying said fluid under pressure to said driving organ, a valve on said last mentioned means, adapted to normally prevent the flow of fluid to said driving organ,



electric means included in the welding circuit for operating said valve, whereby the flow of fluid to the driving organ is allowed only when the arc is formed between the electrode and the piece to be welded.

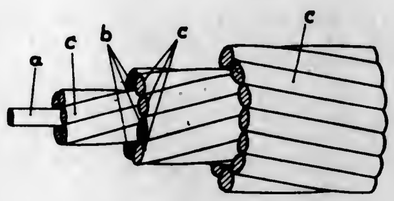
1,904,113. FILM FOR PHOTOGRAPHIC PURPOSES. ANDREW GEORGE ADAMSON, London, England, assignor to W. M. Still & Sons Limited, London, England, and himself. Filed Sept. 11, 1931, Serial No. 562,411, and in Great Britain Sept. 13, 1930. 7 Claims. (Cl. 91—69.)

1. A non-inflammable photographic film, which consists of a core layer of gelatine, rendered insoluble and coated on each side first with rubber and then with another protecting medium such as celluloid.



1,904,114. LUGGAGE CARRIER FOR MOTOR VEHICLES. JULIUS RICHARD AMBROSIUS, Mexico, Mexico. Filed Apr. 4, 1932, Serial No. 603,111, and in France May 9, 1931. 3 Claims. (Cl. 224—29.)

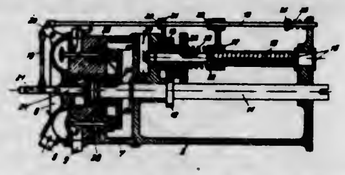
1. The combination with a motor vehicle, including front springs, of a luggage carrier comprising two plates of corrugated sheet metal, one of said plates including an additional strip bent over twice at right angles to form with said plate a housing into and out of which the second plate may slide to vary the width of said carried.



1,904,115. HYDRAULIC JACK. CHARLES F. BACON, Brattleboro, Vt., assignor to Millers Falls Company, Millers Falls, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1929. Serial No. 384,927. 9 Claims. (Cl. 188—9.)

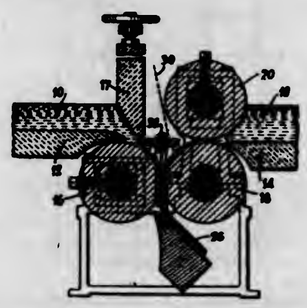
1. In a hydraulic jack, a piston cylinder, a piston therein, a reservoir, a passageway leading from said piston cylinder, a passageway leading from said reservoir, a pump barrel removably secured on said jack and having a pump chamber, said pump chamber being provided with but two openings, a pump plunger permanently closing one of said openings, an independent member extending through the second of said openings and provided with channeling, said channeling comprising a bore, the outer end of which communicates with one of said passageways and the inner end of which communicates with said chamber, the side wall of said pump barrel being formed with a channel communicating with the other of said passageways and

with said channeling, said member being provided with a valve for closing the outer end of said bore and a valve normally closing said channel.



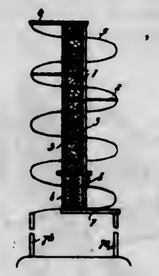
1,904,116. STEEL ALUMINIUM CABLE. REINHOLD BAUM, Cologne-Mulheim, Germany, assignor to Felten & Guilleaume Carlswerk Actiengesellschaft, Cologne-Mulheim, Germany. Filed June 15, 1931, Serial No. 544,579, and in Germany June 21, 1930. 1 Claim. (Cl. 173—13.)

A stranded steel aluminium, electrical cable made free from twist by equalizing the oppositely directed turning moments of the layers of wires with a ratio of cross-section of aluminium to steel of about 6:1 and laying lengths about 11–14 times the diameter of the cable, in which the steel wires are disposed over the whole cross-section of the cable, partly in the middle of the cable and partly in layers together with the aluminium wires.



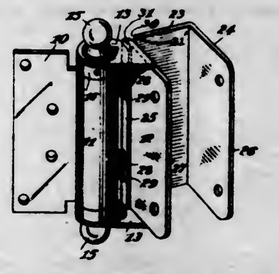
1,904,117. STARTING DEVICE FOR INTERNAL COMBUSTION ENGINES. GABRIEL BECKER, Berlin-Charlottenburg, Germany. Filed Jan. 5, 1932, Serial No. 584,849, and in Germany Nov. 30, 1931. 6 Claims. (Cl. 60—16.)

1. Starting device comprising means for distributing gaseous pressure fluid to the cylinders of an internal combustion engine, said distributing means consisting of a plurality of valves, a driving shaft, a cam plate rotatable by said shaft engageable with said valves for actuating the same in succession, self-locking means for maintaining said cam plate in an operative position for actuating said valves, means for displacing said cam-plate axially on the shaft to an inoperative position,



and a release device actuated from the driving shaft for releasing the self locking means to permit of the displacement of the cam plate to the inoperative position.

1,904,118. MANUFACTURE OF WIRE GLASS. MYRON L. BRENNAN, St. Louis, Mo., assignor to Mississippi Glass Company, New York, N. Y., a Corporation of New York. Filed May 14, 1931. Serial No. 537,870. 5 Claims. (Cl. 49—82.)



1. In apparatus for making glass, a pair of forming rolls, means for feeding molten metal between said rolls to form a half-sheet, means comprising a roll and a non-rotatable member adjacent thereto and with said roll forming a pass to produce a second half-sheet, and means for welding said half-sheets to form a single sheet.

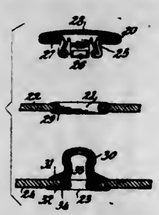
1,904,119. SUPPORT FOR ELECTRODES IN VACUUM VESSELS. RUDOLF GOTTFRIED BERTHOLD, Berlin-Siemenstadt, and WALTER STOCKMEYER, Finkenkrug near Berlin, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed May 1, 1931, Serial No. 534,242, and in Germany May 7, 1930. 9 Claims. (Cl. 250—27.5.)

1. A supporting structure for an incandescent filament comprising a column composed of a plurality of individual blocks of insulating material, arms held between said blocks and having means at their outer ends for supporting the filament at several points between its ends, and means for resiliently supporting said blocks.

1,904,120. DOOR HINGE. EMIL BOMMER, Brooklyn, N. Y. Filed Dec. 8, 1930. Serial No. 500,679. 6 Claims. (Cl. 16—167.)

1. In a hinge of the character described, a pair of pivotally connected leaves, one including a hinge barrel and the second including hinge ears between which the barrel is disposed, a reinforcing member adjustably associated with the second leaf and comprising a plate formed along its opposite longitudinal edges with projecting flanges, one of which is disposed between the barrel and the second leaf and between said ears so as to provide bracing means between said ears, with the other flange disposed at the opposite side of said second leaf, both of said flanges being parallel with said second leaf.

1,904,121. BED LAMP. JOSEPH L. STETNER, Brooklyn, N. Y. Filed Feb. 18, 1932. Serial No. 593,721. 1 Claim. (Cl. 240—108.)

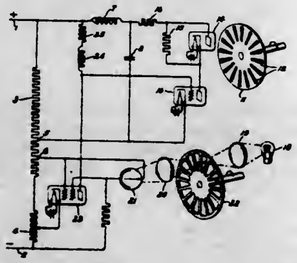


A lamp shade and support therefor comprising a shade frame, a pair of spaced bearing members rigidly carried by the shade frame, said support comprising a member having a body portion, a curved resilient arm projecting from each end of said body portion, and an extension projecting from each of said arms, said extension projecting in opposite directions whereby a flexing of the resilient arms in a direction towards each other will permit of insertion of the extensions in the bearing members of the frame and release of the flexed arms will position the extensions within the bearing members to attach the support to the frame.

1,904,122. DETACHABLE SNAP FASTENER FOR ARTICLES TO BE LAUNDERED. LYMAN B. CHAPMAN, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 20, 1932. Serial No. 629,576. 8 Claims. (Cl. 24—217.)

1. In an article to be laundered, the combination with two parts to be detachably secured together, of a three-part separable snap fastener of the stud-and-socket type comprising a fastener element permanently secured to one part, a fastener element permanently secured to the other part, and a detachable fastener element comprising an ornamental head and an attaching stem, at least one of the three fastener elements having a resilient attaching means and the three elements being of such relative sizes

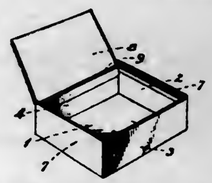
and forms that the stem of the detachable element may be snapped into a detachable engagement with one of the permanently secured fastening elements and the two elements thus attached, one at least of which is resilient, then snapped into a detachable engagement with



the other permanently attached fastener element, the detachable element having the ornamental head being readily removable from the elements secured to the article when the article is to be laundered and subsequently reattached.

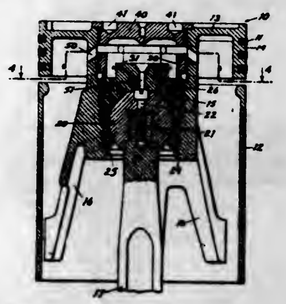
1,904,123. PROCESS OF MANUFACTURING CREPES WITH THREADS OF CELLULOSE ACETATE ARTIFICIAL SILK. CLAUDE CLEMENCON, Caluire-on-the-Rhone, France. Filed Mar. 11, 1932, Serial No. 598,308, and in France Mar. 16, 1931. 3 Claims. (Cl. 28—1.)

1. Process for the treatment of threads of cellulose acetate for use in the manufacture of fabrics with crepe effect consisting in subjecting the threads before twisting to a preliminary shrinkage by first subjecting them to the action of a swelling agent and then eliminating said swelling agent and subsequently subjecting the shrunk threads to a twisting action of the order of 2800 to 3000 turns per metre for a thread of 100 deniers.



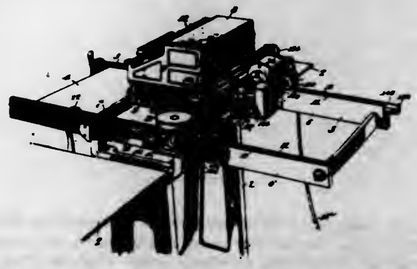
1,904,124. STROBOSCOPE. WILLIAM D. COCKRELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 27, 1932. Serial No. 630,711. 5 Claims. (Cl. 176—124.)

1. A stroboscope comprising a source of supply of direct current, a reactor and a capacitor arranged in series and connected with said source, a vapor electric discharge device connected to be energized from said capacitor and provided with a control grid and means for controlling the charge on said grid.



1,904,125. PASTEBOARD BOX. GEORGE D'ANNUNZIO, Jersey City, N. J., assignor to Shoup-Owens, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 30, 1932. Serial No. 589,825. 4 Claims. (Cl. 229—23.)

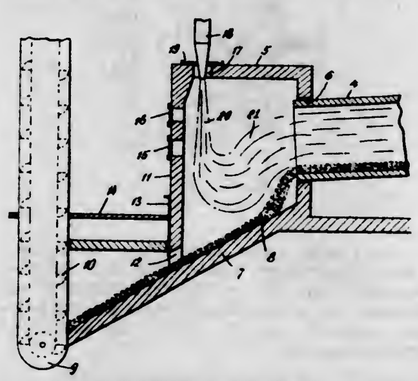
1. A cigar box formed of two pasteboard blanks, one blank having two side flaps and two end flaps, all four flaps when folded up forming the sides and ends of the box body, means for holding said flaps in said folded up position, the other blank being located on the outside of said body and covering the bottom and ends only and cooperating therewith to increase the relative strength of said parts of the finished box, the second mentioned blank and its end flaps being of a width corresponding substantially to the overall width of the box body, the edges of said second blank forming all four corners, the front and



rear lower edges, and the upper end edges, of said box body, and a thin wrapper covering for the corners and edges of said box.

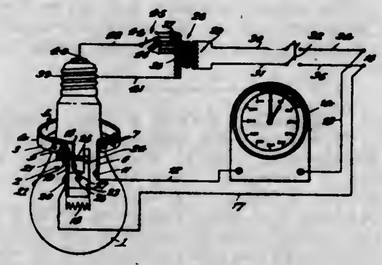
1,904,126. PISTON. JOHN SHEARMAN DONALDSON, St. Albans, N. Y. Filed Aug. 24, 1932. Serial No. 630,215. 8 Claims. (Cl. 309—10.)

1. The combination of a piston and a connecting rod, the piston comprising a ring-carrying head, a central substantially continuous tubular part depending therefrom and open at the top, a removable cap for the top of said tubular part, a skirt portion below and spaced away from the said ring-carrying head, and a plurality of downwardly and outwardly extending spaced legs united at their upper ends with said tubular part and at their lower ends with the lower half of said skirt portion, the connecting rod comprising a spherical head disposed within the bore of said tubular part, and the piston also including upper and lower bearing elements for said spherical head carried by said tubular part, the upper bearing element being removable from the top side of the piston.



1,904,127. AUTOMATIC ELECTRIC WRITING-COMPUTING MACHINE. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Sept. 13, 1926. Serial No. 135,210. 100 Claims. (Cl. 197—66.)

1. In a machine of the class described, the combination with a platen, a frame movable back and forth, a carriage movable on the frame, separate motors both mounted on

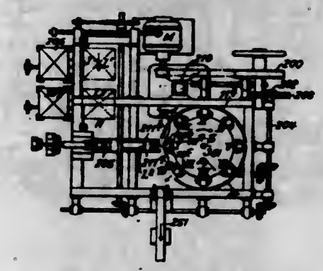


the frame for respectively moving the frame and carriage, the former in either direction, and automatically operated means for rendering the frame moving motor ineffective controlled by movement of the frame in either direction.

1,904,128. METHOD OF BURNING FUEL. JAMES W. FULLER, Catasauqua, Pa., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Mar. 19, 1924, Serial No. 700,199. Renewed Aug. 22, 1931. 10 Claims. (Cl. 222—7.)

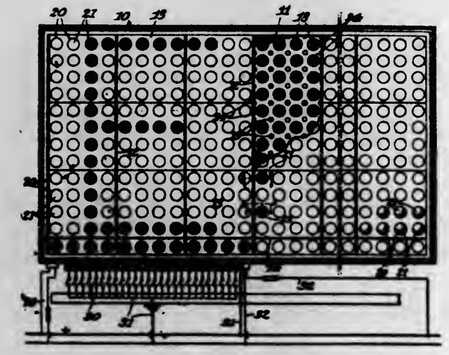
1. The method of burning fuel for heating non-combustible material in a kiln having an inlet end for the material to be treated and a discharge end, and a primary combustion chamber in direct communication with the discharge end, which comprises passing the material through the kiln and through the primary combustion chamber and during such movement of the material heating it by the combustion of pulverulent fuel of low volatile content, the combustion taking place partly in the chamber and partly in the kiln as the gases flow from the chamber into the kiln, and confining the zone of highest temperature to a relatively restricted region within and adjacent the discharge end of the kiln by projecting the fuel into the chamber in the form of a jet so directed that the fuel stream passes through the chamber along a circuitous path such that ignition of the fuel particles entering the chamber is brought about and combustion is maintained by radiant heat from the ignited fuel particles and also by radiant heat given off by the hot discharging material.

1,904,129. THERMOSTATIC RADIATION INDICATOR. PETER GARMS, New York, and GEORGE LEWIS DIGGLES, Flushing, N. Y., assignors to Electrical Testing Laboratories, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1932. Serial No. 584,496. 15 Claims. (Cl. 161—15.)



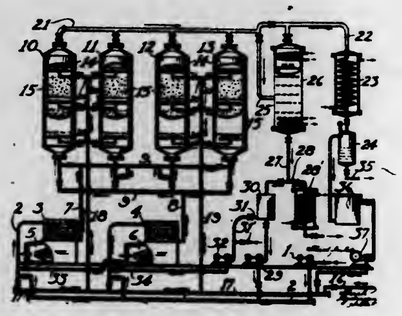
1. In an apparatus for testing electric lamps, the combination with a lamp, and means for supplying current to said lamp; of a temperature-controlled switch comprising an arcuate thermal expansion member disposed adjacent to said lamp, and circuit contacts operated by said member to close under the effect of heat radiated from said lamp upon illumination and to open upon the termination of said illumination; a timing device, and electrical means controlled by said contacts for controlling the operation of the timing device.

1,904,130. THREAD TESTING AND RECORDING DEVICE. PETER GARMS, New York, and GEORGE LEWIS DIGGLES, Flushing, N. Y., assignors to Electrical Testing Laboratories, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1932. Serial No. 595,262. 9 Claims. (Cl. 234—1.)



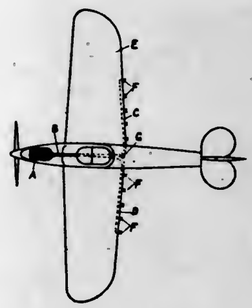
1. A thread testing and recording device comprising means for rotating a threaded body to undergo test and simultaneously proportionately displacing it axially the distance of the theoretical lead of its spiral thread during each complete revolution thereof, a record sheet, a pivoted recording mechanism having a stylus engaging said sheet and an element adapted to be guided by said thread during said movements of said body, and means for moving said record sheet transversely to the axis of rotation of said body simultaneously and proportionately with said movements of said body to cause said stylus to trace a line record of said thread on said sheet.

1,904,131. COMBINED MACHINE FOR MAKING, FILLING, AND CLOSING BAGS. PAUL GANGLER, Esslingen, Germany, assignor to Firm Fr. Hesser, Maschinenfabrik-Aktiengesellschaft, Stuttgart-Cannstatt, Germany. Filed Dec. 18, 1930, Serial No. 502,672, and in Germany Dec. 17, 1929. 13 Claims. (Cl. 93—8.)



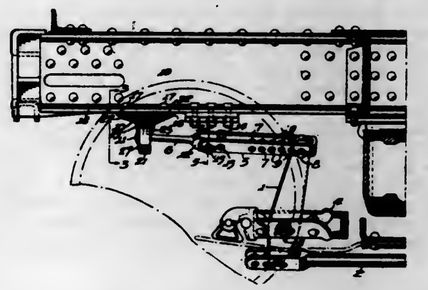
1. In a packing machine of the type specified, comprising a bag filling and closing machine having an intermittently operated conveyor mechanism with a plurality of receptacles having displaceable bottom plates for conveying the bags step by step to the various working stations, means for holding the bottom plates of the receptacles of the conveyor mechanism for vertical displacement and comprising guide rods secured to the bottom plates and automatically acting locking devices cooperating with said guide rods, means for releasing the locking devices comprising bolt-like members arranged to release the self-locking action of said devices, and means adapted to lift up at the desired places of the feed path of the conveyor receptacles said bolt-like members.

1,904,132. CHANGEABLE ILLUMINATED DISPLAY. LOUIS O. GLATZNER, Bristol, Pa. Filed Apr. 22, 1929, Serial No. 356,897. 9 Claims. (Cl. 40—130.)



1. A changeable sign embodying a casing divided into character sections, a group of lamps in each section, each group consisting of selective and non-selective species, and means for projecting light rays from said casing, said means comprising lenses in focus with said selective lamps.

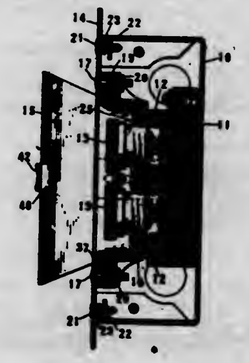
1,904,133. PROCESS FOR TREATING HYDROCARBONS. EDWIN J. GOHR, Elizabeth, N. J., assignor to Standard-I. G. Company. Filed Feb. 2, 1931. Serial No. 512,802. 2 Claims. (Cl. 196—53.)



1. An improved method for putting in operation an additional unit in an operating battery of continually recycling destructive hydrogenation units comprising passing a feed stock which consists of a mixture of high boiling fractions obtained from the product of the operating units of the battery with hydrogen under pressure in excess of 20 atmospheres through the additional unit until the temperature of operation within the destructive hydrogenation range from 700 to 925° F. is obtained therein, then gradually substituting fresh oil for a portion of the heavy fractions derived from the other operating units and bringing the ratio of fresh feed to recycled high boiling fractions to substantially the same value in all of the units of the battery.

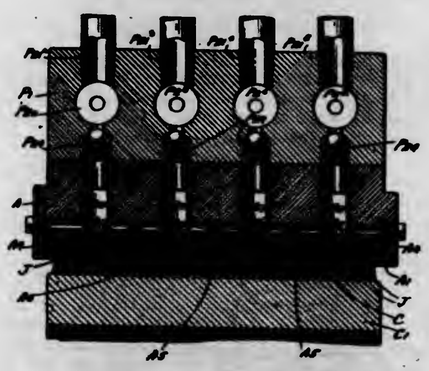
1,904,134. PROPULSION OF AIRCRAFT. ARCHIBALD HALL-BROWN, London, England. Filed Oct. 27, 1930, Serial No. 491,408, and in Great Britain Nov. 7, 1929. 1 Claim. (Cl. 244—18.)

In an aeroplane, a pipe for collecting the exhaust from the power-plant, branch pipes leading from the rear end of said pipe respectively to the trailing edges of each of the wings, each of said branch pipes being mounted to swivel separately from the others, and each having a plurality of nozzles.



1,904,135. BRAKE RIGGING FOR RAILWAY CARS. CYRUS HANKINS, Washington, D. C. Filed Mar. 26, 1931. Serial No. 525,531. 10 Claims. (Cl. 188—206.)

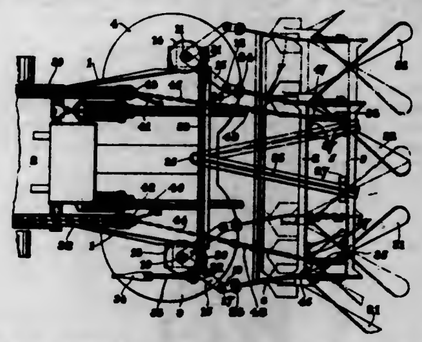
1. In a railway car brake rigging, the combination with the underframe of a car, of a dead lever, a bracket rigid with the underframe and having a recessed portion, and means movably connecting the upper end of the dead lever to the bracket, said means involving a member having a curved portion movably associated with the bracket, said bracket being provided with means disposed within said recess affording a seat for the curved portion of said member.



1,904,136. RESIDENCE PANEL BOARD. CHARLES E. HANNY, Unionville, Conn., assignor to Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 21, 1928. Serial No. 271,859. 8 Claims. (Cl. 247—10.)

1. A residence panel board construction including a box, a fuse block secured in said box and having pertinent terminals and projecting fuse plug shells, a cover for said box having a fuse door hinged thereto and an insulating fuse guard member detachably secured to said cover with securing means operable only from the rear of said cover, said guard member having passages to receive and surround said fuse plug shells and having continuous integral side walls to form a recess for the projecting ends of fuse plugs and said side walls forming an abutment for the said fuse door in its closed position the parts being so

constructed that when the door is open for inspection of the fuses all other conducting parts are covered, and means for detachably securing the cover and guard member to the box.

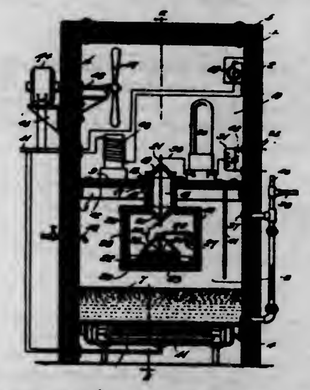


1,904,137. DYEING APPARATUS. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y., a Corporation of New York. Filed Oct. 1, 1930. Serial No. 485,616. 6 Claims. (Cl. 8—17.)

1. Apparatus for dying a wound mass of yarn, comprising a presser having an extended concave surface formed to fit against a circumferential surface of the mass of yarn so as evenly to compress a portion of the mass, and means for injecting dye through the presser into a portion of the yarn compressed by said surface.

1,904,138. RIDGING IMPLEMENT ON ROTARY TILLING MACHINES. PAUL RUDOLPH HASSON and EDWARD DARWENT ELLIS, Leeds, England, assignors to John Fowler & Co., (Leeds) Ltd., Leeds, England. Filed Aug. 13, 1931, Serial No. 556,900, and in Great Britain Mar. 28, 1931. 16 Claims. (Cl. 97—48.)

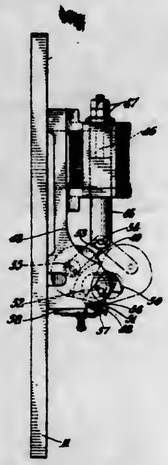
1. In a tilling machine comprising ground working implements adapted to loosen the soil, the combination of a tilling machine frame, a trailing frame attached to the tilling machine frame, shafts carried on said machine frame, worm wheels mounted on said shafts, arms attached to said shafts and pivotally connected to said trailing frame, ridging implements attached to said trailing frame, and means extended to proximity of the driver's seat to rotate said worm wheels and adjust the trailing



frame to cause the ridging implements to trail in lines having adjustable offset as regards the medial line of travel of the machine.

1,904,139. METHOD OF MAKING SELENIUM CELLS. WILHELM HENKEL and FRANZ MEYER, Jena, Germany, assignors to the Firm Carl Zeiss, Jena, Germany. Filed Dec. 28, 1929, Serial No. 417,218, and in Germany Jan. 7, 1929. 1 Claim. (Cl. 201—63.)

A method of making selenium cells consisting therein that a platinum layer is burnt in on one side of a glass plate, that this platinum layer is covered with an easily fusible substance, that a groove is worked into the said substance and that, then, along the said groove a groove is etched into the platinum and the glass by means of hydrofluoric acid, whereupon the said substance is removed and, finally, the groove filled with selenium.

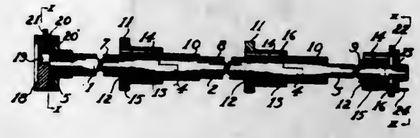


1,904,140. FREQUENCY CONTROL APPARATUS. ERNEST R. HENTSCHEL, Washington, D. C.; John Olson, administrator of said Ernest R. Hentschel, deceased, assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 28, 1930. Serial No. 455,130. 10 Claims. (Cl. 250—36.)

1. A frequency control apparatus comprising a cabinet structure divided into a pair of separate compartments, oscillator apparatus disposed in one compartment, a fre-

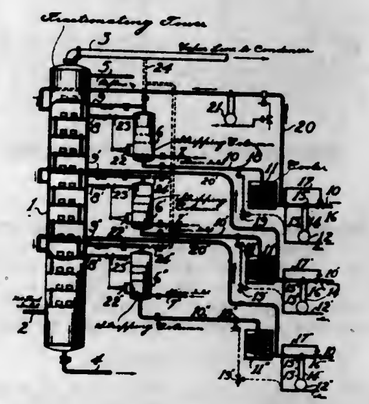
quency fixing element disposed in the other compartment, said last mentioned compartment being partially filled with fluid and having means for effecting the continuous boiling thereof at constant pressure for subjecting said frequency fixing element to heat of vaporization.

1,904,141. MAGNETIC SWITCH. WILBUR F. HURLBURT, East Orange, N. J., assignor to Automatic Switch Company, New York, N. Y., a Corporation of New York. Filed June 27, 1929. Serial No. 374,044. 1 Claim. (Cl. 200—111.)



In a magnetic switch, a vertically disposed supporting panel, a contacting member oscillatable about a horizontal axis parallel to said panel, a momentum member also oscillatable about a horizontal axis parallel to said first named axis from one extreme position to another, a solenoid magnet having a vertically moving core adapted when the magnet is excited to move said momentum member from either extreme position toward an intermediate neutral position, means including contact discs rotatable with said momentum member for deenergizing said magnet as the momentum member travels from either extreme position toward the intermediate position, said momentum member having a relatively large mass to carry it to the other extreme position, driving connections between said momentum member and said contacting member whereby the oscillation of the former will oscillate the latter, and a stop on said core determining the extreme positions of said momentum member.

1,904,142. ELECTRON DISCHARGE DEVICE CIRCUIT ARRANGEMENT. LAWRENCE A. HYLAND, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 6, 1929. Serial No. 360,904. 3 Claims. (Cl. 250—36.)

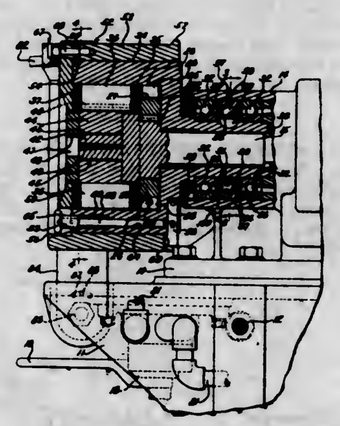


1. In an electron tube system, an electron tube having anode, grid and cathode, a second electron tube having anode, grid, cathode and heater electrode, said heater electrode being in thermal relation with the cathode of said second tube but electrically insulated therefrom, the anode of said first mentioned tube being connected to the cathode of said second mentioned tube, an input circuit connecting the grid of said first mentioned tube to its cathode, a source of anode potential having its negative terminal connected to the cathode of said first mentioned tube and having its positive terminal connected to the anode of said second mentioned tube, an independent source of grid biasing potential, and a voltage divider connected for variably applying a portion of said biasing potentisl between the cathode and grid of said second tube.

1,904,143. GAUGE DEVICE. ARENDT R. KOOS, Elizabeth, N. J. Filed Feb. 8, 1930. Serial No. 426,911. 5 Claims. (Cl. 33—178.)

1. A gauge device for measuring inside diameters, comprising a shaft, an indicator at one end thereof, a tubular member rotatably receiving the shaft, one end of said member having a dial cooperating with the indicator, the opposite end of the shaft being provided with an enlarged face carrying spiral threads, the opposite end of the tubular member enclosing the enlarged face and provided with radial ways facing the threads, and gauge pins slidable in the ways and engaging the threads.

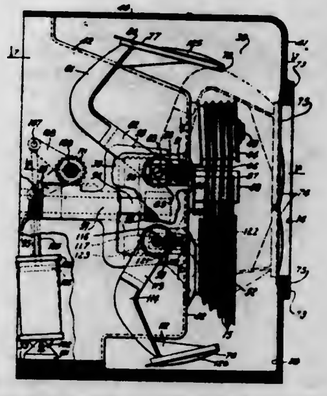
1,904,144. APPARATUS FOR FRACTIONATING LIQUIDS. PAUL E. KUHL, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 25, 1930. Serial No. 423,867. 4 Claims. (Cl. 196—139.)



4. In a fractionating system, a fractionating tower, means for taking off liquid product from an intermediary portion of the tower, a container connected with said means and adapted to hold a column of the liquid product, a liquid discharge line connected with the container, a rate of flow control device in said line to regulate the amount of liquid removed from the system, and a liquid level control on the container to regulate the amount of liquid taken out of the fractionating tower.

1,904,145. HALOGENATION OF AROMATIC COMPOUNDS. MAX ALBERT KUNZ, Mannheim, and KARL KOEBERLE and ERICH BERTHOLD, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 9, 1929, Serial No. 345,882, and in Germany Mar. 13, 1928. Renewed Aug. 24, 1932. 1 Claim. (Cl. 260—61.)

As a new article of manufacture tetrabromopyranthrone forming an orange red powder, practically insoluble in 96 per cent sulphuric acid of about 20° C., readily soluble in oleum and chlorosulphonic acid to a blue solution with a greenish tinge, forming a blue violet vat with an alkaline hydrosulphite solution at 60° C., from which the bulk of the leuco compound separates out as the corresponding alkali metal salt which cannot be brought into solution by raising the temperature, cotton being dyed from the said vat faint red brown shades.

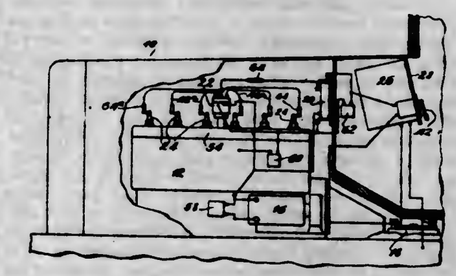


1,904,146. WIRE DRAWING APPARATUS. EINER W. LARSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1929. Serial No. 391,292. 10 Claims. (Cl. 205—13.)

1. In an apparatus for pointing the end of a wire and stringing dies thereon, a wire pointing device, a wire drawing drum arranged therearound, a common driving means for the pointing device and the drawing drum, means for reversing the direction of motion of the driving means, and means responsive solely to the direction of motion of the driving means for operating the wire pointing device and the drawing drum independently of each other.

1,904,147. WIRE DRAWING MACHINE. EINER W. LARSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1929. Serial No. 417,623. 2 Claims. (Cl. 205—19.)

1. In a wire drawing machine, a substantially completely enclosable working chamber having stock entrance and wire exit ports and a vertical doorway, a wire drawing unit housed in the chamber and comprising a horizontally disposed low speed capstan and a horizontally disposed high speed capstan positioned horizontally side by side and laterally spaced from the walls of the chamber, means to form and maintain a bath of lubricant within the chamber and extending above the threshold of the doorway and above the bottoms of the capstans, a pair of pivoted and slidable doors for the doorway, and means to slide the doors linearly and unitedly away from the doorway and then arcuately and oppositely into the

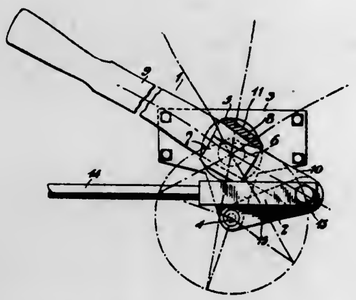


lateral spaces between the capstans and the chamber walls to open the doors and to reverse the action to close the doors.

1,904,148. PROCESS FOR ACCELERATING THE RETTING OF FLAX. WILHELM LENZ, Wiesbaden-Biebrich, and KURT JOCHUM, Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 11, 1929, Serial No. 377,603, and in Germany July 16, 1928. 5 Claims. (Cl. 92—5.)

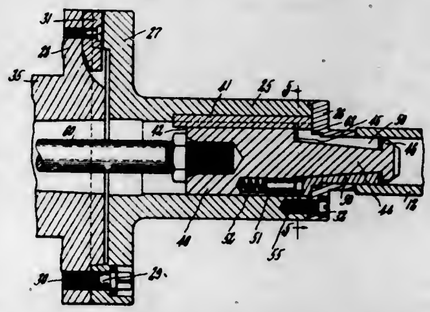
1. Process for accelerating the flax-retting process, which consists in adding to the retting liquid a mixture of bacteria of the mesentericus group and of different bacteria capable of causing fermentation of cane sugar.

1,904,149. MEANS FOR ELIMINATING THE EFFECTS ON RADIO CIRCUITS OF SPARKING IN THE IGNITION SYSTEM OF AN INTERNAL COMBUSTION ENGINE. ANTHON A. LEONARD, Forest Hills, N. Y., assignor, by mesne assignments, to Transitone Automobile Radio Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 3, 1929. Serial No. 330,035. 13 Claims. (Cl. 123—148.)



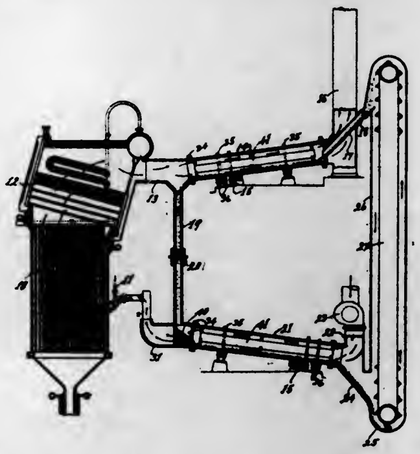
1. In an electric ignition system for an internal combustion engine having spark producing elements normally creating oscillations disturbing to radio apparatus, means for substantially eliminating said disturbing oscillations comprising a substantially non-inductive and substantially non-capacitive lumped resistance unit connected in series with said elements and in close proximity thereto.

1,904,150. HAIR WAVER. ALBERT OGWIN LEWIS, White Hall, Glais, Wales. Filed July 12, 1932, Serial No. 622,023, and in Great Britain May 6, 1932. 9 Claims. (Cl. 132—38.)



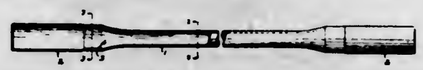
1. A hair waver comprising a mesh work adapted to be extended over the head, a series of hair engaging elements carried thereby, each of said hair engaging elements being provided with a helical groove, the helical groove on the successive hair engaging elements being oppositely inclined.

1,904,151. MECHANICAL MOVEMENT. LOUIS LEVES, City Island, N. Y. Filed Jan. 20, 1930. Serial No. 422,080. 3 Claims. (Cl. 74—39.)



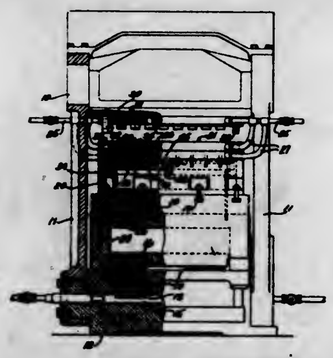
1. A manually operable mechanical movement comprising a manually operable lever of the first class having one free handle end; a rockable follower member; a fulcrum mounting for said manually operable lever adapting it to swing and to shift transversely of its fulcrum to vary its leverage; a pivotal mounting for said follower member supported with its axis fixed with relation thereto and with relation to said fulcrum and laterally offset from the latter; a pivot joint directly and operatively connecting one end of the manually operable lever to the outer shiftable end of the follower member, said pivot joint being constrained to swing around said axis of said pivotal mounting with a fixed radius and cause the shift of the manually operable lever across its fulcrum as it is swung; and a power-transmitting element connected to said pivot joint at the outer end of the follower member, the center of the fulcrum and the center of the fixed axis of the follower member being so related to each other that when the manually operable lever extends across said two points said lever will be in its mid position and its leverage will be gradually increased as it is swung in either direction from said mid position to correspondingly increase the application of power to said power-transmitting element.

1,904,152. WORK HOLDING MECHANISM. JOHN E. LOVELY, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed June 28, 1930. Serial No. 464,471. 9 Claims. (Cl. 82—44.)



3. A mechanism of the class described comprising oppositely disposed rotatable pilots for supporting and centering tubular work, means for moving said pilots toward and from each other to clamp and release work, a tubular stop for one of said pilots against which the work is held by the other of said pilots and into which said one pilot is retractible, and means actuable when said pilots are moved to work-engaging relation for clamping one of said pilots against the inner face of the work.

1,904,153. HEATING COMBUSTION AIR FOR A FURNACE. CHARLES E. LUCKE, New York, N. Y., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Mar. 26, 1927, Serial No. 178,565. Renewed Feb. 1, 1932. 2 Claims. (Cl. 110—56.)

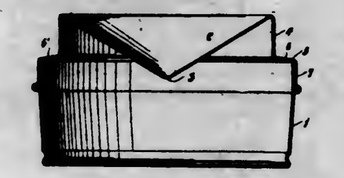


1. The process which comprises introducing a stream of fuel into a furnace, heating a stream of solid particles of refractory material to a temperature in excess of the ignition temperature of said fuel by contacting them directly with hot products of combustion leaving said furnace, continuously heating a stream of air in a sufficient amount and to a temperature sufficiently in excess of the ignition temperature of said fuel to cause a mixture of said air and fuel to be at a temperature in excess of the ignition temperature of said fuel by contacting said stream of air directly with said hot solid particles after removing them from the zone where they were heated, and continuously introducing a stream of said highly heated air together with said stream of fuel into said furnace at a temperature at least as high as the ignition temperature of said fuel.

1,904,154. ELECTRODE FOR DISCHARGE TUBES. JOHN J. MADINE, Cleveland, Ohio, assignor, by mesne assignments, to Flexlume Corporation, Tonawanda, N. Y., a Corporation of New York. Filed Nov. 28, 1927. Serial No. 236,201. 13 Claims. (Cl. 176—126.)

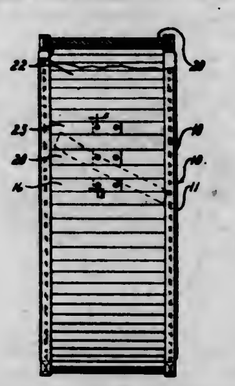
12. A luminous electrical discharge tube comprising a glass tube and a metallic, cup-shaped electrode having its open end disposed toward the electronic stream, and having its edge protected against the electronic stream, the surface of the electrode being coated with a thin, vitreous film which prevents disintegration of the electrode metal.

1,904,155. EJECTING MECHANISM. ANTHONY MALEC, Brookfield, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1928. Serial No. 324,872. 4 Claims. (Cl. 18—17.)



1. In a press, the combination of a vertically reciprocable mold plate, an ejector pin slidably mounted therein, a horizontally slidable plate having an aperture adapted to move into and out of registry with the ejector pin, a vertically movable support for the slidable plate, means for arresting the downward movement of the support during the downward movement of the mold plate, and means operable when the mold plate is at the bottom of its travel to move the sliding plate and thereby bring the aperture in the sliding plate into registry with the ejector pin and allow the ejector pin to drop therein.

1,904,156. PNEUMATIC SOUND REPRODUCER. RUDOLPH F. MALLINA, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1931. Serial No. 555,413. 20 Claims. (Cl. 179—118.)

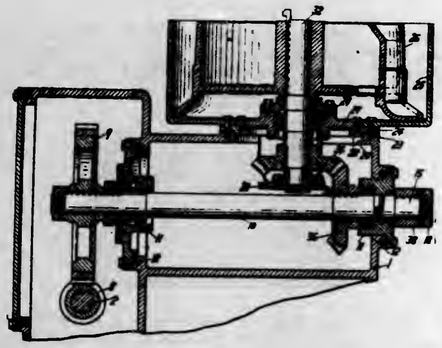


17. A pneumatic sound reproducer comprising a duct for a fluid stream having an increased area at the exit thereof, a valve, electromagnetic means for vibrating said valve in accordance with the sound to be reproduced and means for resiliently supporting said valve centrally in the exit of said duct.

1,904,157. DETERGENT DISPENSING DEVICE. JOSEPH RAYMOND MARTIN, Baltimore, Md., assignor to Frank E. Schwarzkopf, Baltimore, Md. Filed May 13, 1931. Serial No. 537,138. 2 Claims. (Cl. 141—9.)

1. A detergent dispenser comprising a cylindrical container, an inverted conical member having an opening in the central portion thereof, a vertical wall extending downwardly from the outer edge of said conical member, a horizontally extending rim projecting outwardly from the vertical wall and having openings on diametrically opposite sides of the conical member and a flange projecting from the rim to engage the outer side wall of the container.

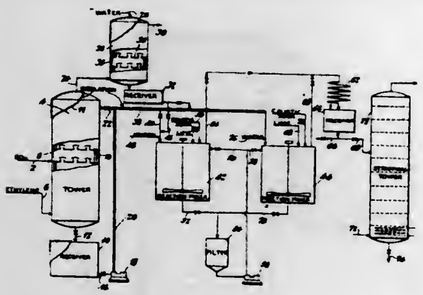
1,904,158. REEL AND METHOD OF ASSEMBLING REELS. LEE R. MCGUIRE, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1930. Serial No. 462,509. 10 Claims. (Cl. 206—59.)



1. In a cable reel, a member for supporting the reel having an unbroken channel and a two part lag engaging the member for protecting the cable.

8. In a reel, a lag having two sections, each section having a portion lapping the corresponding portion of the other section, and means operative at the overlapping portions for securing the sections tightly together.

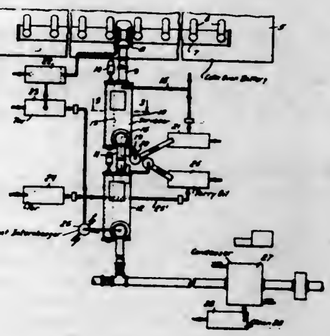
1,904,159. WIRE DRAWING MACHINE. EDWIN J. MCILVRIED, Cleveland, Ohio, assignor, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1929. Serial No. 357,754. 5 Claims. (Cl. 205—16.)



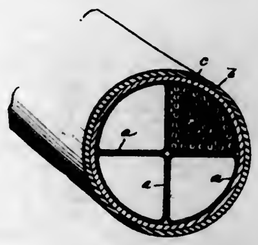
1. In a strand working machine, means to provide interchangeable finished strand delivery means and finished strand take-up means comprising a housing, a drive shaft therein, a capstan adapted to be mounted on the shaft for delivering the finished strand, and a winding unit adapted

to be driven by the shaft and to be removably mounted on the housing as a unit, with the strand receiving point of the winding unit substantially coincident with the

strand receiving point of the capstan and with the plane of rotation of the winding unit substantially perpendicular to the plane of rotation of the capstan.



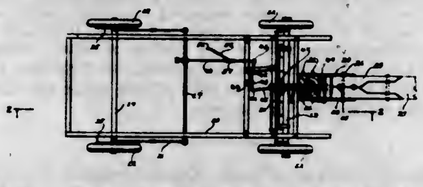
1,904,160. MANUFACTURE OF ACETIC ACID. SYLVAN R. MERLEY, Dover, N. J., and OTTO SPRING, Okmulgee, Okla., assignors to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1931. Serial No. 512,566. 9 Claims. (Cl. 260—116.)



1. The process of making acetic acid, which comprises contacting ethylene with sulfur trioxide in a contact zone, collecting the resultant carbyl sulfate from the bottom of said zone and recycling the same through said zone, cooling and hydrolyzing carbyl sulfate from said zone, neutralizing the hydrolysed solution with caustic soda, crystallizing the sodium sulfate in the neutralized solution, filtering the solution free of precipitated sodium sulfate, heating and concentrating the filtrate, adding lime and an excess of a solution of caustic soda to the mixture while vigorously stirring the same, adding a solution containing a mixture of isethionic and sulfuric acid to the mixture to acidify the same, distilling off the resulting acetic acid and collecting the condensed acetic acid.

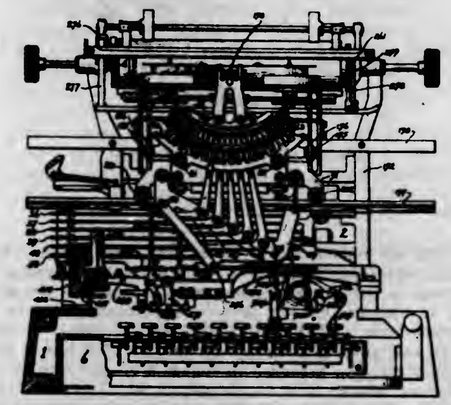
1,904,161. BY-PRODUCT COKE OVEN OPERATION. STUART PARMELEE MILLER, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1929. Serial No. 356,042. 2 Claims. (Cl. 202—30.)

1. A method of producing tarry oil which comprises, cleaning fresh hot coal distillation gases so as to remove entrained pitch constituents at a temperature at which a substantial proportion of condensable oils is retained in the gases in vapor form, and then bringing tar into contact with the clean hot gases so as to condense clean oils therefrom whereby the clean oils blend with the tar and form tarry oil.



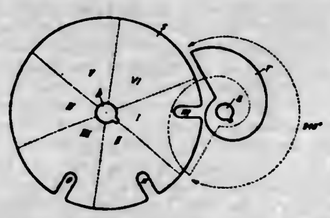
1,904,162. ELECTRICAL CABLE. HUMPHREYS MILLIKEN, Mount Royal, Montreal, Quebec, Canada. Filed Aug. 13, 1930. Serial No. 475,094. 1 Claim. (Cl. 173—81.)

A cable for alternating power currents, composed of a plurality of sectors helically arranged around the axis of said cable, each of said sectors being composed of a plurality of layers of solid wires, each layer being separate and continuous throughout the entire length of the cable, each wire continuing in the same layer throughout the length of the cable and being helically arranged around the axis of its segment, all of said wires and sectors being of the same polarity and connected together electrically at each end of said cable and having sufficient contact-resistance between adjacent wires throughout the length of the cable to tend to prevent current flowing between adjacent wires, for the purposes set forth.



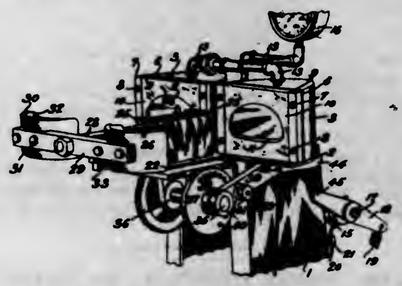
1,904,163. DRAFT DEVICE. ANDERSON F. MORRIS, Weir, Tex. Filed Apr. 30, 1931. Serial No. 534,070. 3 Claims. (Cl. 280—33.44.)

3. In combination with a trailer having brakes, a brake rod connected with the brakes, a lever pivoted to a part of the trailer and having one end connected with said brake rod, a bar connected with the opposite end of said lever, a rod having a ball and socket connection at its rear end with the front end of the last-mentioned bar, said ball and socket connection being arranged adjacent the front axle of the trailer, forwardly extending members connected with the front axle, a tongue supported for sliding and pivoted movement by said forwardly extending members, said tongue having a pair of upwardly extending projections thereon spaced apart, a clip connected to the front end of the rod and having a horizontal part passing through the space between said projections



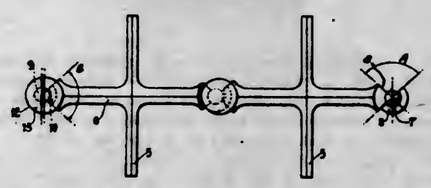
whereby rearward movement of the tongue or forward movement of the trailer with respect to the tongue will cause the forward projection to engage the clip and move the rod and lever to a position to apply the brakes.

1,904,164. SIGNALING SYSTEM AND APPARATUS THEREFOR. STERLING MORTON, HOWARD L. KRUM, and EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignors to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 11, 1930. Serial No. 467,352. 81 Claims. (Cl. 178—4.)



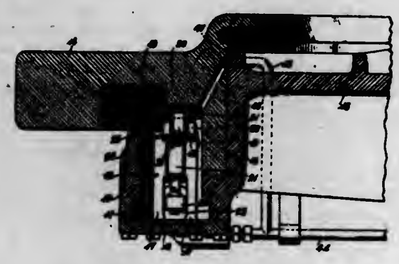
1. In a recorder, a stationary paper carrier, a type carriage movable to form character spaces, permutation code mechanism mounted on said carriage including longitudinally adjustable code members, and means to operate said code mechanism permutably according to the record to be made.

1,904,165. VARIABLE CONDENSER. EDMUND MULLNER, Berlin, Germany, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 10, 1930, Serial No. 427,111, and in Germany Feb. 18, 1929. 6 Claims. (Cl. 250—40.)



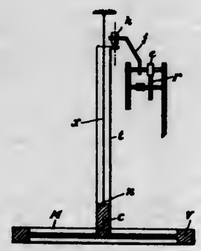
1. A variable condenser, adapted for use in a multi-frequency range oscillation circuit, comprising a plurality of stator groups, one of said groups including a plurality of spaced circular plates, a second of said groups including a plurality of spaced plates, the plate of the second group being segments of the plates of the first group, and at least one stator plate spaced from both said groups having an area different from the plates of both said groups, means for mounting all of said stator plates for rotation about a common axis to effect said multi-range operation, a plurality of rotor plates, of a common area, interleaved with said stator plates, and means for mounting said rotor plates for rotation about a common axis.

1,904,166. SHOE TIP AND HEEL PRESSING MACHINE. HERBERT R. POLLEYS, New Haven, Conn., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed June 2, 1928. Serial No. 282,296. 11 Claims. (Cl. 12—1.)



1. A footwear pressing machine having in combination, means arranged to surround a portion of an article of footwear, means for thrusting the surrounded portion into contact with the first mentioned means, and means for causing the first mentioned means to act upon the surrounded portion of the article of footwear with equal pressure at all points, the first mentioned means and the second mentioned means being relatively adjustable.

1,904,167. CONVEYER. ARNOLD REDLER, Gloucester, England, assignor to Redler Conveyor Company, Quincy, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1927, Serial No. 224,484, and in Germany Oct. 9, 1926. 3 Claims. (Cl. 198—171.)

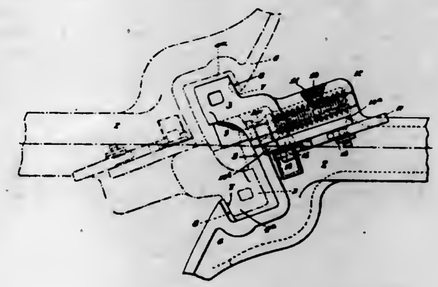


1. A conveyer for transporting comminuted material comprising a conduit formed with a channel having a flat bottom and upstanding sides and a conveyer chain disposed therein consisting of cruciform links having longitudinal webs and rigidly attached cross-arms, said cross-arms extending from intermediate points at each side of said webs and disposed with said webs to lie on said bottom in a plane, articulating means consisting of a pivot pin and receiver therefor formed cooperatively on each pair of web-ends which are adjacently disposed, said pin being arranged to have its axis perpendicular to and extending upwardly from the plane of its web and arms, and interengaging means formed about the respective bases of said pin and receiver and having portions cut away so as to disengage when said webs are swung through a predetermined angle about said pivot out of normal position and to engage and prevent displacement of said pin and receiver when said webs are in normal position.

1,904,168. LUBRICATING SYSTEM AND PUMP. JOHN REID, Oil City, Pa. Filed Nov. 22, 1928. Serial No. 321,236. 6 Claims. (Cl. 184—27.)

1. In a driving mechanism, the combination of a rotatable eccentric, an eccentric ring therefor, an annular lip extending outwardly and upwardly from said eccentric and forming an annular trough adapted to collect oil flowing from the bearing surfaces of said eccentric and ring, and an oil pump arranged wholly within said trough at the point furthest removed from the center of rotation of said eccentric, whereby said pump may be substantially submerged in the oil collected at said point in said trough.

1,904,169. TORSION PENDULUM. JEAN LÉON REUTTER, Paris, France. Filed Nov. 4, 1927, Serial No. 231,042, and in France Nov. 15, 1926. 2 Claims. (Cl. 58—131.)



1. A suspended torsion pendulum including the combination, with a flywheel arranged for rotary oscillation about a substantially vertical axis and a suspension wire generally corresponding with said axis of a stem fixed at the center of said flywheel and to the top of which said wire is attached at a relatively great distance from the center of gravity of the flywheel, a tube rigidly secured to said stem and having an open and free upper end, and concentrically disposed about said suspension wire, an eccentrically disposed pin surmounting said tube, and drive means including a driven escapement having a fork associated therewith and arranged to make contact with said pin in order to oscillate said pendulum as a whole, said flywheel being solely supported and guided in movement by said suspension wire and said tube terminating short of the point of suspension of said wire with the upper open end thereof arranged independent of contact with the same.

1,904,170. CYCLIC PROCESS FOR THE PRODUCTION OF SULPHITE PULP. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 14, 1925. Serial No. 43,481. 3 Claims. (Cl. 92—11.)

1. A cyclic process which comprises cooking raw cellulosic material in a sulphurous acid solution of alkali sulphite, smelting the inorganic content of the spent cooking liquor in a reducing atmosphere to produce alkali sulphide and alkali carbonate, dissolving the smelted compounds in water, carbonating the solution to convert the alkali sulphide into alkali carbonate, treating the carbonated solution with a water-soluble oxidising agent to oxidise such residual alkali sulphide as may be present therein to an oxygen-containing salt of the nature of alkali sulphite and alkali sulphate, and acidulating the resulting solution with sulphur dioxide to form a fresh liquor for repeating the cooking step of the cycle.

1,904,171. CAR COUPLER. DAVID ROBINSON, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 6, 1925, Serial No. 60,733. Renewed Dec. 16, 1930. 1 Claim. (Cl. 213—100.)

In a car coupler of the vertical plane type having a laterally extending buffing face and a plurality of fixed jaws having a pulling engagement with complementary jaws on an opposing coupler head, a horizontally movable T-shaped lock confined within the vertical extent of said jaws and normally projected forwardly of the line of said buffing face and arranged to engage a similar lock on an opposing coupler head of like design, the said lock being capable of movement inwardly of said buffing face to permit the opposing coupler to reach coupling position, and a spring for normally maintaining the said lock in projected position.

1,904,172. PROCESS FOR TREATING LOW BOILING HYDROCARBONS. HELIODOR ROSTIN, Berlin, Germany. Filed Mar. 2, 1929. Serial No. 344,102. 4 Claims. (Cl. 196—44.)

3. A process for treating low boiling hydrocarbons which comprises conducting the same over a porous ore in the pyrophorous state at an elevated temperature.

1,904,173. METHOD OF REMOVING CORROSIVE SULPHUR FROM HYDROCARBON OILS. REGINALD K. STRATFORD and WILLIAM P. DOOHAN, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company, a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,620. 10 Claims. (Cl. 196—32.)

1. The method of removing corrosive sulphur from hydrocarbon oils, consisting of bringing the oil into intimate contact at a temperature between 212° and 300° F. with an alkaline solution containing a substance adapted to promote contact between the oil and treating solution.

9. The method of removing corrosive sulphur from hydrocarbon oils, comprising bringing the oil into intimate contact at a temperature between 212° F. and 300° F. with an alkaline solution containing rosin.

1,904,174. ARRANGEMENT FOR TRANSMITTING WIRELESS SIGNALS. MAXIMILIAAN JULIUS OTTO STRUTT and POPKO REINDER DIJKSTERHUIS, Eindhoven, Netherlands, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Sept. 5, 1929, Serial No. 390,526, and in the Netherlands Sept. 1, 1928. 5 Claims. (Cl. 250—33.)

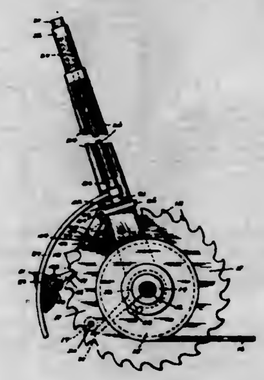
1. An antenna system comprising a transmission line, electrically open ended radiators coupled thereto, an auto-transformer supplied with high frequency current, and feeders coupling each end of the transmission line to the auto-transformer.

1,904,175. CADMIUM-NICKEL ALLOY. CARL E. SWARTZ, Highland Park, and ALBERT J. PHILLIPS, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed June 30, 1932. Serial No. 620,305. 6 Claims. (Cl. 75—1.)

1. A metal alloy containing from 0.25% to 7% nickel and the balance substantially cadmium.

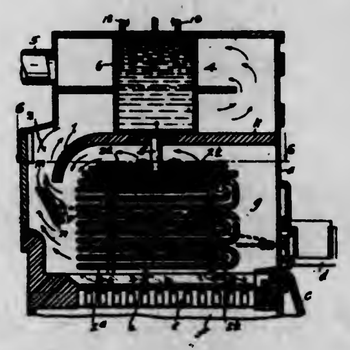
1,904,176. CADMIUM-NICKEL ALLOY. CARL E. SWARTZ, Highland Park, and ALBERT J. PHILLIPS, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1932. Serial No. 646,976. 6 Claims. (Cl. 75—1.)

1. A metal alloy containing from 0.25% to 7% nickel, magnesium and zinc in appreciable quantities not exceeding a total of 3% and the balance cadmium.



1,904,177. FENCE POST ANCHOR. JOHN F. SWENSON, Duluth, Minn. Filed Sept. 18, 1930. Serial No. 482,810. 5 Claims. (Cl. 189—31.)

1. The combination with a post of an anchoring device connected to the base of the post, said device comprising a lower plate member, an upper plate member rotatably secured to the lower member, an upstanding lug formed on said upper member for attaching the post to said member, and common means rotatably securing said plates and also fixedly securing said post to said upstanding lug.

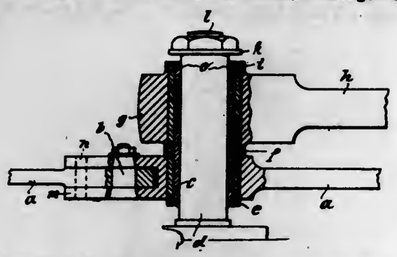


1,904,178. BRAKE DEVICE. FRANK O. VAUGHN, Poughkeepsie, N. Y. Filed Jan. 30, 1932. Serial No. 589,776. 2 Claims. (Cl. 74—54.)

1. A hand operated brake device comprising a cable sheave and a ratchet wheel for rotating the same, a hand lever movably associated therewith for actuating the ratchet wheel, a pawl member pivoted to said hand lever in the path of travel of said ratchet wheel and means mounted on said hand lever for raising said pawl member from said ratchet wheel, said pawl member formed with a closed end and alined orifices in the sides, and a pawl

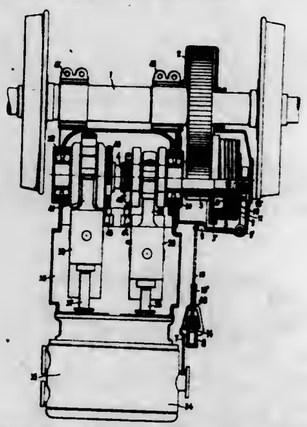
comprising a roller mounted in a floating manner in said pawl member and adapted to contact both with the tooth of the ratchet wheel and the closed end of the pawl member during the operation of said pawl.

1,904,179. HOT WATER HEATING FURNACE. CARL A. W. VOIGT, Portland, Oreg. Filed June 15, 1931. Serial No. 544,487. 6 Claims. (Cl. 122—356.)



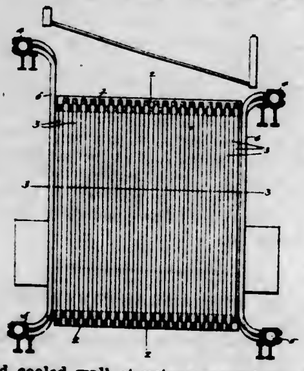
1. In a hot water heating apparatus, a combustion chamber provided with a dome-like roof and a rear wall extending to a point relatively close to the bottom of the combustion chamber, whereby the products of combustion are momentarily retarded and held in said combustion chamber, a flue chamber located over said combustion chamber and a passageway leading from under said rear wall of the combustion chamber to said flue chamber, a series of units of hot water coils arranged along three sides and the roof of the combustion chamber, the return pipes of the apparatus being connected in groups to the coil units, respectively, a hot water drum centrally located in said flue chamber to which said coil units are connected.

1,904,180. CONNECTING ROD CONNECTION. RICHARD P. WAGNER, Berlin, Germany. Filed Jan. 8, 1929, Serial No. 331,072, and in Germany Jan. 12, 1928. 2 Claims. (Cl. 74—17.)



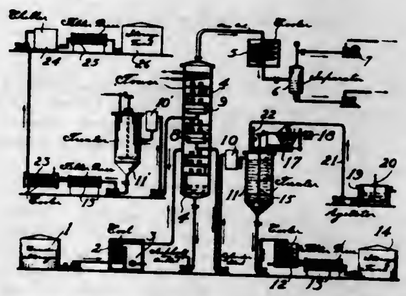
2. The combination of a crank pin, a main connecting rod, a side connecting rod, and means for mounting said

rods on said crank pin for axial movement relative thereto, said means consisting of a sleeve slidably mounted on said crank pin and carrying said rods, a flange on one



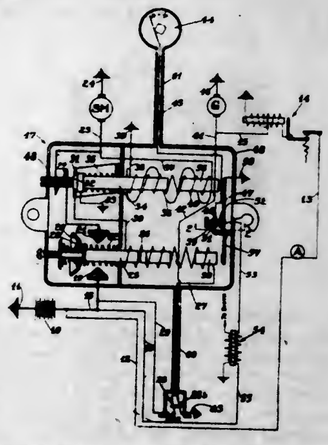
end of said sleeve for preventing movement of said rods in one direction, and means on said sleeve for preventing movement of said rods in the opposite direction.

1,904,181. BOOSTER. RICHARD P. WAGNER, Berlin-Lichterfelde, Germany. Filed Apr. 23, 1929. Serial No. 357,439. 4 Claims. (Cl. 105—48.)



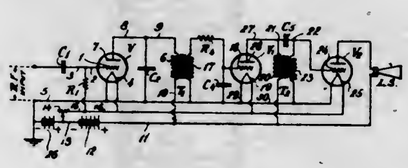
1. A booster comprising an axle, a crank shaft, a permanent-mesh gear operatively connecting said crank shaft and said axle, and a slip clutch in combination with a one-way clutch in said gear.

1,904,182. TUBULAR FLUID-COOLED WALLS. ANTHONY E. WEINGARTNER, Bethlehem, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1930. Serial No. 474,033. 3 Claims. (Cl. 122—235.)



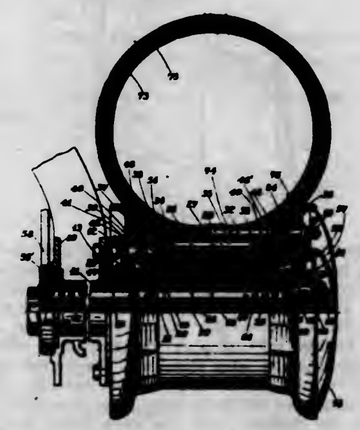
1. A fluid cooled wall structure comprising a plurality of tubes of substantially rectangular exterior cross sectional form, and a header also of substantially rectangular exterior cross sectional form in which said tubes terminate, alternate tubes entering the header at spaced points longitudinally of the tubes to thereby permit contiguous arrangement of the intermediate portions.

1,904,183. PROCESS OF TREATING OILS. ALFRED A WELLS, Roselle Park, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 22, 1929. Serial No. 408,966. 5 Claims. (Cl. 196—147.)



1. Process of treating lubricating oil comprising passing an oil stock containing lubricating oil through a narrow heated passageway into an enlarged fractionation zone to obtain a fraction consisting of the lubricating oil, removing the fraction from the fractionation zone and directly agitating it in an unheated treating zone with a solid absorbent decolorizing agent at a temperature not less than 220° F., and separating the fraction from the decolorizing agent.

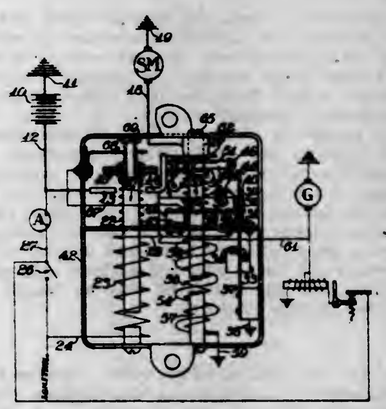
1,904,184. AUTOMATIC STARTING MECHANISM FOR INTERNAL COMBUSTION ENGINES. DANIEL L. WERTZ, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed July 26, 1930. Serial No. 471,075. 2 Claims. (Cl. 290—38.)



1. In an automatic starting and ignition system for internal combustion engines, a starting circuit including a starting switch, an ignition circuit including an ignition switch, a solenoid for controlling said starting switch, a magnetic relay for opening said solenoid circuit when the engine starts, and means whereby said magnetic relay closes the ignition switch during the starting operation and maintains it closed as long as the engine is in operation.

1,904,185. LOW FREQUENCY AMPLIFIER. HAROLD ALDEN WHEELER, Great Neck, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 17, 1927. Serial No. 168,925. 19 Claims. (Cl. 179—171.)

15. In an audio-frequency amplifier, the combination with a pair of thermionic tubes each having anode, cathode and grid, of a transformer having primary and secondary windings, said transformer serving to couple the output section of one said tube with the input section of the other, said transformer having a low ratio of transformation selected to approximately match the plate circuit impedance of the preceding tube with the grid circuit impedance of the succeeding tube when the grid thereof swings considerably positive, whereby the introduction of distortion due to the flow of grid current in said amplifier is minimized.

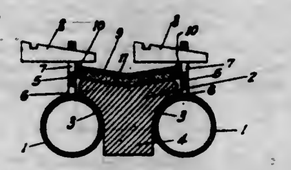


1,904,186. BRAKE MECHANISM. MAURICE P. WHITNEY, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed June 19, 1930. Serial No. 462,185. 18 Claims. (Cl. 188—18.)

1. Braking mechanism for automotive vehicles including a frame support, an axle mounted thereon, an anchor member mounted on said axle and rigidly coupled to said frame support, a rim journaled on said anchor member adjacent said support, and cooperating brake members connected respectively to said rim and anchor member.

1,904,187. AUTOMATIC STARTING MECHANISM FOR INTERNAL COMBUSTION ENGINES. MAURICE P. WHITNEY, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed May 6, 1931. Serial No. 535,323. 8 Claims. (Cl. 290—38.)

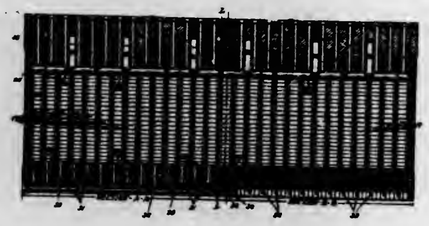
1. In automatic starting mechanism for internal combustion engines, a starting circuit including a source of electrical energy, a starting motor and a starting switch for controlling said motor, a control circuit including said source of energy and electromagnetic means for actuating said starting switch, means for opening said control circuit when the engine starts and for closing the same when the engine stalls, and a thermostatic switch energized by the closing of the starting switch for periodically interrupting said control circuit after a predetermined time.



1,904,188. ANIMAL TRAP. JOSEPH D. ZAHM and JOHN U. LEHN, Lititz, Pa. Filed Feb. 9, 1931. Serial No. 514,338. 9 Claims. (Cl. 43—88.)

1. An auxiliary spring for an animal trap, of U-form, and having rounded ends and apertures and a slot leading into each of said apertures, means being provided to prevent rotation of said spring on said trap beyond a limiting position.

1,904,189. MEANS FOR RETAINING FURNACE WALL BLOCKS AGAINST TUBES. ERVIN G. BAILEY, Easton, and RALPH M. HARDGROVE, Bethlehem, Pa., assignors to Fuller Lehigh Company, Fullerton, Pa., a Corporation of Delaware. Original application filed Oct. 20, 1927, Serial No. 227,456. Divided and this application filed Nov. 17, 1928. Serial No. 320,037. 5 Claims. (Cl. 122—6.)

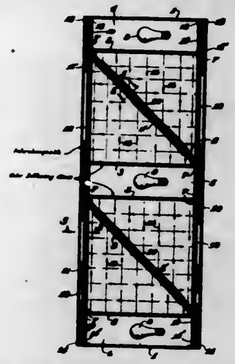


1. In a furnace wall, water tubes, tile between said tubes having shoulders curved to fit the tubes, holding members for said tile attached to said tubes and means cooperating with said holding members, said means comprising a curved plate extending across the rear surface of said tile to press said tile into contact with said tubes.

1,904,190. PROCESS OF MANUFACTURING CHLORINE DIOXIDE. WILLY BECHER, Bussum, Netherlands. Filed Aug. 25, 1930, Serial No. 477,795, and in the Netherlands Aug. 26, 1929. 13 Claims. (Cl. 23—152.)

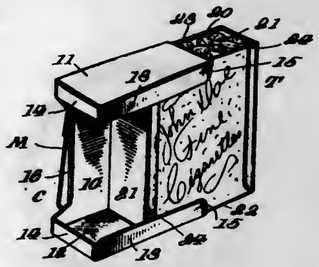
1. A process for preparing chlorine dioxide from alkali metal chlorates and sulphuric acid comprising mixing the alkali metal chlorate with inorganic substances indifferent to alkali metal chlorates and sulphuric acid to form a mixture in solid lumps and then subjecting said lumps to the action of sulphuric acid.

7. A process for preparing chlorine dioxide from alkali metal chlorates and sulphuric acid comprising mixing the alkali metal chlorate with inorganic substances indifferent to alkali metal chlorates and sulphuric acid to obtain the mixture in the form of solid lumps, then subjecting said lumps to the action of sulphuric acids and introducing gases indifferent to chlorine dioxide during the reaction of said lumps with said sulphuric acid, and then saturating said gas introduced with an organic reduction agent in vapor condition.



1,904,191. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1924. Serial No. 705,556. 28 Claims. (Cl. 202—142.)

1. In a coking retort oven, in combination: a plurality of spaced heating walls providing intermediate coking chambers, said heating walls respectively comprising vertical combustion flues; a pair of interior and a pair of side flow ducts in each heating wall respectively communicably connected with interior and side groups of the combustion flues of their respective heating walls, the members of said respective pairs of flow ducts being located on opposite sides of the central portion of the heating wall and the flow ducts constituting the interior pair being substantially equidistant from the center of the heating wall; a pair of mediate flow ducts respectively located between a side flow duct and an interior flow duct; the flow ducts being each of substantially equal length and being also communicably connected individually by duct means extending substantially from the central portion of the flow duct over the top of the coking chamber with substantially the central portion of the corresponding flow duct of an adjacent heating wall; and crosswise regenerators communicably connected with the flues of said heating walls.



1,904,192. SIGN. MELVIN BERNARD BENSON, New York, N. Y., assignor, by mesne assignments, to Melvin B. Benson Corporation, a Corporation of New York, and Melvin B. Benson. Filed Dec. 14, 1929. Serial No. 414,042. 2 Claims. (Cl. 40—133.)

1. An electric sign including a casing, four light beam diffusing glass plates carried by said casing and forming lighting chambers at the top, middle and bottom portions thereof with reflecting chambers disposed between the lighting chambers, double back to back mirrors carried within said reflecting chambers and inclined to the glass diffusing plates, each double mirror being adapted to

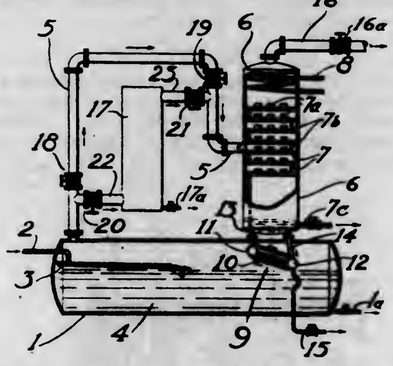
project images of the diffusing glass plates and stenciled plates carried in front and back of said casing directly opposite the reflecting chambers.

1,904,193. PACKAGE HOLDER. CHARLES E. BEAG, Vero Beach, Fla. Filed Aug. 31, 1931. Serial No. 560,423. 10 Claims. (Cl. 206—41.)

3. A package holder of the character described comprising a carrier member formed with a back portion having forwardly bent end portions providing transversely disposed guides, said guides being spaced apart to form an open front portion for the carrier member, a tray member having ends slidably engaging said guides, so as to move laterally with respect to the carrier member, the front of said tray having an open area for exposing a package carried by said tray, said open area being positioned to register with the open front portion of the carrier member, and means limiting sliding movement of the tray member and the carrier member in both directions.

1,904,194. CURTAIN HEADING. EDMOND P. BIXBY, New York, N. Y. Filed Dec. 1, 1932. Serial No. 645,295. 5 Claims. (Cl. 156—10.)

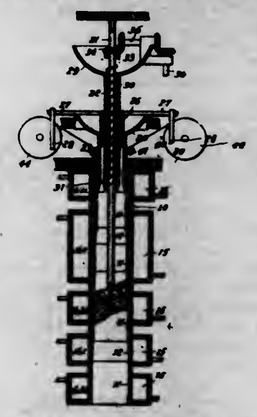
2. A curtain heading including a supporting rod receiving tape positioned longitudinally at the rear of the curtain near the upper end, said tape being spaced



from the upper edge and provided with spaced apertures, said apertures being arranged in groups with a greater distance between certain apertures than others whereby the curtain may be folded to produce evenly spaced gatherings.

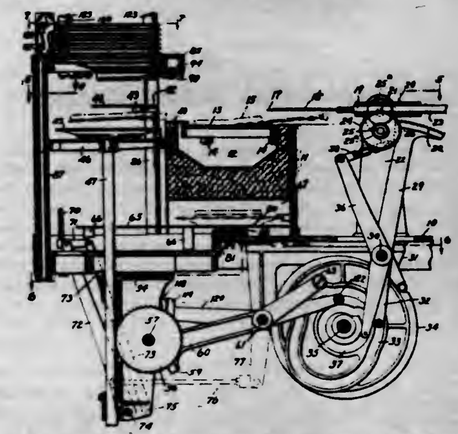
1,904,195. ELECTRIC DISCHARGE TUBE. CORNELIS BOL, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 27, 1930, Serial No. 456,025, and in the Netherlands Aug. 10, 1929. 8 Claims. (Cl. 250—27.5.)

1. An electron discharge device comprising an envelope having a wall with one portion of glass and another portion of sheet metal, said portions having edges, the edge of the sheet metal portion being hermetically sealed to the edge of said glass portion, a plurality of rigid conductors hermetically sealed by vitreous insulation into said sheet metal portion side by side to project on both sides of said sheet metal portion, said conductors constituting contact pins on the outer side and electrode supports on the inner side of said sheet, an electron emitting cathode and a cooperating anode mounted in said envelope and electrically connected to the inner ends of said conductors.



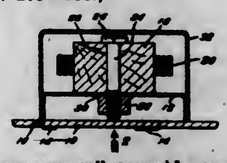
1,904,196. APPARATUS FOR TREATING HYDROCARBONS. SEWARD R. BOLLES, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 18, 1928. Serial No. 247,517. 5 Claims. (Cl. 196—139.)

1. Apparatus for treating hydrocarbons, comprising a vapor separating chamber, a fractionating column communicating with the vapor space of the chamber and having an outlet for vapors, a thermosiphonic reboiler, and closed conduits connecting spaced portions of the thermosiphonic reboiler with the lower portion of the fractionating column to form with the fractionating means a reservoir for condensate, said reboiler being positioned within said vapor separating chamber.



1,904,197. CORK MANUFACTURE. WILLIAM G. BOND, Wilmington, Del. Filed May 20, 1926. Serial No. 110,521. 11 Claims. (Cl. 18—18.)

1. The process of making articles which consists in feeding an annular mass of comminuted particles and a heat coagulating binder thru a forming tube past alternate hot and cold zones and in simultaneously passing thru the center of the mass a plurality of rods of different

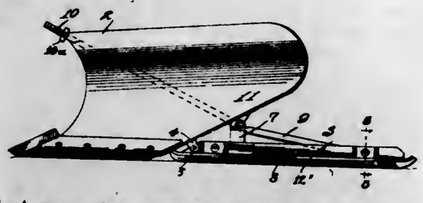


material, allowing the coagulating mass to expand and grip said rods and thereby form the sole translating means for said rods.

1,904,198. DISH HANDLING MECHANISM. HARRY RUSSELL BRAND, New York, N. Y. Filed July 3, 1930. Serial No. 465,755. 12 Claims. (Cl. 53—7.)

1. In combination with a commodity dispensing mechanism, a support for a stack of dishes, means for withdrawing a dish from the bottom of the stack, a vertically reciprocable carrier adapted to convey said dish to a position to receive a commodity from said dispensing mechanism, and means operating thereafter to remove the dish from said carrier.

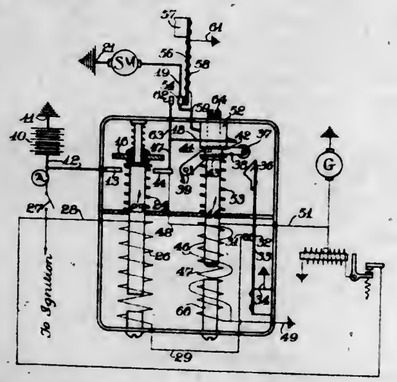
1,904,199. INDUCTANCE. FRANCIS T. BREWER, Dayton, Ohio, assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed June 27, 1931, Serial No. 547,218. Renewed Aug. 22, 1932. 11 Claims. (Cl. 175—356.)



1. A high frequency coil assembly comprising in combination, a multiple layer coil, said coil having a non-

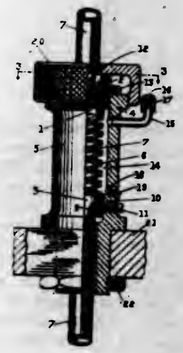
magnetic support core, a non-magnetic conductor extending into and through the entire support core of said coil whereby eddy currents are generated in said conductor, a shield for shielding said coil, said conductor and said shield cooperating to maintain a high ratio of inductance to resistance of the coil.

1,904,200. PROCESS OF PRODUCING AND DISTILLING AQUEOUS SULPHURIC ACID SOLUTIONS OF SECONDARY AND TERTIARY ALCOHOLS. BENJAMIN T. BROOKS, Greenwich, Conn., assignor, by mesne assignments, to Standard Alcohol Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1931. Serial No. 547,896. 10 Claims. (Cl. 260—156.)



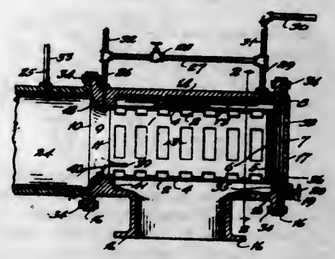
1. Process of selectively distilling a secondary or tertiary alcohol from a solution containing such an alcohol and aqueous sulphuric acid, which comprises distilling the solution while retaining the same by surfaces of a vitreous character and while holding said solution substantially exclusively in contact with surfaces of a vitreous character.

1,904,201. REVERSIBLE AND QUICK-CHANGING RUNNER AND SHOE. WILLIAM JOHN CHAPMAN, Virginia, Minn. Filed Sept. 10, 1930. Serial No. 480,993. 3 Claims. (Cl. 37—44.)



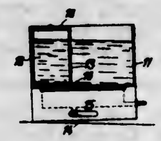
1. A snow plow comprising a pair of wings terminating at their forward edges in an acute angle, each of said wings having a rearwardly extending ear, a runner pivotally mounted to each of said ears, a flexible bar connecting said runners, brace rods connected between said flexible bar and a rear portion of each of said runners, a rod connected between said flexible bar and the forward edges of said wings, and adjustable means upon said rod for raising and lowering said plow.

1,904,202. AUTOMATIC STARTING MECHANISM. FRANK T. CHRISTIAN, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Apr. 28, 1931. Serial No. 533,378. 8 Claims. (Cl. 290—38.)



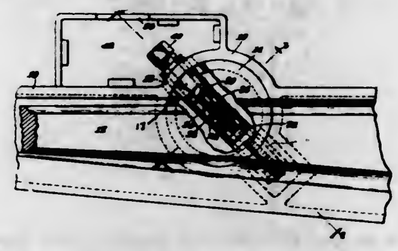
2. In an automatic starting mechanism for internal combustion engines, a starting circuit including a source of energy, a starting motor and a starting switch for controlling said motor, means energized by current traversing the starting circuit for causing said switch to be held closed until the engine starts and means for rendering said holding means inoperative after the starting motor has been energized for a predetermined time.

1,904,203. BEARING AND APPLICATION THEREOF. ERNEST CECIL COPE, Spondon, near Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed Mar. 29, 1929, Serial No. 350,920, and in Great Britain Apr. 11, 1928. 6 Claims. (Cl. 308—152.)



1. A spindle mounting comprising a bearing sleeve, said sleeve having tubular end portions and an intermediate helical bearing portion joining said end portions and integral therewith, and means for adjusting the diameter of the intermediate portion, said adjusting means comprising means to enable torsion to be applied to said intermediate portion and means to maintain the applied torsion on the intermediate portion.

1,904,204. FLUID CONTROL VALVE. EUGENE FRANK DELÉRY, New Orleans, La., assignor by Decree of Distribution to Mrs. Edna Fuselier Deléry. Filed Dec. 5, 1927. Serial No. 237,718. 7 Claims. (Cl. 137—152.)

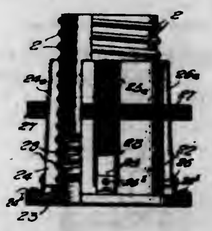


1. In a fluid control valve an interior hollow reciprocating cylinder open at the entrance end, a rigid head at the end of the said cylinder farthest away from the entrance, an aperture in the rigid head and multiple ports in the circumferential wall of the reciprocating cylinder, a cup packing attached to the rear of the partition, an annular washer attaching the cup packing to the head, and means for attaching the annular washer to the partition, means to prevent the rotation of the reciprocating cylinder.

1,904,205. ELECTRIC HEATING AND COOKING APPLIANCE. EDUARDO RICCI DEL RICCIO, Berlin, Germany. Filed Apr. 8, 1931, Serial No. 528,615, and in Germany Apr. 17, 1930. 4 Claims. (Cl. 219—43.)

1. A cooking appliance comprising in combination an electrically heated vessel, a tipping pivot element upon said vessel, an auxiliary vessel closed at the top and open at the bottom located within said main vessel laterally to said tipping pivot element, and means adapted to be actuated by the tipping of the vessel for breaking the heating circuit.

1,904,206. TONGUE SWITCH. ISRAEL K. DIXON, Johnstown, Pa. Filed Nov. 24, 1931. Serial No. 577,069. 9 Claims. (Cl. 246—443.)



1. A switch comprising a switch body, a tongue having a heel journalled therein and whose lower surface bears on a seat formed in the journal portion of said switch body and a hold down device extending transversely through the tongue and making a bearing contact with spaced portions of the switch body on opposite sides of the axis of oscillation of the tongue heel and pressing against the central axial portion of said heel.

1,904,207. HINGE. RAMON DONADEU, Buenos Aires, Argentina. Filed June 28, 1932. Serial No. 619,676. 2 Claims. (Cl. 16—54.)

1. In a cushioning hinge for doors, and the like, the combination of two superposed tubular members, to be respectively attached to the door and the door jamb, means uniting said members permitting their relative rotation, a hollow piston disposed within said tubular members, and provided with cam grooves arranged to be engaged by pins provided on said tubular members, the closed bottom of said piston containing a bore opening into said piston and adapted to communicate with a duct provided in the lower portion of the lower tubular member having a second duct in its upper portion, and a grooved screw and check valves disposed in the closed bottom of said hollow piston for controlling the flow of a liquid contained in said lower tubular member.

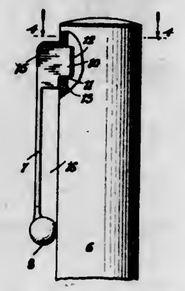
1,904,208. VARIABLE INDUCTANCE SYSTEM. JENNINGS B. DOW, Alexandria, Va. Filed Nov. 14, 1930. Serial No. 495,777. 16 Claims. (Cl. 171—242.)

1. A high frequency inductance system comprising a helical inductance coil, a metallic member, and screw threads formed interiorly of said metallic member and having a pitch corresponding to the pitch of the turns of said inductance coil, said inductance coil being rotatable into position within said metallic member for variably short-circuiting selected turns of said coil.

1,904,209. PROCESS OF MAKING ARTIFICIAL FILAMENTS AND PRODUCT THEREOF. CAMILLE DREYFUS, New York, N. Y., and WILLIAM WHITEHEAD, Cumberland, Md., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Sept. 8, 1928. Serial No. 304,805. 8 Claims. (Cl. 18—54.)

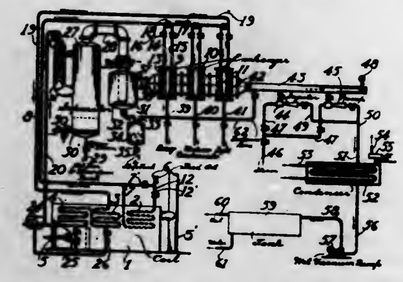
1. Process of producing yarns, filaments, bristles and the like having hollow spaces therein comprising forming the same from solutions containing cellulosic material under such conditions that elimination of solvent takes place in two stages, the first stage of solvent elimination being a retarded one under conditions which tend to cause surface coagulation only and the second stage being effected under conditions that tend to cause complete coagulation.

1,904,210. LOCK. JOHN V. EICHEL, Jr., Philadelphia, Pa., assignor to H. S. Getty and Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1931. Serial No. 559,274. 2 Claims. (Cl. 292—356.)



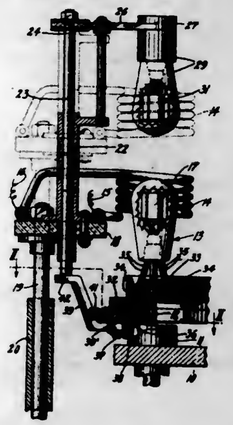
1. In a lock, a spindle of non-circular cross section, an escutcheon providing a bearing for the spindle and having a recess in its inner face concentric with the spindle and provided with inwardly projecting diametrically opposite lugs on its wall, and a plate fitted on the spindle and adapted to fit within said recess and provided with diametrically opposite projecting lugs on its periphery to engage the lugs in the recess and limit the movement of the spindle.

1,904,211. PROCEDURE IN THE PRODUCTION OF A PERFUME OR COSMETIC. HANS EISNER, Berlin-Tempelhof, and HERMANN VOLLMER, Berlin-Halensee, Germany. Filed Apr. 20, 1929, Serial No. 356,872, and in Germany June 11, 1926. 5 Claims. (Cl. 167—94.)



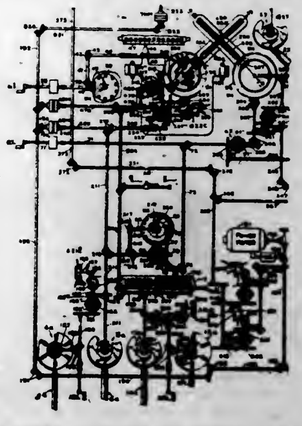
1. As a new product suitable for use as a cosmetic or a perfume, a composition of matter comprising an oil, selected from a group consisting of fatty oils and paraffin oil, admixed with from 5 to 20 per cent by weight of an essential oil; the said oils being mutually dissolved, the composition being free from cloudiness and the liquid mixtures possessing viscosities which follow a substantially hyperbolic curve.

1,904,212. FOUNTAIN PEN CLIP. HARRY ESTEROW, New York, N. Y. Filed May 10, 1932. Serial No. 610,340. 3 Claims. (Cl. 24—11.)



3. In a clip of the character described, wherein a tongue-like body portion is adapted to normally lie parallel with a carrying member, and wherein the free end of the clip carries a ball knob for engagement with the carrying member with the ball knob adapted for point contact with an object to which the clip is attached, the tongue-like body portion being provided on its attached end with laterally extending walls, one of said walls being at the upper terminal end of the clip, two of said walls carrying lip extensions defining shoulders lying in the plane of the edge of the aforesaid end wall and adjacent side of the ball knob, the shoulders and last named wall abutting the carrying member to space the tongue-like body portion parallel with the carrying member and said carrying member having openings therein to receive and retain the lip extensions.

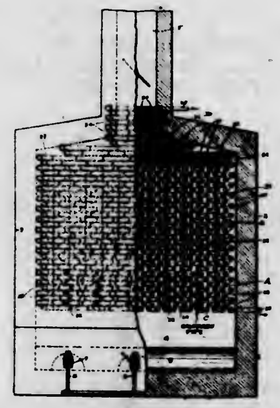
1,904,213. METHOD AND APPARATUS FOR DISTILLING OIL. CHARLES RINGGOLD EWING, Toronto, Ontario, and THOMAS MONTGOMERY, Sarnia, Ontario, Canada, assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 3, 1929. Serial No. 330,011. 3 Claims. (Cl. 196—77.)



8. Method of running asphalt containing petroleum oils for asphalt and lubricating distillates, comprising passing the oil in a narrow confined stream through a heating zone in which the oil is raised to a temperature at which vaporization tends to occur, discharging the hot oil into a separating zone through an intermediary stage in which the oil is caused to pass over a series of baffles and is then discharged through a large, substantially unobstructed opening into the separating zone, taking off tar from said zone, withdrawing vapors therefrom, removing entrained particles from the vapors and condensing the vapors.

1,904,214. DEVICE FOR HIGH FREQUENCY INDUCTION HEATING. JAMES M. FAGAN, Maplewood, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 22, 1930. Serial No. 422,533. 6 Claims. (Cl. 219—47.)

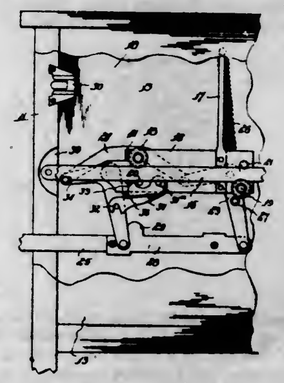
1. A machine for inductively heating a body comprising means for supporting a body, a high frequency coil, means for moving the body through a horizontal path adjacent to said coil, a second body movable adjacent to said coil and means in the path of movement of said first mentioned body and engageable therewith to prevent movement of said second mentioned body.



1,904,215. ARTILLERY COMPUTING SYSTEM. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Oct. 16, 1924. Serial No. 744,052. 76 Claims. (Cl. 235—61.5.)

10. In an artillery computing system, means to generate a target's range and azimuth from a reference point, circuit-closers controlled by said means, a selective control switch having a plurality of circuit-establishing positions, electrical circuits some of which in one position of said switch are closed by said circuit-closers, operating devices in circuit with said circuit-closers and adapted to be energized, elements set by said operating devices to indicate the reference point range and azimuth of a target, other circuit controllers adapted by the actuation of said elements to close others of said circuits and actuating means responsive to the closure of the last named circuits to indicate the range and azimuth of the target from remote observing stations.

48. In an artillery computing system, a mathematical mechanism related to a battery station operable in response to transmissions of a movable target's reference point range and azimuth and comprising means to measure the target's range and azimuth as relocated at the battery station, and means to correct the target's relocated range and azimuth including corrections for the effect on the projectile of a gun of the height of the gun, the atmosphere, the initial velocity of the projectile and the wind.

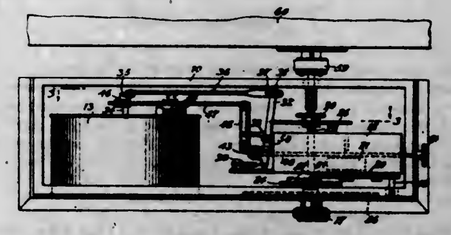


1,904,216. STEAM GENERATOR AND SUPERHEATER AND OPERATION THEREOF. CHAUNCEY B. FORWARD, Urbana, Ohio, assignor, by mesne assignments, to Forward Process Company, Dover, Del., a Corporation of Delaware. Filed Nov. 2, 1922. Serial No. 598,464. 3 Claims. (Cl. 122—258.)

1. A steam generator and superheater comprising a heating chamber, a continuous coil of pipe arranged in said chamber and extending through the side-walls thereof at intervals, means for supplying water to one end of said coil and for discharging superheated steam from the other end thereof, a series of valved branches connecting intermediate parts of said coil extending outside of the heating chamber and communicating with a collecting drum having a level indicator and valved discharge connector.

1,904,217. METAL FIXTURE FOR TYPEWRITER DESKS. MARTIN FOX, Chicago, Ill., assignor to The Seng Company, Chicago, Ill. Filed Apr. 8, 1931. Serial No. 528,669. 1 Claim. (Cl. 312—28.)

In combination with a typewriter desk having a compartment with corner posts at its forward end and recesses at the inner side of said posts, of supporting rails at opposite sides of the compartment with the ends of said rails secured in the bottom of the aforesaid recesses, plates slidable on the rails and having grooved rollers at the front and rear thereof traveling over the upper and lower edges of said rails, stop members bent outwardly from near the forward ends of the plates and formed integrally therewith to provide lips with flat surfaces in advance of the front rollers which engage the corner posts at one side of the recesses for limiting the forward movement of the sliding plates, and bell crank levers pivoted to the plates for swinging movement and to which the platform is pivoted; together with a pawl pivoted to the plate and

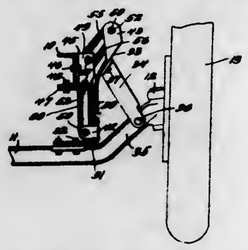


having a tail-piece entering a recess in the rail, a spring for moving the pawl into engagement with the recess, and a lug struck from the plate and with which the pawl engages for limiting the movement of the same in one direction, said pawl cooperating with a pin on one of the bell crank levers in the lowered position of the platform.

1,904,218. PROCESS FOR RESTORING THE ACTIVITY OF HYDROGENATION CATALYSTS. JAMES A. FRANCEWAY, Baton Rouge, La., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 23, 1930. Serial No. 463,848. 17 Claims. (Cl. 23—288.)

1. An improved process for reactivation of sulfactive catalysts used in the hydrogenation of carbonaceous material with free hydrogen at a pressure in excess of 20 atmospheres which comprises removing the bulk of the carbonaceous material from the said sulfactive catalyst and etching the surface of the catalyst.

3. Process according to claim 1 in which the etching agent comprises a mixture of steam and ammonia.



1,904,219. RADIO STATION SELECTOR. HERBERT V. GRIMES, Elizabeth, N. J., assignor to William Taylor, Elizabeth, N. J. Filed June 14, 1929. Serial No. 370,836. 6 Claims. (Cl. 250—20.)

1. A station selector for radio receiving apparatus, including a spring motor, a shaft operable thereby, means for rotating a radio receiving condenser by rotation of said shaft, means for automatically controlling the movement of said motor, said last-mentioned means including a

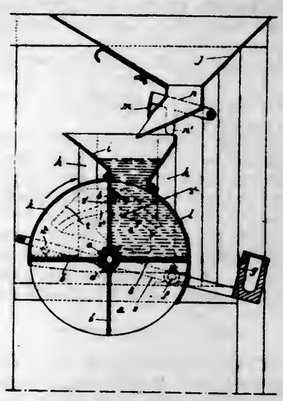
time-controlled mechanism, an arbor extending therefrom and terminating in a crank, and a cam mounted on said arbor, said crank and cam being jointly operable to control rotation of said motor.

1,904,220. VEHICLE SPRING AND SHOCK ABSORBER. MATT GZUPKAYTIS, Baltimore, Md. Filed June 26, 1931. Serial No. 547,090. 6 Claims. (Cl. 267—30.)

1. In a combined vehicle spring and shock absorber, the combination of an upstanding bracket mounted at its lower end upon one end of an axle of a vehicle, a brace between said bracket and an outer portion of said axle, and an elastic strap connecting the upper end of said bracket with the chassis of the vehicle.

1,904,221. PROTECTIVE LAYER ON PHOTOGRAPHIC FILMS. MAX HAGENDORN, Dessau in Anhalt, Germany, assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Apr. 25, 1927, Serial No. 186,567, and in Germany May 1, 1926. 3 Claims. (Cl. 95—9.)

1. A photographic film with a protective layer on its back surface, said layer comprising a compound of the group consisting of cellulose-ether-stearate, cellulose-ether-phosphate, cellulose-acetate-stearate, and cellulose-acetate-phosphate.

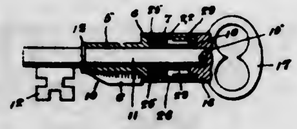


1,904,222. CULTURE BOTTLE. ROBERT McC. HALBACH, Jersey City, N. J. Filed Mar. 9, 1932. Serial No. 597,845. 6 Claims. (Cl. 215—1.)

1. A bacteriological culture bottle including a body having parallel major side walls, a neck offset laterally with respect to one of said side walls whereby said wall, and the adjacent walls of the bottle provide a portion for receiving and retaining a fluid plating media when the bottle is supported horizontally on said side.

1,904,223. MACHINE FOR ASCERTAINING THE VOLUME OF LOADS OF GRANULAR MATERIAL. ALFRED HANIQUE, Paris, France. Filed Aug. 26, 1931, Serial No. 559,565, and in France Mar. 27, 1931. 3 Claims. (Cl. 73—137.)

1. In a distributing machine, the combination of a horizontal rotary drum provided with wide open compartments, a hopper adapted to feed the compartments as they pass in succession underneath it when the drum rotates, a shaft disposed axially of the drum and carrying the hopper, covers secured to the hopper and extending over



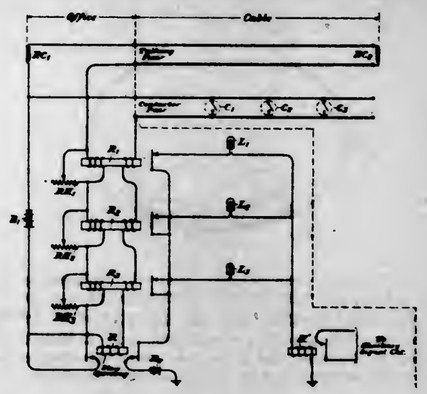
the entire upper half of the periphery of the drum except in front of the discharge opening of the hopper and means for locking the drum against rotation as long as the weight of material in each successive compartment is under a predetermined value.

1,904,224. ELECTROMAGNETIC TOOL. CLARENCE A. HARGROVE, Acton, Ind. Filed May 3, 1932. Serial No. 609,009. 1 Claim. (Cl. 175—367.)

An electro-magnetic tool comprising a tubular casing made from non-magnetic material, end heads fitted in opposite extremities of the casing and made from insulating material, a handle abutting one end head, a fastener countersunk in the handle centrally thereof and secured in the end head adjacent thereto, a magnetic core arranged interiorly of the casing between the end heads and engaged at its inner end by said fastener and having an outer reduced end projected exteriorly of the casing, said handle having passages and likewise the end head next thereto leading to one side of the core between the same and the casing, electric current wires of a normally open circuit trained through the passages and forming a coil about the core next to its reduced outer end and confined by the casing, said core having a channel accommodating one of the current wires, and a push button switch carried by the casing and operated exteriorly thereof and included in the circuit for the closing thereof, said switch being disposed close to the handle.

1,904,225. KEY FOR LOCKS. JOEL H. HENDRIX, New Castle, Pa., assignor of one-half to W. Walter Braham, New Castle, Pa. Filed July 7, 1931. Serial No. 549,249. 12 Claims. (Cl. 70—9.)

9. A key including a shank, a member mounted on the shank, a finger piece secured to the shank, securing means on the finger piece, a complemental securing means carried by the member and cooperating with the securing means on the finger piece to lock the shank and finger piece against movement with respect to the member.



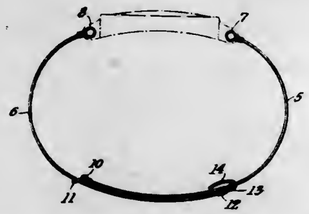
1,904,226. CABLE MAINTENANCE APPARATUS. THOMAS C. HENNEBERGER, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 2, 1930. Serial No. 418,144. 3 Claims. (Cl. 177—311.)

1. A cable terminal device, comprising a gas-tight chamber and a plurality of binding posts extending through a wall thereof, means associated with one end of said chamber for connecting the same to a cable sleeve or the like, a low pressure alarm contactor of the Bourdon tube type but having the inside of the pressure responsive element at atmospheric pressure, and a connector between the other end of said chamber and said contactor including means for effecting electrical connections between certain of said binding posts and the contacts of the contactor, said connector being perforated to admit gas from said chamber to the interior of the contactor.

1,904,227. GAS PRESSURE ALARM SYSTEM FOR CABLES. THOMAS C. HENNEBERGER, Caldwell, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 9, 1931. Serial No. 543,232. 1 Claim. (Cl. 177—311.)

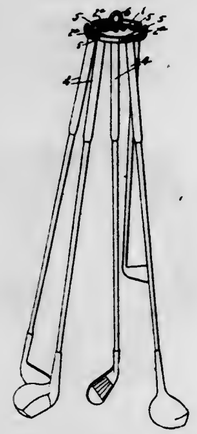
In association with a cable including a testing pair of conductors and an auxiliary pair of conductors, said testing pair having a plurality of short-circuiting devices spaced thereafong and designed to operate thereon, apparatus grouped at a single station on the line of said cable, said apparatus comprising a plurality of differential relays corresponding in number to said short-circuiting devices, an auxiliary relay, a plurality of signaling devices each controlled by one of said differential relays, and a source of voltage, each of said differential relays having a first winding in series with the conductors of said testing pair, the winding of said auxiliary relay and said source of voltage and a second winding adapted to be connected in series with the conductors of said auxiliary pair and said source of voltage upon the operation of said auxiliary relay, and means associated with each of said differential relays for adjusting the effective ampere-turns of the windings thereof.

1,904,228. PANTIES. MARY C. HENNESSY, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed June 1, 1932. Serial No. 614,810. 4 Claims. (Cl. 2—224.)



1. Panties including a body having front and rear inelastic sections formed with extensions at the lower ends, said extensions at the point of juncture with the respective front and rear sections being of substantially the same width, said extensions tapering to substantially a point at their respective lower ends, means for disengagably connecting said points together, and elastic netting on each side forming side sections, said side sections being wider at the top and bottom than at the center, and a reinforcing elastic tape connected to each side section at the top.

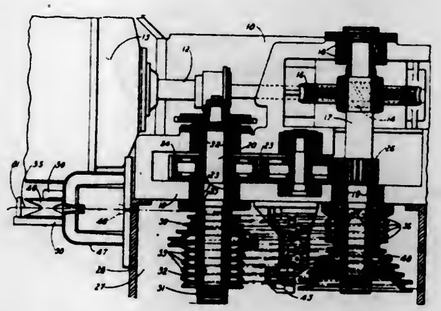
1,904,229. 2,4-DI-(NITROPHENYL)-6-HALOGEN-1,3,5-TRIAZINES AND METHOD OF MAKING THE SAME. WILHELM HENTRICH, Leverkusen-on-the-Rhine, and JOSEF HILGER, Cologne-Mulheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 6, 1930, Serial No. 450,307, and in Germany May 7, 1929. 4 Claims. (Cl. 260—27.)



1. The process which comprises heating for several hours at a temperature between about 100 and 150° C. a 2,4-di-(nitrophenyl)-6-hydroxy-1,3,5-triazine with a phosphorus halide.

1,904,230. FASTENER FOR WRIST WATCH STRAPS. EMIL C. HILDEBRAND, Irvington, N. J., assignor to Krements & Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 28, 1931. Serial No. 533,403. 5 Claims. (Cl. 24—206.)

1. A fastener comprising a pair of overlapping strap ends, a loop pivotally secured to the end of one strap for receiving the overstrap, said loop-carrying strap having a central row of spaced perforations, and a hinged hook member on the inner end of the said overstrap adapted to be selectively engaged in any of the said perforations.

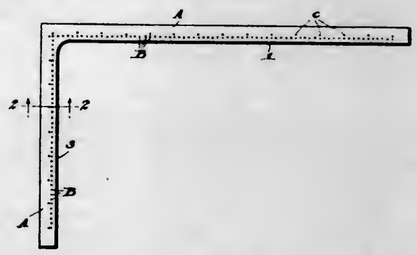


1,904,231. GOLF CLUB ASSEMBLY. FREDERICK A. HODGMAN, Yonkers, N. Y. Filed May 13, 1932. Serial No. 611,071. 3 Claims. (Cl. 150—1.5.)

1. A golf club assembly comprising connector means to be permanently secured to the extremity of the handle ends of a plurality of golf clubs, a carrier plate, and means arranged radially around and adjacent the edges thereof for detachably engaging said connector means to secure said ends of said clubs in assembled relation and to permit the free ends of said clubs to be spread apart to a limited degree without separation from said carrier plate.

1,904,232. WIRE DRAWING APPARATUS. CARL R. HOFFMAN, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1930. Serial No. 432,341. 1 Claim. (Cl. 205—13.)

In a wire drawing apparatus, a pair of spaced shafts, means for rotating said shafts, a multi-step capstan secured to one of said shafts, a multi-step idler sheave rotatably mounted over said other shaft and opposite said multi-step capstan, a second multi-step capstan secured to said other shaft adjacent said idler sheave, and a second idler sheave mounted over said first mentioned shaft adjacent said first mentioned capstan and opposite said second mentioned capstan, each successive step of each of said capstans having a larger diameter than the preceding step, the largest step of said first mentioned capstan substantially opposite the smallest step of said second

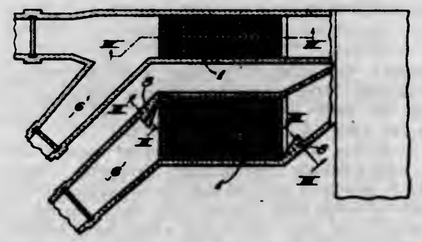


mentioned capstan, and the largest step of said second mentioned capstan more remote from the smallest step of said first mentioned capstan than from any other step of said first mentioned capstan.

1,904,233. PROCESS FOR PRODUCING MAGNETIC BODIES. LOWELL M. HOLLINGSWORTH, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1932. Serial No. 608,559. 3 Claims. (Cl. 175—21.)

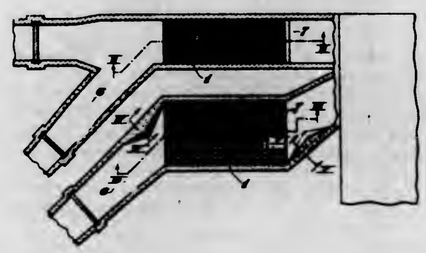
1. The process of making a low loss magnetic body from finely divided magnetic material of the type requiring heat treatment at a high temperature to properly develop its magnetic characteristics, and insulating material, which consists in first applying coatings of said insulating material to the individual particles of the magnetic material, then heat treating the insulated magnetic particles at a high temperature to anneal the magnetic material therein and to remove volatile constituents from the insulating coatings, compressing the resulting insulated particles into the desired form, and then heat treating the compressed body at as high a temperature as the insulating material will withstand without substantial deterioration from an insulating standpoint, to remove the strains produced in the magnetic material in the forming operation.

1,904,234. MEASURING SCALE. HARRIET MORINE HOSKIN and GEORGE CLARENCE HOSKIN, Brookfield, Ill. Filed Aug. 20, 1929. Serial No. 387,179. 4 Claims. (Cl. 33—174.)



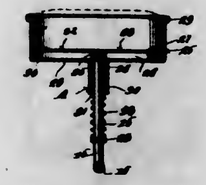
2. A device of the type described comprising an elongated body portion of X-ray permeable substance and a series of pellets of X-ray impermeable material carried by the body portion and disposed in alinement, said pellets being spaced at equal distances apart to form a measuring scale.

1,904,235. METHOD OF IMPROVING CELLULOSE RAW MATERIAL OF ALL KINDS. VALENTIN HOTTENROTH, Mannheim, and OTTO FAUST, Mannheim-Neuostheim, Germany, assignors to Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany. Filed Nov. 12, 1928, Serial No. 319,001, and in Germany Nov. 24, 1927. 2 Claims. (Cl. 92—18.)



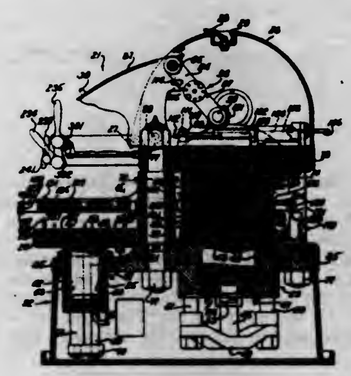
1. The process for improving bleached sulphite cellulose consisting in immersing 100 kgs. of the air-dried sulphite cellulose in 300 litres of 12% soda lye for 2 hours, in pressing off until the material weighs about 300 kgs., in separating the material in fibres and ripening for 5 days at 25° C., and in washing, acidifying and neutralising the material, as set forth.

1,904,236. HEAT REGENERATOR. WILLIAM J. IRWIN, Wilkinsburg, Pa. Filed July 6, 1932. Serial No. 621,118. 5 Claims. (Cl. 263—19.)



5. The combination of a heat regenerating unit, chambers extending the lengths of the open sides of said unit, and gaseous fluid passageways communicating with one end of each of said chambers at diagonally opposite ends thereof, one or both of said passageways being arranged in a plane parallel to that of the open sides of said unit at an angle to the longitudinal center line thereof and provided with an abrupt obstruction arranged on its side forming an acute angle with said center line and adjacent the unit.

1,904,237. REGENERATIVE CHAMBER. WILLIAM J. IRWIN, Wilkinsburg, Pa. Filed July 6, 1932. Serial No. 621,119. 6 Claims. (Cl. 263—19.)



1. The combination of a heat regenerating unit, chambers extending the lengths of the open sides of said unit, and passageways communicating with one end of each of said chambers at opposite ends of said unit, one or more of said passageways being constructed so their surfaces remote from said unit angle theretowards and terminate thereover.

1,904,238. SOAP DISPENSER. WILLIS A. JENNINGS, Chicago, Ill. Filed Oct. 26, 1929. Serial No. 402,665. 2 Claims. (Cl. 45—28.)

1. A soap holder of the character described comprising a standard disposed in a vertical plane, a casing slidably mounted on the standard, a follower plate arranged in the casing and carried by the upper end of the standard, spring means normally urging the casing in one direction on the standard, and means for locking the casing in an adjusted position on the standard.

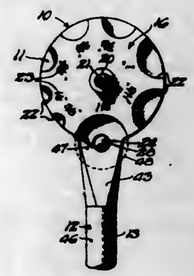
1,904,239. MOLDING MACHINE. FRED VOLENTINE JOHNSON, Irvington, N. J., ESTYLE DEUCY HANSON, Westmont, Ill., and DANIEL VAUGHN WATERS, Oak Park, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1928. Serial No. 324,812. 13 Claims. (Cl. 18—17.)

1. A molding press comprising a hydraulically movable heating platen, a stationary head associated therewith, a hydraulically movable cooling platen, a tiltable head associated therewith, and a hydraulically operated adjustable toggle connection operable independently of the movable cooling platen for tilting the tiltable head.

1,904,240. MANUFACTURE OF ELECTRIC DETONATORS, PERCUSSION CAPS, AND LIKE ARTICLES. DAVID TREVOR JONES and FREDERICK JOSEPH MOORE, Saltcoats, Scotland, assignors to E. I. du Pont de Nemours and Co., Wilmington, Del., a Corporation of Delaware. Filed Jan. 30, 1929, Serial No. 336,216, and in Great Britain Feb. 2, 1928. 12 Claims. (Cl. 52—4.)

1. Electric detonators, electric fuses, igniters and fuse-heads in which the igniting material includes lead salts of 2-mono-nitro-resorcin of which special cases are the basic, normal and acid salts.

6. Percussion caps and percussion and friction primers containing a mixture of lead salts of 2-mono-nitro-resorcin, these being selected from a group consisting of basic, normal and acid salts.



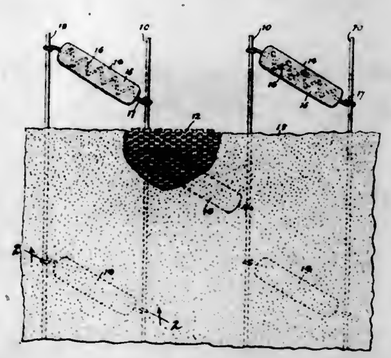
1,904,241. COMPOUND METAL STOCK. ERWIN KAMMERER, Pforzheim, Germany. Filed Aug. 8, 1929, Serial No. 383,271, and in Germany Dec. 31, 1926. 7 Claims. (Cl. 29—181.)

1. A rolled compound metal stock having a layer of an iron-group metal intermediate other adjacent layers respectively of copper-containing metal foundation and silver, to substantially prevent inter-diffusion of such copper-containing metal and silver, when heating the said stock up to enameling and annealing and soldering temperatures, the copper-containing metal constituting a major part of the entire stock, the layer of iron-group metal being resistant to alloying with gold and silver.

1,904,242. CENTER LOCATING DEVICE. HENRY F. KIECKHEAFER, Hammond, Ind. Filed Nov. 4, 1929. Serial No. 404,710. 1 Claim. (Cl. 33—191.)

A center locating device comprising a circular plate, a handle element extending therefrom, a disc rotatably mounted on said plate and having a plurality of recesses of different radii formed therein arranged about its circumferential periphery, said disc having radially arranged indentations on the face thereof contiguous to the plate, a member slidably mounted in said plate and selectively engageable in the indentations to hold the plate and disc relatively immovable with respect to each other, and a punching element slidably mounted in the handle on the

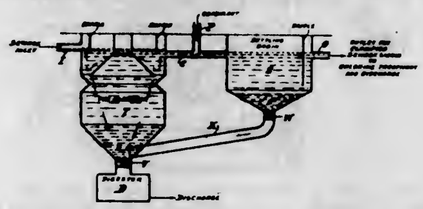
periphery of the disc and adapted to strike the center point in the end of round stock selectively disposed in one of said recesses.



1,904,243. MOLDING POWDER AND METHOD OF MOLDING. MAX LANDECKER, Barmen, Germany. Filed July 11, 1929, Serial No. 377,589, and in Germany May 29, 1928. 6 Claims. (Cl. 18—55.)

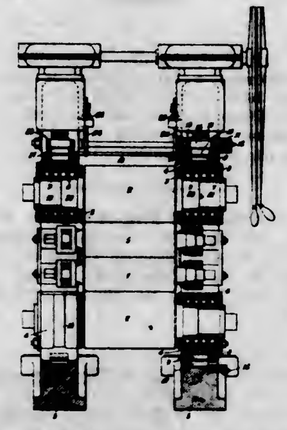
1. A process for the manufacture of molded articles from urea-aldehyde condensation products, comprising adding to powdered urea-aldehyde condensation products a quantity of water such that the total water content is not less than about 10%, the water added being insufficient to destroy the powdered character of the mass, and molding the powder under heat and pressure.

1,904,244. PLASTIC MASS AND PROCESS FOR MAKING SAME. MAX LANDECKER, Barmen, Germany. Filed July 11, 1929, Serial No. 377,590, and in Germany June 11, 1928. 8 Claims. (Cl. 260—3.)



1. A process for preparing plastic masses, comprising reacting urea with the reaction products of an aldehyde and a sulphide capable of liberating hydrogen sulphide or free sulphur upon acidification.

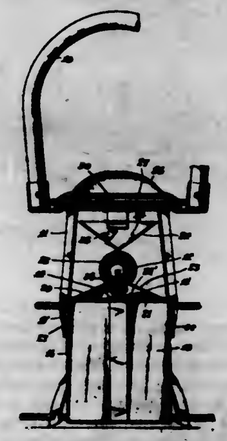
1,904,245. PLASTERING SUPPORT. JAMES OSWALD OLIVER, New York, N. Y. Filed July 30, 1929, Serial No. 382,188. Renewed Aug. 19, 1932. 4 Claims. (Cl. 72—116.)



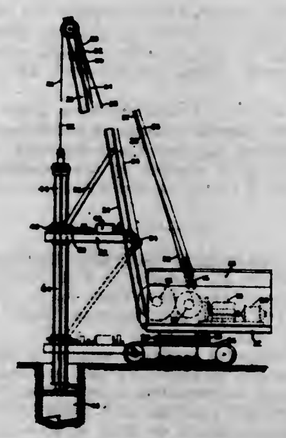
1. The combination with a lath-supporting structure, of a plaster-supporting element supported thereby in abutment with the lath supported by said structure, said element including a plaster-engaging surface to which the plaster may adhere, and reinforcing means extending through said element.

1,904,246. ART OF TREATING SEWAGE. GEORG ORNSTEIN, Berlin, Germany. Filed Dec. 6, 1929, Serial No. 412,093, and in Germany Sept. 10, 1928. 4 Claims. (Cl. 210—2.)

1. The improvement in the art of purification of sewage by coagulants which comprises pre-clarifying the sewage by settling sludge therefrom prior to treatment with a coagulant, combining the aforesaid sludge with chemically precipitated sludge obtained from coagulation treatment and exposing said combined sludges to a common digestion treatment effective upon the intermixed sludges in a state of liquid consistency during the course of the said digestion treatment.



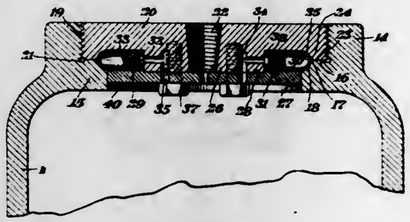
1,904,247. BEARING MOUNTING. PER GUNNAR PALMGREN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Nov. 26, 1929, Serial No. 409,788, and in Germany May 28, 1929. 4 Claims. (Cl. 308—22.)



1. A bearing mounting comprising a housing and a support therefor, one of these members being formed with a recess having a bottom face, a hardened member projecting into such recess and having a face engaging such bottom face, one of such faces being plane and the other being convex, the faces being in rolling engagement and adapted to transmit radial load, and the side face of the projecting member engaging the wall of the recess for transmitting thrust loads.

1,904,248. LANTERN. JUDSON S. PIXLEY, New York, N. Y., and MARTIN BENDER, Glen Ridge, N. J., assignors to Armspear Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1929. Serial No. 409,606. 7 Claims. (Cl. 240—10.63.)

1. A lantern provided with a handle, a supporting frame, a lamp within said frame, a circular reflector around said lamp, a battery below said lamp, one terminal of said battery being connected to one lamp terminal, the other lamp terminal being grounded to said reflector and means between the other terminal of said battery and reflector for completing or opening the circuit through said lamp to light the same in response to movement of said battery relative to said reflector, and said means including a container for said battery, a rotatable connection mechanically securing said container to said reflector, a metal portion within said reflector and recessed to be out of contact with both battery terminals in one position of adjustment of said connection between the reflector and container and in electrical contact with one of said battery terminals in another position of adjustment of said mechanical connection, said mechanical connection including a pin and slot on opposite sides of said reflector and container, and yieldable means for retaining said pin within its slot.

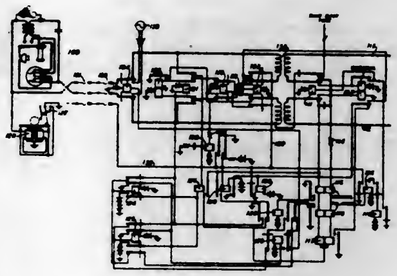


1,904,249. EARTH BORING APPARATUS. CHARLES L. POWELL, New York, and HERMAN R. SMITH, Douglaston, N. Y., assignors to Caisson Contracting Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1932. Serial No. 609,668. 8 Claims. (Cl. 255—22.)

1. Apparatus for boring into the ground with rotary tools, comprising in combination; a crane having a non-rotatable ground-gripping structure with a rotatable

structure mounted thereon; means for rotating rotary tools; and means on the ground-gripping and rotatable portions of said crane for operatively supporting the rotating means on either at the will of the operator.

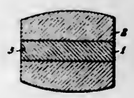
1,904,250. AUTOMATIC PRESSURE SEALING MEANS. HARRY H. PURVIS, Port Jefferson, N. Y., assignor to Pure Carbonic Company of America, a Corporation of Delaware. Filed Apr. 27, 1932. Serial No. 607,687. 9 Claims. (Cl. 220—46.)



1. In a pressure tank, a mouth therefor, a machined shoulder around the inside of said mouth, a small bevel at the end of said shoulder, a filleted surface leading from said bevel, a screw plug to close said mouth, a shoulder, a bevel and a filleted surface on the underside of said plug to register with the corresponding parts in said mouth, said filleted surfaces completing a semicircle except for a recess produced by the two bevels, a central hub on the underside of said plug, a U-shaped rubber gasket of uniform thickness surrounding said hub, a ring of rectangular cross-section inserted between the sides of said gasket and closely fitting around said hub, a locking plate fitting in the opening in the mouth of the tank and forming a flange running from the edge of the lower filleted surface to the hub, said flange forming a chamber with the underside of the plug and the filleted surfaces which is filled exactly by the gasket, said plate clamping the sides of the gasket in immovable pressure tight position, an opening in said plate communicating with an opening in said plug, an annular recess on the inner side of the ring registering with the aforementioned opening, a radial hole through said ring, and a discharge opening through said plate and said plug.

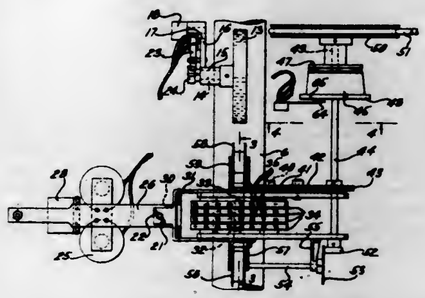
1,904,251. PAPER MANUFACTURE. HAROLD ROBERT RAFTON, Andover, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Apr. 29, 1931. Serial No. 533,872. 43 Claims. (Cl. 92—21.)

1. In a method of manufacturing paper filled with alkaline filler wherein material is added to a paper mix under conditions favoring the minimizing of the time and/or intimacy of contact of the constituents of the mix, the step of adding to said mix a non-acid aluminum compound.



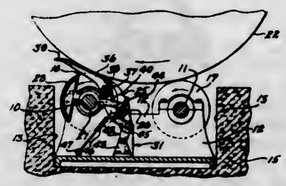
1,904,252. TELEPHONE SYSTEM. THEODORE D. ROBB, Ridgewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1932. Serial No. 599,652. 8 Claims. (Cl. 179—6.3.)

1. In a telephone exchange system, a calling line, a coin box thereon, an operator's position, means including a trunk circuit for extending a connection from said line to said operator's position, said trunk circuit being inductively divided into a plurality of sections, a coin box control key at said operator's position, a first relay controlled over the incoming section of said trunk circuit from said key, a second relay in the outgoing section of said trunk circuit, means controlled by said second relay for applying coin box operating current to said coin box, a source of booster current and a source of operating current at the incoming end of said trunk circuit and means



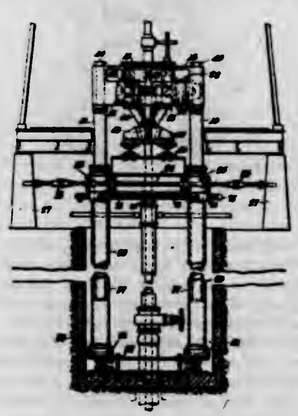
controlled by said first relay for applying said sources of current accumulatively over the outgoing section of said trunk circuit for operating said second relay.

1,904,253. BEARING ROLLER. PATRIK SAMUEL RYDBECK, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed July 10, 1930, Serial No. 467,042, and in Sweden July 11, 1929. 4 Claims. (Cl. 308—215.)



1. As an article of manufacture, a roller for a roller bearing comprising a core formed of steel having a center punch and a surrounding layer formed of steel presenting a sharp division between itself and the core for the purpose of preventing the rise and spread of cracks from the center punch.

1,904,254. APPARATUS FOR MARKING STRAND MATERIAL. DE HART G. SCRANTOM, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1929. Serial No. 396,127. 13 Claims. (Cl. 101—73.)

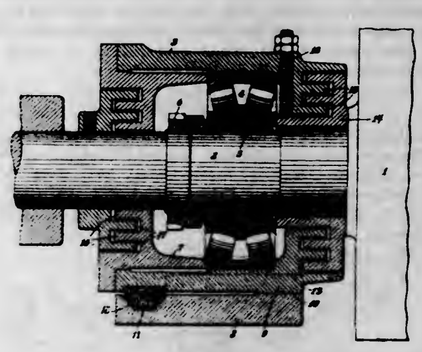


1. A strand measuring apparatus comprising an embossed printing tape, a hammer associated therewith, and means controlled by the strand for causing the hammer to strike the tape for printing a designation on the strand.

1,904,255. DEVICE FOR HANDLING REELS. GEORGE ALLEN SHELBY, Irvington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 4, 1928. Serial No. 282,729. 8 Claims. (Cl. 242—66.)

8. In an apparatus for handling reels, a roller for peripherally engaging and driving a reel, a rotatable member movable about the center of the roller, a wedge member pivoted to the rotatable member movable about the periphery of the roller, and pivoted means for wedging the wedge member between the peripheries of the reel and the roller to disengage the reel from the roller.

1,904,256. DRILLING MACHINERY. WALDO SHELDON, South Norwalk, Conn. Filed Jan. 8, 1932. Serial No. 585,473. 20 Claims. (Cl. 255—22.)

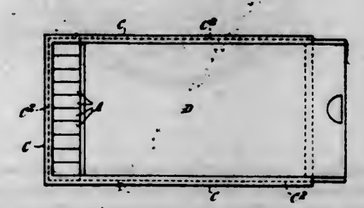


1. In combination, hydraulic power cylinders, a supporting head operated thereby, a rotary drilling machine mounted on said head and set in the head with the rotary table of the same above the top of the head and a drive motor for the table set down in the head below the top of the same and connected in driving relation with the table.

1,904,257. SUPERSATURATED CALCIUM GLUCONATE SOLUTION. ARTHUR STOLL and ERNST ROTHLIN, Basel, Switzerland, assignors to the Firm of "Chemical Works formerly Sandoz," Basel, Switzerland. Filed Oct. 16, 1929, Serial No. 400,157, and in Germany Oct. 29, 1928. 1 Claim. (Cl. 167—68.)

As new composition of matter, clear, stable, sterile and supersaturated aqueous calcium gluconate solutions, containing 4–10% of calcium ginconate and such therapeutically useful compounds, that are heat insensitive and incapable of reacting with calcium gluconate, which solutions possess excellent therapeutical properties and may be used for intramuscular injections free from irritation of the tissues.

1,904,258. BEARING MOUNTING. GUNNAR WISTRAND, Berlin, Germany, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Jan. 20, 1930, Serial No. 422,012, and in Germany Apr. 23, 1929. 4 Claims. (Cl. 308—22.)



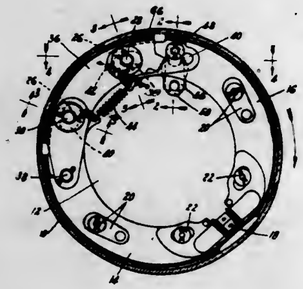
1. A bearing mounting comprising a housing, a bearing in the housing, there being a fulcrum rigidly formed on the housing and disposed transversely of the bearing axis and located at one side of the central radial plane of the bearing, a base plate having rigid parts for supporting the fulcrum on a fixed axis and other rigid parts for engaging and supporting the housing at the other side of said central plane when the arts are in their normal positions.

1,904,259. JEWEL AND SETTING THEREFOR. LUCIAN M. ZELL, Essex County, N. J. Filed Mar. 19, 1931. Serial No. 523,670. 11 Claims. (Cl. 63—26.)

1. As a new article of manufacture, cut precious or semi-precious stones having a faceted surface and mounting means integral with and extended laterally beyond and formed from the body of the stone, said faceted surfaces being extended adjacent said mounting means without interference with the brilliancy of the stones.

1,904,260. BRUSH. SHOZABURO AKI, Mill Hill, London, England. Filed Dec. 7, 1932, Serial No. 646,172, and in Great Britain Nov. 16, 1931. 3 Claims. (Cl. 15—202.)

1. A detachably assembled brush comprising a frame having side walls and a removable top wall, the bottom of said frame being open, the inner lower surface of cer-

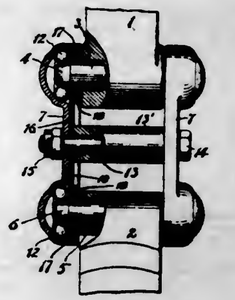


tain of said side walls being provided with inwardly projecting flanges, a plurality of elongated separable bristle-carrying units having their end portions formed to cooperate with the inwardly projecting flanges of the side walls of the frame, said units being positioned in parallel arrangement in said frame with the bristles projecting through the opening in the bottom of said frame, said removable cover and the inwardly projecting flanges of the side walls of the frame cooperating to retain the bristle-carrying units in assembled relation.

1,904,261. INDIRECTLY HEATED CATHODE. LESLIE HERBERT BEDFORD, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1931, Serial No. 522,841, and in Great Britain Aug. 1, 1930. 8 Claims. (Cl. 250—27.5.)

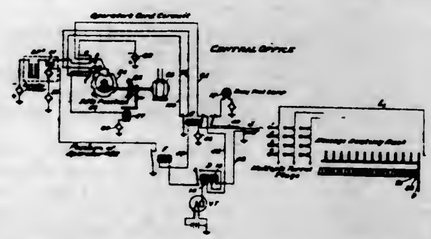
3. An indirectly heated cathode for an electron discharge device comprising a twin bore insulating tube, a hairpin heater element having crimp portions exerting expansional force on the inner walls of said twin bore tube, and a metallic electron emitting sleeve exerting compressional force on the outer wall of said insulating tube.

1,904,262. BRAKE. VINCENT BENDIX, Chicago, Ill., and LUDGER E. LA BRIE, South Bend, Ind.; said Bendix assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Oct. 5, 1927. Serial No. 224,085. 16 Claims. (Cl. 188—78.)



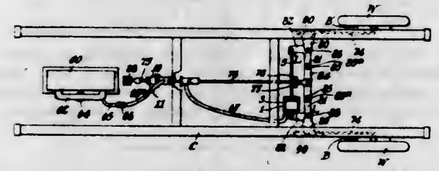
1. A brake comprising, in combination, a drum, friction means including at least three shoes engageable with the drum and shiftable to anchor at one end when the drum is turning in one direction and at a point intermediately arranged between its ends when the drum is turning in the other direction, and applying means engaging said ends.

1,904,263. NUT AND WASHER ASSEMBLY. JOSEPH BENDA, Montclair, N. J., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed July 13, 1931. Serial No. 550,426. 4 Claims. (Cl. 151—37.)



1. In combination, a bolt nut, a crown nut within which said bolt nut is fixed, a washer disposed within the crown nut adjacent said bolt nut, and means on the crown nut engaging said washer and holding it against removal from the crown nut.

1,904,264. SPRING SHACKLE. WILLIAM C. BETZ, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Original application filed Oct. 28, 1924, Serial No. 746,328. Divided and this application filed Sept. 11, 1930. Serial No. 481,084. 21 Claims. (Cl. 267—54.)

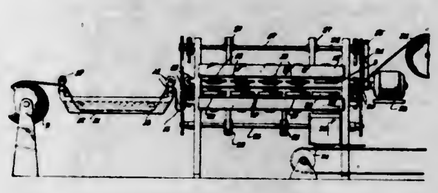


1. In an anti-friction spring shackle, a pair of shackle links each having spaced apart bearing raceways formed directly thereon, anti-friction bearing members on said raceways, means to be carried by a frame and spring and having raceways complementary to said first mentioned raceways and engaging said anti-friction bearing members thereon, and a plate for each of said shackle links and having parts extending over said anti-friction bearing members of each of said raceways on said link.

1,904,265. AUTOMATIC OPERATOR INDICATOR FOR BUSY LINES AT CENTRAL OFFICES. WILLIAM B. BLANTON, Merrick, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1931. Serial No. 566,096. 7 Claims. (Cl. 178—2.)

1. In an intercommunication system embodying a central office and a plurality of branch offices, a line from each branch office terminating at said central office, multiplied jacks or plugs for each line located at a number of turrets or operators' positions, a message routing or distributing center, indicating devices at said center corresponding to each line, and means operating automatically in response to the seizure of a line to cause the corresponding indicator to display a signal designating the particular operator seizing the line.

1,904,266. BRAKE MECHANISM FOR AUTOMOTIVE VEHICLES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Dec. 12, 1927. Serial No. 239,444. 7 Claims. (Cl. 188—152.)



5. In a brake system for automotive vehicles, the combination with brake mechanisms for a pair of wheels disposed oppositely to each other transversely of the vehicle, of a power actuator comprising a cylinder and piston, both movable with respect to each other and with respect to the vehicle, connections from the cylinder to brake mechanism for one of said wheels, connections from the piston to brake mechanism for the other of said wheels, controlling valve mechanism for the actuator, provided with relatively movable parts having a limited movement with respect to each other, means for establishing differential fluid pressures on opposite faces of said piston and said cylinder under the control of said valve mechanism, an operator operated part, connected with one of said relatively movable valve parts, connections from the other of said relatively movable valve part to said brake mechanisms, including equalizing means, and a single adjusting device in said last mentioned connections interposed between said equalizing means and the valve part connected therewith.

1,904,267. BRAKE SYSTEM FOR AUTOMOTIVE VEHICLES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Mar. 28, 1929. Serial No. 350,744. 24 Claims. (Cl. 188—152.)

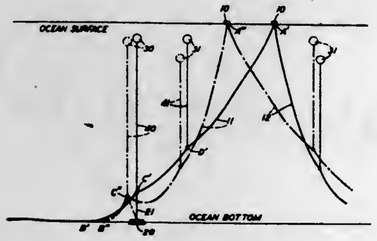
1. In a brake system for automotive vehicles provided with an internal combustion engine having a throttle controlled suction passage, the combination with main and at least one auxiliary power actuator, each comprising a cylinder and piston, means for connecting said pistons with brake mechanisms, a separate suction line for each cylinder for connecting it with the said suction passage, a main controlling valve mechanism for controlling the operation of said main and auxiliary actuators for joint operation, separate valve mechanism for controlling the auxiliary actuator, and independent physically operable parts for operating said valve mechanisms.

1,904,268. METHOD FOR THE MANUFACTURE OF FORMED ARTICLES. FRED L. BRONSON, New York, N. Y. Filed Mar. 8, 1932. Serial No. 597,585. 18 Claims. (Cl. 18—56.)

1. The method of forming an article which comprises moistening sheet material, heating and pressing the moist sheet to form the article in substantially its final shape, permitting the escape of the vapor formed thereby, and again heating and pressing the article to more completely shape and dry same.

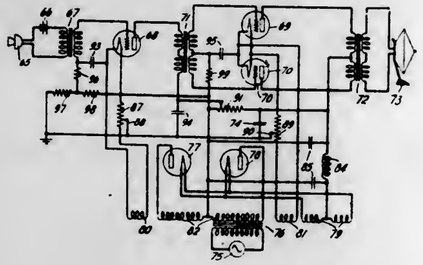
1,904,269. MANUFACTURE OF LOW BOILING TAR ACIDS. SOLOMON CAPLAN, Brooklyn, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed Sept. 29, 1926. Serial No. 138,571. 8 Claims. (Cl. 260—154.)

1. The process for converting high boiling tar acids into tar acids of lower boiling point, which comprises contacting vapors of the former with a large molar excess of steam at an elevated temperature ranging from 600° C. to 800° C., adapted to facilitate the said conversion reactions, in the absence of solid materials reacting with steam to generate hydrogen, and collecting the reaction products.



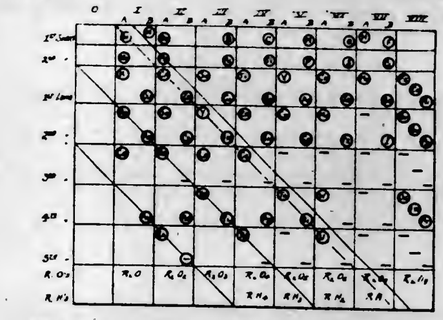
1,904,270. ICE SKATE. ODILON CHARETTE, Fitchburg, Mass. Filed Apr. 29, 1932. Serial No. 608,278. 4 Claims. (Cl. 208—167.)

1. In a skate, a blade holder having parallel longitudinal blade-straddling flanges and a longitudinal plane straight horizontal abutment face between the upper portions of said flanges, a skate blade snugly received between said flanges and having a straight plane upper edge contacting with said abutment face, and bolts passing through



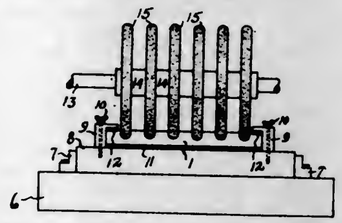
said flanges, said blade being provided with slots opening through its upper edge and receiving said bolts, said slots being directed upwardly and forwardly and provided with rearwardly inclined walls lying on the upper sides of said bolts, whereby the opposing forces acting on said blade holder and said blade during skating, tend to wedge said blade into tight engagement with said abutment face.

1,904,271. SUBMARINE CABLE ANCHORAGE. CHARLES A. CHASE, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1931. Serial No. 583,221. 4 Claims. (Cl. 178—1.)



1. A signaling cable on the ocean bottom having a portion thereof raised from the ocean bottom, a float connected to said portion near the ocean bottom at a point which is always off the bottom and anchoring means on the ocean bottom connected to a point on the cable near the connection of said float to reduce the movement of said cable with respect to the ocean bottom.

1,904,272. VACUUM TUBE AMPLIFIER CIRCUIT. VAN METER COUSINS, Lyndhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1928. Serial No. 259,845. 4 Claims. (Cl. 250—27.)

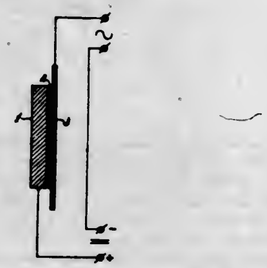


1. In a tandem stage amplifier, each stage including a space discharge tube having a cathode, an anode and a grid or the equivalent, means for energizing the cathodes by alternating current, a common source of space current for said stages, separate means in the respective stages for deriving from the cathode energizing means and applying to the respective cathode-anode circuits alternating voltages sufficient to compensate the effect on the anode current of the alternating cathode-energizing current, and means in each cathode-anode circuit permitting space current voltage to be supplied to the several stages from said common source but preventing the alternating current that is applied to one cathode-anode circuit from affecting other stages.

1,904,273. METHOD OF PRODUCING AN ARTICLE OF MANUFACTURE. HENRY L. CROWLEY, East Orange, N. J., assignor to Henry L. Crowley & Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed Jan. 14, 1929. Serial No. 332,555. 2 Claims. (Cl. 25—156.)

1. The method which consists in reducing a metal to powder, subjecting the powdered metal to a heat below the fusion point of the metal, then extruding the powder to solidify the same and finally baking the solidified mass.

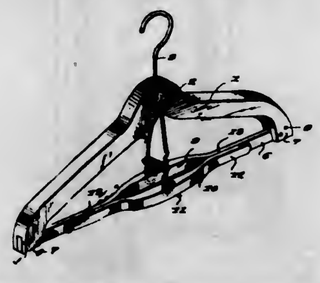
1,904,274. GRINDING APPARATUS. HENRY L. CROWLEY, East Orange, N. J., assignor to Henry L. Crowley & Company, Inc., West Orange, N. J., a Corporation of New Jersey. Filed Apr. 9, 1931. Serial No. 528,729. 3 Claims. (Cl. 51—74.)



1. A jig of the type described comprising a plate, a pair of parallel L-shaped bars releasably secured along the edges of said plate, a resilient cushion on said plate between said bars, and resilient cushions on the flanges of said bars.

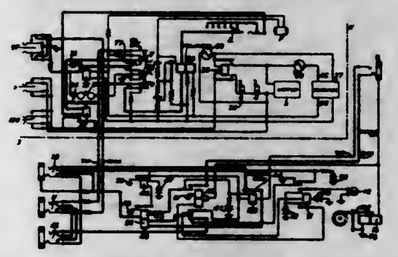
1,904,275. BRIDGING BLOCK FOR WELLS. BERNARD H. DAVIS, Fullerton, Calif. Filed Nov. 28, 1932. Serial No. 644,734. 7 Claims. (Cl. 166—13.)

1. In a bridging block for wells, a body comprising two sections movable to occupy expanded and contracted positions, a wedge between the sections with its apex disposed upwardly to force said sections to expanded position and lock them within a well casing, means on the wedge to normally engage the walls of the well casing and prevent downward movement of the wedge with respect to the casing, and means to hold said first mentioned means out of engagement with the walls of the casing during the positioning of the bridging block.



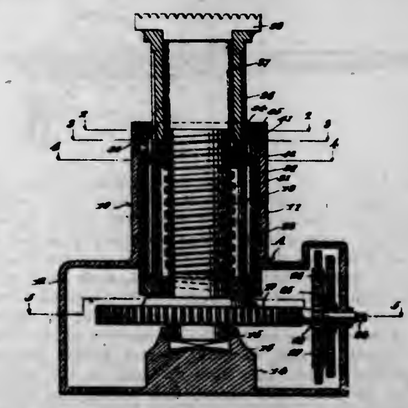
1,904,276. DRY RECTIFIER. JAN HENDRIK DE BOER, WILLEM CHRISTIAAN VAN GEEL, and HENDRIK EMMENS, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabriken, Eindhoven, Netherlands. Filed Jan. 22, 1931, Serial No. 510,581, and in the Netherlands Mar. 7, 1930. 6 Claims. (Cl. 175—366.)

1. A dry rectifier having a cathode and an anode, in which the anode consists substantially in part of phosphorus and the cathode consists of a film-forming material having a higher conductivity and greater emissive power than phosphorus.



4. A dry rectifier having a cathode and an anode, in which the anode consists substantially in part of red phosphorus and the cathode consists of a film-forming material having a higher conductivity and greater emissive power than red phosphorus.

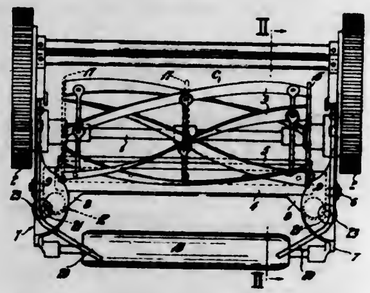
1,904,277. COAT AND TROUSER HANGER. ROMEO A. DE BUCCI, Providence, R. I. Filed Apr. 11, 1932. Serial No. 604,541. 1 Claim. (Cl. 223—68.)



A hanger of the class described comprising a coat hanger member, a stationary clamping jaw extended between the ends of said coat hanger member, an adjustable clamping jaw provided with laterally extending substantially aligned arms adapted to be brought into clamping engagement with said stationary clamping jaw, a supporting spring member, said coat hanger member provided with a socket, a loop portion formed upon said spring member snugly fitting in said socket, said spring member provided with a stationary leg having a loop formed at the end thereof extending at right-angles to said first mentioned loop, and engaging said stationary jaw whereby the spring member will be firmly clamped between the stationary jaw and the coat hanger, said spring member provided with a spring adjustable arm having corrugations formed upon the length thereof, the terminals of said spring adjustable arm being provided with a loop extending at right angles to said first-mentioned loop, said adjustable jaw provided with a socket for receiving said loop formed on the terminal of said adjustable arm, and a clamping link slidable over said stationary and adjustable arms of said spring member.

1,904,278. MESSAGE REGISTER CIRCUIT FOR TELEGRAPH EXCHANGES. ALLAN B. DICKINSON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1932. Serial No. 589,196. 16 Claims. (Cl. 178—2.)

1. A telegraph exchange system comprising a central office and a plurality of subscribers' telegraph printer stations any two of which stations may be connected through said central office as desired, and including means, under control of the central office attendant, whereby apparatus at an unattended subscriber's station may be set into operation in order to record a message transmitted through said central office by a second subscriber, characterized in this, that means individual to said second subscriber's station are provided for registering each connection completed from his station to an unattended station.



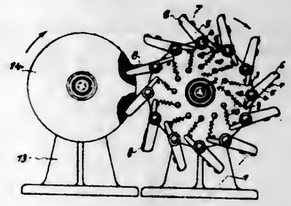
1,904,279. LIFTING JACK. JOSEPH F. DONNELLY, South Bellingham, Wash. Filed Mar. 7, 1931. Serial No. 520,901. 1 Claim. (Cl. 254—102.)

A lifting jack comprising a jack body, a ram including inner and outer telescoping sections, mounted within the body, means for preventing turning movement of the outer section in the body, means for preventing turning movement of the inner section relative to the outer section, a single jack screw, means for rotating the jack screw, a feed nut threaded on the jack screw engaging the inner section, the feed nut and outer section having a bayonet slot and pin connection, with the lateral end of the bayonet slot disposed uppermost, whereby the pin of the feed nut will ride into said lateral section of the bayonet slot when

the inner section has been raised to an extreme position relative to the outer section, and a feed nut carried by the outer section for engagement with the feed screw upon the raising of the outer section by the first mentioned feed nut.

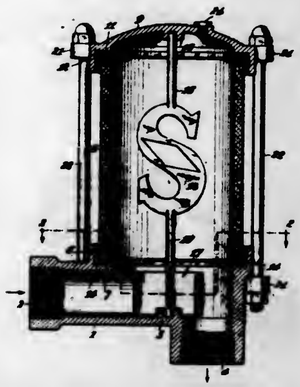
1,904,280. LAWN MOWER. THOMAS JUTSON EDWARDS, Hawthorn, Victoria, Australia. Filed Mar. 6, 1930, Serial No. 433,771, and in Australia July 17, 1929. 4 Claims. (Cl. 56—294.)

1. A lawn mower comprising a frame, a rotary cutter mounted on said frame, a knife pivotally mounted on said frame adapted to cooperate with said rotary cutter to produce a cutting action, a bearing surface on said frame, a telescopic casing having one portion rigidly fixed to and movable with said pivoted knife, a second portion telescopically engaging the first portion, and a spring in the casing for urging the second portion of the telescopic casing into contact with the bearing surface and for urging the pivoted knife into contact with the rotary cutter.



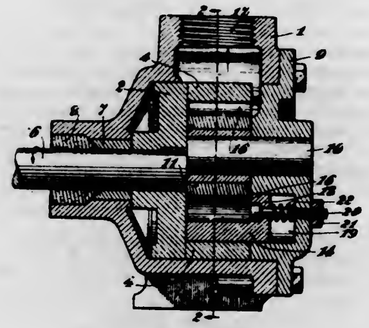
1,904,281. AIRCRAFT. CORNWALLIS D. ELLINGSTON, Great Falls, Mont., assignor of one-half to Albert E. Schwingel and William H. Bertsche, Great Falls, Mont. Filed Mar. 22, 1932. Serial No. 600,507. 3 Claims. (Cl. 244—12.)

1. In an aircraft, a fuselage, a main plane thereon having a stationary intermediate section and outer movable sections, feed screws rotatably supported in the fuselage transversely thereof and having reversely threaded end portions, telescopic fittings arranged in the intermediate and outer sections of the main plane, nuts fixed to the outer sections at their inner ends and threaded on the end portions of one feed screw, hangers carried at opposite sides of the fuselage below the intermediate section, wheel forks hinged to said hangers, ground wheels journaled in said wheel forks, feed nuts threaded on the end portions of the other feed screw, link connections between the last mentioned feed nuts and the forks, and connections between the feed screws for simultaneous operation thereof.



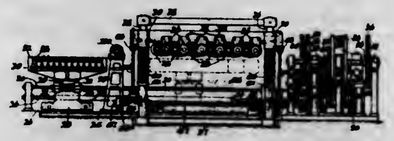
1,904,282. POLISHING APPARATUS, SPECIALLY FOR KNIVES, FORKS, AND SPOONS. ROBERT EAU, Solingen, Germany. Filed May 29, 1930, Serial No. 457,457, and in Germany June 3, 1929. 2 Claims. (Cl. 51—106.)

1. An apparatus for polishing articles, such as knives, forks, spoons or the like, comprising in combination a rotating flexible laminated polishing wheel, a turret like article carrying disc disposed adjacent said wheel and adapted to rotate at a slower speed than said wheel and to present said articles to said wheel, oscillatable levers pivoted to said disc and adapted to project beyond the rim thereof, article carrying members pivoted to said levers for movement in planes perpendicular to the plane of said disc, spring means connecting said disc with said levers and adapted to urge said levers toward their initial extended positions, stops on said disc for holding said



levers in said extended positions, resilient means for urging said article carrying members toward positions transverse to the plane of said disc, said disc and said wheel being so closely disposed with relation to each other that said articles are adapted to be embedded to some extent within the surface of said wheel, whereby the frictional contact will cause said levers and said members to yield so as to present said articles to said wheel at varying angles both within the plane of said disc and perpendicularly thereto, thus effecting the gradual transformation of transverse polishing to longitudinal polishing.

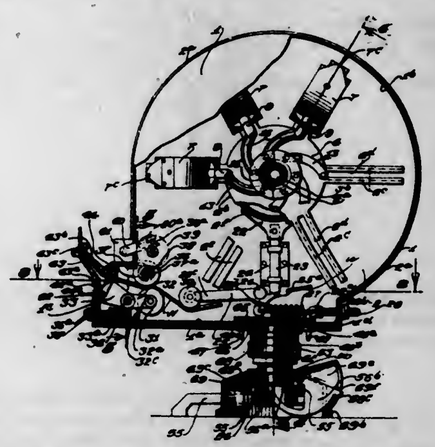
1,904,283. FLOW INDICATOR. CHARLES D. FAGAN, Sharon, and REHL W. SWANK, Sharpsville, Pa., assignors to Sharpsville Boiler Works Co., Sharpsville, Pa., a Corporation of Pennsylvania. Filed June 2, 1931. Serial No. 541,628. 2 Claims. (Cl. 116—117.)



1. A flow indicator comprising a transparent walled chamber, a shaft extending into said chamber, a substantially flat advertising symbol visually mounted on said shaft with the axis of said shaft extending through the axis of said symbol, a bladed rotor mounted on said shaft, an inlet conduit to direct liquid against the blades of said rotor in a direction substantially at right angles to the axis of the rotor to cause said rotor to rotate when liquid is flowing from said inlet conduit, and an outlet conduit having an axis substantially parallel to the axis of rotation of the rotor and with the blades of said rotor moving in a path directly over the mouth of said outlet conduit so that an increased flow of liquid into said outlet conduit increases the resistance to the rotation of said rotor to compensate for the tendency of said rotor to speed up under increased flow of liquid through said device, said transparent walled chamber being in free communication with said inlet and outlet conduits.

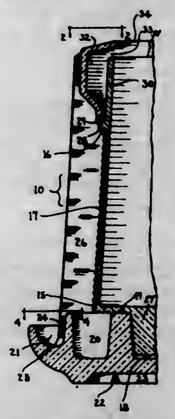
1,904,284. PUMP. CHARLES D. FAGAN, Sharon, and REHL W. SWANK, Sharpsville, Pa., assignors to Sharpsville Boiler Works Co., Sharpsville, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1931. Serial No. 559,882. 4 Claims. (Cl. 103—126.)

1. A liquid pump of the eccentric type comprising a casing provided with an inlet port and an outlet port, a pair of eccentrically mounted pump elements adapted to intermesh for pumping action, a crescent shaped partition between said pair of eccentrically mounted pump elements, and pressure operated means to move said partition endwise to relieve the pumping action of both of said elements when the pressure in the outlet port exceeds a predetermined amount.



1,904,285. METHOD AND MACHINERY FOR THE MANUFACTURE OF ACOUSTICAL BOARD AND THE LIKE. FRANCIS S. FARLEY, Trenton, N. J., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1929. Serial No. 391,088. 12 Claims. (Cl. 164—62.)

11. The method of fabricating acoustical material having its surface broken by sets of parallel channels, the sets being angularly disposed with respect to each other so as to form a recurrent pattern, which comprises moving the material transversely relative to a plurality of channel-cutting means so as to cut a plurality of channels comprised in one of said sets, automatically changing the angular position of the board to a predetermined position in the transverse plane to correspond with the angular relationship between parallel sets of channels, and cutting a plurality of channels comprised in another of said sets.

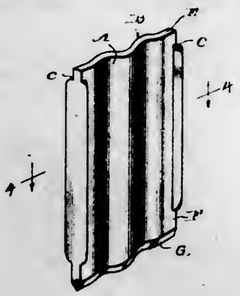


1,904,286. WIRE REEL. EDWARD M. HARRIS, San Diego, Calif. Filed May 9, 1930. Serial No. 451,011. 10 Claims. (Cl. 242—118.)

1. In a device of the class described, a reel mechanism for receiving a previously wound coil of wire, a brake means normally engaging said reel mechanism, guide means for receiving an end of said coil of wire, a release means for said brake means disposed between said guide means and said coil of wire, said guide means adapted to cause said wire to pass said release means, whereby said wire upon the application of tension thereon, actuates

said release means, said reel mechanism comprising a plurality of radially disposed wire receiving cages substantially encircling spaced apart portions of the annulus formed by said coil of wire, means for shifting said cages radially, and means for opening said cages.

1,904,287. SUPPORT FOR PARASITIC GROWTHS. PAUL W. LEFFLAND, Arlington, Tex. Filed Dec. 26, 1930. Serial No. 504,837. 7 Claims. (Cl. 47—38.)

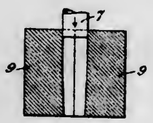


1. A flower vase comprising a waterproof base provided with a recess, a center part formed of porous material provided with an integral projection to fit said recess and with a corrugated outer surface, and an integral upper glazed portion, the lower part of said glazed portion being provided with an annular outwardly projecting flange.

1,904,288. FLANGED CORRUGATED FASTENER. JOHN SHERMAN MCCHESNEY, Chicago, Ill. Filed Apr. 26, 1929. Serial No. 358,297. 1 Claim. (Cl. 85—11.)

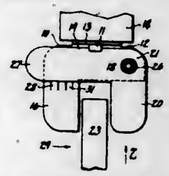
A fastener comprising a central relatively thin web longitudinally corrugated throughout its entire length and having a sharpened penetrating edge extending entirely across one end and a driving surface perpendicular to

the axis of the web extending entirely across the other end, sharp thin smooth holding flanges projecting laterally from both sides of the web along the opposed longi-



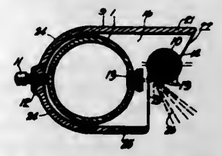
tudinal edges thereof, the outer edges of the flanges being parallel with each other and in line with the edges of the web and terminating intermediate the ends of the web.

1,904,289. METHOD OF MANUFACTURING ARTICLES FROM CELLULOID AND THE LIKE. SAMUEL A. NEIDICH, Edgewater Park, and WILLIAM MENDEL, Beverly, N. J. Filed Mar. 13, 1929. Serial No. 346,786. 1 Claim. (Cl. 18—51.)



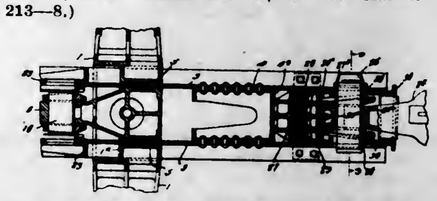
The method of forming an article of cellulosic material presenting a mosaic pattern at its outer surface, which consists in selecting a piece of said material of a uniform color desired for some elements of the mosaic pattern; masking, with a coating insoluble in any solvent of said material, selected areas in spaced relation on said surface which are to remain of that color; subjecting the unmasked areas of said surface to the action of a solvent of said material, having a high boiling point and low volatility; and subjecting unmasked areas in spaced relation on said surface to the action of a dye to which said material is normally resistant, but is rendered quickly permeable by the action of said solvent; wherein the solvent is mixed with carbon tetrachloride.

1,904,290. MANUFACTURE OF TAPERED TUBES OF CELLULOID AND THE LIKE. SAMUEL A. NEIDICH, Edgewater Park, N. J. Original application filed Jan. 18, 1929, Serial No. 333,353. Divided and this application filed Apr. 17, 1930. Serial No. 444,951. 2 Claims. (Cl. 18—51.)



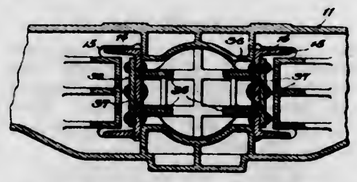
1. The method of making a tapered tube of celluloid and the like, open at both ends, which includes moistening a sheet of such material with a solvent thereof; rolling such sheet to a cylindrical tubular form of uniform diameter and thickness of wall; distorting an end portion of the cylindrical wall of said tube to conical form, by constricting it, while it is in a softened state, but without increasing the length of said primarily formed tube; whereby the thickness of the wall of said conical portion is increased by said constricting operation.

1,904,291. LATCH FOR GATES AND THE LIKE. VIVIAN W. NEILSON and CLARENCE C. NEILSON, Trout Creek, Utah. Filed Jan. 21, 1930. Serial No. 422,311. 7 Claims. (Cl. 292—67.)



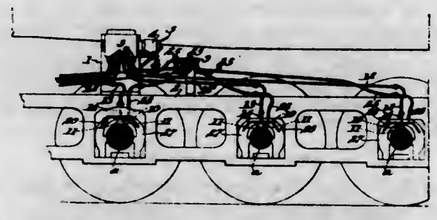
2. A gate latch, including in combination, a bracket having a shelf, a stop abutment projecting from said shelf, a latch member having a gate-engaging bar spaced apart from and positioned in opposition to said stop abutment, a stem substantially integral with said gate-engaging bar, a pivot member associated with said shelf and said latch member, a spring operative to press said latch member and said shelf together, and a retaining lug projecting from said shelf, said retaining lug being normally in front of said stem.

1,904,292. SPRINKLING DEVICE. LEE NORMAN DUNCAN, Oklahoma City, Okla. Filed Sept. 8, 1931. Serial No. 561,663. 4 Claims. (Cl. 299—126.)



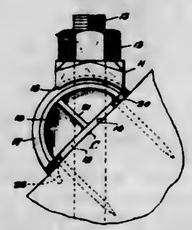
2. In a sprinkling device the combination of, a shield and housing for a roller, a cylindrical, rotating, eccentric roller journaled in said housing, renewable axle and sleeve means for holding and positioning said roller within said housing, supply pipe and nozzle means for discharging water upon said roller, a set screw on said shield for alining said roller and said nozzle whereby a jet of water from said nozzle is deflected in successive waves uniformly over a desired area by said eccentric roller.

1,904,293. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 5, 1926. Serial No. 79,449. 19 Claims. (Cl. 213—8.)



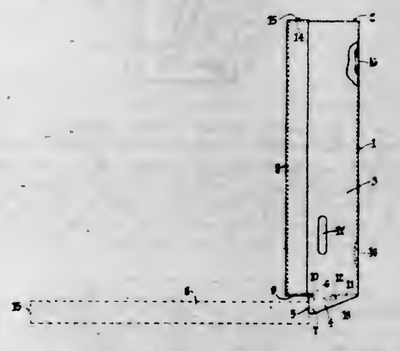
14. In a railway car, a body structure including a bolster, a long travel draft member extending substantially the length of the structure and mounted for longitudinal movement relative thereto, said draft member extending through said bolster, means for yieldingly resisting said relative movement whereby excessive forces imparted to the center member are gradually resisted without damage to the car structure, and means including a coupler operatively connected to said draft member for securing train slack, said coupler being adapted to movement in both directions from a normal position relative to said center member, and means for yieldingly resisting movement of the coupler relative to the center member, the movement of the draft member relative to the car structure being greater than the movement of the coupler relative to said draft member.

1,904,294. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 29, 1926. Serial No. 84,787. 29 Claims. (Cl. 213—8.)



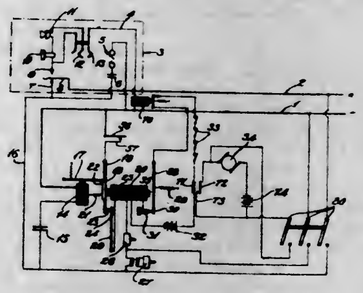
2. A railway car comprising a plurality of transverse members including a bolster, a long travel center member extending substantially the length of the car and mounted for longitudinal movement relative to said bolster, coupler means operatively connected to said center member, and means including a plurality of resilient members extending from a point adjacent the inner end of the coupler shank of said coupler means to said bolster for resisting said relative movement.

1,904,295. LUBRICATION ASSEMBLY. FRANK W. EDWARDS, Chicago, Ill., assignor to The Ohio Injector Company of Illinois, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1930. Serial No. 459,573. 3 Claims. (Cl. 184—7.)



1. In a lubrication assembly, a lubricator, a plurality of members to be lubricated each having a radial bearing and a thrust bearing, a plurality of lubricant feeds provided by said lubricator, one of such feeds connected with each of said radial bearings, a distributor, one of such feeds connected to said distributor, and a plurality of conduits connected with said distributor, one of said conduits connected with each of said thrust bearings, whereby lubricant may be supplied in adequate different quantities to a plurality of bearings in excess of the number of feeds provided by said lubricator.

1,904,296. ADJUSTABLE WASHER. GROVER C. ROYAR, Sacramento, Calif. Filed Dec. 31, 1928. Serial No. 329,402. 4 Claims. (Cl. 85—50.)

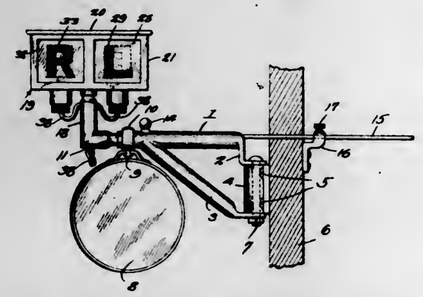


1. A washer of the kind described comprising a flat member seatable against a flat surface and having a slot for a bolt or rod and outstanding integral curved portions at opposite sides of said slot, and a washer plate having an aperture for said bolt or rod and adapted to seat against said curved portions, said member having an abutment adjacent to one end of said slot to enter a slot in an object and abut against said object.

1,904,297. PAPER CABINET. ALEC LAURENCE SAUNDERS, Ottawa, Ontario, Canada, assignor to E. B. Eddy Company, Limited, Hull, Quebec, Canada. Filed Nov. 27, 1931, Serial No. 577,600, and in Canada Nov. 16, 1931. 1 Claim. (Cl. 312—50.)

A cabinet for dispensing towels and the like comprising a box-like body portion adapted to be fastened to a wall surface, and a tray-like rectangular cover portion, the bottom walls of said portions forming a flat bearing surface for the towels, a slot-like opening in said surface, a lug on the lower end of each side wall of the body portion, each lug having pivot means for the cover portion and a vertical shoulder to hold the latter in horizontal position when open, the bottom wall of the cover portion being wider than the side walls thereof and having an eye engaging said pivot, means for rotary movement of the cover portion whereby the latter when open rests on said vertical shoulders in a horizontal position.

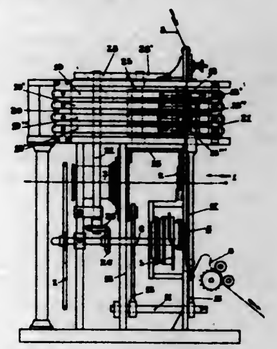
1,904,298. DEVICE FOR TRANSMITTING AND RECORDING TELEPHONE MESSAGES. KENNETH HARTLEY SAYER, New York, N. Y., assignor of forty-five per cent to John C. Thorne, New York, N. Y. Filed May 21, 1931. Serial No. 539,081. 20 Claims. (Cl. 179—6.)



1. In a device of the character described, an arrangement of conductors leading from a central station, a normally open telephone transmitter and receiver circuit, adapted to be manually closed, a telephone ringing device circuit, and an auxiliary recorder circuit, said three circuits being connected to said conductors at all times, said ringing circuit and said auxiliary circuit being energised substantially simultaneously and automatic means to delay operation of said auxiliary recorder for a substantial period after said energization.

1,904,299. PYROPHORIC LIGHTER. ADOLF WEISSENBURGER, Evillard, Switzerland, assignor to the Firm, Hermann Thorens, S. A., Ste.-Croix, Switzerland. Filed Mar. 16, 1931, Serial No. 523,097, and in Germany Apr. 14, 1930. 6 Claims. (Cl. 67—7.1.)

1. In a pyrophoric pocket lighter comprising a casing forming a fuel reservoir, wick igniting means mounted on the casing, a longitudinally movable wick tube slidably mounted in the casing, manually operated means for raising or lowering said wick tube relative to the casing, and means for operating said wick ignition means when the wick tube is in its lowered position.

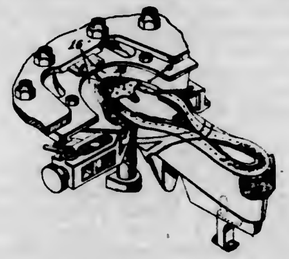


1,904,300. SIGNAL AND TROUBLE-FINDER. HARRY B. CANNON, Bradford, Pa. Filed Oct. 21, 1930. Serial No. 490,300. 2 Claims. (Cl. 177—329.)

1. In a device of the class described, an auto having a wall provided with a hole, a bracket on the inner surface of the wall and provided with a holding device, an outstanding guide, means for mounting the guide on the outside of the wall, a slide mounted removably and for reciprocation in the guide and having an inner end portion slidable in the hole and in the bracket and extended into the auto, the inner end portion being engageable by the holding means, the inner end portion constituting means whereby an operator, within the car, may reciprocate the slide, and a light box carried by the outer end of the slide and forming a signal which can be moved in and out by means of said end portion of the slide; the said inner end portion of the slide being in the form of a rod of materially less cross-sectional area than the slide, thereby reducing the size of said hole, and making said inner end portion of the slide readily insertible into the ground, when the slide is removed from the guide, whereby the light box may be used as a trouble-finding lamp, for which the slide and its aforesaid inner end constitute a ground-supported standard.

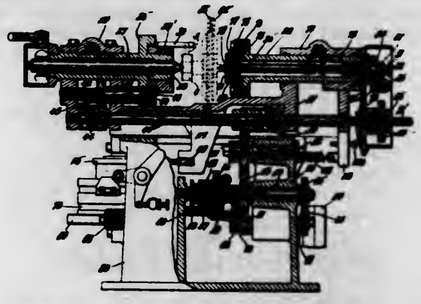
2. In a device of the class described, an auto having a wall provided with a hole, an outstanding guide, means for hinging the guide to the wall on the outside thereof, whereby the guide may be swung into parallelism with the wall when the guide is not in use, a slide mounted to reciprocate in the guide, and a signal on the outer end of the slide; the inner end of the slide extending through the hole and into the auto, to enable the slide and the signal to be reciprocated by an operator within the auto, the engagement of the slide in the hole serving to hold the guide in outstanding relation to the wall, the slide being removable from the guide and from the hole, thereby enabling the guide to be swung into parallelism with the wall, as aforesaid.

1,904,301. MACHINE FOR PERFORATING SLOW EMULSION FILMS WHILE THEY ARE BEING SHOWN ON THE SCREEN. JEAN MAURICE JACQUES DELAFON, Samoreau-sur-Seine, France. Filed Nov. 27, 1931, Serial No. 577,670, and in France Dec. 16, 1930. 10 Claims. (Cl. 164—87.)



1. In a moving picture machine provided with a window adapted to frame individual pictures,—means for manually displacing said window, a film perforator adapted to perforate a film traversing said machine, means operative to reciprocate said perforator and means operative by displacement of said window to change the position of said perforator.

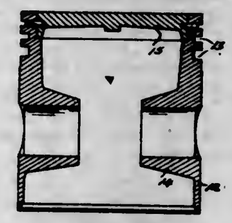
1,904,302. LIQUID DISPENSING SYSTEM. WARREN H. DE LANCEY, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1930. Serial No. 432,469. 7 Claims. (Cl. 221—95.)



1. In a liquid dispensing system, a liquid delivery line terminating in a flexible hose, a control element remote from the discharge end of said hose, an actuating element for the control element adjacent said end of the hose, a flexible power transmission wire extending from the actuating element to the control element, a flexible casing for said wire attached near one end to the hose and near the other end anchored at a point adjacent the control element and subject to extension and contraction under movement of the hose, and means for compensating for such extensions and contractions of said casing.

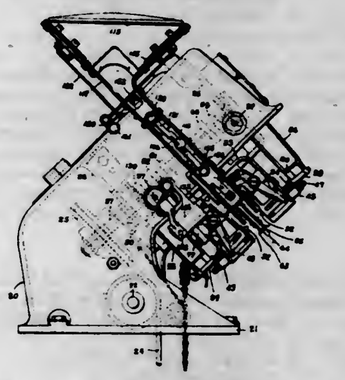
1,904,303. MEANS FOR HOLDING SHOE UPPERS IN LASTED POSITION. JOSEPH FAUSSE, Melrose, Mass., assignor to The Littleway Process Company, Lynn, Mass., a Corporation of Massachusetts. Filed Apr. 25, 1932. Serial No. 607,281. 30 Claims. (Cl. 12—107.)

1. A device for holding an end portion of an upper in lasted relation to a sole on a last, said device comprising an upper-holding member formed to extend around an end of the shoe bottom over the margin of the sole and having arms spaced from each other laterally of the shoe to hold the upper at the sides of the shoe bottom, and another member constructed to extend over the shoe bottom and to act on said arms to press the upper-holding member toward the bottom of the last, said other member being so formed as to leave visible the greater portion of the shoe bottom located near the margin of the sole along the upper-holding member.



1,904,304. METHOD AND MACHINE FOR GRINDING CHASERS. RALPH E. FLANDERS, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed June 15, 1923, Serial No. 645,516. Renewed Nov. 18, 1930. 15 Claims. (Cl. 51—94.)

1. A machine of the class described comprising a grinding wheel, a carriage, means on said carriage for rotatably supporting a mandrel constructed to support a plurality of chasers having their work engaging faces presented outwardly from the axis of rotation of said mandrel, means for rotating said mandrel to present said chasers successively toward said wheel, and means acting to effect approach between said wheel and mandrel whenever a chaser is presented toward said wheel to cause said wheel to grind said face, and then to effect a retraction between said wheel and mandrel after a time of grinding so short relative to the speed of rotation of said mandrel that the face of each chaser is ground concave circumferentially relative to said mandrel.



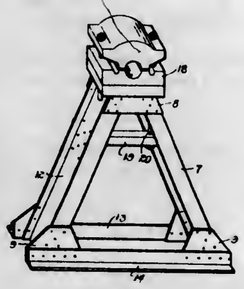
1,904,305. PISTON. PHELPS M. FRENS, Detroit, Mich. Filed Mar. 30, 1931. Serial No. 526,481. 4 Claims. (Cl. 74—108.)

1. A piston comprising an annular member having its upper face in and exposed to the combustion chamber, said member including an integral ring groove portion and bosses for the wrist pin and being also fashioned to provide draft for withdrawal through its upper end of a

corresponding single piece core and an inner member secured within said annular member and completing the head.

1,904,306. FASTENER INSERTING MACHINE. SYLVESTER LEO. GOOKIN, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 21, 1930. Serial No. 469,432. 36 Claims. (Cl. 218—15.2.)

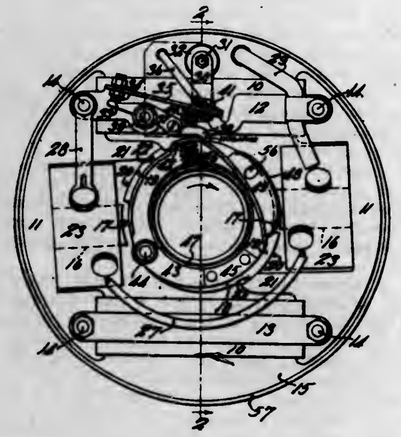
5. A fastener-inserting machine comprising a work-punching device and a fastener-inserting device arranged side by side, a hammer having an operating surface arranged to act on said devices alternately, movable means by which said devices are shifted to place them alternately in register with a common area of said operating surface, and mechanism arranged to operate said hammer with strokes having a common terminal limit but different starting points.



12. A duplex fastener-inserting machine comprising a pair of opposed fastener-inserting devices, two opposed members arranged to operate said devices respectively, a double-acting toggle arranged between and connecting said members, and mechanism arranged to operate said toggle.

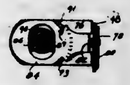
17. A duplex fastener-inserting machine comprising a pair of opposed punching devices, a pair of opposed fastener-inserting devices arranged beside the punching devices respectively, two opposed hammers arranged to operate the punching devices and the fastener-inserting devices alternately, movable means by which said devices are shifted to place said pairs alternately at a common operating locality, a double-acting toggle arranged between and connecting said hammers, and mechanism arranged to operate said toggle by moving it back and forth across its dead-center position to points unequally distant from said position.

32. A machine comprising fastener-inserting mechanism, a jointed raceway having an upper section and a lower section arranged to supply fasteners to said mechanism, means by which said upper section of the raceway is supported in a certain relation to said mechanism and



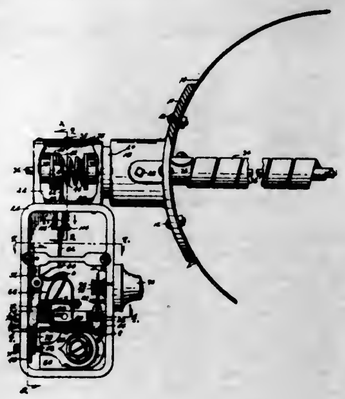
from which the raceway may be detached, and mechanism for operating said lower section of the raceway to present the fasteners, said operating mechanism and said lower section having cooperative coupling elements formed and arranged to be coupled by mounting the upper section of the raceway on said supporting means.

1,904,307. JACK POST. REX G. HAMAKER, Houston, Tex., assignor of one-half to A. M. Bowman, Houston, Tex. Filed Jan. 10, 1929. Serial No. 331,625. 1 Claim. (Cl. 308—25.)



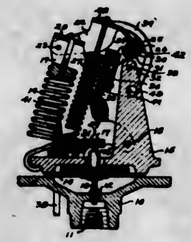
A jack post adapted to be subjected to either upward or downward stresses, comprising a pair of leg members, means to space the lower ends of said legs and adapted to absorb the horizontal component of either of said stresses, said means comprising a pair of spaced angle bars, a bearing on said post, a transverse brace on said legs, and anchor rods on said bearings tying said bearings to said post.

1,904,308. MAGNETO. KENNETH A. HARMON, Springfield, Mass., assignor to Wico Electric Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1931, Serial No. 567,171. Renewed May 27, 1932. 21 Claims. (Cl. 171—209.)



1. In a rotary magneto, a source of magnetic flux, pole pieces connected one to each polar extremity of said source, a rotor having projections thereon movable in close proximity to said pole pieces and adapted during each revolution of the rotor to make and subsequently break a magnetic circuit from said source through said pole pieces and rotor, primary and secondary windings associated with said magnetic circuit, normally engaged but relatively-movable breaker points, an electrical circuit including said primary winding and breaker points and arranged to be opened and closed by the separation and engagement respectively of said breaker points, and means movable with the rotor for opening the breaker points when the rotor moves into position relatively to said pole pieces to make said magnetic circuit and for closing them prior to the breaking of said magnetic circuit and again opening said points when the rotor moves into position to break said magnetic circuit and again closing them after said last named break.

1,904,309. CONTROL SWITCH STRUCTURE. MALCOLM E. HENNING, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed Jan. 27, 1930. Serial No. 423,677. 9 Claims. (Cl. 200—166.)

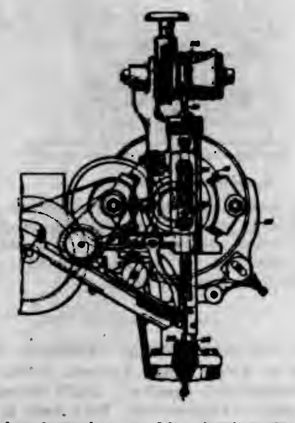


1. For use in a control structure having a movable element and a magnet with the element having a portion located in the magnetic field of said magnet, a stop for said element and means for varying the differential of operation of the element comprising mechanism for changing the location of said stop with respect to said magnet, said mechanism including a cam and a spring retaining it against said magnet.

1,904,310. STACK TEMPERATURE ACTUATED CONTROL DEVICE. MALCOLM E. HENNING, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed Apr. 14, 1930. Serial No. 444,202. 8 Claims. (Cl. 200—122.)

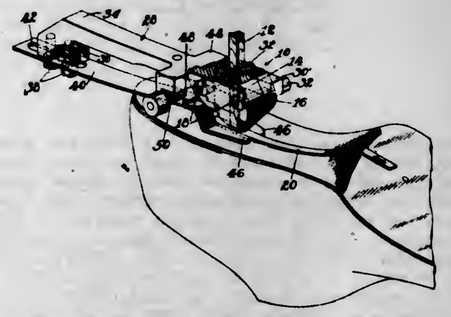
1. In a stack temperature actuated control device, a thermostatic power unit, an auxiliary switch operatively connected therewith, a main switch in series with said auxiliary switch, a heating coil shunting said auxiliary switch, a thermostatic bar adjacent said heating coil and operatively connected with said main switch for opening the same upon the thermostatic bar being moved by a predetermined rise of the temperature of said heating coil and means to open said auxiliary switch if said power unit becomes inoperative.

1,904,311. FLUID PRESSURE SWITCH. FRANKLIN G. HOBART, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 17, 1930. Serial No. 429,065. 11 Claims. (Cl. 200—83.)



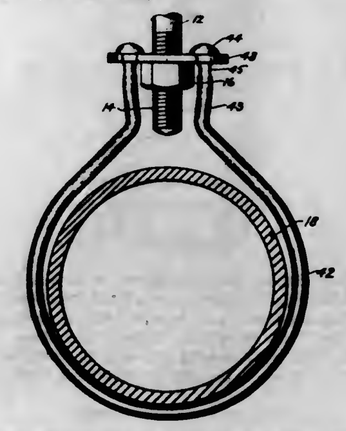
1. In a switch, an actuating member, a lever actuated thereby, a rotary thrust element operatively connecting the lever to said member, and means constituting a fibrous, oil retaining bearing surface for the thrust element.

1,904,312. DOBBY PATTERN CHAIN. ELBRIDGE R. HOLMES and OSCAR V. PAYNE, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 10, 1931. Serial No. 549,960. 13 Claims. (Cl. 139—334.)



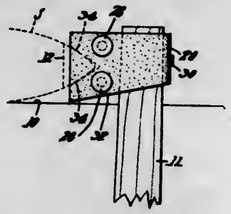
1. In a dobby pattern chain operating with pattern pegs, a chain bar having transverse holes for the pegs, and a sheet metal clip secured to the bar to attach the same to adjacent bars and having perforations aligned with certain of the peg holes of the bar.

1,904,313. FASTENING INSERTING MACHINE. CHARLES FREDERICK REGINALD JEAVONS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1930, Serial No. 473,150, and in Great Britain Sept. 19, 1929. 17 Claims. (Cl. 1—18.)



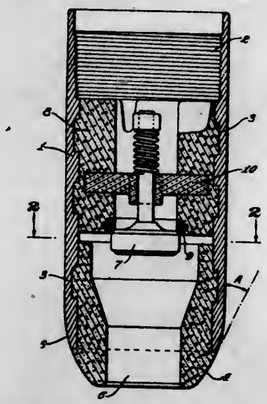
1. A fastening inserting machine having, in combination, means constructed and arranged to enter a fastening receiving recess in a work piece to position said recess in the line of drive of the fastenings, means operating to clamp the work, and means for thereafter operating the first-named means to insert a fastening into the work.

1,904,314. FASTENING INSERTING MACHINE. ARTHUR S. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 6, 1931. Serial No. 548,786. 11 Claims. (Cl. 1—18.2.)



1. In a fastening-inserting machine, fastening-inserting means, an adjustable resilient member adapted to position a work piece longitudinally relatively to the inserting means and located below the plane in which fastenings are to be inserted in the work piece, and means located substantially in the plane in which the fastenings are to be inserted in the work constructed and arranged to position the work piece transversely relatively to the fastening-inserting means, whereby fastening-receiving apertures in the work piece are brought into alinement with the fastening-inserting means.

1,904,315. PIPE HANGER. PERCY N. KENWAY, Newton, Mass. Filed Dec. 6, 1930. Serial No. 500,520. 2 Claims. (Cl. 248—31.)

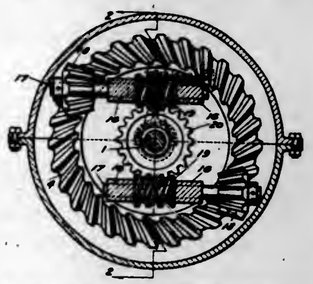


2. A pipe hanger for use with a lag screw or machine bolt, comprising a flat sheet metal yoke arranged to swivel upon the screw or bolt and having laterally extending slots with restricted openings near its ends which are accessible from the external edge of the yoke, and a pipe-encircling member of heavy wire having upstanding ends yieldingly spaced apart a distance greater than the distance between the slots and adapted to be sprung into said slots, said upstanding ends being swaged into heads substantially circular in contour and symmetrically disposed with respect to the line of stress in said upstanding ends.

1,904,316. PICKER FOR FLY SHUTTLE LOOMS. ALFRED KULLMAN, Worcester, Mass., assignor to Graton & Knight Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1929. Serial No. 358,349. 1 Claim. (Cl. 139—159.)

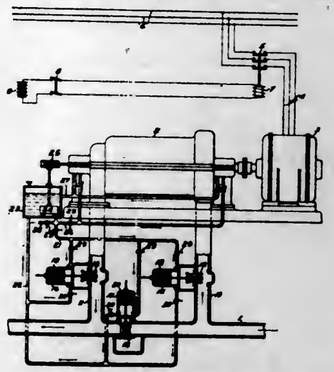
A picker for use with a shuttle in a loom, said picker being formed of a plurality of strips of leather placed side by side and an elongated piece of leather wound about said strips and firmly secured thereto, said picker having an accurately formed conical recess in its shuttle engaging face of predetermined size, and completely surrounded by the solid material of the picker, and having its side walls at such an angle as to be tangent to the shuttle point at a portion substantially spaced from the extreme end of said shuttle point, and said extreme end being free from the sides of said conical recess at the deepest part of said recess when the shuttle point is fully seated in said recess.

1,904,317. WELL CASING SHOE. JOHN J. LARKIN, St. Louis, Mo. Filed Sept. 28, 1932. Serial No. 635,207. 8 Claims. (Cl. 166—9.)



1. A shoe adapted for attachment to a casing and free of obstruction against passage of a drill therethrough, said shoe having its lower end tapered, and a part of disintegrable material extending beyond the lower end of said shoe, said part having a taper in continuation of the taper of the shoe to provide therewith a guide.

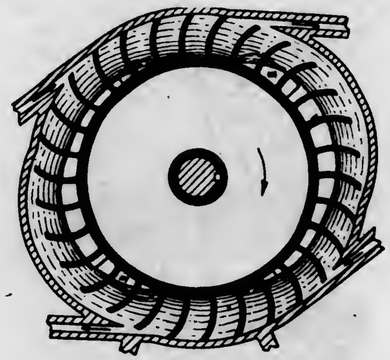
1,904,318. FRAME. HENRY H. LEHERR, Akron, Ohio. Filed July 6, 1931. Serial No. 548,780. 2 Claims. (Cl. 40—154.)



1. In a frame of the class described, a frame body composed of one piece of hard rubber, said body having an opening therein for exposing to view the article to be framed, and soft rubber flaps on the rear side of said frame, sad flaps projecting inwardly beyond the edge of said opening.

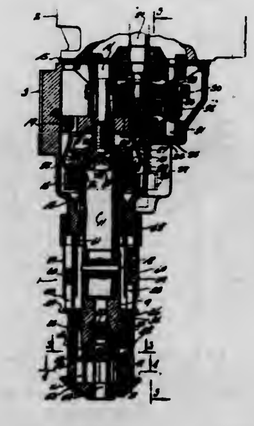
1,904,319. VARIABLE SPEED TRANSMISSION. ALBERT E. MAROLF, Davenport, Iowa. Filed Aug. 11, 1928, Serial No. 298,924. Renewed Oct. 15, 1932. 19 Claims. (Cl. 74—34.)

1. In a structure of the character described, a pair of aligned shafts, one carrying a worm wheel and the other a carrier for a worm, a worm carried by the carrier and capable of rotational displacement about its axis, a pinion mounted about the axis of the worm for unitary movement therewith, the worm and worm wheel being connected in driving relation such that rotation of the shaft carrying the worm wheel may cause rotation of the carrier and the shaft to which the carrier is connected, a gear on the first shaft meshing with said pinion and capable of oscillatory motion with relation to the shaft, and means for controlling the functioning of the last mentioned gear.



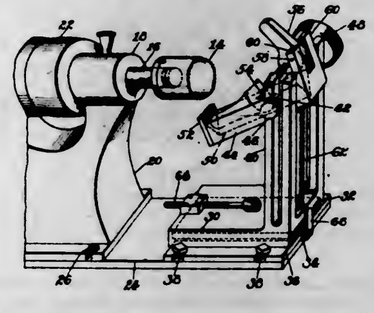
1,904,320. PIPELINE BOOSTER SYSTEM. DEREK B. MARPLES, Bella Vista, Wettingen, Switzerland, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 5, 1931. Serial No. 567,061. 3 Claims. (Cl. 137—78.)

1. In a booster system, the combination of a pipeline, a pump in said pipeline, a bypass around said pump and automatic valve means for closing off the pump inlet and discharge and for opening said bypass when said pump is stopped, and vice versa.



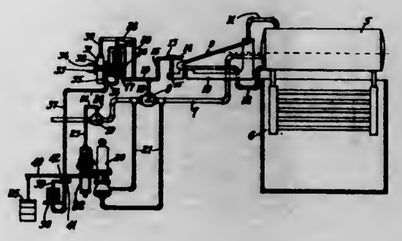
1,904,321. HYDROTURBINE PUMPING APPARATUS. HAROLD L. NASH, South Norwalk, Conn., assignor to Nash Engineering Company, South Norwalk, Conn., a Corporation of Connecticut. Filed June 1, 1931. Serial No. 541,194. 2 Claims. (Cl. 230—79.)

1. Pumping apparatus comprising a hydro-turbine pump having a pumping chamber of non-circular cross section and provided with inlet and discharge ports, said chamber being peripherally enlarged from a point adjacent the inlet port and being thereafter peripherally contracted toward the discharge port and a rotor mounted in said chamber and having a plurality of displacement chambers, said pump using a liquid for its pumping action, which liquid is rendered effective to partially compress charges of air or gas in said displacement chambers by the velocity of



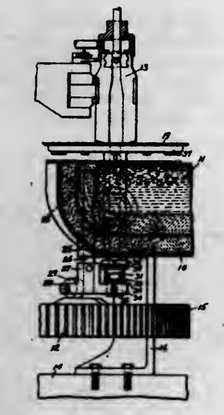
said liquid and the peripheral contraction of the pumping chamber, means providing a discharge passage for a portion of said pumping liquid from the periphery of said pumping chamber at one point in the cycle of pumping operations, and means to restore a similar amount of liquid directly to the periphery of said pumping chamber at a later point in the pumping cycle and at a pressure substantially higher than the normal pressure of the liquid as removed from the pumping chamber.

1,904,322. STUD SETTING TOOL. REINHOLD A. NORLING, Aurora, Ill., assignor to Independent Pneumatic Tool Co., Chicago, Ill., a Corporation of Delaware. Filed Mar. 26, 1932. Serial No. 601,442. 8 Claims. (Cl. 81—57.)



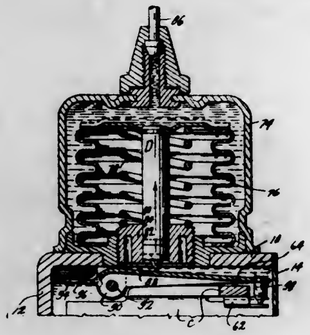
8. In a tool for setting studs by power, a chuck, jaws carried thereby, means operable through the power furnished by the tool for moving the jaws into and out of stud engaging positions, and a brake device operable on said means to retard the rotation of the same with the chuck to effect actuation of the jaws, said brake device including a disc of friction material supported by the chuck and spring pressed plungers carried by the tool for applying pressure against the disc.

1,904,323. MACHINE FOR SLOTTING HEELS. WILLIAM H. NUTT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 5, 1929, Serial No. 337,696. Divided and this application filed July 30, 1931. Serial No. 554,011. 15 Claims. (Cl. 12—42.)



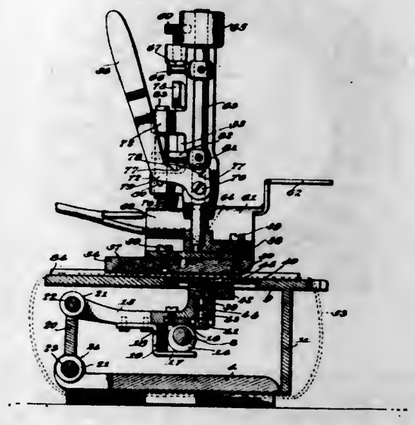
1. A machine for operating upon heels having, in combination, a cutter and heel-supporting means constructed and arranged for relative movement to form in the breast of a heel a laterally curved heel cover receiving slot, and guide means constructed and arranged to define the path of relative movement of the cutter and the heel-supporting means.

1,904,324. WATER CONTROL APPARATUS. THOMAS A. PEEBLES, Mount Lebanon, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed July 7, 1928. Serial No. 291,090. 2 Claims. (Cl. 122—451.1.)



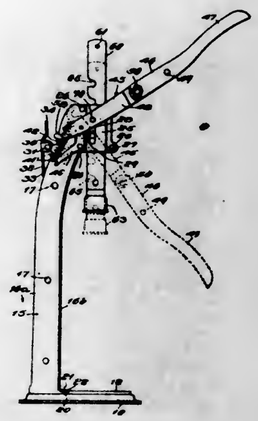
1. In combination with a boiler having a feed water line, a feed water control valve in said line, means for operating said valve in response to demand for feed water by said boiler, pressure control means for varying the water pressure in said line on the inlet side of said valve, and an additional mechanism responsive in operation to the drop in pressure across said valve and the position of said valve controlling said pressure control means for increasing the pressure differential across said valve as said valve opens and for decreasing such pressure differential as the valve closes.

1,904,325. ROTARY KNIFE FOR SEVERING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 10, 1929. Serial No. 413,005. 13 Claims. (Cl. 49—5.)



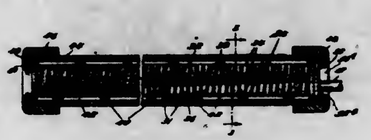
6. Mechanism for severing molten glass comprising a rotary knife, means for rotating said knife about its axis, means for intermittently reciprocating said knife axially, and resilient means for permitting axial movement of said knife independently of said reciprocating means.

1,904,326. AUTOMATIC CONTROLLING DEVICE. RALPH PENN, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed Dec. 19, 1927. Serial No. 241,076. 2 Claims. (Cl. 200—83.)



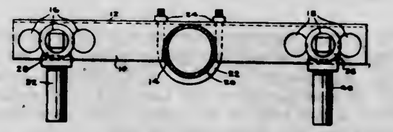
1. For use with an actuating member, an electric switch and a resilient connection between said actuating member and said switch, a safety device of the class described comprising a pivoted lever adapted to be moved to a position engaging said resilient connection for opening said switch, means normally constraining said lever to remain spaced from said resilient connection and pressure responsive means adapted upon abnormal pressure conditions to move said lever to cause engagement thereof with said resilient connection and move said connection against the action of said means normally constraining it to remain spaced therefrom and to thereby open said switch.

1,904,327. APPARATUS FOR AND METHOD OF ATTACHING SHOE LININGS. ADAM H. PREUSEL, Halifax, Pa., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 18, 1929. Serial No. 347,960. 33 Claims. (Cl. 154—1.)



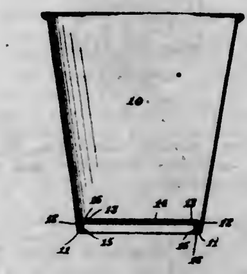
1. Apparatus of the character described comprising means defining a restricted channel a part of which means is heated, and separate means for moving a tongue and an article of work through the channel to be subjected to the heat and pressure.

1,904,328. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill., assignor to Indestro Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1930. Serial No. 432,337. 16 Claims. (Cl. 226—84.)



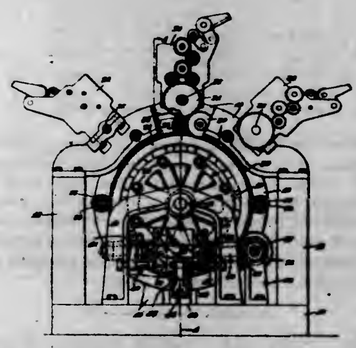
1. In a device of the class described, a standard, a capping member carried by said standard so as to be vertically reciprocable, and a pivoted handle for actuating said capping member, the pivot of said handle being floatingly carried by and translatable with respect to said standard so that said handle may be brought into and out of operative relation to said capping member, and means resiliently urging said handle into engagement with said capping member and toward an elevated position.

1,904,329. STOCK GUIDE MEANS FOR MACHINE TOOLS. CHARLES A. RICH, Providence, R. I., assignor to Brown & Sharpe Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed July 1, 1931. Serial No. 548,170. 14 Claims. (Cl. 82—38.)



1. Guide means for feeding bars of stock to machine tools, including a tube, a helically wound bar supporting resilient strip within said tube having spaced coils, a flat helically wound sheath strip interposed between said supporting strip and the inner wall of said tube having coils spaced apart a greater distance than those of the resilient supporting strip whereby the coils of said supporting strip contacting said bar may freely resiliently flex outwardly within said tube between the more widely spaced coils of said sheath strip, and cap members secured to the ends of said tube having end walls abutting the ends of said strips to secure them against longitudinal vibration having central holes therein extending exterior of the inner periphery of said bar supporting and sheath strips of a size to permit insertion of different sized bars of stock.

1,904,330. TEMPLATE FOR USE IN INSTALLING PLUMBING. DE WITT C. RUFF, St. Paul, Minn. Filed May 21, 1931. Serial No. 539,028. 5 Claims. (Cl. 72—128.)

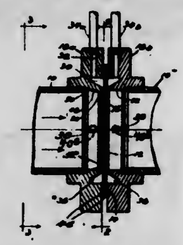


1. A template for use in installing plumbing comprising a support, means for securing said support rigidly in place for subsequent enclosure within a wall structure, means for securing the loose end of a pipe to said support, and a stub adapted to be removably attached to said pipe end so as to extend out through the wall structure as the latter is built, said stub when removed being replacable by a pipe connection through the hole formed in the wall by the stub.

1,904,331. DRINKING CUP. MELVIN H. SIDEBOTHAM, West Newton, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed May 7, 1931. Serial No. 535,699. 4 Claims. (Cl. 229—21.)

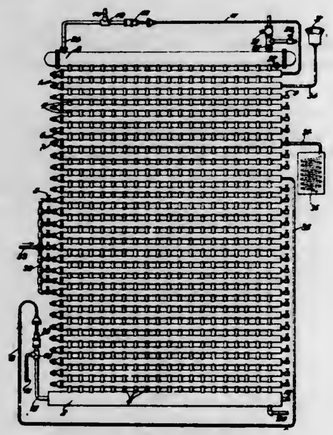
1. A paper cup comprising a body and a single-thick bottom closure therefor, said body and closure having two adhesively-united annular areas at an angle to each other.

1,904,332. MACHINE FOR PRINTING ROUND CANS IN MULTIPLE COLORS. MELVIN H. SIDEBOTHAM, West Newton, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed July 13, 1931. Serial No. 550,401. 10 Claims. (Cl. 101—38.)



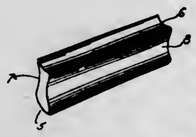
1. A printing machine having a rotatable plurality of supports for sound articles, and means for directly printing registered colors successively on articles carried by said supports.

1,904,333. ORIFICE METER. ED S. SMITH, Jr., Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed July 27, 1929. Serial No. 381,475. 5 Claims. (Cl. 73—167.)



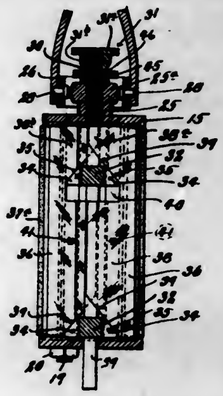
2. A metering device, comprising an orifice plate and a pair of orifice flanges adapted to support said orifice

plate between them, each flange having adjacent to said orifice plate a single point pressure connection and a



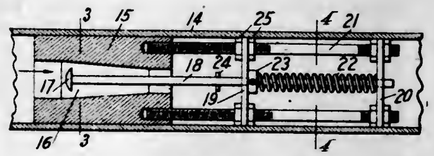
second independent annular connection completely circular except for said point connection and in the same plane as said point connection.

1,904,334. RECTIFIER. SYDNEY S. SMITH, Tulsa, Okla., assignor to Shell Petroleum Corporation, a Corporation of Virginia. Filed Mar. 29, 1930. Serial No. 439,883. 12 Claims. (Cl. 196—94.)



1. A rectifier including a series of vertical tubes in lateral alignment, a series of superimposed horizontal tubes each of which is in communication with said vertical tubes, means for maintaining a temperature gradient in said horizontal tubes, a connection for introducing input into one or more horizontal tubes adjacent a vertical tube, and connections for withdrawing the end products adjacent a vertical tube remote from the input.

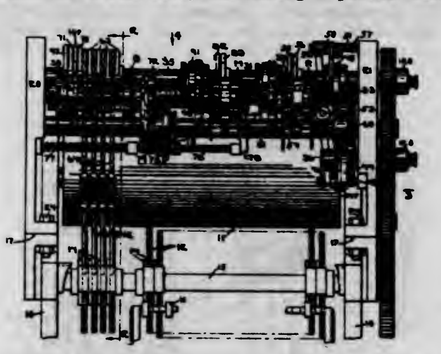
1,904,335. TONE BAR. GEORGE STEVENS, Chicago, Ill. Filed Apr. 25, 1932. Serial No. 607,301. 3 Claims. (Cl. 84—319.)



1. A tone bar comprising an elongated bar having in general an oblong cross section, but with one edge convex and the opposite edge concave, and with the concave surface extending substantially uniformly across the full length of the bar, the radius of curvature of the concave surface being comparable to the radius of the opposite convex surface.

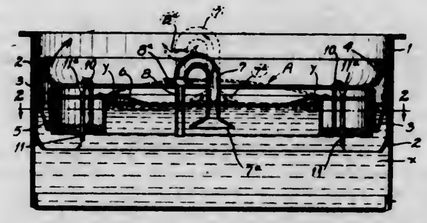
1,904,336. HONING DEVICE. JOSEPH SUNNEN, Kirkwood, Mo. Filed Sept. 2, 1930. Serial No. 479,188. 13 Claims. (Cl. 51—184.3.)

1. A honing device comprising a revoluble carrier provided in its periphery with a plurality of spaced radially and vertically disposed pockets intersecting each other to form a central chamber, a rod extending axially through said chamber, a block fixed on said rod and provided with a plurality of radial projections extending into said pockets, each of said projections having an upwardly and inwardly inclined face, a mount movably arranged in each pocket, the forward end of each mount being provided with a longitudinally and vertically disposed channel for receiving a cylinder engaging element, the rear end of each mount having a pair of spaced parallel walls slidably engaging the walls of the respective pocket, the walls of said mount being provided with inclined portions for engaging corresponding faces of said projections whereby said mounts can be moved radially into expanded positions when said rod and block are moved longitudinally in one direction.



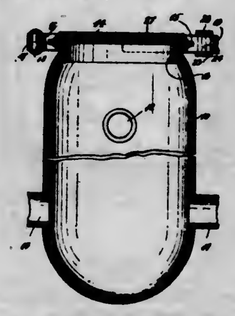
1,904,337. FLOW REGULATOR. EDWARD T. TURNER, Dayton, Ohio. Filed July 5, 1927. Serial No. 203,375. 5 Claims. (Cl. 137—152.)

1. In a flow regulating device, a tubular housing, a partition arranged within said housing and having a tapered passageway for fluid, a supporting structure carried by said partition and having a part forming a guideway, a rod slidably mounted in said guideway and extending into the passageway of said partition, a head carried by said rod and arranged to partially obstruct the flow of fluid through said passageway, and a spring acting on said rod to resist the movement of said head by fluid pressure.



1,904,338. REVERSING MULTIPLIER. WILLIAM M. WATTIE, Worcester, and KARL S. WHITTEN, Auburn, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 8, 1931. Serial No. 554,665. 12 Claims. (Cl. 139—326.)

1. In a drop box loom having a plurality of harnesses and a dobby having a pattern chain controlling said harnesses, in combination, a multiplying mechanism mounted on and above said dobby and having a pattern chain



controlling said drop boxes, and means to intermittently feed said chain in timed relation to the movements of the harnesses.

1,904,339. FLOATING DECK FOR LIQUID STORAGE TANKS. JOHN H. WIGGINS, Tulsa, Okla. Filed Feb. 15, 1928. Serial No. 254,517. 10 Claims. (Cl. 220—26.)

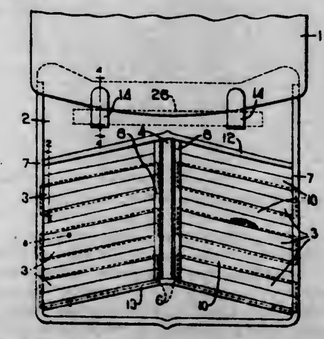
1. A breather roof having a confined gas space and provided with a flexible sheet metal portion; and buoyant means attached thereto, the buoyant means being so located that, and the relative vertical forces accomplished through the flexible roof due to gas pressure and by the buoyant means and the relative loads found in the flexible sheet metal portion and the buoyant means being so proportioned with respect to each other that, under varying pressures in the gas space the flexible sheet metal portion will change its shape so as to vary the volume of said gas space.

1,904,340. PIPE-TRAP COVER. HARRY SUMNER WRIGHT, Reading, Mass. Filed Dec. 5, 1931. Serial No. 579,182. 1 Claim. (Cl. 220—61.)

A clamping member comprising a pair of hinged arms having their free ends terminating in oppositely-disposed laterally-extending projections provided with oppositely-directed curvilinear surfaces, a locking member independent of said arms and arranged to receive said projections, and a locking lever pivotally connected to one end of said member and having a cam surface on the free end thereof arranged for co-operation with the curvilinear surface of one of said projections to draw the other end of said member against the other of said projections.

1,904,341. ANTISTICK COATING MATERIAL. JAMES HOWARD YOUNG, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1929. Serial No. 348,358. 5 Claims. (Cl. 134—1.)

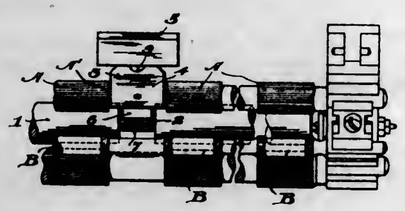
1. An antistick coating material, comprising an alginate base, soap, glycerine, and glue substantially in the proportions specified.



1,904,342. SPLASH FLAP FOR AUTOMOBILES. MAX ZAIGER, Swampscott, and LOUIS ZAIGER, Lynn, Mass. Filed Feb. 18, 1931. Serial No. 516,601. 4 Claims. (Cl. 280—152.)

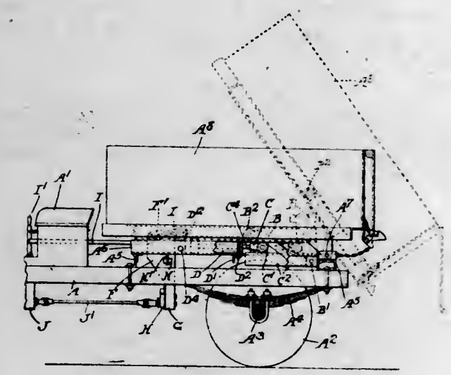
1. A splash flap construction for the front fenders of automobiles comprising a flap member, means for securing said flap member to the front edge of the front fender, and a downwardly-extended arm in the rear of the flap to hold the flap separated from the front wheel when the automobile is in motion.

2. A splash flap construction for the fenders of automobiles comprising a flap member, two one-piece U-shaped clips having substantially parallel legs and adapted to embrace the rear edge of an automobile fender, the outer face of the inner leg of each clip engaging the outer face of the flap member, a headed clamping screw for each clip, each clamping screw extending through the flap member and through the inner leg of the corresponding clip and having screw-threaded engagement with said leg and having such a length that when the screw is tightened it serves to clamp the flap member to the clip and the clip to the rear edge of the fender.



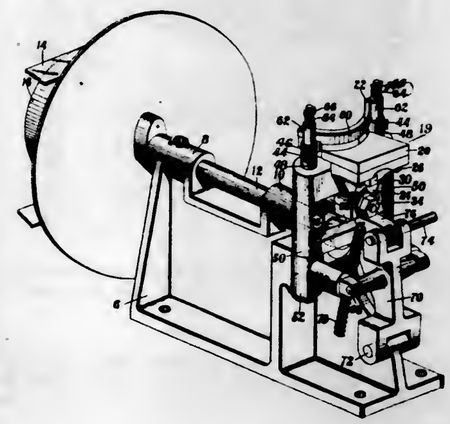
1,904,343. SPLASH FLAP FOR AUTOMOBILES. MAX ZAIGER, Swampscott, and LOUIS ZAIGER, Lynn, Mass. Filed June 15, 1932. Serial No. 617,358. 7 Claims. (Cl. 280—152.)

7. A splash flap for automobiles comprising a body portion of moldable material having two series of metal strips exposed on its rear face, the strips of each series extend-



ing from an outside edge of the flap nearly to the center and being inclined with reference to said ontside edge, the central portion of the body being free from strips, whereby said body can be flexed transversely.

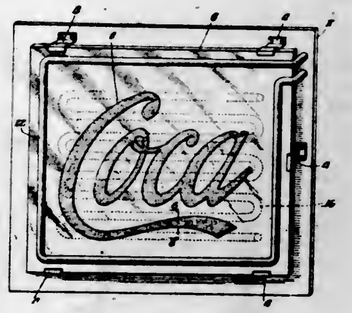
1,904,344. SUPPORT FOR CLEARER ROLLS. JAMES A. ANDREWS, Augusta, Me. Filed Mar. 4, 1931. Serial No. 519,978. 5 Claims. (Cl. 19—140.)



2. In combination with a shaft having spaced drawing-in rolls, and the intermediate rolls of a spinning machine, a clearer roll underlying and contacting the drawing-in and intermediate rolls and having a reduced part and a clip member having a part mounted on the shaft of and in the space between the drawing-in rolls so as to be solely supported by and for swinging movements on said shaft, a seat carried by said member and of greater length than and receiving said reduced part of the clearer roll to support the latter for movement lengthwise of the seat, and counterbalancing means connected to the member.

1,904,345. HYDRAULIC HOIST DUMPING BODY. WILLIAM C. ANTHONY and LESTER WACHTER, Streator, Ill., assignors to The Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Nov. 19, 1930. Serial No. 496,632. 5 Claims. (Cl. 298—22.)

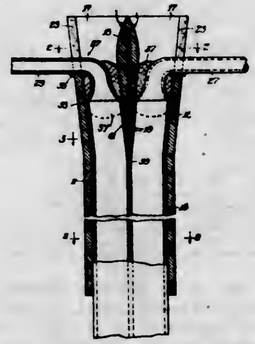
1. In combination with an automotive vehicle having a frame, a dumping receptacle pivotally supported therefrom, means for dumping the receptacle, said means including a hydraulic assembly, said assembly being mounted on the frame with a three-point suspension, a portion of the assembly being laterally bent from the longitudinal axis of the assembly, and shock absorbing means for supporting its weight.



1,904,346. HEEL BREASTING MACHINE. FRED ASHWORTH, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 6, 1930. Serial No. 493,859. 13 Claims. (Cl. 12—47.)

1. In a heel breasting machine, the combination of a permanent frame, permanent driving mechanism supported in the frame, and a detachable breasting unit mounted upon the frame in cooperative relation to the driving mechanism, said breasting unit comprising a relatively movable breasting knife and work support.

11. In a heel breasting machine, a frame, driving mechanism supported on the frame, and a detachable breasting unit comprising a breasting knife, a work support, and means on the work support cooperating with the driving mechanism for moving the work support relatively to the breasting knife.

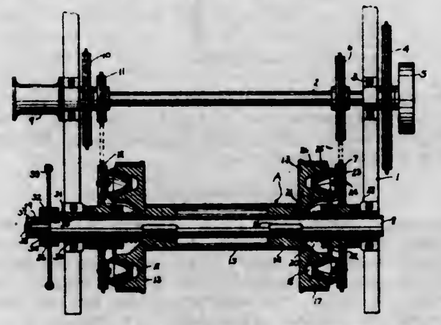


1,904,347. SIGN. ROBERT E. BARCLAY, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of New York. Filed Sept. 16, 1930. Serial No. 482,241. 33 Claims. (Cl. 40—130.)

19. A display device comprising a panel, luminescent light refracting means for displaying characters on said panel and means to illuminate the luminescent light refracting means with stroboscopic light.

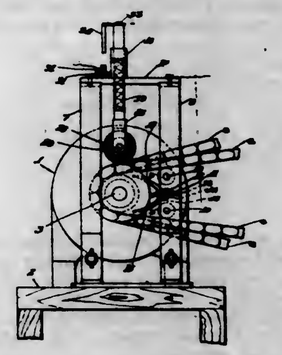
33. A display device comprising luminescent light refracting means forming display characters and means to illuminate the luminescent light refracting means.

1,904,348. METHOD OF MAKING MULTIBORE TUBES. ROBERT E. BARCLAY, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of New York. Filed Aug. 5, 1931. Serial No. 555,244. 10 Claims. (Cl. 49—17.1.)



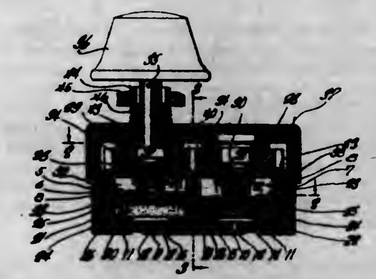
1. The method of making multi-bore tubing which comprises forming a plurality of tubes, feeding the tubes so formed together at a common point while in fluid condition whereby the contacting surfaces of the tubes fuse together.

1,904,349. VISIBLE RECORD CARD HOLDER. SAMUEL BARLOW, Sydney, New South Wales, Australia. Filed Nov. 5, 1931, Serial No. 573,279, and in Australia Nov. 8, 1930. 8 Claims. (Cl. 129—16.7.)



1. In and for visible record card holders of the kind set forth, a metal plate having one side rectangularly flanged and an integral acutely angled front portion shorter at one end than the plate, said plate having strengthening grooves adjacent said shortened end and having end abutments and having the plate end folded to constitute stubs each with a revolvable carrier thereon, substantially as herein described and explained.

1,904,350. CLUTCH FOR HOISTING DRUMS. ARTHUR C. BENSON, Houston, Tex., assignor to James S. Abercrombie, Houston, Tex. Filed May 26, 1928. Serial No. 280,873. 2 Claims. (Cl. 192—94.)



1. A friction clutch control means including a shaft, a bearing therefor, a cap member threaded to said bearing, and means on said cap and said shaft whereby said shaft may be moved longitudinally with respect to said bearing by movement of said cap.

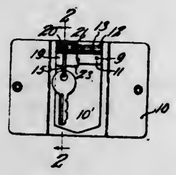
1,904,351. BROKEN BELT DETECTOR AND SAFETY DEVICE. ALFRED A. BIANCHI, Worcester, Mass. Filed Oct. 5, 1927. Serial No. 224,154. 4 Claims. (Cl. 74—51.)

1. In apparatus of the class described, a pair of grooved pulleys, a belt connecting and passing around said pulleys, said belt being made of leather links, and means to prevent said belt from whipping around said pulleys or either of them upon breakage of said belt, said means including a roller located between the courses of said belt and a finger located in the groove of the pulley between said roller and the pulley, said finger being arranged to direct the belt out of the groove in the pulley upon breakage of said belt.

1,904,352. ELECTRICAL RESISTOR. LYNDE BRADLEY, Milwaukee, Wis., assignor, by mesne assignments, to Allen-Bradley Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 28, 1928. Serial No. 321,386. 5 Claims. (Cl. 201—50.)

5. A potentiometer comprising a supporting member having spaced pockets, spaced terminals each having a portion extending into one pocket, a variable resistance element in each pocket in electrical connection with the terminal part therein, a cover to close the pockets, means carried by the cover to simultaneously and oppositely vary the individual resistance of said resistance elements and connect the resistance elements in series across the terminals so that the sum of both is always constant, and a fixed resistor mounted on the outside of the supporting member and electrically bridging the spaced terminals to define the effective resistance across the terminals, the value of said fixed resistor being chosen to adapt the potentiometer to a particular circuit requirement.

1,904,353. FLEXIBLE POCKET RECEPTACLE. WARREN R. BUXTON, Longmeadow, Mass. Filed June 18, 1929. Serial No. 371,934. 2 Claims. (Cl. 150—33.)

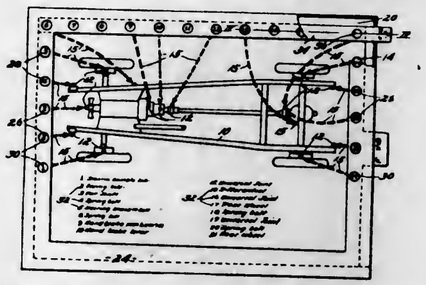


2. A flexible pocket receptacle, comprising, an outer wall, longitudinally spaced end sections mounted thereon

at least one of which consists of two plies, a member extending from one section across the gap between said end sections and slidably received between said plies of the other section, the outer ply of the latter section connected along one side edge and one end edge to a side edge and an end edge respectively of the outer wall and the

inner ply of such section connected along one side edge to the opposite side edge of such outer ply and otherwise unsecured to the latter or to said outer wall, and means wholly independent of said member and much more readily flexible than said member or end sections for interconnecting the end sections and limiting the degree of separation thereof.

1,904,354. KEY CASE. WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1930. Serial No. 480,391. 13 Claims. (Cl. 150—40.)



1. A device for removably securing a key hook, having an enlarged head, in a key case which comprises tubular members positioned in telescopic relation, registering slots formed in said members, adapted to receive the shank of the key hook and of a width to permit free swivel movement and travel of the hook in the slots, enlarged openings communicating with said slots and positioned to be brought into registration for the introduction of the enlarged head of the key hook, by relative movement of the tubular members, and to be thereafter moved out of registration to lock the hooks in the slots.

1,904,355. POWER LOADER. JOHN L. CLARKSON, Nashville, Ill. Filed July 28, 1930. Serial No. 470,031. 15 Claims. (Cl. 198—8.)

1. A loading machine of the character described, comprising, an elevating conveyor at the front of the machine extending upwardly and rearwardly, a gathering head overlapping said conveyor, and means on said head for gathering the material thereon and for moving the same therealong and onto said conveyor, said head being spaced above said conveyor at the point of delivery a distance sufficient to permit the material lumps to drop out of the path of said gathering means.

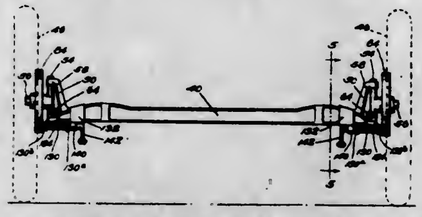
1,904,356. DISPLAY GREASE CHART. DAVID L. CONKLIN, Independence, Mo., assignor of one-third to Fred O. True, Kansas City, Mo. Filed June 9, 1932. Serial No. 616,179. 9 Claims. (Cl. 35—12.)

1. A chart for use in servicing vehicles comprising in combination, a perforated panel; a support for the panel, a diagrammatic representation of a particular kind of vehicle on the panel having a portion overlying a part of said panel; windows formed through said overlying portion; and lead lines, comprising a series of holes formed through the panel, joining certain of the perforations formed through the underlying part of said panel and the exposed portion, a predetermined number of said windows being in register with some of the perforations in the underlying part of said panel.

1,904,357. SMOKE DISPOSAL AND DRAFT INDUCING APPARATUS. FRANS H. C. COPPUS, Worcester, Mass., assignor to Anna M. C. Wechsberg, Vera L. Wood, and Frans H. C. Coppus, as trustees, Worcester, Mass. Filed Dec. 31, 1929. Serial No. 417,774. 29 Claims. (Cl. 104—52.)

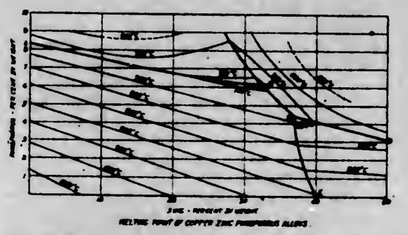
1. As an article of manufacture, a smoke jack suspended to swing, having the part above the point of suspension made to substantially counterbalance the part below the point of suspension.

1,904,358. FOUNTAIN PEN. ARTHUR O. DAHLBERG, Lake Worth, Fla., assignor to The Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 306,009, filed Sept. 14, 1928. This application filed Jan. 24, 1933. Serial No. 653,846. 57 Claims. (Cl. 120—47.)



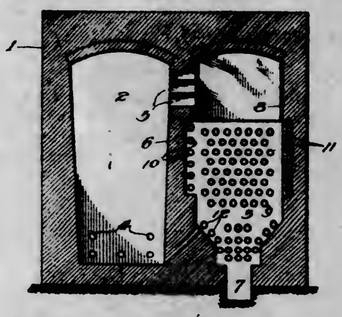
1. In a fountain pen having a barrel, a feed bar secured to one end of said barrel and having ink and air passageways formed therein, an air tube connected with said air passageway and extending a substantial distance into said barrel, and filling means located in the other

end of said barrel comprising a reciprocable plunger, a spring tending to urge said plunger outwardly, and a pliable sealing member having its peripheral edge fixed



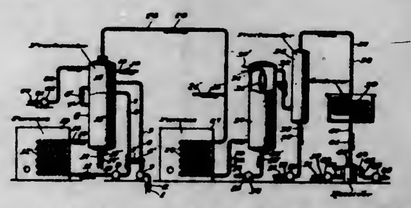
relative to said barrel and having its central portion engaged by said plunger and adapted to be reciprocated thereby.

1,904,359. CONTROLLING MEANS FOR VEHICLE WHEEL BRAKES. JOHN B. DES ROSIERS, Providence, R. I. Filed May 2, 1928. Serial No. 274,609. 6 Claims. (Cl. 188—194.)



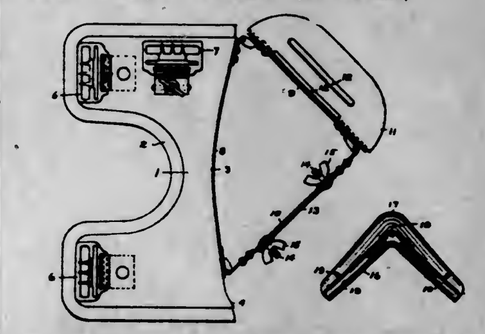
1. Brake-operating mechanism for a brake on a swivelled wheel comprising, in combination, swivelling and non-swivelling shaft sections approximately in alinement with each other when the wheel is directed straight ahead and a spring connecting said sections approximately at the swivelling axis of the wheel and permitting the swivelling of the wheel and serving as a torque-transmitting element between said sections in all positions of the wheel.

1,904,360. BRAZING SOLDER. AUGUST M. DINKLER, Waterbury, and CYRIL STANLEY SMITH, Cheshire, Conn., assignors to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 9, 1932. Serial No. 628,006. 4 Claims. (Cl. 75—1.)



1. An alloy composed of a substantial amount of phosphorus above 2.50 and up to 10 percent, from 5 to 50 percent zinc, the balance being principally copper.

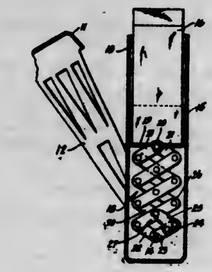
1,904,361. METHOD AND APPARATUS FOR UTILIZING RADIANT HEAT ENERGY. GUSTAV EGLOFF and LEV A. MEKLER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 21, 1928. Serial No. 287,303. 2 Claims. (Cl. 122—4.)



2. In combination with an element to be heated and an original source of radiant heat, of heating reflecting surfaces in proximity to said original source and adapted to distribute radiant heat from said original source to said element, and cooling means for said heat reflecting surfaces.

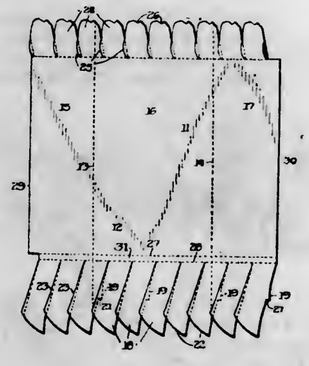
1,904,362. CONVERSION OF HYDROCARBON GASES. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 8, 1931. Serial No. 528,530. 3 Claims. (Cl. 196—10.)

1. A process for treating normally incondensible hydrocarbon gases which comprises heating the same under superatmospheric pressure to a temperature of between 1200° F. and 1850° F., then substantially lowering the pressure on the heated gases and subjecting the same under the lower pressure to the action of ultra violet light.



1,904,363. SURGICAL SPLINT. JOE J. ETTINGER, Warsaw, Ind., assignor to Zimmer Manufacturing Company, Warsaw, Ind., a Corporation. Filed Feb. 27, 1930. Serial No. 431,930. 2 Claims. (Cl. 128—88.)

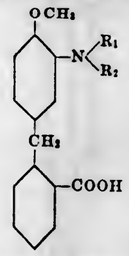
1. A surgical splint comprising a laterally convex base member having its middle portion concaved longitudinally



and adapted to be engaged upon either side of the human trunk the lower part of said middle portion being longitudinally convex to engage on either human hip, a support hinged to the base, and an angular arm rest adjustably carried by the base and being reversible end to end on the support, the rest being concaved transversely and being widest and convex longitudinally at the apex of the angle thereof.

1,904,364. HOLDER FOR COSMETICS AND THE LIKE. GILES C. FULLMER, Bridgeport, Conn., assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 7, 1931. Serial No. 535,627. 7 Claims. (Cl. 206—56.)

2. In a cosmetic holder, a receptacle having an open end, a carrier in the receptacle and adapted to receive a cosmetic, a lazy tong manually operable means outside the receptacle within the receptacle and beneath the carrier, and means to operate the lazy tong means to shift the carrier toward the open end of the receptacle to expose the cosmetic for use and after use to shift the carrier to withdrawn the cosmetic into the receptacle, said last means including a cover for the open end of the receptacle.

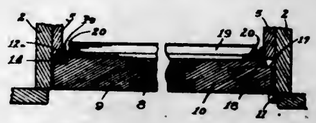


1,904,365. COLLAPSIBLE RECEPTACLE. WILLIAM J. GEIST, Lockport, Ill. Filed Feb. 6, 1931. Serial No. 513,897. 9 Claims. (Cl. 229—21.)

1. A foldable flat container blank having a main body-portion and a series of overlapping flaps extended at an oblique angle from an edge thereof.

1,904,366. ORGANIC ACID OF THE DIPHENYL-METHANE SERIES AND A PROCESS OF PREPARING THE SAME. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, a Corporation of Delaware. Filed July 2, 1928. Serial No. 290,028. 9 Claims. (Cl. 260—64.)

5. As new articles of manufacture, compounds having the following probable general formula:

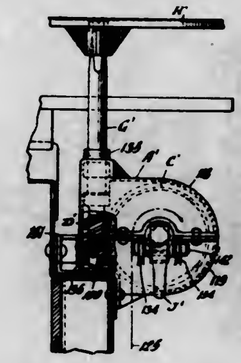


in which R_1 and R_2 are H atoms or acidyl groups.

1,904,367. 7.7'-DICHLORO FLAVANTHRONE AND THE PROCESS OF MAKING SAME. IVAN GUBELMANN, South Milwaukee, Wis., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, a Corporation of Delaware. Filed Sept. 4, 1928. Serial No. 303,961. 5 Claims. (Cl. 260—42.)

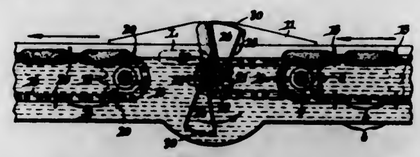
1. The process of preparing 7,7'-dichloro flavanthrone, which comprises treating 2-amino-7-chloro anthraquinone with antimony pentachloride in nitrobenzene at a temperature of about 200 to 210° C.

1,904,368. WEATHER-PROOFING STRUCTURE FOR DOORS. DAVID H. HARNLY, Chicago, Ill. Filed May 29, 1930. Serial No. 456,887. 6 Claims. (Cl. 20—69.)



1. The combination with a door frame, of a continuous weather-strip along the sides and one end thereof, and a door hingedly mounted on said frame having a marginal groove on the rear face of the door for receiving said weather-strip, said groove having a sloping wall for guiding and deflecting said weather-strip thereinto.

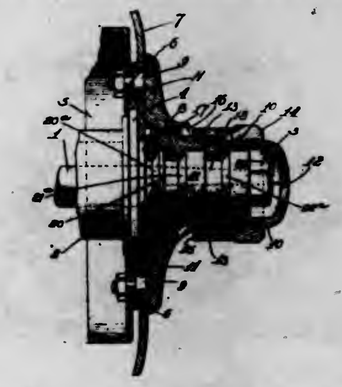
1,904,369. HAND BRAKE. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 9, 1931. Serial No. 514,464. 3 Claims. (Cl. 74—112.)



1. In a hand brake mechanism for railway cars adapted to be mounted on the end wall of the car, which end wall has an offset section, the combination with a vertically disposed operating shaft disposed adjacent to the end wall of the car above said offset section and inwardly of the plane of said offset section, said shaft extending above the top of the car and having an operating hand wheel secured to the upper end thereof, said shaft having a worm member fixed thereto having right hand threads thereon; of a chain winding drum rotatable about a horizontal axis parallel to the end wall of the car and disposed outwardly beyond said operating shaft and outwardly of said offset section of the wall; a worm wheel fixed to said drum and rotatable about the same axis, said worm wheel being operatively engaged with said worm member; and means secured to

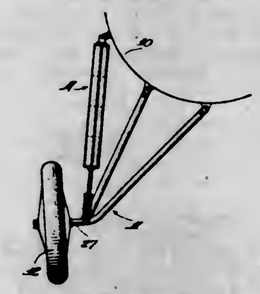
the car wall above said offset section and inwardly thereof for supporting said drum, worm wheel, worm, and operating shaft with the shaft and worm disposed in-

wardly of the axis of rotation of said drum and between the same and the end wall section to which the supporting means is secured.



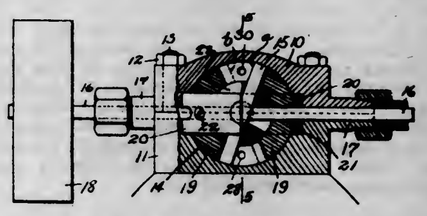
1,904,370. AUTOMATIC COOKING APPARATUS. HERBERT T. HUNTER, Baltimore, Md., assignor to Doughnut Machine Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 15, 1930. Serial No. 495,896. 10 Claims. (Cl. 53—7.)

1. In apparatus for cooking doughnuts and the like in hot liquor, an elongated receptacle for the cooking liquor; a progressing means with individual cells to maintain the doughnuts definitely separated in the liquor while conveying them along a portion of the receptacle; a second and similar progressing means with cells for conveying the doughnuts in definite separation in the liquor along the remaining portion of the receptacle; and a synchronized rotary turnover for engaging the doughnuts individually from beneath to invert them incident to transfer from the cells of the first progressing means to the cells of the second progressing means, each said vane embodying a broad curved tip effective to prevent backing of the inverted doughnuts.



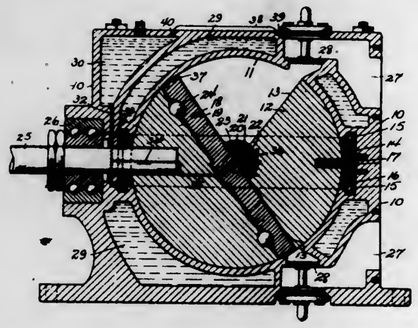
1,904,371. DEMOUNTABLE WHEEL LOCK. ARTHUR C. HYNAN, Chicago, Ill., assignor to Robert N. Burton, Chicago, Ill. Filed Aug. 18, 1930. Serial No. 475,871. 3 Claims. (Cl. 301—9.)

2. The combination of a wheel and a separable hub therefor having a transaxial flange against the outer face of which the body of the wheel is normally disposed, and a reduced portion extending through a central aperture in the wheel, said reduced portion having a transaxial circumferential encompassing groove having its inwardly facing wall sloping radially toward the axis of the hub and thereby inclined outwardly with respect to the outer face of the first mentioned flange and with respect to the wheel body and having its opposite wall substantially directly transaxial, a locking member formed to be disposed between said inclined and directly transaxial walls, dimensioned for clearance therebetween at least equal to the radial divergence of said inclined and transaxial walls of the groove, and means operating independently of said wheel for forcing said locking member



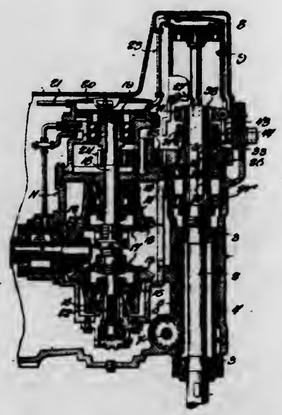
transaxially for wedging it in an axial direction relative to said wheel body and the first mentioned flange of the hub.

1,904,372. PNEUMATIC SHOCK ABSORBER. PETER W. KANE, Buffalo, N. Y. Filed Apr. 3, 1931. Serial No. 527,499. 11 Claims. (Cl. 188—88.)



1. A shock absorber comprising a casing formed of a single length of tubing, partition members in said casing for forming a plurality of compression chambers, means extending between each of said partitions and said casing for sealing the compression chambers, a piston in each chamber, and a piston rod connecting said pistons for unitary movement.

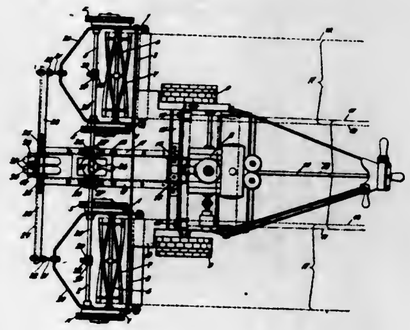
1,904,373. ENGINE. JAMES L. KEMPTHORNE, Montclair, N. J. Filed Aug. 20, 1930, Serial No. 476,492. Renewed Aug. 26, 1932. 8 Claims. (Cl. 104—142.)



1. A machine of the kind described comprising a casing with a spherical opening therein, a wobble-plate in the opening, and elements, including end pieces opposite the wobble-plate, movable by the wobble-plate and conforming to its oscillation to form chambers for the intake and exhaust of fluids.

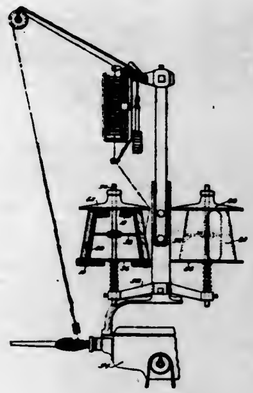
1,904,374. ENGINE. JAMES L. KEMPTHORNE, Montclair, N. J. Filed Nov. 25, 1930, Serial No. 497,980. Renewed Aug. 26, 1932. 10 Claims. (Cl. 103—142.)

1. An engine comprising a casing having a spherical chamber therein, a segmental abutment mounted to oscillate in the chamber, and a semi-spherical member rotatable in the chamber opposite the abutment and in contact therewith across the centre whereby the abutment is caused to oscillate when the member rotates.



1,904,375. TAPPING AND DRILLING MACHINE. FREDERICK H. KIND, Manitowoc, Wis., assignor to W. Gaterman Mfg. Co., Manitowoc, Wis. Filed Nov. 18, 1929. Serial No. 408,040. 3 Claims. (Cl. 10—135.)

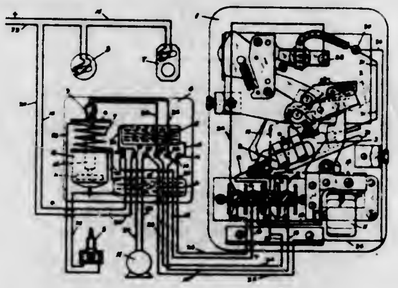
1. In a machine of the character described, a tool carrying spindle, driving means for rotating the spindle comprising an annular member carried by said spindle and provided with a semi-spherical pocket in its periphery, a driven sleeve surrounding said annular member and provided with an opening for alignment with said pocket, a ball normally positioned within said opening and pocket, and a spring-urged sleeve having an internally tapered face for engagement with said ball.



1,904,376. GANG-MOWER. CHARLES G. KRUCKEMEYER, Jennings, Mo. Filed June 9, 1930. Serial No. 460,039. 12 Claims. (Cl. 56—7.)

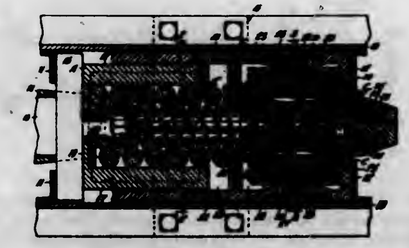
1. A device of the character described comprising a frame of rigid construction, a rock shaft supported by said frame, sliding rods in connection with the ends of said rock shaft, means connecting the lower ends of said rods with lawn mowers, means connecting the forward

end of said frame with said lawn mowers, and means for connecting the rear end of said frame with a motor vehicle.



1,904,377. MANUFACTURE OF RAYON. GEORGE R. LOCKHART, Providence, R. I., assignor to Manville Jenckes Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 24, 1930. Serial No. 438,370. 6 Claims. (Cl. 18—54.)

5. The method of producing rayon threads which comprises forming a cake, placing a porous wrapping through and around the cake, processing the cake, placing the cake on a supporting spool for winding, removing the wrapping from the outside of the cake while leaving the wrapping in contact with the inner wall of the cake, and thereafter winding the thread from the cake.

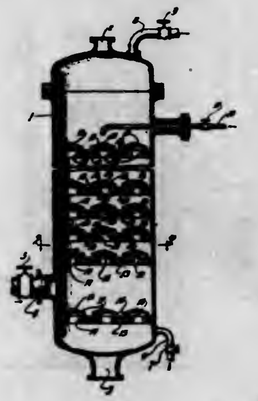


1,904,378. CONSTANT CURRENT IGNITION DEVICE. IRA E. MCCABE, Chicago, Ill. Filed May 9, 1930. Serial No. 451,187. 5 Claims. (Cl. 175—115.)

2. In an electrically controlled fluid fuel burner mechanism, a hot wire ignition system including an electrical resistance igniting element, a constant current transformer, means for energising the primary coil of the transformer, means connecting the igniting element in circuit with the secondary coil, an electro-magnetic means interposed in the secondary circuit, and means actuated thereby a constant predetermined time after each energization of the

primary coil to supply fluid fuel to the igniting device, thereby insuring a constant pre-heating period of the igniting device.

1,904,379. FRICTION SHOCK ABSORBING MECHANISM. WILLIAM H. MINER, Chazy, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 16, 1928. Serial No. 293,155. 5 Claims. (Cl. 213—30.)



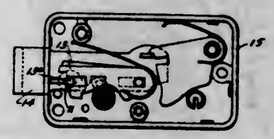
2. In a shock absorbing mechanism, the combination with relatively movable followers, one of said followers having spaced side walls provided with opposed interior bearing surfaces; of two groups of spring plates disposed at opposite sides of the mechanism, said spring plates being interposed between the follower bearing surfaces; a pair of carriers for said plates engaged and actuated by means on said follower to effect relative approach of said carriers and the other follower upon compression of the mechanism; wedge means having wedge faces adjacent opposite ends thereof, having wedging engagement with opposite ends of said carriers for spreading said carriers apart; and a main spring resistance opposing relative movement of the wedge member and the last named follower.

1,904,380. APPARATUS FOR VAPOR FRACTIONATION. JACQUE C. MORRELL and JOSEPH G. ALTHER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 25, 1927. Serial No. 186,219. 3 Claims. (Cl. 261—114.)

1. A dephlegmator comprising in combination a shell having vapor and liquid inlet and outlet, spaced superimposed decks mounted within said shell forming a plurality of chambers, relatively short upstanding open end risers

projecting above the general plane of each deck through which vapors pass from a lower to a higher chamber, a cap mounted above each riser, each cap comprising a

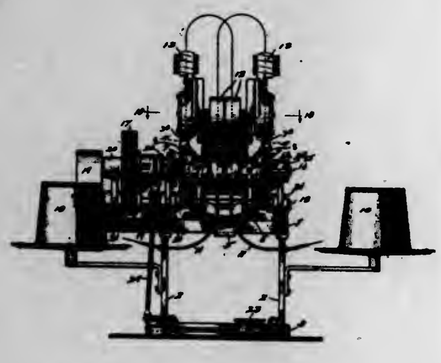
flange extending below and surrounding the upper limits of said riser having perforations therein above the upper end of said riser, and a top wall.



1,904,381. REFINING OF HYDROCARBON OILS. JACQUE C. MORRELL, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 11, 1929. Serial No. 406,528. 2 Claims. (Cl. 196—36.)

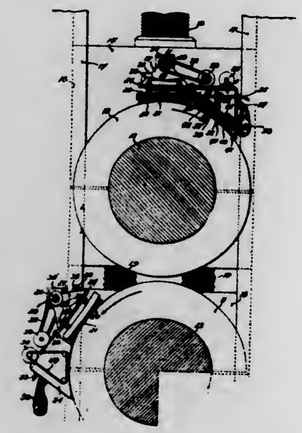
1. A process of refining cracked hydrocarbon distillates containing highly unsaturated hydrocarbons which comprises passing the same in vapor form thru adsorbent earthy material containing soda lime.

1,904,382. PROCESS FOR SWEETENING HYDROCARBON DISTILLATES CONTAINING MERCAPTANS. JACQUE C. MORRELL, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 15, 1929. Serial No. 407,372. 1 Claim. (Cl. 196—38.)



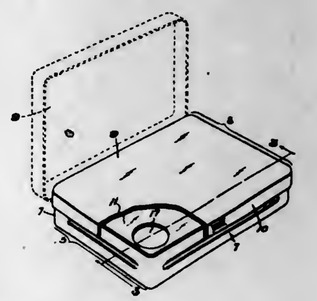
A process for sweetening hydrocarbon distillate containing mercaptans which comprises converting the mercaptans to mercaptides by treating the distillate with plumbite solution, and then precipitating the mercaptides by exposing the distillate to ultraviolet light.

1,904,383. SAFE DEPOSIT LOCK. WILLIAM P. MOSELY, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed July 28, 1928. Serial No. 296,048. 10 Claims. (Cl. 70—14.)



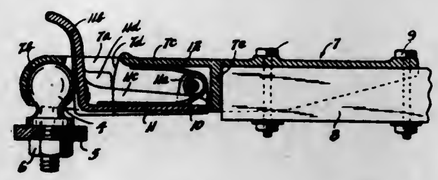
1. In a lock, a plurality of tumblers, a key guide in said lock whereby said tumblers may be operated, means leading into said lock independently of said keyway, and adapted to hold said tumblers in inoperative position, and a key designating character carried by said tumbler holding means.

1,904,384. MACHINE FOR MAKING AND INSERTING WIRE FASTENERS FOR BASKET COVERS. WALTER F. NEWHOUSE, Benton Harbor, Mich. Filed Nov. 9, 1931. Serial No. 573,784. 42 Claims. (Cl. 140—93.)



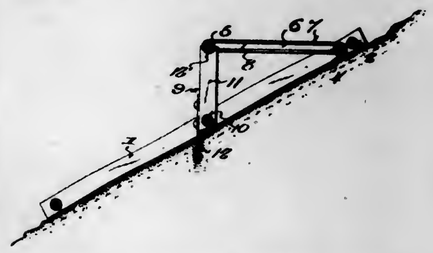
1. In a machine for making and inserting wire devices, the combination of a movable former, a stationary forming plate adapted and disposed in fixed position to cooperate with the movable former to form the wire device, by bending a length of wire into bail-shaped form, driving mechanism operable at right angles to said movable former to strip the bail-shaped wire device from said forming plate, by lateral movement thereof, and to bend the end portions of said wire device at right angles, operative to insert said wire end portions through the work, and clinching mechanism to clinch the wire ends upon the work.

1,904,385. GRINDING AND POLISHING ATTACHMENT FOR ROLLING MILLS. HARRY A. POLING, Kenosha, Wis., assignor of one-fourth to Frank S. Symmonds, Kenosha, Wis. Filed May 3, 1928, Serial No. 274,953. Renewed Mar. 3, 1932. 12 Claims. (Cl. 51—252.)



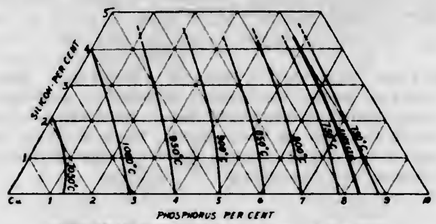
1. A roll dressing attachment for rolling mills having an adjustable roll, said attachment comprising an abrasive element for contact with the roll, means for reciprocating said element along the roll during operation of the mill, and means for maintaining a definite relation between said element and roll during adjustment of the roll.

1,904,386. DISPENSING CONTAINER FOR TABLETS AND THE LIKE. CHARLES E. RAYMOND, Boston, Mass. Filed Nov. 29, 1930, Serial No. 499,028. Renewed July 2, 1932. 7 Claims. (Cl. 206—42.)



3. In a dispensing container for tablets and the like, the combination of a box comprising a body, an imperforate outer cover, and an inner cover spaced from the bottom of said box body to provide a single storage space for the tablets, said inner cover being provided with an opening through which the tablets may be dispensed.

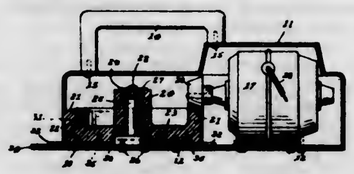
1,904,387. COUPLING. LEON LE ROY RHODES, Minneapolis, Minn. Filed Mar. 30, 1932. Serial No. 601,987. 5 Claims. (Cl. 280—33.15.)



1. In a coupler, the combination with a ball, of an approximately U-shaped socket member having a socket engaging one side of said ball, a ball clamping dog located between the prongs of said socket member and pivoted thereto for engagement with the opposite side of said ball, the prongs of said socket member having shoulders integrally formed thereon and said dog having integral wings at its sides closely adjacent said shoulders for engagement therewith.

1,904,388. COLLAPSIBLE TERRACE CHAIR. GEORGE A. RIDDELL, Sheboygan, Wis. Filed July 18, 1932. Serial No. 623,045. 2 Claims. (Cl. 155—1.)

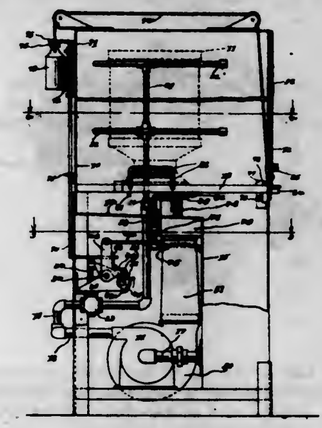
1. A chair of the character described comprising a pair of longitudinal runners, a cross brace connecting the said runners adjacent their upper and lower ends, a seat section pivotally connected at one of its ends to said runners, a pair of pivotal uprights for engaging the forward end of said seat section in raised position, said uprights being pivotally connected between said runners ahead of the forward end of said seat section when the latter is collapsed, and a pair of prongs carried by said uprights for engagement in the ground when said uprights are in vertical, supporting position.



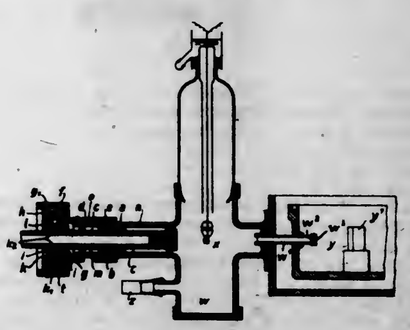
1,904,389. BRAZING SOLDER. CYRIL STANLEY SMITH, Cheshire, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 30, 1932. Serial No. 626,524. 3 Claims. (Cl. 75—1.)

MELTING POINTS OF THE COPPER-PHOSPHORUS-SILICON ALLOYS.

1. An alloy containing approximately 2 to 10 percent of phosphorus, 0.1 to 5 percent of silicon, the balance being substantially all copper.



1,904,390. HEDGE TRIMMER. CARL SOHN, Stratford, Conn. Filed Nov. 21, 1932. Serial No. 643,602. 2 Claims. (Cl. 30—11.)

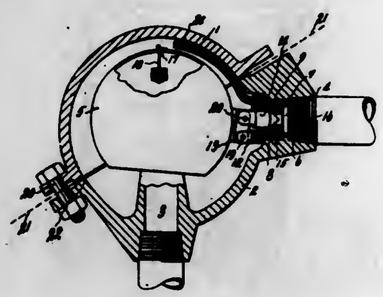


1. A hedge trimmer of the class described, the same comprising a base plate having projected teeth, a bearing post secured to the top side of said base plate, a cutter wheel mounted on the post including a hub portion, and a relatively heavy rim portion having a bevelled driving surface, cutters secured to the underside of the wheel between it and the base plate and projecting from the periphery of the wheel, a motor secured to the base plate having a conical driving pulley in engagement with the bevelled surface of the cutter wheel for operating the latter, a housing enclosing the wheel and motor, means for detachably securing the same to the base plate and having an opening around its forward end portion to permit the cutters to pass therethrough.

1,904,391. CAN WASHING MACHINE. HAROLD L. SOLIE and NELS J. HEDLUND, Minneapolis, Minn. Filed July 26, 1930. Serial No. 470,781. 5 Claims. (Cl. 141—7.)

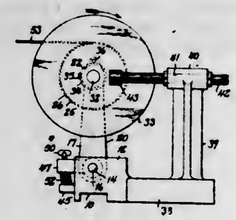
3. A can washing machine comprising a plurality of chambers each adapted to enclose a can to be washed, means for directing washing fluid, steam and air against the cans in said chambers, valves for severally controlling the supplies of said fluid, steam and air to each of said chambers, means, including a shaft, for actuating said valves for each chamber, a common power-driven shaft and clutches for severally connecting said power-driven shaft to said first mentioned shafts.

1,904,392. JOINT FOR MEMBERS PROVIDED IN A WALL SEPARATING SPACES OF DIFFERENT PRESSURES. HUGO STINTZING, Giessen, and EUGEN HUBER, Frankfort-on-the-Main, Germany. Filed June 10, 1929, Serial No. 369,783, and in Germany Dec. 24, 1927. 11 Claims. (Cl. 286—9.)



7. The herein described joint for members provided in a wall separating spaces of different pressures, comprising a wall separating the said spaces and formed with a hole providing a spherical seat, a spherical member in loose and rocking engagement with said spherical seat, a spherical bearing disposed concentrically of said seat and providing a support for said member permitting rocking movement thereof and adapted to hold the same away from its seat, and a packing medium filling the gap thus produced between said member and seat.

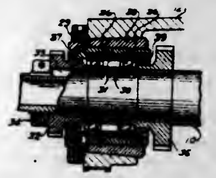
1,904,393. STEAM TRAP. ALBERT CHESTER TRAVIS, JR., Jackson Heights, N. Y., assignor to A. W. Holbrook & Sons, Inc., Palmer, Mass., a Corporation of Massachusetts. Filed June 12, 1931. Serial No. 543,827. 3 Claims. (Cl. 137—103.)



1. A steam trap comprising in combination a casing having a side outlet, a valve stem movable to and from a seat in the outlet opening, an inverted bucket pivoted at a point adjacent the outlet and in position to overlie

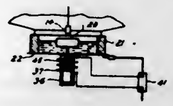
an inlet opening in the bottom of the casing, said bucket being connected to operate said valve stem by a rocking motion of the bucket, and a weighted wire hung loosely

in a vent hole at the top of the bucket whereby the vent hole is kept cleaned by a pendulum-like swinging motion induced whenever the bucket rocks on its pivot.



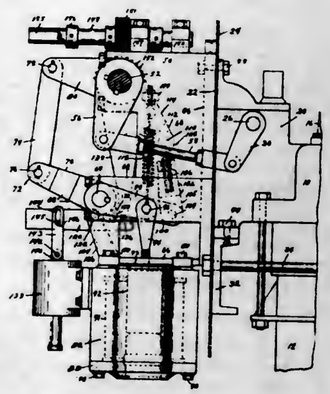
1,904,394. AUTOMATIC TENSION MECHANISM FOR STRANDS, ETC. JOHN VACHER, Waterbury, Conn., assignor to The American Mills Company, Waterbury, Conn., a Corporation. Filed Aug. 4, 1931. Serial No. 555,024. 7 Claims. (Cl. 242—55.)

1. In a mechanism of the class described, the combination with a revoluble reel mounted for bodily movement; of a pair of complementary interengaging rotary friction-members, one of which is adapted for connection to a source of power for being driven at a substantially constant speed and the other of which is operatively associated with the said reel and bodily movable therewith relatively with respect to its complementary friction-member to effect a speed-changing relationship between the two said members in direct response to a change in the tension of the material being handled by the said reel; the said parts being organised and related with respect to each other in such manner as to move the said reel and simultaneously slide the face of the movable friction-member across the periphery of its complementary friction-member to automatically effect a positive and proportional change in the speed of the said reel as the said tension is changed.



1,904,395. SPINDLE BEARING. ALEXANDER G. WHITEHEAD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1930. Serial No. 482,536. 2 Claims. (Cl. 308—189.)

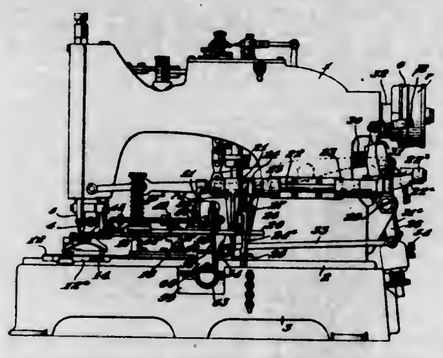
1. A spindle supporting and mounting construction comprising in combination, a supporting member, aligned conical openings therein, housing members fitting said openings, spaced anti-friction bearings within said housing members, and a sleeve slidably mounted within one of the housing members and having one of the bearing members mounted therein and a spindle supported within



said bearings in said housing members whereby said spindle and the bearings within one of said conical openings are free to move axially therein.

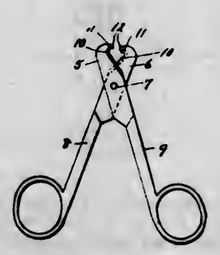
1,904,396. ELECTRIC CURRENT RECTIFIER. STEFAN WIDMER, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Mar. 31, 1931, Serial No. 526,644, and in Germany Apr. 14, 1930. 8 Claims. (Cl. 175—363.)

7. In an electric power rectifier structure of the metallic vapor arc type comprising a tank, anodes extending into the tank, and a fluid metallic cathode, the tank having a well formed therein to receive the cathode material; a cylinder fastened on and in communication with the cathode well, a solenoid core movable within said cylinder, a solenoid coil arranged about said cylinder, and a plate of difficultly fusible material connected with said core and movable thereby to permit attachment of the arc thereon when said coil is deenergized.



1,904,397. ELECTRIC SWITCH. CHESTER D. AINSWORTH, Wollaston, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed May 31, 1930. Serial No. 458,872. 12 Claims. (Cl. 200—106.)

1. Electric switch operating mechanism including the combination of a switch operating member, a pivoted actuating member having a rigid link pivotally connecting said

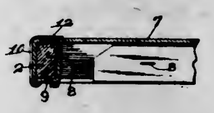


actuating and operating members, a locking toggle having one end thereof pivotally connected with said actuating member and having its other end pivotally connected to a fixed support, a latch arm carried by one of said toggle members, a latch for engaging said latch arm whereby to hold said toggle releasably in an underset position, means to trip said latch electrically, and manual means for operating said actuating member to close the switch including a manually operable shaft, a pinion carried by said shaft, and cooperating gear teeth carried by one of said toggle members.

1,904,398. METHOD OF AND APPARATUS FOR SEWING SEAMS. LESTER L. ALMOND, North Troy, ROLLAND HERRINGTON, Troy, N. Y., and FRANCIS A. MATTHEWS, Kitchener, Ontario, Canada, assignors to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed Dec. 26, 1930. Serial No. 504,804. 31 Claims. (Cl. 112—252.)

1. Apparatus for making a sewed seam comprising an eye-pointed needle, means for advancing the needle through the work while holding the free end of the thread at a point above the work, means for releasing said free end before the completion of the first stitch cycle to permit it to be drawn down to the under side of the work, and means for temporarily holding said end at a point below the work until the completion of at least one stitch cycle.

1,904,399. SURGICAL CLAW SCISSORS. HARRY B. BALTHASER, Philadelphia, Pa. Filed Sept. 22, 1930. Serial No. 483,433. 2 Claims. (Cl. 128—318.)



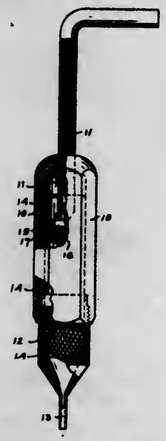
1. In surgical scissors, a pair of blades pivotally connected to one another and each having a cutting edge projecting in a substantially straight line from the inner edge of the blade toward the outer edge and toward the outer end of said blade and then extending in a curved line still toward the outer end of the blade back toward the inner edge thereof with a short straight portion between the curved part and said inner edge contiguous to the outer end of the blade and with said outer end forming a claw having a blunt terminal.

1,904,400. BOX. RALPH L. BANGS, Wakefield, and WILLIAM A. HERMANSON, Brighton, Mass. Filed July 24, 1931. Serial No. 552,943. 3 Claims. (Cl. 229—14.)

1. A box adapted to contain articles and keep them in a warm or cold state, comprising a casing of insulated walls composed of corrugated cardboard with an insulating batting between and removable insulating liner having a layer of insulating batting.

1,904,401. TABLE. WILLIAM H. BRESSENBRUGGE, Whitefish Bay, Wis. Filed July 11, 1930. Serial No. 467,242. 1 Claim. (Cl. 45—81.)

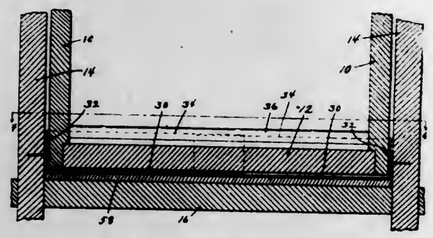
In a table, an open rectangular rigid table top frame including side rails secured together at their meeting ends, a relatively stiff table top cover having a finished exterior face and of a predetermined pliability, the edges of the cover being folded down and under the side rails and provided with extensions for engaging the inner faces of the rails, and fastening elements securing the edges of the cover to the bottom and inner faces of the rails.



1,904,402. TREATMENT OF HYDROCARBON OILS. EDWIN R. BIRKHIMER, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 15, 1931. Serial No. 537,753. 18 Claims. (Cl. 196—13.)

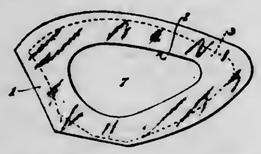
1. In the art of refining mineral oils, the process which comprises separating an oil containing paraffinic and naphthenic hydrocarbons into fractions respectively richer in paraffinic and naphthenic compounds by extracting said oil with an aromatic aldehyde.

1,904,403. METHOD AND MEANS FOR FILLING TIRE CASING CUTS. ROBERT M. BOWES and CHARLES E. BOWES, Indianapolis, Ind. Filed Aug. 19, 1931. Serial No. 558,180. 3 Claims. (Cl. 221—79.)



1. A gun cylinder closed at one end having a threaded hole through the closed end, an extension at the other end removably secured to and having substantially the same bore as the cylinder and terminating with a reduced nozzle, a cartridge seated in the bore of the cylinder and far enough in the cylinder extension to provide a hand hold for the withdrawal of the cartridge shell when the extension is removed, a plug in the bore of the cartridge initially in the end opposite the hand hold portion, said

plug having a countersunk outer side, means to prevent the passing of the plug through said end opposite the hand hold portion and a threaded shaft screwed through the

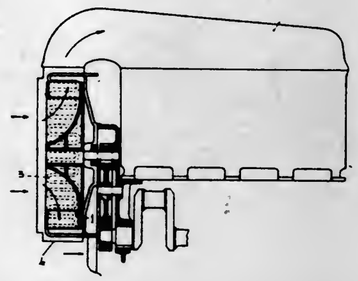


threaded hole in the end of the gun cylinder said shaft having a formed end which enters the countersink in the plug.

1,904,404. BUILDING CONSTRUCTION. MICHAEL F. BURK, Swampscott, Mass., assignor to T. T. Greenwood, Boston, Mass. Filed Apr. 25, 1930. Serial No. 447,211. 13 Claims. (Cl. 20—11.)

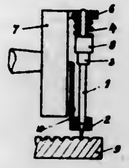
1. A building wall having spaced vertical studs, a weather pan located between said studs having a bottom wall which is inclined downwardly and outwardly toward the outer surface of the wall and also having upstanding end and inner walls, and a window frame having uprights and a window sill therebetween which are seated in said pan upon said bottom wall and between said upstanding walls said uprights being located against the ends of said sill and the joints between said uprights and sill communicating with said pan.

1,904,405. TEMPLATE FOR SPLITTING LEATHER SOLES. ANTHONY CAGGIANO, Springfield, Mass. Filed June 6, 1931. Serial No. 542,660. 1 Claim. (Cl. 69—20.)



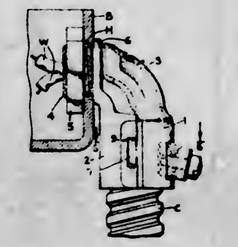
As an article of manufacture, a template for shoe soles comprising a sheet of thin transparent material, as celluloid, of a shape and size corresponding to the shape and size of a leather sole and formed with a centrally disposed opening whose periphery is approximately parallel to the outer edge or periphery of said template.

1,904,406. METHOD OF REDUCING THE SOLUTION VISCOSITY OF CELLULOSE. MICHAEL J. CALLAHAN, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 2, 1930. Serial No. 465,454. 4 Claims. (Cl. 260—146.)



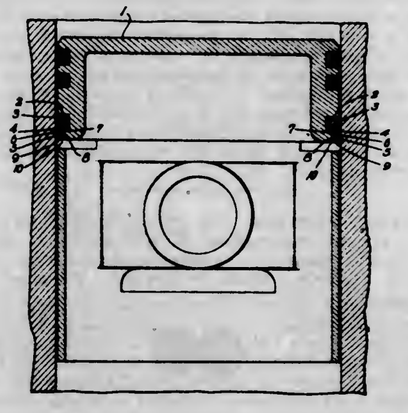
1. A method of reducing the solution viscosity of cellulose which comprises treating the cellulose with a gas containing a hydrogen halide as its sole reactive ingredient to reduce the solution viscosity of the cellulose, and discontinuing the treatment before the fibrous structure of the cellulose is substantially impaired.

1,904,407. OIL COOLING ARRANGEMENT FOR AIR-COOLED INTERNAL COMBUSTION ENGINES. GIULIO CESARE CAPPA, Turin, Italy, assignor of one-half to Società Anonima Automobili Ansaldo, Turin, Italy. Filed Aug. 22, 1930, Serial No. 477,101, and in Italy Aug. 29, 1929. 1 Claim. (Cl. 123—171.)



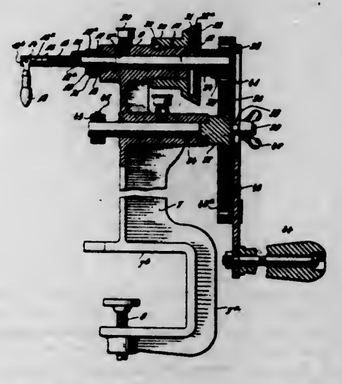
In combination with an internal combustion engine, a fan supplying cooling air to said engine, a coil arranged in the fan outlet chamber and adapted to be put in the engine oil circulation and a by-pass for short-circuiting said coil.

1,904,408. NEEDLE SECURING DEVICE FOR TALKING MACHINES. ANDRÉ MARIE BERNARD CHARLIN, Paris, France. Filed May 29, 1930, Serial No. 457,008, and in France Aug. 14, 1929. 4 Claims. (Cl. 274—37.)



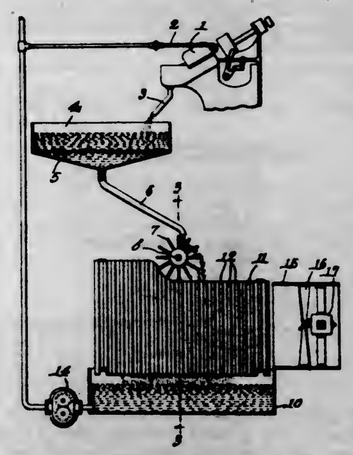
1. In a stylus holding device of a sound reproducing apparatus including a part to be vibrated, the combination of a member secured to said part and provided with a hole, a rigid stylus having a sharp tapering end and a maximum diameter greater than the inner diameter of said hole, means for applying the tapering end of said stylus against the edge of said hole so that it is wedged therein with its point projecting from said member, and damping means interposed between the last mentioned means and said stylus.

1,904,409. CABLE CONNECTER. LEWIS H. CHURCH, Roselle, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 19, 1929. Serial No. 400,808. 19 Claims. (Cl. 247—25.)



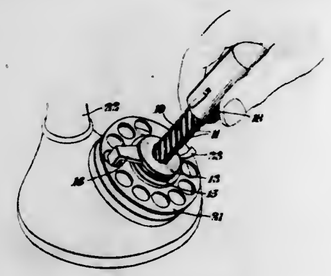
1. An elbow connecter comprising two separable portions forming a complete connecter with the interior of each portion exposed when separated, a box hole anchorage means upon one of said portions extending at an angle to the axis of the connecter, the portions being separable around the bend of the elbow to form a straight passage through the box hole anchorage means which is unobstructed by the portion carrying the same, interengaging means upon said portions engageable and completely disengageable upon relative axial movement therebetween for retaining the portions together and permitting complete separation thereof, and clamping means upon at least one of said portions for clamping a cable within the connecter and for locking said interengaging means against separation of the portions.

1,904,410. PISTON RING. CARL W. CLARK, Bethesda, Ohio, assignor of one-fourth to Cecil L. Ayers, St. Clairsville, Ohio, and one-fourth to S. T. Vaughn, Bethesda, Ohio. Filed Nov. 11, 1932. Serial No. 642,293. 2 Claims. (Cl. 74—109.)



1. The combination with a piston having a ring groove and an oil drain slot and a ring land of reduced diameter located intermediately of said groove and said slot, of a piston ring located in said groove and having an axially extending flange located intermediately of the inner and outer faces of said ring and extending downwardly over said ring land to said oil drain slot, whereby oil is prevented from passing behind said ring.

1,904,411. WINDING MECHANISM. JOSEPH CLAYTON, New York, N. Y. Filed Mar. 28, 1931. Serial No. 525,894. 5 Claims. (Cl. 242—55.)

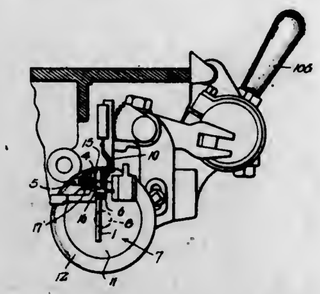


1. A device for winding material upon a suitable carrier, embodying a supporting standard, a shaft journalled in a bearing on said standard, a clutch member fixed to said shaft, a cooperating clutch member mounted on said shaft bearing, a pinion keyed to said shaft, driving means including a ring gear mounted on said standard for movement relative thereto, into and out of mesh with said pinion, and means on said shaft cooperating with one end of the bearing therefor to render said shaft capable of longitudinal movement relative to its bearing, in response to variations in the load transmitted to said shaft transversely of its axis.

1,904,412. LUBRICANT COOLER. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio. Filed Nov. 10, 1930. Serial No. 494,788. 4 Claims. (Cl. 184—6.)

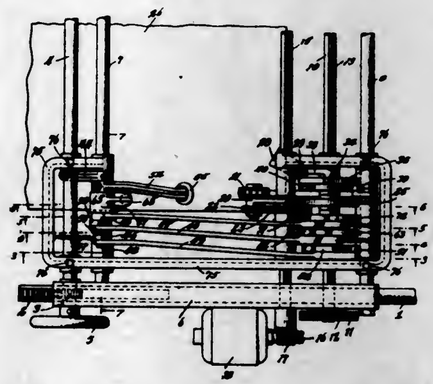
1. An apparatus of the class described including a receiver for lubricant, spaced cooling plates upstanding thereabove, means for directing air currents between the plates, means for distributing lubricant over the plates and downwardly across and in direct contact with the air currents in the spaces between the plates, and means, including mechanism to be lubricated, for elevating lubricant from the receiver and directing it onto the distributing means.

1,904,413. TELEPHONE DIAL ACTUATOR. JULIUS P. COLLYER, Old Greenwich, Conn. Filed May 19, 1932. Serial No. 612,279. 8 Claims. (Cl. 179—90.)



1. A telephone dial-operating instrument comprising a dial-engaging member, a stem connected to said member, a manually operated actuator mounted on said stem, and inter-engaging means on said stem and actuator for effecting rotation of said stem upon movement of the actuator axially of said stem.

1,904,414. PRODUCTION OF AROMATIC ALDEHYDES. AUGUSTUS E. CRAVER, Brooklyn, N. Y., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 18, 1921, Serial No. 516,124. Divided and this application filed July 23, 1927. Serial No. 208,063. 5 Claims. (Cl. 260—136.)



1. The process of producing an aldehyde which comprises passing, in the vapor phase, ortho-chlortoluene and an oxygen-containing gas into contact with tantalum oxide, at a temperature of approximately 500° C.

1,904,415. CHANNELING MACHINE. ALPHONSE U. CROCE, Brockton, Mass., assignor to Leo V. Clancy, Brockton, Mass. Filed Dec. 4, 1930. Serial No. 500,110. 3 Claims. (Cl. 12—27.)

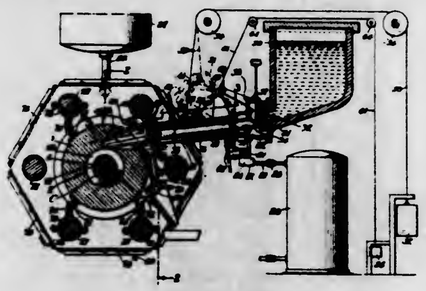
1. In a channeling machine, provided with an edge slitting knife having a shank provided with a lower cutting edge and a blade extending laterally of the shank at both sides thereof and provided with a longitudinal cutting edge also at both sides of the shank, said shank having its lower portion for a distance about equal to the breadth of said blade provided with opposite curved diversely beveled surfaces leading away from the shank cutting edge and intersecting the upper surface of said blade at about right angles, to thereby gradually turn the outside lip of the insole to about forty five degrees upwardly and at the same time resist any downward and inward reverse movement of said lip.

1,904,416. SHEET SEPARATOR FOR PAPER FEEDING MACHINES. FRANK L. CROSS, Port Washington, N. Y., assignor to Cross Paper Feeder Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1931. Serial No. 570,125. 8 Claims. (Cl. 271—21.)

1. The combination with means for imparting a combing separating action to a pile of sheets, and a sheet moving separator element to engage and move the top sheet of said combed pile, of means engaging the combed portion of the pile to hold the combed sheets in combed condition for the action of said sheet moving separator element.

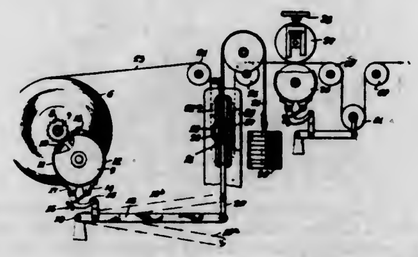
1,904,417. FINISHING PROCESS. FRANK M. CHYSTLER, Lansing, Mich., assignor to Jones-Dabney Co., a Corporation of Delaware. Filed Oct. 21, 1931. Serial No. 570,265. 10 Claims. (Cl. 91—70.)

1. The method of finishing a surface of an article of manufacture which comprises applying to the surface a film of a liquid coating composition comprising a synthetic resin, subjecting the outer surface of the film to an abrasive treatment, and heating the resulting film to obliterate abrasive marks.



9. The method of finishing a surface of an article of manufacture which comprises applying to the surface a film of liquid coating composition comprising nitrocellulose and a synthetic resin of the phthalic anhydride glycerine type, treating the film to increase its hardness, subjecting the outer surface of the hardened film to the action of an abrasive to produce a relatively smooth surface, and heating the resulting film to a temperature of about 160° F. to 250° F. to modify the physical condition of the material thereof and effect the substantial elimination of abrasive marks.

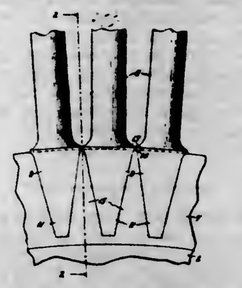
1,904,418. METHOD OF INSULATION. CHRISTIAN DANTSIZEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 11, 1929. Serial No. 399,063. 7 Claims. (Cl. 204—1.)



1. The process of insulating a metallic conductor shaped into any desired final form in which the abutting parts of the shaped conductor are in electrical contact, which consists in making the shaped conductor the anode in an electrolyte which on electrolysis deposits an insulating coating throughout the entire surface of the shaped conductor, including the parts thereof originally in electrical contact, and passing an electric current through the electrolyte for a time sufficient to effect such insulation of the entire shaped conductor.

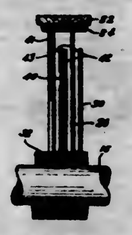
1,904,419. LEAD EXTRUSION APPARATUS. FRANK L. DAVIS, Jr., Kenilworth, N. J., assignor to The Watson-Stillman Co., Roselle, N. J., a Corporation of New Jersey. Filed June 4, 1932. Serial No. 615,382. 15 Claims. (Cl. 207—4.)

1. In a metal extrusion apparatus including an extrusion chamber having an airtight charging and cleaning out passage, an extrusion ram mounted to reciprocate in the extrusion chamber and a supply container for molten metal having a discharge port, an airtight delivery conduit leading from said supply discharge port to said discharging passage and comprising telescoping tubular sections; means excluding air from said discharge port and the adjacent end of said conduit; an airtight releasable juncture between said conduit and said charging passage, the conduit being retractible from the passage by telescoping; a hinge mounting for the conduit adapting it to be swung out of alinement with the charging passage; and means to automatically swing the conduit out of alinement with the charging passage when it is freed from the latter.



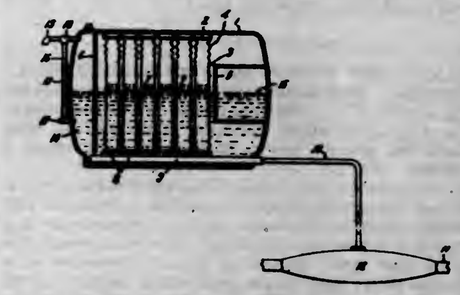
1,904,420. WEB TENSIONING MEANS. CHARLES A. DICKHAUT, New York, N. Y., assignor to John Waldron Corporation, New Brunswick, N. J. Original application filed Apr. 3, 1928, Serial No. 266,906. Divided and this application filed Aug. 12, 1931. Serial No. 556,544. 8 Claims. (Cl. 242—75.)

4. A device for controlling web tension comprising a shaft, a roll of material to be unwound positioned thereon, means for applying a braking effect to said shaft controlled by the tension in the web leaving the roll, and means for applying further tension to said web also controlled in accordance with the tension of the web leaving the roll.



1,904,421. BUCKET WHEEL. JOHN H. DORAN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 1, 1931. Serial No. 566,291. 4 Claims. (Cl. 253—77.)

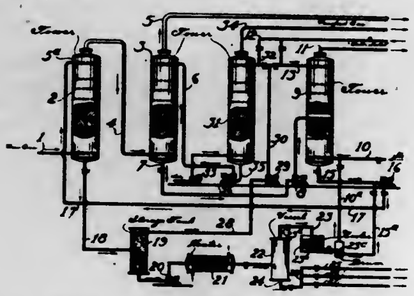
1. A bucket wheel having a rim and row of buckets secured to the rim, the buckets being provided with base portions having projections straddling the rim of the wheel, said projections having portions engaging each other and other portions defining overhung recesses between the other portions of adjacent buckets, and means



for integrally uniting adjacent base portions to each other and to the rim comprising welding material filling said overhung recesses.

1,904,422. ELECTRICAL APPARATUS. HENRY G. DYBVIG, Dayton, Ohio, assignor to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 2, 1930. Serial No. 485,929. 12 Claims. (Cl. 175—41.5.)

1. In an electrical condenser, a plurality of separate condenser units, means for simultaneously adjusting the units, and means for adjusting the capacities of the several units to cause simultaneous adjustments to result in equal increments of change of capacities of the units, said second means including a plate having an insulated core coated with a removable conductive coat so that the capacity of the units may be equalized by removing portions of the coating.

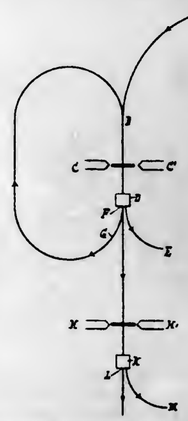


1,904,423. INDICATOR FOR RESERVOIRS FOR LIQUID FILLED CABLES. EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1931. Serial No. 571,155. 1 Claim. (Cl. 73—54.)

A reservoir comprising a rigid walled tank the interior of which is exposed to atmospheric pressure and is closed against internal inspection, individual cellular elements

sealed against the admission of air located in the tank and arranged side by side, each of said elements having flexible side walls and a chamber, a manifold located within the tank and connected to the chambers in parallel to deliver liquid thereto and receive it therefrom, a body of liquid in the tank in which the elements are partly submerged, the liquid in the chambers of the elements and the submerging liquid being separately maintained, and a sight indicator external to the tank and connected thereto and from which the submerging liquid is free to flow, said indicator being calibrated in terms of movements of the walls of the elements.

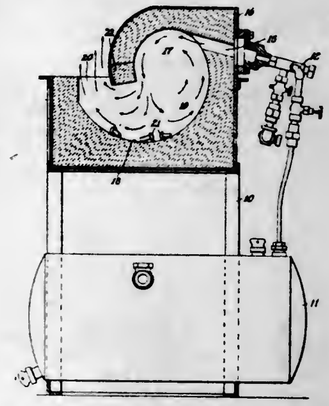
1,904,424. PROCESS FOR THE REMOVAL OF HYDROGEN SULPHIDE FROM GAS MIXTURES AND FOR THE RECOVERY OF ELEMENTAL SULPHUR. WILLIAM J. EDMONDS and OLIVER H. DAWSON, Baytown, Tex., assignors to Standard Oil Development Company. Filed Jan. 21, 1930. Serial No. 422,287. 6 Claims. (Cl. 23—225.)



1. An improved process for the recovery and purification of the sulphur which results from the desulphurization of gas by sulphur dioxide, comprising withdrawing a liquid suspension of elemental sulphur formed by such desulphurization, heating it to an elevated temperature above the melting point of sulphur for a prolonged period, removing water and sulphur dioxide and separately removing from the three layers formed, separate fractions of sulphur one of which is substantially pure sulphur.

1,904,425. NITRIDING FERROUS ALLOYS. JOHN J. EGAN, Brooklyn, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Mar. 14, 1930. Serial No. 435,971. 12 Claims. (Cl. 148—16.)

3. The method of producing a nitrided case on a ferrous alloy object containing a nitride promoting agent which comprises closely associating with the object, a subdivided material comprising a pre-nitrided ferrous alloy containing at least one nitride promoting agent, and heating in the presence of a nitriding agent.

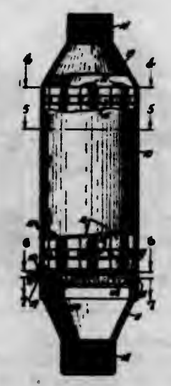


1,904,426. PRODUCTION OF ACETYLENE AND HYDROGEN. OTTO EISENHUT, Heidelberg, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Jan. 8, 1930, Serial No. 419,364, and in Germany Jan. 12. 1929. 8 Claims. (Cl. 204—31.)

1. A process for the production of acetylene and hydrogen from gases comprising hydrocarbons in which a substantially complete conversion of said hydrocarbons into hydrogen and acetylene is effected, which comprises passing the said gases through a system of electric arcs, branching off at least at one spot within the said system a part of the gases, which have been subjected to the treatment of at least one electric arc wherein only a partial conversion to acetylene and hydrogen was effected, mixing the branched-off portion with the gases which have not yet passed at least the last of the arcs with which the said part has been treated, and subjecting the other part of the said gases to a further electric arc

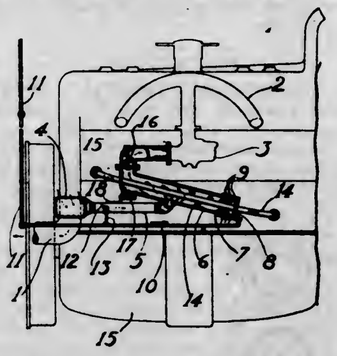
treatment to effect a substantially complete conversion of the hydrocarbons contained therein into acetylene and hydrogen.

1,904,427. FORGE. WALTER C. ELZE, Forest Hills, N. Y., assignor to Hauck Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 7, 1931. Serial No. 528,295. 2 Claims. (Cl. 263—9.)



1. A forge comprising a casing of refractory material affording a heating chamber, said chamber in cross-section being substantially semi-circular over its upper half and substantially semi-circular over its lower half, the radius of curvature of the latter half being greater than that of the former with the rear walls of the two halves merging, whereby the lower half is caused to project beyond the upper half to afford a mouth opening at the top, an inlet duct located at the upper portion of the casing and directed into the semi-circular upper half portion thereof and substantially tangentially thereto, and a burner discharging into said duct.

1,904,428. SPRAYING DEVICE. HANS J. P. ENEMARK, Stapleton, N. Y. Filed Aug. 22, 1931. Serial No. 558,790. 4 Claims. (Cl. 299—83.)



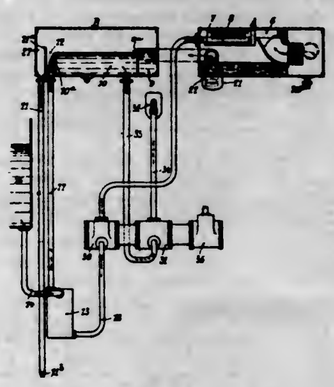
1. A spray device of the character described, comprising a cylindrical casing open at both ends and provided with means of connection to a water supply and to a spray

nozzle; a circular series of tubular members supported within and longitudinally of said casing, a plurality of said members having perforated end closures, a rotary disk valve mounted within said casing adjacent the inner ends of said members, and transversely of the axes thereof, said valve being formed with an opening located at the same distance as said members from the center of

the casing and adapted to register axially with each or any of said members according to the position of the valve, means externally of the casing for rotating said valve, the latter being constructed and arranged to form a closure for all the tubular members when the valve is in closed position and the casing therein out of registry with the said members.

1,904,429. TEMPERATURE CONTROL IN LUBRICATING OIL SYSTEMS. EARLE W. EVANS, Linden, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Oct. 30, 1928. Serial No. 316,093. 8 Claims. (Cl. 123—196.)

1. In a temperature controlling means for lubricating systems, the improvement which comprises an oil circulation line, a jacket surrounding a portion of said line and opening upon a source of unheated air, a source of heated air, regulable means for connecting said sources to the jacket, and means for circulating air from the sources through the jacket.

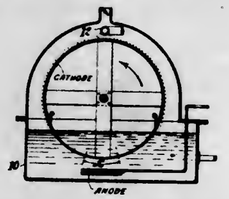


1,904,430. METHOD OF MAKING VALVES FOR EXPLOSION ENGINES. AMEDEO FERRANDO and ALBINO ZANSI, Ivrea, Italy, assignors to Ditta Giovanni Zansi, Ivrea, Italy. Filed Mar. 2, 1929, Serial No. 343,929, and in Italy Apr. 4, 1928. 1 Claim. (Cl. 29—156.7.)

A process for manufacturing valves more particularly for internal combustion engines, consisting in forming in a cylinder of high grade metal serving to form the valve head an axial bore having on its bottom a conical projection, in fitting in said bore a cylindrical stem of lower grade metal having in its end surface a conical cavity corresponding to the conical projection of the bottom of

the cylinder bore, in heating said cylinder and said stem and upsetting simultaneously said cylinder and the end of said stem to expand the stem material radially in the form of a flange of substantial thickness enclosed in a casing of uniform thickness constituting the valve head.

1,904,431. FEED WATER HEATING PLANT. SÉBASTIEN OTTO ALFRED FIEDLER, Paris, France, assignor to l'Auxiliaire des Chemins de Fer et de l'Industrie, Paris, France. Filed May 4, 1928, Serial No. 275,091, and in France May 16, 1927. 18 Claims. (Cl. 261—35.)

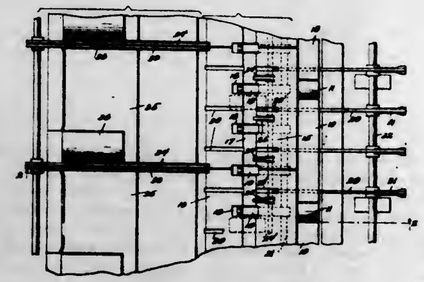


1. In a feed water heater, a mixing chamber, a hot water container having an orifice of small section in communication with the atmosphere, a water seal between said mixing chamber and said container, means for supplying said mixing chamber with exhaust steam from a discontinuously steam operated apparatus, and throttling means on said steam supplying means responsive to the pressure in said container.

1,904,432. METHOD OF ELECTRODEPOSITING CHROMIUM. COLIN G. FINK, New York, N. Y., assignor to Chemical Treatment Company, Inc., a Corporation of New York. Filed July 27, 1926. Serial No. 125,174. 7 Claims. (Cl. 204—1.)

1. A method of chromium plating large objects and other objects where the conditions limit the current to a lesser amount than will furnish the required current-density for plating over the entire surface to be plated, comprising bringing such object into contact with a chromium plating bath for which a relatively large minimum current-density is required to effect deposition of the chromium, and passing a current from an anode to a portion of the surface of said object (cathode) at a current-density at or above the aforementioned minimum current-density to thereby plate chromium on said portion, maintaining the portion of the surface not being

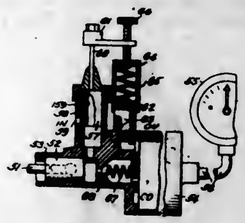
plated at the time, wet, and successively passing a current at or above the aforesaid minimum current-density to effect plating of chromium on successive unplated



wetted portions of said object, while maintaining the portions of the surface of said object on which the plating is incomplete, wet.

1,904,433. HYDROCARBON OIL AND METHOD OF MAKING THE SAME. HERBERT G. M. FISCHER, Westfield, and CLIFFORD E. GUSTAFSON, Elizabeth, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 21, 1928. Serial No. 307,546. 6 Claims. (Cl. 44—9.)

1. As a composition of matter a low boiling hydrocarbon oil normally tending to form gum and an addition agent comprising a mixture of a hydrocarbon with condensed nuclei of the naphthalene, anthracene and phenanthrene types, and a naphthalene compound having in the alpha position a group selected from the class consisting of hydroxyl and amino groups, such addition agent being present in gum inhibiting proportions only.

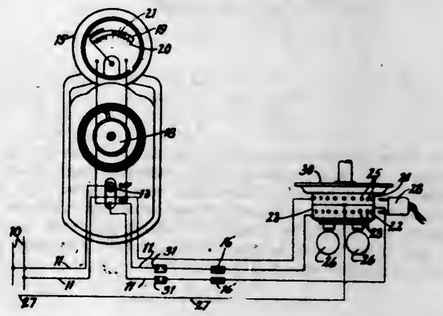


1,904,434. COOLING BED. GUSTAV LEONARD FISK, Pittsburgh, Pa., assignor to Mesta Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1929. Serial No. 414,752. 21 Claims. (Cl. 80—42.)

1. A cooling bed comprising a skid section and a table section and having an elongated depressed portion, or pocket between said sections for the reception and temporary storage of a plurality of bars sliding successively down said skid section, a plurality of arms extending across said pocket adapted to support bars therein, means for raising and lowering said arms, and pusher bars adapted to propel bars over said table section.

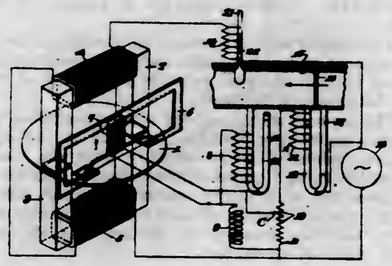
1,904,435. INDICATOR DEVICE. HOWARD A. FLAMMER, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1930. Serial No. 480,651. 2 Claims. (Cl. 264—14.)

1. In an indicator for a machine for mechanically inducing artificial respiration, said indicator comprising a cylinder, a piston movable in said cylinder and actuated by said machine, an air inlet valve connecting with said cylinder and actuated upon a movement of said piston in said cylinder, a pressure chamber, a valve operable under the action of said piston upon both movements of the latter for admitting and retaining the air in said



chamber, a two-way movable valve actuated one way by the first mentioned valve for closing it and the other way automatically for controlling the pressure in said chamber and a gauge for indicating such a pressure.

1,904,436. THERMIONIC TUBE. CHARLES SAMUEL FRANKLIN, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 26, 1929, Serial No. 402,689, and in Great Britain Nov. 2, 1928. 3 Claims. (Cl. 250—27.5.)



1. A thermionic tube comprising a disc-shaped anode, a disc-shaped grid electrode adjacent and parallel to said anode, the grid electrode being provided with grooves, an electron emitting electrode positioned within the said grooves and a cylindrical member open at each end, interposed between and having its ends joined to said anode and grid electrodes.

1,904,437. ELECTRICAL TREATING APPARATUS. ERNEST O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Original application filed Oct. 27, 1927, Serial No. 229,141. Divided and this application filed Mar. 28, 1930. Serial No. 439,613. 10 Claims. (Cl. 161—1.)

1. In combination, an electrical treating apparatus, an adjustable time-control switch controlling the same, and a voltmeter connected across the leads between the switch and the apparatus, said voltmeter having a scale thereon indicating the time of treatment necessary for a definite dosage under varying voltage conditions.

1,904,438. INTEGRATING METER. BENNET H. FREEMAN, Wilmette, Ill., assignor to Republic Flow Meters Co., Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 13, 1922, Serial No. 587,942. Divided and this application filed Aug. 12, 1927. Serial No. 212,407. 9 Claims. (Cl. 171—264.)

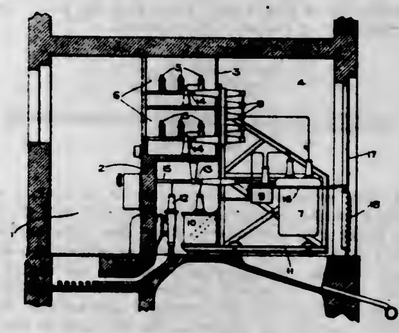
2. An integrating meter of the induction type in which the accelerating torque is supplied by electro-magnetic means energized from an alternating current supply, and means in circuit with said electro-magnetic means for rendering the changes in frequency ineffective to affect the registration of the meter.

1,904,439. PRODUCTION OF HYDROGEN FROM HYDROCARBON GASES. GEORGE H. FREYERMUTH, Elisabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Mar. 5, 1930. Serial No. 433,822. 10 Claims. (Cl. 23—212.)

1. In a process for production of hydrogen by the catalytic reaction of hydrocarbon gas and steam, the improvement which comprises selectively removing heavier constituents from the hydrocarbon gas prior to reaction.

9. In a process for production of hydrogen from refinery gas by the action of steam in presence of a nickel containing catalyst, the steps of scrubbing the gas with oil under pressure sufficient to effect a substantially complete removal of normally liquid hydrocarbons and then with an aqueous alkaline agent prior to reaction with steam.

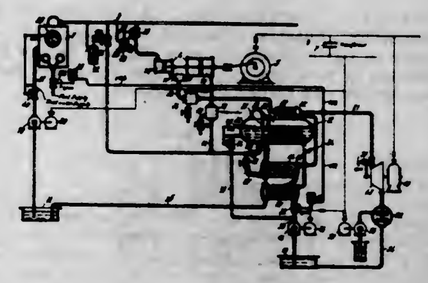
1,904,440. REACTIVATION OF CATALYST USED IN THE PREPARATION OF HYDROGEN. GEORGE H. FREYERMUTH, Elisabeth, N. J., and WILLIAM V. HANKS, Baton Rouge, La., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Mar. 6, 1930. Serial No. 433,805. 7 Claims. (Cl. 23—288.)



1. In a process for reactivation of a catalyst used in the manufacture of hydrogen by reaction of hydrocarbon gas and steam, the improvement comprising passing steam and hydrogen over the spent catalyst at an elevated temperature.

1,904,441. PROCESS FOR THE PRODUCTION OF HYDROGEN FROM REFINERY AND OTHER HYDROCARBON GASES. GEORGE H. FREYERMUTH, Elisabeth, N. J., and JAMES K. SMALL and WILLIAM V. HANKS, Baton Rouge, La., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Mar. 7, 1930. Serial No. 434,096. 11 Claims. (Cl. 23—212.)

1. An improved process for obtaining gas rich in free hydrogen or hydrocarbons which comprises continuously passing hydrocarbon in admixture with steam, over a suitable catalyst, which is incapable of absorbing appreciable amounts of carbon dioxide, while at a temperature in excess of about 1200° F. for a prolonged period until there is evidence of loss of catalytic activity, then passing steam, free of hydrocarbons, over the catalyst for a period of several hours whereby the catalytic activity is regained.



9. In a process for the production of hydrogen by reaction of hydrocarbon gas and steam over an active nickel-containing catalyst under conditions at which the catalyst shows a decrease in activity with time, an improved method of operation comprising passing steam free of hydrocarbons over the said catalyst at substantially the same temperature as that used for the hydrocarbon steam reaction for a period of several hours whereby the catalyst activity is regained.

1,904,442. HIGH TENSION SWITCH PLANT. ERNST GASIOROWSKI, Berlin-Hermsdorf, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 9, 1930, Serial No. 419,706, and in Germany Apr. 25, 1929. 3 Claims. (Cl. 175—298.)

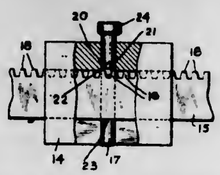
1. A high tension switching station comprising a bus-bar compartment, a switching compartment extending in part beneath said bus-bar compartment, an isolating partition between said bus-bar and switching compartments, and a movable switch-gear unit mounted within said switching compartment having detachable connections extending beneath said bus-bar compartment and through said isolating partition into said bus-bar compartment.

1,904,443. STEAM PLANT. HANS GLEICHMANN, Falkenhain near Spandau, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Original application filed Aug. 15, 1928, Serial No. 299,801, and in Germany June 27, 1928. Divided and this application filed Jan. 4, 1930. Serial No. 416,511. 1 Claim. (Cl. 60—94.)

A high and low pressure vapor power plant having a high pressure circuit for the operating medium including a high pressure vapor generator, a high pressure prime

mover supplied with vapor from the generator, a vapor transformer of the indirect heating type connected at its primary side to the exhaust side of said high pressure prime mover, and means for returning the condensate from the primary side of the vapor transformer to said generator, the low pressure medium circuit including the secondary side of said vapor transformer and a low pressure vapor consumer, the high pressure medium circuit including a vapor washer of the direct vapor regeneration type containing a washing liquid of the same kind as the liquid from which the high pressure vapor is generated, said washer being interposed between said prime mover exhaust and the primary side of said transformer, whereby through the regeneration of vapor from said washing liquid purified vapor is delivered to said transformer and purified condensate is returned to said generator.

1,904,444. HAIR WAVER. ABRAHAM GOODMAN, Brooklyn, N. Y., assignor to Emeth Financial Corporation, a Corporation of New York. Filed Feb. 19, 1932. Serial No. 593,964. 4 Claims. (Cl. 132—41.)



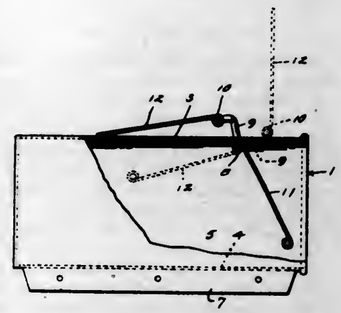
1. A hair waver comprising a tubular member, a member fitting on the tubular member, both of said members having finger grip portions at their rear ends and being pivotally connected together adjacent to said ends, a spring disposed between the finger grip portions for urging said members closed, an elastic clamping cord extending normally rearwardly from the rear end and secured at one end to the spring, and means on the free end of the cord for detachably securing said end to the front end of the tubular member.

1,904,445. PLASTIC COMPOSITION. DANIEL M. GRAY, Wheeling, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Apr. 7, 1930. Serial No. 442,475. 2 Claims. (Cl. 134—12.)

1. A sealing composition comprising approximately

	Parts
High grade glue	75
Casein	175
Talc	75
Titanium oxide	75
Diethylene glycol	400
Paraformaldehyde	10
Water	900
Aqua ammonia (28% NH_3)	18

1,904,446. POSITIONING MEANS FOR POISE WEIGHTS. WILLIAM GUMPRICH, Brooklyn, N. Y., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Feb. 15, 1929. Serial No. 340,154. 14 Claims. (Cl. 265—49.)

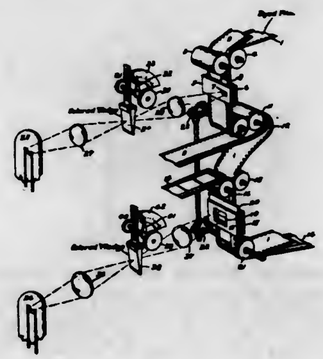


1. A scale beam having a toothed portion, a poise weight slidably mounted upon said scale beam, an element carried by said poise weight, said element having a recess accommodating said beam and for guiding movement of said element transversely of the beam, and a tooth to coact with said toothed portion to position said poise weight upon said beam.

1,904,447. RECTIFIER. CARL HAMBUECHEN, Belleville, Ill., assignor to The B-L Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 2, 1931. Serial No. 506,318. 5 Claims. (Cl. 175—336.)

2. A rectifying unit comprising an electro positive electrode element of a film forming metal, an electro negative electrode element of copper sulphide, and a layer of copper iodide between said elements.

3. The method of making dry current rectifiers which comprises applying a solution of iodine to the surface of copper sulphide electro negative electrode elements and assembling said copper sulphide electro negative electrode elements with electr positive electrode elements with the treated surface of said copper sulphide electro negative electrode elements in contact with the electro positive electrode elements.

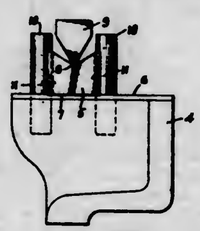


1,904,448. NEWSPAPER BOX. WELLESLEY R. HAMPDEN, Reedville, and GEORGE W. HAGLE, Hillsboro, Oreg. Filed Sept. 30, 1930. Serial No. 485,516. 3 Claims. (Cl. 232—35.)

1. An article collection receptacle, comprising a casing having an opening for the insertion of articles thereinto, a shaft disposed transversely of the casing adjacent the top thereof and adjacent the opening, a plate secured to said shaft and normally closing said opening, a crank having a pair of substantially right angularly related arms, one of said arms being attached at one end to said shaft to extend substantially at right angles therefrom, a bar attached at one end to the free end of the other arm of said crank and extending transversely across the top of the receptacle, and a signal plate carried by said bar, said signal plate being disposed to extend in substantially the same direction as the said other arm to which the supporting bar is connected, the said other arm and signal plate being directed longitudinally of the casing in non-signaling position when the first mentioned plate covers the receptacle opening.

1,904,449. SOUND RECORD FILM AND FILM PRINTING APPARATUS. ARTHUR C. HARDY, Wellesley, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1927. Serial No. 193,017. 7 Claims. (Cl. 95—75.)

1. The method of making a film print from a plurality of separate sound and picture record films which comprises exposing separate portions of a print film containing a light restraining dye to separate light beams, forming sharp images thereon, controlling the beams by the respective record films and independently adjustably coloring the respective beams whereby the products of the gamma

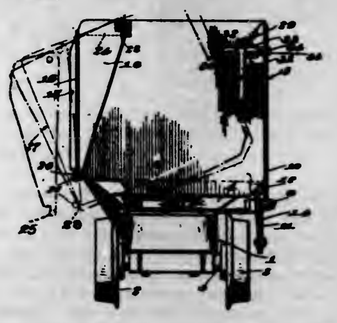


of each record film and the gamma of the print film shall have predetermined values when the print film is developed to the limit.

1,904,450. STABILIZATION OF HALOGENATED HYDROCARBONS. CHARLES ROBERTS HARRIS, Niagara Falls, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1931. Serial No. 519,894. 9 Claims. (Cl. 23—250.)

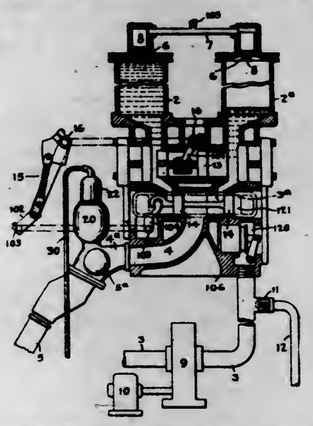
1. A composition of matter comprising a chlorinated hydrocarbon and stabilizing amounts of amylene.

1,904,451. BEARING. CLIFFORD B. HASKINS, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed May 16, 1930. Serial No. 452,948. 1 Claim. (Cl. 308—2.)



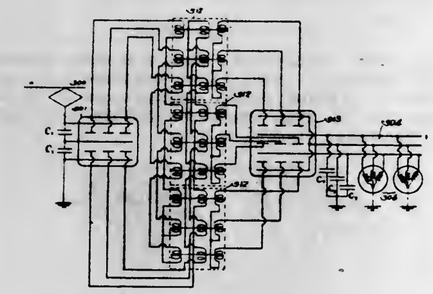
In a scale, the combination of a bearing block adapted to support a scale pivot member, said bearing block being provided with grooves on opposite sides thereof and a flat surface extending transversely of said grooves, a support for said block provided with a curved surface upon which bears the flat surface of the block, and a plurality of guiding pins mounted in the latter and loosely co-acting with the grooves in the bearing block, said pins and the co-acting grooves being co-ordinated with the curved surface of the support to permit limited universal aligning movement of the block relative to the support.

1,904,452. FATTY ACIDS AND PROCESS FOR PREPARING SAME. ROBERT T. HASLAM, Westfield, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 14, 1930. Serial No. 475,895. 7 Claims. (Cl. 260—116.)



1. Improved process for producing oxidation products of paraffin which comprises adding a substantial quantity of waxy constituents to a hydrocarbon oil, maintaining the mixture in a reaction zone under a high pressure of hydrogen and at temperature adjusted to substantially saturate the oil, removing a hydrogenated product from said reaction zone, reducing pressure on said product, and blowing oxygen-containing gas therethrough while maintained at a temperature of about 350° F.

1,904,453. DUMP CAR. EDWARD HAUGEN, Wallace, Idaho, assignor to Coeur d'Alene Hardware & Foundry Company, Wallace, Idaho, a Corporation of Idaho. Filed Aug. 24, 1931. Serial No. 559,088. 4 Claims. (Cl. 105—244.)

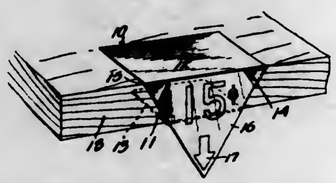


1. A dump car comprising a truck, a body tiltably mounted on the truck, an unfettered door movably carried by the body, said door tending to open immediately after an initial tilt of the body toward a dumping position, a lug on the door, and a hook on the truck engaged by the lug to lock the door from which hook the lug is displaced by the door after said initial tilt of the body.

1,904,454. DISPENSER OF THE TWIN CHAMBER TYPE. WALTER H. HAUFF, Ludlow, Ky., assignor to Augustine Davis, jr., Cincinnati, Ohio. Filed Apr. 2, 1931. Serial No. 527,155. 4 Claims. (Cl. 221—100.)

1. In a dispenser of the type having twin measuring chambers and automatic reversing mechanism causing each chamber to empty in turn while the other is being filled, a discharge conduit into which the measured quantities are emptied, an air-pocket in free communication with said conduit, an air exit from said pocket, and valve means in position to evacuate the air bodies through the air-pocket while liquid is flowing through the discharge conduit, said valve means being operated by a rise in the liquid level in the air-pocket to prevent egress of the liquid through said air exit.

1,904,455. METHOD AND APPARATUS FOR CONVERTING ELECTRIC POWER. LOUIS A. HAZELTINE, Hoboken, N. J., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1928. Serial No. 649,536. 24 Claims. (Cl. 175—363.)

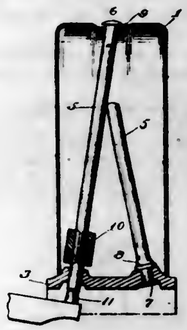


5. Apparatus for converting electric energy of a given form into low frequency alternating current comprising means including an inductive winding and a plurality of electric valves for converting said energy into high frequency alternating current, and means including a plurality of other electric valves for converting said high frequency alternating current into low frequency alternating current, said inductive winding being provided with substantial leakage reactance for limiting the low frequency short circuit current.

13. Apparatus for transmitting energy between an input circuit and an *n*-phase-polyphase alternating current circuit comprising a pair of magnetically insulated inductive windings for each phase, an electric valve associated with each winding for interconnecting said circuits, means for coupling said windings into two groups, each group including a single winding of each phase, and means for rendering each valve nonconductive for only 1/*n*th of a cycle.

16. The method of converting alternating-current power of one frequency into alternating-current power of another frequency by electrostatically controlled valves, which comprises varying the control electrode potentials of said valves at a frequency equal to the sum or difference of the first mentioned frequencies.

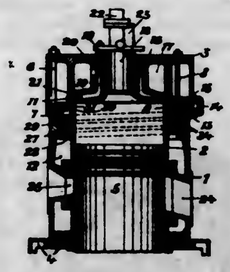
1,904,456. PRICE TAG AND HOLDER. JOHN F. HEALY, Cincinnati, Ohio, assignor to Piggly Wiggly Corporation, Cincinnati, Ohio, a Corporation of Delaware. Filed Apr. 22, 1932. Serial No. 606,959. 2 Claims. (Cl. 40—16.)



1. A device of the kind described comprising a plate bent to provide two portions lying in two parallel planes and having a third portion perpendicular to said first named portions, the sides of which slope inwardly from top to bottom, ears formed on the sides thereof bent to provide pockets adapted to receive and support a tag therein, the lower portion of which projects downward below the plane formed by the lower of said first named portions, substantially as set forth.

1,904,457. PRICE TAG AND HOLDER. JOHN F. HEALY, Cincinnati, Ohio, assignor to Piggly Wiggly Corporation, Cincinnati, Ohio, a Corporation of Delaware. Filed Apr. 22, 1932. Serial No. 606,960. 3 Claims. (Cl. 40—16.)

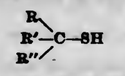
1. A device of the kind described comprising a strip having opposed grooves in the face thereof, and a price tag positioned in said grooves having a triangular portion on one edge cut back into the tag and projecting outside thereof to indicate the location of the merchandise to which said tag applies, substantially as set forth.



1,904,458. METHOD OF MAKING TENSION WHEELS. JOSEPH L. HECHT, Davenport, Iowa, assignor to French & Hecht, Incorporated, a Corporation of Iowa. Filed Nov. 18, 1931. Serial No. 574,687. 3 Claims. (Cl. 29—159.02.)

1. In the method of making tension wheels, assembling a hub member provided with spoke holes, concentrically within a closed rim member provided with corresponding spoke holes, provided spokes having a head at one of their ends, inserting the headless end of a spoke through corresponding holes in said members, positioning said spoke with its head spaced a short distance from the adjacent surface of the adjacent wheel member, and acting on the opposite end of the spoke to fasten it rigidly to the wheel member at that end while causing said spoke in the fastening operation to shorten and the head on the other end of the spoke to move up to and seat tightly against the surface of the wheel member at that end and thereby tension the spoke.

1,904,459. CYLINDER FOR INTERNAL COMBUSTION EUGINES. WILHELM HEPTI, Winterthur, Switzerland, assignor to the Firm of Sulzer Freres Societe Anonyme, Winterthur, Switzerland. Filed July 15, 1930, Serial No. 468,056, and in Switzerland Aug. 21, 1929. 4 Claims. (Cl. 123—173.)



1. A cylinder for internal combustion engines with inserted liner, comprising in combination a cylinder head, means for securing said head to said cylinder, separate means for securing the head to the liner, an intermediate member engaging the liner, means for drawing the liner towards the cylinder head independently of said cylinder and helically arranged fins on said intermediate

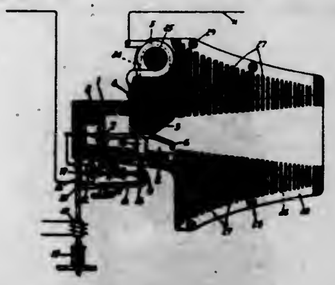
member adapted to cause a cooling medium to follow a relatively long path through the parts adjacent to the combustion chamber.

1,904,460. CONCENTRATION OF ORES BY FLOTATION. FREDERICK G. MOORS, New York, RAYMOND W. HESS, Buffalo, and ROBERT L. PERKINS, East Aurora, N. Y., assignors to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1927. Serial No. 168,464. 11 Claims. (Cl. 209—166.)

1. A method of effecting the concentration of minerals by flotation, which comprises subjecting a mineral pulp to a froth flotation operation in the presence of a thioalcohol which corresponds with the following formula:

wherein R denotes an aromatic hydrocarbon radical, and R′ and R″ each denote a hydrogen atom or a hydrocarbon radical.

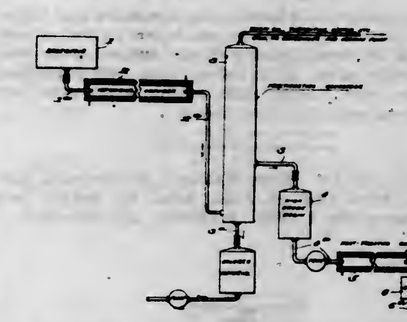
1,904,461. CONCENTRATION OF MINERALS BY FLOTATION. RAYMOND W. HESS, Buffalo, N. Y., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 4, 1928. Serial No. 252,045. 11 Claims. (Cl. 209—166.)



1. In effecting the concentration of minerals, the process which comprises incorporating with a mineral pulp a composition comprising an aralkyl mercaptan and a diaralkyl monosulfide, and subjecting the resulting mixture to a froth-flotation operation.

1,904,462. FLOTATION OF MINERALS. RAYMOND W. HESS and JOSEPH M. F. LEAPER, Buffalo, N. Y., assignors to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1927. Serial No. 193,052. 14 Claims. (Cl. 209—166.)

1. In effecting the concentration of minerals, the process which comprises adding to the mineral pulp a flotation agent comprising the product relatively insoluble in water obtainable by the decomposition of a metal salt of benzyl thiosulfuric acid in the presence of water and an acid, and subjecting the mixture to a froth flotation operation.

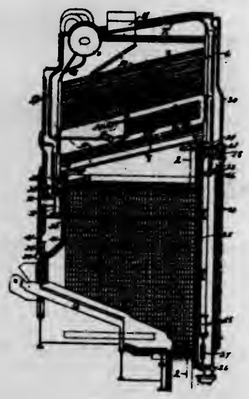


1,904,463. CIRCUIT INTERRUPTING APPARATUS. JOHN D. HILLIARD, Glens Falls, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 27, 1929. Serial No. 410,198. 3 Claims. (Cl. 200—144.)

1. In a circuit interrupting device, an arc-cooling structure comprising a passage through which an arc may be forced, switch contacts separable at one end of said passage, and a plurality of spaced plates of conducting material forming one side of the passage whereby a portion of the arc is blown between said plates during movement thereof through the passage, said plates being graded in

thickness and heat radiating surface so that the heat generated during the initial movement of the arc may be readily dissipated.

1,904,464. PROCESS OF PRODUCING HIGH GRADE ROSIN. ARTHUR R. HITCH, Brunswick, Ga., assignor, by mesne assignments, to Gillican-Chipley Company, a Corporation of Delaware. Filed Dec. 14, 1929. Serial No. 414,140. 6 Claims. (Cl. 201—61.)



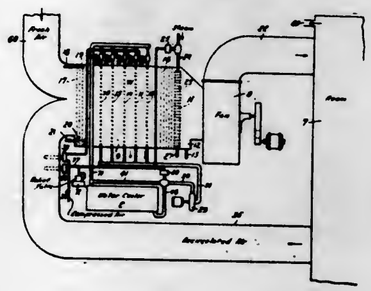
1. The process of producing a high grade distilled rosin which process comprises treating rosin materials with solvents, spraying the resultant mixture into a zone heated to approximately 340° C. and subjecting all of the material therein to vaporization, fractionally condensing color containing impurities at a relatively high temperature, and fractionally condensing a relatively high grade rosin at a lower temperature.

1,904,465. ELECTRICAL REGULATOR. EUGEN HOROWITZ, Halensee, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1931, Serial No. 508,958, and in Germany Feb. 11, 1930. 4 Claims. (Cl. 171—119.)

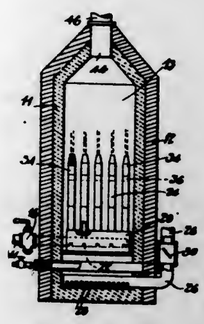
1. In combination, a dynamo electric machine, an excitation controlling circuit for said dynamo electric machine, a resistance element whose electrical resistance changes instantaneously with the voltage which is applied to it connected in said circuit, and means for varying the voltage applied to said resistance in accordance with variations in an electrical condition of said machine.

1,904,466. FURNACE AND BOILER. WILLIAM A. JONES, Westerleigh, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 21, 1929. Serial No. 408,746. 6 Claims. (Cl. 122—235.)

1. In combination, a boiler, a furnace below said boiler, metallic supporting means at the lower portion of said boiler and the upper portion of said furnace walls, said boiler having metal parts resting upon said supporting means and said furnace walls having metal parts suspended from said supporting means.



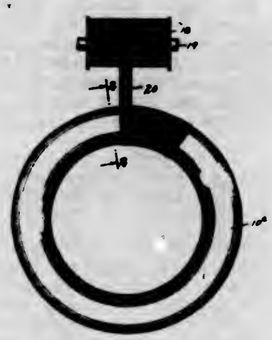
1,904,467. VALVE. KURT KARNATH, Zweibrucken, Germany. Filed Sept. 21, 1929, Serial No. 394,174, and in Germany Oct. 2, 1928. 9 Claims. (Cl. 251—91.)



1. A valve, comprising a valve casing, a valve closing member, a stem connected with said closing member for moving the same into and out of closing position and mounted in said valve casing for being rotatable and non-shiftable, operating means for said stem including a reducing gearing, and means operative when closing the valve for throwing said reducing gearing out of operation.

1,904,468. METHOD AND APPARATUS FOR CONDITIONING AIR. ALFRED D. KARR, Newark, N. J., and KARL D. PERKINS, New York, N. Y., assignors to Audiffren Refrigerating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 7, 1931. Serial No. 528,340. 8 Claims. (Cl. 62—176.)

6. In an air conditioning system, in combination with an enclosure in which conditioned air is used, a cooler chamber, means for passing air to be supplied to the enclosure in a single stream through said chamber, a plurality of cooled surfaces extending across the cross section of said cooler chamber in the path of said air stream, means for selectively cooling said surfaces to a temperature below the dew-point of the air entering said chamber whereby a quantity of moisture is condensed from the air, and means for selectively reducing the total cooled surface area exposed to said air-stream while maintaining a sufficient temperature difference between the cooled surfaces and the entering air stream to condense a substantially unchanged quantity of moisture from the air in said stream, whereby the amount of sensible heat abstracted from the air stream may be reduced while the amount of heat abstracted from the air stream as latent heat of condensation is maintained substantially unchanged.



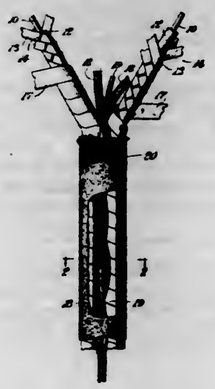
1,904,469. PRODUCTION OF CARBON BLACK. THEODORE P. KELLER, Elizabeth, N. J., assignor to General Atlas Carbon Company, Dover, Del., a Corporation of Delaware. Filed Feb. 19, 1931. Serial No. 516,980. 18 Claims. (Cl. 134—60.)

1. Apparatus for making carbon black comprising an unobstructed heat-insulated furnace chamber, a plurality of spaced narrow gas ducts mounted in parallel vertical planes in the lower portion of the chamber and adapted to discharge gas upwardly thereinto, and means for introducing a determinate amount of air at a controlled velocity into the chamber adjacent the lower end of the gas ducts, each of the gas ducts being provided with a beveled marginal portion adjacent its outlet end and having its inner and outer wall surfaces gradually sloping toward each other at the said outlet end for facilitating streamline flow of fluids respectively moving upwardly within and around each of the said gas ducts.

1,904,470. WREATH AND METHOD OF MAKING SAME. DAVID J. KELMAN, Brooklyn, N. Y. Filed Nov. 18, 1931. Serial No. 575,704. 4 Claims. (Cl. 41—12.)

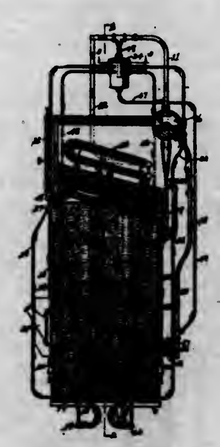
1. The method of making a wreath consisting in bunching a plurality of strands and winding the same onto a single spool, and then unwinding said bunched strands from said spool and winding the same around an annular core to completely cover the same.

2. A wreath comprising a core and a covering therefor comprising a strand made of elongated and untwisted rayon fibers.



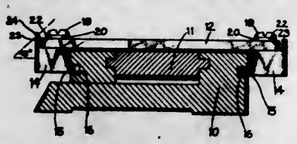
1,904,471. DECORATIVE MATERIAL. DAVID J. KELMAN, Brooklyn, N. Y. Filed Mar. 8, 1932. Serial No. 597,474. 6 Claims. (Cl. 41—10.)

5. A decorative material comprising an elongated flexible core and a plurality of narrow strips of cellophane extending therefrom and disposed along the length of the core, said strips extending in various angular positions with respect to the core.



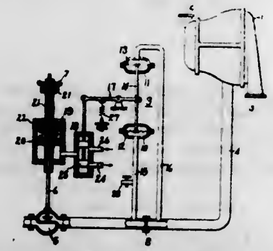
6. An elongated decorative material comprising a string made of textile material and a thin flexible, pliant metal wire disposed alongside said string and twisted about another string made of textile material, and a plurality of narrow, transparent, flexible strips having reflecting surfaces, gripped at intermediate portions thereof by said twisted strings and wire.

1,904,472. ELECTRICAL CABLE. MOSS A. KENT, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Sept. 29, 1928. Serial No. 309,145. 3 Claims. (Cl. 173—264.)



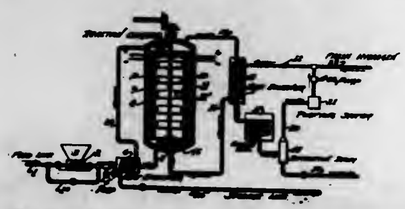
1. An electric cable comprising a plurality of insulated conductors, filling strands in the valleys between said conductors, one of said filling strands including a bare wire twisted with a paper trand to form convolutions in the wire and the paper strand, and a wrapper enclosing the whole.

1,904,473. STEAM BOILER. HOWARD J. KERR, Westfield, N. J., assignor to Fuller Lehigh Company, Fullerton, Pa., a Corporation of Delaware. Filed Aug. 23, 1928. Serial No. 301,455. 13 Claims. (Cl. 122—235.)



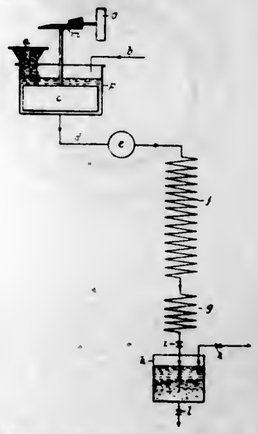
1. A steam boiler having furnace wall tubes, a steam and water drum connected to said tubes, and a separator located outside of said drum at an elevation at least as high as the normal water level in said boiler and connected to said tubes, the water space of said separator being connected to the lower portion of said tubes.

1,904,474. SLIDE RULE. ADOLF W. KEUFFEL, Montclair, N. J., assignor to Keuffel & Esser Co., Hoboken, N. J., a Corporation of New Jersey. Filed Oct. 29, 1930. Serial No. 491,855. 16 Claims. (Cl. 235—70.)



1. A slide rule runner comprising spaced guide devices for slidably engaging opposite edges of a rule, a transverse transparent panel extending across the space between the guide devices, means securing the margins of the panel directly to the guide devices, said panel constituting a connection between the guide devices that hold them in position and yielding means to protect the plate.

1,904,475. VALVE CONTROL MECHANISM. FRIEDRICH KISSING, Berlin-Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1931, Serial No. 564,617, and in Germany Oct. 14, 1930. 5 Claims. (Cl. 137—152.5.)



1. The combination with a conduit for conveying a fluid, and a valve in the conduit, of means for automatically closing the valve when the flow of fluid in the conduit reaches a predetermined minimum value comprising a restriction in the conduit, a differential pressure responsive device connected to the restriction on opposite sides thereof, and means actuated by the pressure responsive device for completely closing the valve to prevent backflow of fluid in the conduit.

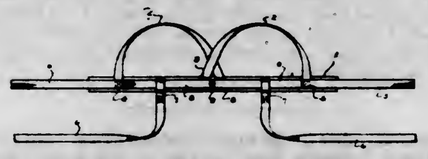
1,904,476. CONVERSION OF SOLID FUELS AND PRODUCTS DERIVED THEREFROM OR OTHER MATERIALS INTO VALUABLE LIQUIDS. CARL KRAUCH, Ludwigshafen-on-the-Rhine, and MATHIAS PIER, Heidelberg, Germany, assignors, by mesne assignments, to Standard-I. G. Company, Linden, N. J., a Corporation of Delaware. Original application filed Feb. 6, 1926, Serial No. 86,646, and in Germany Nov. 7, 1925. Divided and this application filed Apr. 7, 1927. Serial No. 181,887. 4 Claims. (Cl. 196—53.)

1. The process of converting carbonaceous substances, such as solid and liquid fuels, distillation and extraction products thereof, into valuable liquids, which comprises subjecting such substances to destructive hydrogenation by means of an added hydrogenating gas and heat at a temperature of between about 300° and 500° C. and at a pressure of at least 20 atmospheres in a reaction vessel, the inner surface of which consists of an alloy of aluminium solid under the conditions of working.

1,904,477. PRODUCTION OF VALUABLE ORGANIC PRODUCTS. CARL KRAUCH, Ludwigshafen-on-the-Rhine, MATHIAS PIER, Heidelberg, and EUGEN ANTHES, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 5, 1928, Serial No. 244,769, and in Germany Jan. 13, 1927. 3 Claims. (Cl. 196—14.)

3. The process of extracting oils of about the viscosity of lubricating oils from solid, non-asphaltic, pyro-bituminous materials by passing said solid materials through a reaction zone while treating them with a hydrocarbon liquid, the major constituents of which boil between 100° and 300° C., at a temperature of from 300° to 400° C. and under a pressure of at least 75 atmospheres, until at least 50% of the oil contained in said initial material is extracted therefrom but for only so long that substantially no low boiling hydrocarbons are produced, said hydrocarbon liquid being maintained in the liquid state throughout the process, and then separating the liquid extraction from the residual solid materials.

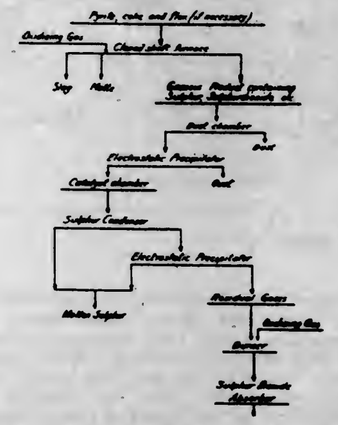
1,904,478. APPARATUS FOR MAKING BLEACHING POWDER. EDWARD THORNDIKE LADD, Lewiston, N. Y., assignor to Isco Chemical Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 26, 1929. Serial No. 402,614. 8 Claims. (Cl. 23—283.)



6. An apparatus for making bleaching powder, comprising a relatively high chlorinating tower, means for creating a chlorinated atmosphere within the tower, a shaker element located near the top of the tower for distributing particles of solid material into the tower, the walls of the tower being so formed that such particles will fall freely by gravity from its top to its bottom through the chlorinated atmosphere, and a plow for discharging such product from the apparatus.

1,904,479. REENFORCED CHAIN AND METHOD OF MAKING THE SAME. WALTER B. LASHAR, Fairfield, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Dec. 19, 1930. Serial No. 503,401. 14 Claims. (Cl. 59—35.)

1. The method of forming a reenforced link for a cross chain of an anti-skid tire chain, said method comprising the steps of forming shoulders upon a stock wire, severing from said stock wire a part including one or more shouldered portions, bending said part to form a link and applying separately formed substantially annular reenforcement members to said wire stock between adjacent shoulders.



1,904,480. TETHER FOR CHILDREN. SOL C. LEIFERT, Brighton, N. Y. Filed Apr. 22, 1931. Serial No. 531,959. 1 Claim. (Cl. 128—134.)

A device of the class described comprising a waistband, two shoulder straps secured to the waistband in crossed relation on opposite sides of and near the center of the waistband and also near the ends of the waistband, a guide strap of less width and of slightly less length than the waistband secured to the waistband near its ends at the points where the shoulder straps are secured and also secured to the waistband near the center between the adjacent ends of the two crossed shoulder straps, said guide strap being free from the waistband intermediate the points where secured to the waistband, tie tapes having their inner ends superimposed on the ends of the guide strap and the ends of the crossed shoulder straps near the ends of the waistband, the said ends of the tie tapes, the ends of the guide strap and the ends of the crossed shoulder straps adjacent the ends of the waistband all being secured in their said relationship by stitching passing through these said parts and the waistband, and restraining straps having their ends looped around the guide strap for sliding movement thereon.

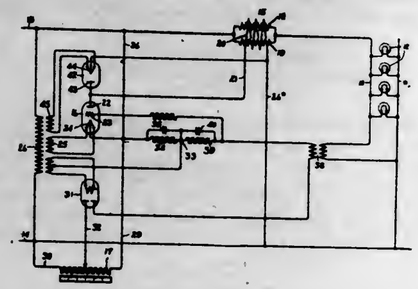
1,904,481. PROCESS OF RECOVERING SULPHUR FROM SULPHIDE MINERALS. NILS ERIK LENANDER, Lokken Verk, Norway, assignor, by mesne assignments, to Texas Gulf Sulphur Company, Houston, Tex., a Corporation of Texas. Filed May 18, 1930, Serial No. 452,139 and in Great Britain Apr. 5, 1930. 2 Claims. (Cl. 23—227.)

2. A process of smelting pyrites with the recovery as elemental sulphur of a large part of the pyrite sulphur which comprises smelting the pyrites with coke and flux (if necessary) in a closed shaft furnace provided with means for the introduction of an oxidising gas approximate the bottom thereof and thereby producing molten slag and matte and a gaseous product containing elemental sulphur vapour, sulphur dioxide and other sulphur compounds, withdrawing said gaseous product from the furnace and passing it at a temperature of about 400° C. through a chamber containing an appropriate catalysts for promoting the interaction of the sulphur dioxide and other sulphur compounds therein to form elemental sulphur, cooling the so treated gaseous product to condense

and recover the elemental sulphur therein, and removing such traces of sulphur and compounds thereof as remain in the residual gases by heating said gases in the presence of an oxidising gas at a sufficiently high temperature to convert the sulphur and compounds thereof to sulphur dioxide and passing the resulting gases through an appropriate medium for absorbing the sulphur dioxide therein.

1,904,482. PRODUCTION OF ELEMENTAL SULPHUR. NILS ERIK LENANDER, Lokken Verk, Norway, assignor, by mesne assignments, to Texas Gulf Sulphur Company, Houston, Tex., a Corporation of Texas. Filed July 26, 1930, Serial No. 471,099, and in Sweden June 18, 1930. 8 Claims. (Cl. 23—226.)

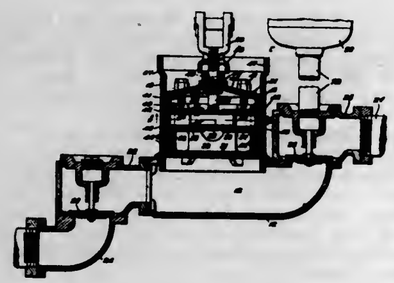
1. The method of producing elemental sulphur by the reaction of sulphur dioxide and carbon disulphide gases which comprises, subjecting said gases at an elevated temperature to the action of a catalyst of the group consisting of bauxite, aluminum hydrate, and oxide of aluminum containing some proportion of combined water to promote the reaction between said gases with the liberation of elemental sulphur.



1,904,483. PRODUCTION OF ELEMENTAL SULPHUR FROM GASEOUS SULPHUR COMPOUNDS. NILS ERIK LENANDER, Lokken Verk, Norway, assignor, by mesne assignments, to Texas Gulf Sulphur Company, Houston, Tex., a Corporation of Texas. Filed July 26, 1930. Serial No. 471,100. 8 Claims. (Cl. 23—226.)

1. In the production of elemental sulphur by the reaction between a gaseous sulphur compound and another gas, subjecting the reacting gases at an elevated temperature to the catalytic action of aluminum hydrate embodied in a porous cement-like product.

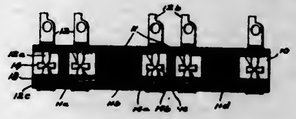
1,904,484. METHOD OF REMOVING ARSENIC AND CHLORINE FROM SULPHUR. STANLEY ISAAC LEVY, Kingston Hill, England. Filed Jan. 22, 1931, Serial No. 510,590, and in Great Britain Mar. 15, 1930. 19 Claims. (Cl. 23—220.)



1. A process of removing impurities such as arsenic, antimony, selenium, etc., from sulphur consisting in adding a medium serving to form volatile chlorides with the impurities and removing the volatile chlorides formed.

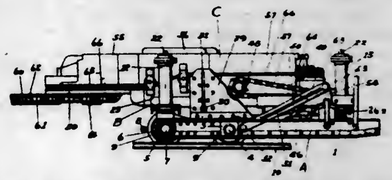
1,904,485. CONTROL SYSTEM. ORRIN W. LIVINGSTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 11, 1931. Serial No. 562,359. 19 Claims. (Cl. 171—119.)

1. A control system comprising in combination an alternating current load circuit, control means for said circuit comprising electric valve apparatus provided with a control grid, means for supplying a variable direct current control voltage to said grid, and means from said alternating current load circuit for supplying to said grid a regulating voltage having a direct current component of opposite polarity with respect to said control voltage.



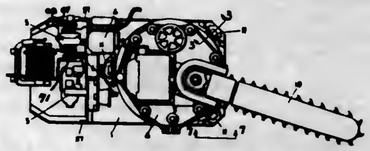
1,904,486. PLUNGER PUMP. CHARLES I. LONGENECKER, Wauwatosa, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 19, 1930. Serial No. 462,281. 3 Claims. (Cl. 184—18.)

2. A self-lubricating plunger for pumps and the like, comprising a hollow piston member having a working head and a skirt of reduced diameter, said skirt being provided with piston pin bearings having passages adapted to conduct lubricant to the bores thereof; an inverted hollow follower telescoping over said skirt to provide a substantially closed hollow plunger adapted to contain lubricant, said follower having lubricant passages affording communication between said piston pin bores and the exterior of the plunger; yieldable packing interposed between the follower wall and the head of said piston member; and means for adjustably securing said follower to said piston member.



1,904,487. RESISTANCE UNIT. CLINTON L. LYON, Scotia, and CLAUDE A. JAGGER, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 1, 1929. Serial No. 359,650. 7 Claims. (Cl. 201—63.)

1. A resistance unit or the like comprising a substantially cylindrical support provided with a longitudinal recess and a terminal for said unit comprising a portion embracing said cylindrical support so that it is secured



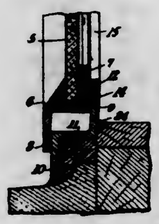
thereon and a portion projecting into said recess whereby the terminal is secured against rotation on said support but can be readily adjusted longitudinally thereof.

1,904,488. COAL CUTTING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 15, 1929, Serial No. 386,138. Renewed Nov. 20, 1931. 16 Claims. (Cl. 262—28.)

7. In a mining apparatus, a movable base, a plurality of vertical pedestals pivoted to the base at their lower ends, and a frame loosely engaging the pedestals above their pivotal axes, the pivoting axis of one of the pedestals being at an angle to the pivoting axis of another of the pedestals whereby the pivoting movements of the pedestals are mutually limited.

1,904,489. COAL MINING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 16, 1929. Serial No. 400,063. 37 Claims. (Cl. 262—28.)

1. The combination with a mining machine, a coal cutting device vertically and horizontally adjustable thereon; of self-contained power means for vertically adjusting said device and being subject to lateral thrusts imposed by the cutting device, and a longitudinally extensible pedestal associated with said power means to brace the latter against said lateral thrusts.

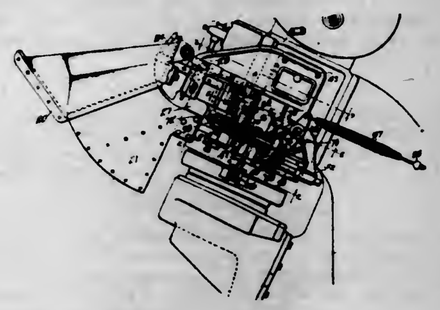


1,904,490. TURNTABLE FOR PHONOGRAPHS. RUDOLPH F. MALLINA, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1931. Serial No. 576,002. 7 Claims. (Cl. 274—39.)

2. The combination with a thin, disc type phonograph record having a tendency to warp and a turntable for supporting the record, of means for clamping the periphery

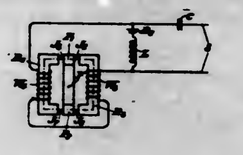
of the record to the turntable, and a ring of resilient material in contact with the record and shaped to exert a radial tension on the record when compressed by the clamping means whereby irregularities in the surface of the record may be removed.

1,904,491. WEATHER STRIP. JOHN MANHAN, New York, N. Y., assignor to A. B. C. Metal Corp., New York, N. Y., a Corporation of New York. Filed June 12, 1931. Serial No. 543,853. 8 Claims. (Cl. 189—65.)



1. Weatherstripping comprising a continuous section of sheet material transversely bent in the form of a channel to fit over a stop flange of a casement window, a spring supporting arm reflexed from the inner wall of said channel and an outwardly facing open trough portion at the end of said spring arm over and free of the back of the mounting channel and thereby freely yieldable inwardly away from the channel and a resilient weathering strip seated in said outwardly faced inwardly yieldable trough.

1,904,492. BOURDON LEVER TYPE OF PRESSURE GAUGE. CHARLES J. MANUEL, La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 10, 1928. Serial No. 291,552. 4 Claims. (Cl. 73—109.)

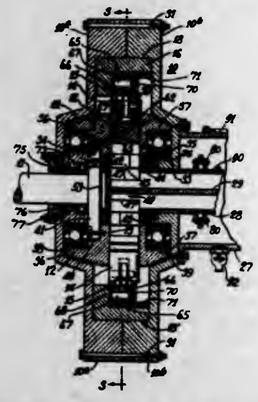


4. A pressure gauge comprising a casing, a post projecting through said casing and detachably secured thereto, said post being provided with a socket and an integral externally threaded nipple, there being an aperture in one side of said post in communication with the bore of said nipple, a tubular spring sector having an open end secured to said post in communication with said aperture and a closed free end, an index hand provided with a hub, means whereby said hub is pivotally mounted in the socket in said post, a unitary connection between said closed free end and said index hand, said index hand comprising a pair of parallel relatively offset portions, a dial, means whereby said dial is secured to said post so as to be adapted to contact with an element of said hand-pivoting means to maintain the pivot thereof in said socket.

1,904,493. TRANSFER MECHANISM. SAMUEL W. MATHIAS, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a Corporation of Pennsylvania. Original application filed Nov. 28, 1927, Serial No. 236,258. Divided and this application filed July 13, 1929. Serial No. 378,055. 18 Claims. (Cl. 10—166.)

2. In a machine for pointing and threading work, the combination of a chute to receive the work, and a transfer mechanism for moving the work, from the chute to work holding means, the said transfer mechanism comprising an arm having work engaging fingers thereon, a shaft supporting said arm, means for rotating said shaft on its axis through an arc of 180° and for swinging it in a plane through another arc of 180° the plane of one of these movements being parallel with the top of the chute and the plane of the other movement being at right angles to the top of the chute, substantially as set forth.

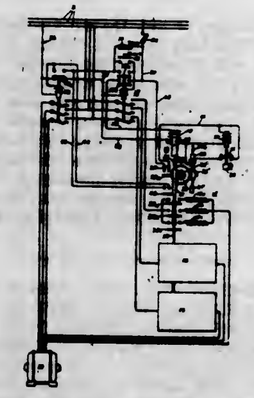
1,904,494. TUNING FORK GENERATOR. ANDREW L. MATTE, Summit, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed June 16, 1928, Serial No. 286,042. Divided and this application filed May 15, 1930. Serial No. 452,642. 10 Claims. (Cl. 171—209.)



1. The combination of two U-shaped cores of iron, the ends of which face each other, a tuning fork placed so that each prong will be between the adjacent ends of both of said U-shaped cores, each prong of the tuning fork being spaced by equal gaps from the adjacent ends of both said U-shaped cores, two coils of wire wound on said U-shaped cores and arranged in series relationship so that their magnetic effects which produce alternating currents will be additive, and means for producing a driving flux for said tuning fork which threads said U-shaped cores equally in order that the effect of said flux will be negligible.

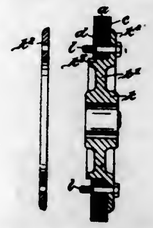
1,904,495. PROCESS FOR THE DIRECT MANUFACTURE OF KETONES FROM IMPURE VOLATILE ACIDS. JACQUES GEORGES MAUGER, Paris, France, assignor to Société dite: Maison Camus-Duchemin Société Anonyme, Paris, France, a Corporation of France. Filed May 10, 1930, Serial No. 451,288, and in France May 13, 1929. 6 Claims. (Cl. 260—122.)

1. The process of purifying volatile acids contaminated by impurities which consists of vaporizing the acid, pass-



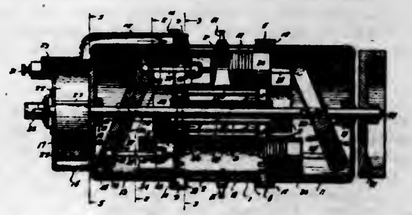
ing it over absorbent charcoal heated to a temperature of approximately 425° C., which absorbent charcoal in part physically stops the impurities and in part transforms them chemically into products which are not injurious for further treatment of the acids.

1,904,496. HYDRAULIC TRANSMISSION SYSTEM. ROBERT MAW, Montreal, Quebec, Canada. Filed Mar. 30, 1929. Serial No. 351,329. 5 Claims. (Cl. 60—53.)



1. In a hydraulic transmission system, the combination with mechanically driven and driving engines having casings provided with rotatable members formed with cylinders and cooperating pistons, of a passage member secured in said engine casings having ported ends disposed as hubs for said reciprocable members, means associated with said passage member dividing the same into discharge and return conduits, valve members associated with said reciprocable members about said ported hubs and cooperating with the same to effect continuity of fluid movement through said engines, lateral discharge ports communicating with said discharge and return conduits, and a rigid auxiliary member disposed about said passage member communicating with said lateral discharge ports and secured to said engine casings.

1,904,497. MOTOR STARTER. CARLISLE N. MCDAVITT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1931. Serial No. 569,012. 12 Claims. (Cl. 172—289.)

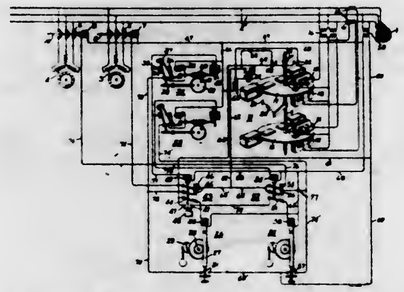


1. A motor starter comprising means for varying the motor current from zero value to a starting value for said motor in a series of steps, means for arresting the action of said current varying means after the current has been increased to said starting value to provide for acceleration of said motor from rest to an intermediate speed, and means for subsequently activating said current varying means to accelerate said motor to full speed.

1,904,498. ROLLER PARTICULARLY FOR USE IN TEXTILE MACHINERY. HENRY MCGHEE, Rushcutters Bay, near Sydney, New South Wales, Australia. Filed Nov. 8, 1930, Serial No. 494,423, and in Great Britain Nov. 26, 1929. 6 Claims. (Cl. 19—142.)

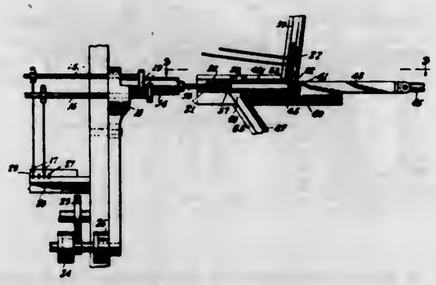
1. A roller for textile machinery comprising a continuous stitchless leather rim, an inner sleeve of soft rubber, and a lining of hard rubber, said parts being united by vulcanizing under heat and pressure.

1,904,499. INTERNAL COMBUSTION ENGINE. CHESTER MCLAREN, El Centro, Calif. Filed July 22, 1929. Serial No. 379,940. 6 Claims. (Cl. 123—58.)



2. An internal combustion engine comprising a rotary shaft, a plurality of cylinders spaced about said shaft and arranged with the axes of said cylinders parallel to said shaft, a pair of balanced pistons in each cylinder, means for imparting rotary motion to the shaft from the pistons, an inlet port adjacent one end of the cylinder at a point approximating that of the end of travel of one of said pistons and an exhaust port adjacent the other end of the cylinder at a point approximating that of the end of travel of the other piston and means for supplying fuel under pressure to said cylinder, said last mentioned means comprising a rotary pump associated with said shaft and a sleeve having openings associated with the inlet ports of said cylinders for controlling the supply of fuel admitted to said cylinders and means associated with the sleeve for simultaneously controlling the supply of fuel to all of said cylinders.

1,904,500. ELECTRICAL REGULATING SYSTEM. DAVID W. MCLENNAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1930. Serial No. 497,211. 16 Claims. (Cl. 171—97.)

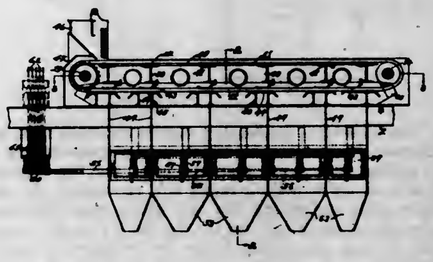


1. In combination, an electric circuit, a variable load connected to said circuit, said load including a plurality of load increments, and time delayed acting means responsive to the load on said circuit for removing one of said load increments a predetermined time after the load on said circuit exceeds a predetermined high value.

16. A load regulating system comprising a power supply circuit, a variable load connected to said circuit, an overpower relay connected to said circuit, a relay having normally closed and normally open contacts and time delayed closing contacts, a normally open time delayed closing relay, a circuit controlled by said overpower relay including the normally closed contacts of said second mentioned relay and the operating means of said time delayed closing relay, a normally closed time delayed opening relay, a circuit including the contacts of said time delayed opening and closing relays, and the operating means of said time delayed opening relay and said second mentioned relay, a circuit including means for reducing the load on said power

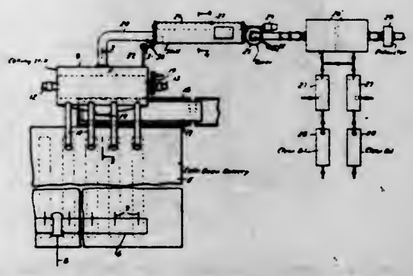
supply circuit controlled by the normally open contacts of said second mentioned relay, a second circuit controlled by the normally open contacts of said second mentioned relay for short circuiting the contacts of said normally closed time delayed opening relay, a third circuit under the joint control of said overpower relay and the time delayed closing contacts of said second mentioned relay, and means including a second normally open time delayed closing relay and a second normally closed time delayed opening relay energized by said third circuit for further reducing the load on said power supply circuit.

1,904,501. KNITTING MACHINE. JOSEPH F. MEYER, Orange, N. J. Filed Feb. 27, 1930. Serial No. 431,700. 11 Claims. (Cl. 66—85.)



1. In a knitting machine, the combination of reciprocating thread guide bars arranged in rows, one row above the other, pattern links carrying actuating pins disposed in superposed rows to cooperate with the superposed row of bars, means for effecting operating engagement of the links with the bars and means for circulating said pattern links to and away from said operating means, said links being unconnected and said circulating means being constructed to handle said unconnected links in serial order.

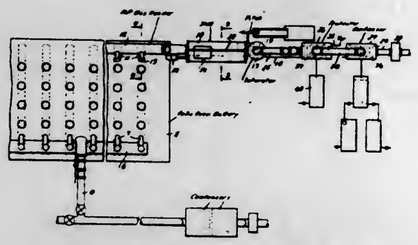
1,904,502. PROCESS FOR APPLYING RUBBER TO METAL AND OTHER HARD MATERIALS. ANDRÉ JULES MICHELIN, Paris, France, assignor to Michelin et Cie, Clermont-Ferrand, France, a Corporation of France. Filed May 19, 1930, Serial No. 453,844, and in France May 28, 1929. 8 Claims. (Cl. 154—53.)



1. As a new article of manufacture, a structure comprising a metallic core, a strong metal wire provided with a textile wrapper tightly wound around said core, and a rubber coating applied over said wire.

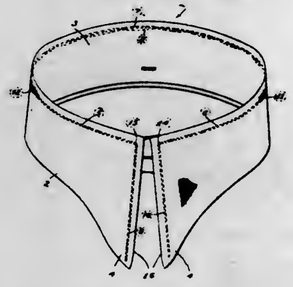
1,904,503. CHAIN GRATE STOKER. BENJAMIN H. MILLER, Wadsworth, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 28, 1928. Serial No. 281,023. 8 Claims. (Cl. 110—40.)

1. In a chain grate stoker, a longitudinal air duct beneath said stoker, and means for admitting air from said duct through the lower run of the chain grate and thence through the upper run thereof, said means comprising a duct located along side of said air duct and divided into compartments.



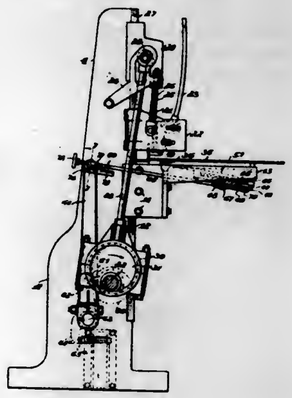
1,904,504. DISTILLATION OF TAR OR PITCH TO COKE AND APPARATUS THEREFOR. STUART PARMELEE MILLER, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 9, 1929. Serial No. 384,667. 2 Claims. (Cl. 202—80.)

1. The method of distilling tar to coke which comprises passing hot coal distillation gases through one still and then through a second still, adding tar to the second still,



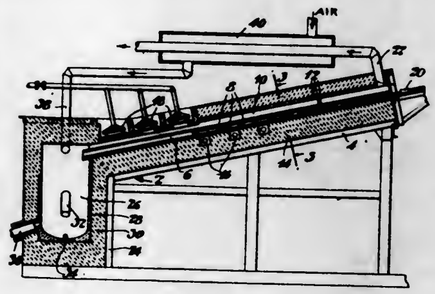
spraying it in the form of an intense spray into direct and intimate contact with the hot gases in the second still, whereby the gases are cleaned and the tar is distilled, drawing off the residue resulting from this distillation of the tar and adding it to the first still, exposing a film of this distilled tar to the action of the hot coal distillation gases within this first still while simultaneously applying additional heat to the film, whereby the film of partly distilled tar is converted to coke, discharging the coke from the first still, collecting the hot clean enriched gases leaving the second still and cooling them to separate oils therefrom.

1,904,505. DISTILLATION OF TAR OR PITCH. STUART PARMELEE MILLER, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 11, 1929. Serial No. 413,254. 2 Claims. (Cl. 202—30.)



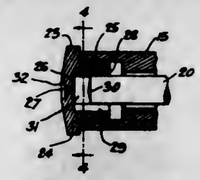
1. The method of condensing vapors resulting from the distillation of coal tar in which greasy constituents of high boiling points are distilled from the tar together with oils of lower boiling range and recovering the condensate while preheating the tar, which comprises passing the vapors resulting from the distillation up thru a condenser, cooling the vapors below the dewpoint of greasy constituents in the lower part of the condenser by bringing them into indirect heat interchange relation with the tar to be distilled thereby separating greasy constituents from the vapors in the lower part of the condenser, further cooling the vapors and separating oils from the vapor in the upper part of the same condenser, allowing the oils to flow down from the upper part of the condenser thru the lower part of the condenser, and thus dissolving the greasy constituents in the oils.

1,904,506. COLLAR SUPPORT. STEPHEN R. MORDEN, San Francisco, Calif. Filed Aug. 24, 1931. Serial No. 559,062. 2 Claims. (Cl. 2—132.)



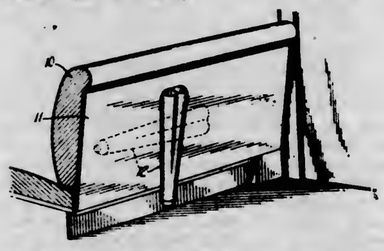
1. A collar support comprising two flexible wires having arcuate neck encircling portions, the end of each of said portions being slidably secured to the other one and the free end of each wire extending at an angle with respect to the arcuate portion and designed to support a collar point.

1,904,507. NAILING MACHINE. HENRY W. MORGAN, Brighton, N. Y., assignor to Morgan Machine Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 17, 1930. Serial No. 489,421. 10 Claims. (Cl. 1—15.)



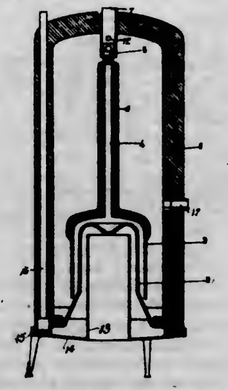
1. In a nailing machine, the combination with a work supporting table provided with a slot having an inclined end, of nailing mechanism for driving nails into work held on said table, and work positioning means including a part lying at one time substantially within said slot and shiftable from such position to ride up said inclined end of said slot to a position projecting above said table for engaging a piece of work to position it accurately with respect to said nailing mechanism.

1,904,508. REDUCTION FURNACE. JOHN D. MORGAN, South Orange, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 17, 1931. Serial No. 530,796. 2 Claims. (Cl. 13—2.)



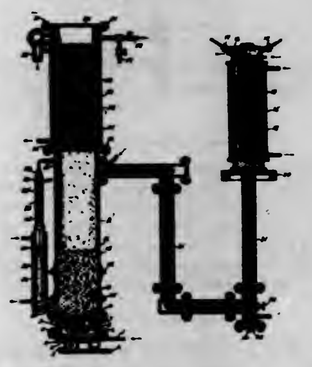
1. A furnace comprising in combination a stationary sloping heating hearth, electrical resistance heating units for heating a charge being fed through said hearth, means for feeding a charge through said hearth in a uniform, relatively thin and wide ribbon, means for breaking said charge as it leaves said hearth, means at the inlet of said feeding means adapted to allow the feeding of said charge without allowing the escape of gases, means directly connected to the discharge end of said hearth for receiving spent material therefrom, means for regenerating the heat of said spent material, means for heating said charge by the heat thus regenerated, and means for heating said charge by the heat of combustion of the gases developed.

1,904,509. NEBULIZER OF LIQUIDS. ALBERT W. MORSE, Forest Hills, N. Y. Filed Oct. 10, 1930. Serial No. 487,793. 3 Claims. (Cl. 299—118.)



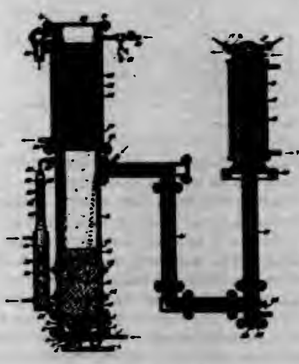
1. A nebulizer of liquids comprising a structure having a recess at one end with a central outlet through to its other end, a cylindrical bushing pressed into the said recess having a slot through its entire length tangential to the center of the bushing, and a regulating stem slidingly engaging the center of the said bushing.

1,904,510. UMBRELLA HOLDER. HARRIET J. MOTT, Hollis, N. Y. Filed Sept. 30, 1931. Serial No. 566,079. 4 Claims. (Cl. 211—63.)



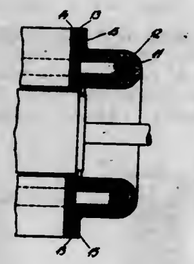
4. An umbrella holder of the class described comprising an elongated tubular body of rigid material, the walls of which are contracted at the lower closed end thereof and flared to the upper open end of said body, a drainwater receptacle at the lower end of said tubular body, and means involving a fixed pivot disposed below the open end of said body for supporting said tubular body normally in upright position and for permitting the swinging movement of the open end portion of said body on the pivot in each of at least two directions through an arc of at least 90° to permit the swinging movement of the open end of said body in either of at least two directions in the insertion and removal of an umbrella with respect to the holder.

1,904,511. LIQUID HEATER. MARCEL MUTRUX and ROBERT CAILLET, Vevey, Switzerland. Filed Sept. 17, 1930, Serial No. 482,606, and in Switzerland June 18, 1930. 8 Claims. (Cl. 122—13.)



8. In a liquid heater, the combination of heating means, a water heating and conducting pipe leading from the heating means, an accessible water conducting pipe in communication with the first pipe, and a plug having a relatively small aperture as compared with the diameters of the water conducting pipes removably seated on the first pipe at its point of communication with the second pipe, and said plug being removable through said second pipe for cleaning purposes.

1,904,512. METHOD AND APPARATUS FOR PREPARING SULPHUR DIOXIDE. BIRGER W. NORDLANDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 22, 1929. Serial No. 372,868. 3 Claims. (Cl. 23—179.)



1. The process of preparing sulphur dioxide substantially free from sulphur trioxide, which comprises reacting oxygen gas within an excess of liquid sulphur in an enclosed space by passing said gas through the liquid sulphur at a rate such that substantially no free oxygen emerges therefrom.

1,904,513. APPARATUS FOR PREPARING SULPHUR DIOXIDE. BIRGER W. NORDLANDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed June 22, 1929, Serial No. 372,868. Divided and this application filed Mar. 13, 1931. Serial No. 522,477. 1 Claim. (Cl. 23—278.)
